| CASE NAME: | Development Standards Overhaul Rezoning and Text Amendments |
| CASE NO.: | PRC2026-00016 |
| Property Owner, Applicant: | Adams County Community & Economic Development Department |
| Applicant's Address: | 4430 South Adams County Parkway, Brighton, CO 80601 |
| Location of Request: | Unincorporated Adams County |
| Application Filed: | (i) Text Amendment to comprehensively update the Adams County Development Standards and Regulations (DSR); and (ii) Zoning Map Amendments to create a New Zoning Map to align the new standards with the official zoning map. |
| Hearing Dates: | **PC: October 22, 2026 / 6:00 p.m.**<br>**BoCC: November 17, 2026 / 9:30 a.m.** |
| Report Date: | October 2, 2026 |
| Case Manager: | Lia Campbell, Senior Long-Range Planner |
| Staff Recommendation: | (i) APPROVAL of the Text Amendment with three findings of fact and one note and (ii) APROVAL of a new Zoning Map with four findings of fact. |

**Executive Summary**

- The requests include a Text Amendment to replace the existing Adams County Development Standards and Regulations (DSR) and a Zoning Map Amendment to create a New Zoning Map to align the new standards with the official zoning map.
- The goals of this project, known as the Development Standards Overhaul (DSO), are to implement the Advancing Adams Comprehensive Plan, adopted by the Board of County Commissioners in 2022 and modernize the development standards that have not been comprehensively updated since 2002.
- The DSO is multi-year planning effort led by County staff with support from Kendig Keast Collaborative (KKC).
- Extensive public outreach was conducted throughout the course of the project to ensure the new standards are stakeholder informed.

**Background:**

In 2022, the Adams County Board of County Commissioners adopted the Advancing Adams Comprehensive Plan ("Plan"). The Plan identifies three core values: Equity, Sustainability, and Livability. Through those core values, Advancing Adams addresses the community's vision for future land uses, housing and population growth, the natural and built environment, economic development, and cultural heritage. To implement the vision laid out in the Comprehensive Plan,

staff launched the Development Standards Overhaul ("DSO") project in 2024 to comprehensively update and modernize the Adams County Development Standards and Regulations ("DSR"). The last comprehensive update to the DSR was completed in 2002.

The DSO project kicked off in 2024 with a series of stakeholder engagement efforts, including public meetings, online engagement tools, and surveys. From these initial efforts, an engagement report was generated, summarizing the feedback that was received from stakeholders and other members of the public. This summary of public feedback was used as the starting point for drafting the new regulations. The full text of the Stakeholder Engagement Report can be found in Exhibit 2.2, and the key proposed changes are highlighted below.

**Proposed Changes, Text Amendment:**

As the proposed replacement to the existing DSR is over 1,100 pages, only a summary of the key changes is outlined below. The entirety of the proposed development standards can be found in Exhibit 2.1. In summarizing the changes, Staff focused on the key subject areas of Housing, Sustainability, and Economic Development.

1. Housing
    a. Increase Housing Options
        i. The DSO proposes to allow more housing types in the urban areas of unincorporated Adams County. This includes allowing duplexes/two-family uses in the Residential-1-C (R-1-C) zone district, which currently only allows for one detached single-family home; allowing multiplex building forms (up to four units) and townhomes in the Residential-2 (R-2) zone district, which currently allows only single-family home and duplexes; and allowing Accessory Dwelling Units (ADUs) accessory to duplex/two-family uses, which are currently only allowed accessory to detached single-family homes.
        ii. The DSO proposes modest reductions in minimum lot sizes and setbacks. See Exhibit 1.1, Residential District Dimensional Standards Comparison Charts for current vs. proposed dimensional standards.
        iii. The DSO proposes to allow a second single-family home per 35 acres in the Agricultural-3 (A-3) zone district, and to allow one ADU per single-family home.
    b. Protect Neighborhood Character – the DSO proposes gradual height increases to ensure that building height increases incrementally over time and to avoid dramatic changes all at once to existing neighborhoods.
    c. Enhance Neighborhood Design
        i. Development Types - The DSO introduces Development Types to allow for greater flexibility in housing development. The Development Types allow for greater density in exchange for Amenity Space. Amenity Space is explained in greater detail below. See Exhibit 1.1, Residential District Dimensional Standards Comparison Charts for more information on the proposed densities and required amenity spaces for each development type in each residential zone district.
2. Sustainability
    a. Improve Open Space Design

i. Amenity Space – the DSO proposes to require Amenity Space for developments of 5 units or more. The purpose of the Amenity Space requirements is to ensure there is a tradeoff between increased density and open space for residents: as density allowances increase, the percent of required amenity space also increases. See Exhibit 1.1, Residential District Dimensional Standards Comparison Charts for more information on the proposed densities and required amenity spaces for each development type in each residential zone district.

b. Conserve Water Resources – the DSO proposes to require native or natively adapted plant species in required landscaping, to ensure that landscape planning is water conscious.

3. Economic Development
   a. Simplify Development Processes
      i. The DSO proposes to allow for an administrative review of final plats. Currently, Minor Subdivision Final Plats must go before the Planning Commission and the Board of County Commissioners and Major Subdivisions Final Plats must be reviewed on the Board of County Commissioners consent agenda.
      ii. The DSO proposes to replace the Change in Use process with a Site Plan Review process.
      iii. The DSO proposes to remove language that requires only one principally permit use per lot. Removing this language reflects the reality that many properties in Adams County have multiple principal uses on a single site.
      iv. The DSO proposes to consolidate the six existing commercial zone districts into three zone districts. Existing C-0 and C-1 will become Neighborhood Commercial; existing C-2 and C-3 will become General Commercial; and existing C-4 and C-5 will become Heavy Commercial. This commercial zone district consolidation is reflected in the New Zoning Map accompanying the Text Amendment as part of this case.

**<u>Proposed Changes, Zoning Map Amendment:</u>**

Staff is proposing a New Zoning Map to bring the zoning map into alignment with the proposed standards under the DSO.

- **Commercial zone districts**: The intent of the Zoning Map Amendment is to consolidate zone districts that are currently governed by functionally identical land use standards. Consolidating the districts from six to three makes the underlying zone district land use standards easier for property owners to follow and more efficient for the County to administer.
- **R-1-A zone district**: The intent of the Zoning Map Amendment is to clean up the zoning map, as the R-1-A zone district is currently governed by the R-1-C zone district standards. This is essentially a housekeeping change.
- **Conservation:** The intent of the Zoning Map Amendment is to consolidate the Conservation Zone District to the Natural Areas Zone District, which serves a similar purpose and is meant to encourage the preservation of environmentally sensitive areas from development. Currently, only one property is zoned Conservation. The single property that is currently zoned Conservation will be rezoned to Natural Areas.

**Development Standards and Regulations Requirements:**

Section 2-02-15-06-01 of the Development Standards and Regulations lists three criteria for reviewing a Text Amendment. The Planning Commission, in making their recommendation, and the Board of County Commissioners in approving a Text Amendment, shall find:

1. *The Text Amendment is consistent with the Adams County Comprehensive Plan.*

   **Staff Analysis:**

   The Text Amendment is consistent with the Adams County Comprehensive Plan and helps implement the vision laid out in the Comprehensive Plan. The Text Amendment is supported by the following goals and strategies in the Comprehensive Plan.

   Housing

   *Community and Housing (COH) Goal 1:* Support sustainable and responsible land use planning for residential growth and development

   The Text Amendment proposes density increases in the urban areas of the county, where access to transit and services is greatest. With the exception of the Agricultural-3 (A-3) zone district, there are no density increases proposed in the rural residential and agricultural zone districts in order to continue to preserve the rural areas of the County. The housing proposal for Agricultural-3 is to give residents the opportunity to add incremental additional housing that may serve as housing for farmworkers or other residents without having to subdivide, change the future land use, or rezone the property. The Text Amendment supports COH Goal 1.

   *Community and Housing (COH) Goal 2:* Increase housing opportunities through Adams County by taking a proactive role in addressing housing affordability, diversity, and supply through land use regulations.

   The Text Amendment, through increases in density allowances and housing options in urban residential zone districts, is addressing housing affordability and diversity through land use regulations. These new housing options and density allowances will provide the opportunity for homeowners and developers to build a wider variety of housing units throughout urban unincorporated Adams County. The Text Amendment supports this COH Goal 2.

   Sustainability

   *Natural Resources and Environment (NRE) Strategy 2.1.03:* Consider the inclusion of water conservation in building and development codes. Promote water use efficiency for new and redeveloped residential and commercial properties in unincorporated Adams County.

   The Text Amendment, through enhanced water preservation landscape standards, promotes water use efficiency on new and redeveloped properties. The Text Amendment supports NRE Strategy 2.1.03

   Economic Development

*Economic Development (ED) Goal 1:* Encourage a "people first" philosophy in economic development that is committed to innovation, exceptional service, and transparency.
The Text Amendment supports a "people first" philosophy in economic development. The Text Amendment updates development processes to be more streamlined and understandable to residents and developers. It also removes language prohibiting more than one principally permitted use on a site to be more in line with the reality of how commercial and industrial properties are developed and used in Adams County. Additionally, the Text Amendment permits Child Care Centers in all zone districts and as accessory to Houses of Worship, which can help to promote the development of new Child Care Centers.

Based upon these facts and those in the record, Staff finds that the proposed Text Amendment is consistent with the Adams County Comprehensive Plan.

2. *The Text Amendment is consistent with the purposes of these standards and regulations.*
**Staff Analysis:**
The proposed Text Amendment is consistent with the purposes of the Adams County Development Standards and Regulations.

Per Section 1-01-01, standards and regulations to guide development are necessary to protect and promote the public health, safety, and general welfare of the County due to the continued pressures associated with new development, redevelopment, and use of properties in unincorporated Adams County. This means that, on occasion, updates may be needed to manage changes to state law and development pressures felt in the County. The Adams County Development Standards and Regulations have not been updated since 2002 and a comprehensive update was necessary to modernize the code and continue to protect and promote the public health, safety, and general welfare of the County.

Based upon these facts and those in the record, Staff finds that the proposed Text Amendment is consistent with the purposes of these standards and regulations.

3. *The Text Amendment will not be detrimental to the majority of persons or property in the surrounding areas nor to the community in general.*
**Staff Analysis:**
The proposed Text Amendment is intended to provide increased opportunities for attainable housing by diversifying housing options and removing barriers, increase the resiliency and sustainability of Adams County's built environment through more robust water conservation standards, and encourage robust economic development through streamlining the commercial development process. All of this is in the pursuit of fostering an inclusive and diverse community.

Based upon these facts and those in the record, the proposed Text Amendment is not detrimental to the community in general, and further the health, safety, and welfare of the community.

Section 2-02-15 of the Adams County Development Standards and Regulations lists four criteria for reviewing a Zoning Map Amendment. The Planning Commission, in making their recommendation to the Board of County Commissioners for a New Zoning Map, shall find:

1. *The zoning map amendment is consistent with the Adams County Comprehensive Plan.*
   **Staff Analysis:**
   The purpose of the proposed New Zoning Map is to align the Zoning Map with the proposed Text Amendment. The Zoning Map Amendment is consistent with the Comprehensive Plan as detailed in the Staff Analysis of finding one of the Text Amendment.

2. *The zoning map amendment is consistent with the purposes of these standards and regulations.*
   **Staff Analysis:**
   The New Zoning Map is necessary to ensure consistency with the Text Amendment accompanying this Zoning Map Amendment application.

3. *The zoning map amendment will comply with the requirements of these standards and regulations.*
   **Staff Analysis:**
   The New Zoning Map is necessary to ensure compliance with the Text Amendment accompanying this Zoning Map Amendment application.

4. *The zoning map amendment is compatible with the surrounding area, harmonious with the character of the neighborhood, not detrimental to the immediate area, not detrimental to the future development of the area, and not detrimental to the health, safety and welfare of the inhabitants of the area and the County.*
   **Staff Analysis:**
   The New Zoning Map promotes compatible and harmonious future development by aligning the proposed Text Amendment with the Zoning Map.
   The rezoning of R-1-A to R-1-C presents no material change as the existing DSR stipulates that the R-1-A zone district is currently governed by the R-1-C zone district standards.
   The rezoning of a single parcel from the Conservation District to the Natural Areas District is compatible and harmonious as the rezoning is meant to consolidate the districts as they both have similar purposes and are meant to encourage the preservation of environmentally sensitive areas from development.
   The purpose of rezoning the six existing commercial zone districts (C-0, C-1, C-2, C-3, C-4, C-5) to three zone districts (Neighborhood Commercial, General Commercial, and Heavy Commercial) is meant to consolidate zone districts that are currently governed by functionally identical land use standards (i.e., C-0 and C-1 are nearly identical and have been combined to the Neighborhood Commercial zone district). The New Zoning Map

supports compatibility and harmony as well as reduces concerns related to the health, safety, and welfare of inhabitants by implementing the zone district standards for the respective zone districts as contemplated in the associated Text Amendment.

## PUBLIC OUTREACH

Stakeholder engagement was essential in developing land use standards and regulations that address the unique landscape, challenges, and opportunities in Adams County. The project was kicked off in 2024 with three months of stakeholder engagement, which is outlined in Exhibit 2.2, Stakeholder Engagement Report. The initial feedback from that effort was used as the foundation for developing new standards and regulations.

A Community Advisory Committee and Technical Advisory Committee were formed to help inform the process. Staff met with these Committees periodically throughout the DSO project.

The standards and regulations were developed in modules. The modules included Land Dedication Standards; Residential Districts and Subdivision Design Standards, Commercial and Industrial Districts, Uses and Standards; Environmental and Sustainability Standards; and Process and Governance Standards. Public outreach/stakeholder engagement was incorporated into the Residential Districts and Subdivision Design Standards, Commercial and Industrial Districts, Uses and Standards; Environmental and Sustainability Standards modules through public meetings, Community and Technical Advisory Committee Meetings, and industry specific outreach.

Once a full draft was ready for public review, Staff embarked on a "roadshow" to present the standards to the public. The purpose of the roadshow was to meet residents and stakeholders where they were at. Engagement meetings were held in Sherrelwood, Midtown, Strasburg, Brighton, and virtually. Additionally, Staff attended ACREP and I-70 REAP to share the standards with commercial and industrial stakeholders.

All property owners within 600 feet of the properties affected by the Zoning Map Amendment were notified of the request. Over 17,800 letters were sent.

Staff maintained a PublicInput webpage throughout the duration of the project so that residents and stakeholders would be able to monitor project updates and reach out to the project team with any questions, comments, or concerns. Staff also published three informational videos, informative social media posts, and recorded an All In Adams podcast episode to inform the public about the project and how they could get involved.

## PUBLIC COMMENTS

Throughout the project, staff heard comments, concerns, and questions on the following topics: code compliance, data centers, parking, oil and gas development, density concerns, affordable housing concerns, landscaping, short-term rentals, bike infrastructure, use permissions, renewable energy development, environmental standards, outdoor storage, and infill development. These comments were part of robust conversations that greatly informed the final document. Staff received three written public comments that are included in this staff report.

## REFERRAL AGENCY COMMENTS

Staff worked with referral agencies throughout the draft review process and Staff was able to incorporate many of the comments and concerns expressed by these agencies. No objections were provided from referral agents regarding the application. Letters were received from Denver Water, Douglas County; Thonton Fire Department; and United Power.

**Staff Recommendation:**

It is Staff's determination that the requests are consistent with the Adams County's Comprehensive Plan and will promote the health, safety, and welfare of the citizens and property owners of Adams County. Based upon the criteria for approving a Text Amendment and a Zoning Map Amendment, Staff recommends approval of this request with seven findings of fact and one note.

**Recommended Findings of Fact (Text Amendments):**

1. The Text amendment is consistent with the goals and policies of the Adams County Comprehensive Plan.
2. The Text Amendment is consistent with the purposes of these standards and regulations
3. The Text Amendment will not be detrimental to the majority of persons or property in the surrounding areas nor to the community in general.

**Recommended Note (Text Amendments):**

1. In order to ensure consistency and accuracy throughout the new Development Standards and Regulations, Community and Economic Development Department staff, in consultation with the County Attorney's Office, may make minor corrections to the new Development Standards and Regulations until December 31, 2026 to correct any typographical errors, errors in numbering/lettering, or incorrect cross-references, so long as any such corrections do not alter the substance or meaning of the regulations.

**Recommended Findings of Fact (Zoning Map Amendments):**

1. The zoning map amendment is consistent with the Adams County Comprehensive Plan.
2. The zoning map amendment is consistent with the purposes of these standards and regulations.
3. The zoning map amendment will comply with the requirements of these standards and regulations.
4. The zoning map amendment is compatible with the surrounding area, harmonious with the character of the neighborhood, not detrimental to the immediate area, not detrimental to the future development of the area, and not detrimental to the health, safety and welfare of the inhabitants of the area and the County.

# CHAPTER 1 ADMINISTRATION

**Contents:**

Div. 1-01 General Provisions
Div. 1-02 Effect of DSR
Div. 1-03 Exceptions and Interpretations

## Div. 1-01 General Provisions

### 1-01-01 Title

These standards and regulations shall be known as the "Adams County Development Standards and Regulations" and may also be referred to as the “development standards and regulations” or “DSR”.

### 1-01-02 Authority

The Adams County Board of County Commissioners has authority to adopt these development standards and regulations pursuant to the following provisions of the Colorado Constitution and the Colorado Revised Statutes, as amended:

A. Title 22, Article 32 (Zoning, Planning and Building Code, Duties of School District Boards);
B. Title 24, Article 65.1 (Areas and Activities of State Interest);
C. Title 24, Article 68 (Vested Property Rights);
D. Title 25, Article 7 (Colorado Air Quality Control);
E. Title 25, Article 8 (Colorado Water Quality Control Act);
F. Title 28, Article 6 (Division of Aviation);
G. Title 29, Article 20 (Local Government Land Use Control Act);
H. Title 30, Article 11 (County Powers and Functions);
I. Title 30, Article 15 (County Regulations Under Police Powers);
J. Title 30, Article 28 (County Planning and Building Code);
K. Title 32, Article 1 (Special District Act/Provisions);
L. Title 34, Article 1 (Preservation of Commercial Mineral Deposits);
M. Title 34, Article 60 (Oil and Gas Conservation Act);
N. Title 38, Article 30.5 (Conservation Easements);
O. Title 41, Article 4 (Airports); and
P. Title 43, Article 2, (State, County and Municipal Highways).

### 1-01-03 Findings and Purposes

A. **Findings.** The Board of County Commissioners of Adams County, Colorado, hereby finds, due to the continued pressures associated with new development, redevelopment, and use of properties in unincorporated Adams County, that standards and regulations to guide

development are necessary to protect and promote the public health, safety, and general welfare of the County.

B. **Purposes.** These Development Standards and Regulations are intended to control and assist in the orderly, efficient, and integrated development of the County, to preserve the health, safety, and welfare of the public, in accordance with established County policies and plans. These provisions are specifically intended to:

1. Divide the unincorporated area of the County into zone districts to carry out this DSR;
2. Designate, regulate, and restrict the location of buildings, structures, and use of land for residential, commercial, industrial, agricultural or other purposes;
3. Regulate and limit dimensional and development standards for all buildings and structures; and
4. Establish general procedures for processing applications under this DSR.

## 1-01-04 Jurisdiction

The provisions of these Development Standards and Regulations (DSR) shall apply to all development of land in unincorporated areas of Adams County, unless expressly and specifically exempted or provided otherwise in this DSR.

## 1-01-05 Enactment, Repeal, and Effective Date

A. *Enactment and Repeal.* The enactment of this DSR shall repeal and replace the DSR previously in effect in its entirety.

B. *Effective Date*. Except as otherwise expressly provided herein in Table 2-06-02.B-2 and Sec. 3-09-03, these standards and regulations shall take effect and be in force on January 1, 2027. An application submitted prior to the effective date of these standards and regulations shall be reviewed, and action shall be taken in accordance with the County land use and development regulations in effect at the time a complete application, as provided in Sec. 13-01-04, *Step 3: Development Application, Submittal, and Completeness*, was submitted, unless the applicant agrees to have their application reviewed pursuant to this DSR.

## 1-01-06 Fee Schedule

The fees and charges authorized under this DSR shall be established by the Board of County Commissioners in a Fee Schedule adopted by resolution. The Fee Schedule may be amended from time to time by resolution of the Board of County Commissioners without the necessity of amending this DSR.

# Div. 1-02 Effect of DSR

## 1-02-01 Applicability

No land use or land development shall commence without prior authorization pursuant to these standards and regulations. All development within unincorporated Adams County shall comply with the requirements, criteria, and procedures contained in these standards and regulations.

## 1-02-02 Conflicting Regulations

A. **Not Exempt from Other Laws**. Nothing in these standards and regulations shall be construed as exempting any person from other requirements of Adams County, or any state and federal laws or regulations.

B. **Conflict with Other Laws**. All Adams County regulations inconsistent or in conflict with these standards and regulations are hereby repealed to the extent of such inconsistency or conflict and no further. Such repeals shall not affect or prevent the enforcement of a violation of any regulation repealed hereby; nor for any violation existing or committed prior to the repeal; nor extend the termination date for a nonconforming use, if under both these and previous regulations, such a use was declared non-conforming.

C. **Titles and Subtitles Advisory Only.** The titles and subtitles of the various sections and subsections of these standards and regulations are advisory only. In the event of any conflict between the title and the text of a provision, the text shall control.

D. **Conflicting Provisions**. If provisions of this DSR are inconsistent with one another or when the regulations of this DSR conflict with other adopted ordinances or regulations of the County, the provisions that the Community and Economic Development Director may deem more restrictive shall control, unless otherwise specifically stated. If the written text of this DSR is inconsistent with illustrative or tabular information, the written text shall control. If a table in this DSR is inconsistent with a graphic, the table shall control.

E. **Illustrations**. Illustrations and photographs in this DSR are provided for illustrative purposes only and do not have regulatory authority and may not be drawn to scale.

## 1-02-03 Relationship to Covenants

A. **Covenants on Private Property**. Persons owning property in the unincorporated area of Adams County may have a covenant recorded against their property that affects how the land may be used or developed. It is hereby noted as a point of information that such covenants constitute a private party agreement between the property owner imposing the covenant and subsequent owners.

B. **Relationship to the Development Standards and Regulations**. The County does not have the power or obligation to enforce or alter such covenants. However, where there is a conflict between covenants and the provisions of these development standards and regulations, the County has the authority to enforce these development standards and regulations, and the property owner is obligated to abide by the more restrictive provision.

C. **County as Party to a Recorded Covenant**. If the County is a party to a recorded covenant, then the County has the authority to enforce such covenant in accordance with its terms and applicable law.

## 1-02-04 Transitional Provisions

A. **Purpose**. The purpose of transitional regulations is to clarify the status of properties with pending applications and properties with outstanding violations, at the time of the adoption of this DSR.

B. **Violations Continue.** Any violation of the previous DSR shall continue to be a violation under these standards and regulations and shall be subject to the penalties and enforcement set forth in Chapter 15, *Enforcement, Violations, and Remedies*, unless the use, development,

construction, or other activity complies with the provisions of this DSR. Payment may be required for any civil penalty assessed under the previous ordinance, even if the original violation is no longer considered a violation under this DSR. Nothing in this DSR shall prohibit the continuation of previous enforcement actions undertaken by the County pursuant to regulations in effect before the effective date of this DSR.

C. **Processing of Applications Commenced or Approved Under Previous DSR**.

1. *Pending Applications.*

   a. Any complete application that has been submitted for approval, but upon which no final action has been taken by the appropriate reviewing body prior to the effective date of this DSR (as indicated in Sec. 1-01-05), shall be reviewed in accordance with the standards and regulations in effect on the date the Director of Community and Economic Development deemed the application complete. If the applicant fails to comply with any applicable required period for submittal or other procedural requirements, the application shall expire and subsequent applications shall be subject to the requirements of this DSR. Any re-application for an expired project approval shall meet the standards in effect at the time of reapplication.

   b. An applicant with a complete application that has been submitted for approval, but upon which no final action has been taken prior to the effective date of this DSR, may request review under this DSR by a written letter to the Director.

2. *Approved Projects.*

   a. Specific Use Permits, Conditional Use Permits, Site Plan approvals, Building Permits, and Variances that were valid on January 1, 2027, shall remain valid until their expiration date. Projects with valid approvals or permits may be completed with the development standards in effect at the time of approval.

   b. Any building or development for which a Building Permit was issued prior to the effective date of this DSR may be permitted to proceed to construction. If the development for which the Building Permit is issued prior to the effective date of this DSR fails to comply with the time frames for development established for the Building Permit, the Building Permit shall expire and future development shall comply with the requirements of this DSR.

   c. Modifications to an approved Building Permit shall require resubmittal under the DSR that is in effect at the time of resubmittal.

3. *Subdivisions*. All subdivision plats that, upon the effective date of this DSR have been previously approved by the County and for which the applicant has paid all fees, are considered to be approved subdivisions as such requirements for approval exist in this DSR.

4. *Site Specific Development Plan.* An application for approval of a Site Specific Development Plan, as well as the approval, conditional approval, or denial of approval of such development plan, shall be governed only by the duly adopted laws and regulations in effect at the time the complete application is submitted. (*See* C.R.S. § 24-68-102.5, Applications - Approval by Local Government.)

## 1-02-05 Interpretation and Administration

A. **Minimum Requirements.** The interpretation and application of the provisions in these standards and regulations shall be regarded as the minimum requirements for the protection of

the health, safety, and welfare of the public. These standards and regulations shall be regarded as remedial and shall be liberally construed to further the purpose of these standards and regulations and the Adams County Comprehensive Plan.

B. **State Law.** These standards and regulations shall be interpreted in accordance with the laws of the State of Colorado.

C. **The Director of Community and Economic Development.** The Director of Community and Economic Development shall interpret these standards and regulations to reflect the purpose and intent of protecting the health, safety, and welfare of the public.

## 1-02-06 Severability

It is the intent that the provisions of these standards and regulations shall be severable so that:

A. **Generally.** If any provision of this DSR is declared invalid or unconstitutional, the decision shall not affect, impair, or nullify these standards and regulations as a whole or any of the remaining portions of these standards and regulations, or the application of any provision of these standards and regulations to any other lot, building, structure, or tract of land.

B. **As Applied**. If any provision of these standards and regulations is declared invalid or unconstitutional, the effect of the decision shall be limited to that lot, building, other structures, or tract of land immediately involved in the controversy, action, or proceeding in which the judgment or decree of invalidity is rendered.

## 1-02-07 Vested Rights

A. **Purpose.** The purpose of this section is to provide the procedure for approval of a vested property right in accordance with C.R.S. § 24-68-101 *et seq*.

B. **Applicability.** Vested rights may only be approved with the approval of a Site Specific Development Plan.

C. **Approval.** A vested right shall be deemed established with the approval or conditional approval of a Site Specific Development Plan. A conditional approval may impose such terms and conditions necessary to protect the public health, safety and welfare and to ensure compliance with the Adams County Comprehensive Plan and these standards and regulations. Failure to abide by such terms and conditions shall result in a forfeiture of vested rights. A vested property right, once established, shall attach and run with the applicable property.

D. **Term.**

1. *Effective Period.* A vested right shall remain in effect for three years from the date of approval of the Site Specific Development Plan or for such longer period as approved by the Board of County Commissioners.

2. *Extension Approval Criteria.* The Board of County Commissioners may extend the term of a vested right when such extension is deemed to be in the public interest and warranted in light of all relevant circumstances, including the size and phasing of the development, economic cycles, and market conditions.

3. *Extension Review.*

   a. An applicant desiring such an extension must file, at least 45 days prior to the expiration of the vesting period, an application for such extension with the Community and Economic Development Department and pay an administrative fee in

an amount specified in the Schedule of License, Permit, and Application Fees established by the Board of County Commissioners, a copy of which is on file in the Community and Economic Development Department.

b. Upon receipt of the application, the Community and Economic Development Department shall review the application and make a recommendation to the Board of County Commissioners that such extension be granted, granted with conditions or denied based on the applicable approval criteria. The Board of County Commissioners will then review the extension request and grant, grant with conditions or deny such extension based on the applicable approval criteria.

E. **Modification of Plan.** The Board of County Commissioners' approval of any modification to a Site Specific Development Plan shall not extend the term of a vested right unless expressly authorized by the Board of County Commissioners in accordance with the extension review process in this Section.

F. **Relationship to other Regulations.**

1. *Establishment*. A vested property right, once established, shall preclude any zoning or land use action by the County or pursuant to an initiated measure that would alter, impair, prevent, diminish, or otherwise delay the development or use of the property as set forth in the Site Specific development plan, except:

a. With the consent of the applicant;

b. Upon the discovery of natural or man-made hazards on or in the immediate vicinity of the property which could not reasonably have been discovered at the time of the Site Specific Development Plan approval and which, if not corrected, would pose a serious threat to the public health, safety, and welfare; or

c. To the extent that compensation is paid, as provided in C.R.S. § 24-68-105(1)(c).

2. *Application of Other Regulations*. The establishment of a vested property right shall not preclude the application of regulations which are general in nature and applicable to all property subject to land use regulation by the County, including, but not limited to, building, fire, plumbing, electrical, mechanical, water and sewer codes.

G. **Notice.** Approval of a Site Specific Development Plan shall be subject to all rights of referendum and judicial review, except the required number of days to commence such referendum or review shall not begin to run until a notice advising the general public of the approval and the creation of a vested property right is published, no later than 14 days after such approval, in a newspaper of general circulation within the County. The applicant is responsible for causing the publication of the notice and for paying all associated publication fees.

H. **Forfeiture of Vested Rights.** A vested property right shall terminate upon:

1. *Terms and Conditions*. Failure to abide by the terms and conditions of a conditionally approved Site Specific Development Plan;

2. *Site Specific Development Plan*. Substantial failure to comply with a Site Specific Development Plan; or

3. *Expiration*. The expiration of the vesting period.

I. **Limitations.** This section is intended to implement the provisions of C.R.S. § 24-68-101 *et seq*. If C.R.S. § 24-68-101 *et seq*. is repealed or judicially determined to be invalid or unconstitutional, this section shall be deemed repealed and the provisions of this section shall no longer be effective.

## 1-02-08 General Conditions of Land Use Approvals

A. **Purpose.** The purpose of this Section is to implement the requirements of C.R.S. § 29-20-201 *et seq*. and to ensure that conditions imposed on land use approvals do not result in the unlawful or unreasonable impairment of property rights.

B. **Conditions on Land Use Approvals.**

1. In imposing conditions on land use approvals, the County shall ensure that all conditions are reasonable, related to applicable review criteria, and supported by an essential nexus to a legitimate governmental interest, as required by C.R.S. § 29-20-203.
2. The County shall not require a property owner to dedicate real property to the public or pay money to a public entity in an amount determined on an individual and discretionary basis unless:
   a. An essential nexus between the dedication or payment and a legitimate government interest; and
   b. The dedication or payment is roughly proportional to the impact of the proposed use or development.
3. All conditions imposed on an approval shall be based on this DSR, consistent with the Adams County Comprehensive Plan, and any other standards and regulations that may from time to time be adopted by the Board of County Commissioners.
4. Generally, a project shall not create adverse impacts on adjacent properties or the surrounding area with respect to: traffic generation and circulation; noise, vibration, dust, light, glare, or odors; hours of operation; building scale, massing, and site design in relation to established development patterns; public service and infrastructure demand; and public health, safety, or environmental risks.

C. **General Conditions of Land Use Approvals.** Any property owner who alleges that the County has imposed a condition that violates the provisions of Subsection B, *Conditions on Land Use Approvals*, above, may seek remedies pursuant to C.R.S. § 29-20-204.

D. **Limitations.** This section is intended only to implement the provisions of C.R.S. § 29-20-201 *et seq*. If C.R.S. § 29-20-201 *et seq*. is repealed or judicially determined to be invalid or unconstitutional, this section shall be deemed repealed and the provisions of this section shall no longer be effective.

# Div. 1-03 Exceptions and Interpretations

## 1-03-01 Exceptions – Certain Dimensional Standards

A. **Generally**. The provisions of this Section set forth special cases that warrant flexibility in certain dimensional standards in this DSR.

B. **Height.**

1. *General*. Chimneys, cornices without windows, cupolas, domes not used for human occupancy, elevator penthouses, monuments, parapet walls, skylights, spires, belfries, steeples, theater scenery lofts, ventilators, and similar structures and necessary mechanical appurtenances covering not more than 25% of the roof area of the structure, may exceed the maximum permitted height in the district in which the site is located. In no

case may the exclusions exceed 150% of the height of the principal building without approval of a Variance in accordance with Sec. 13-07-03, *Variance*.

2. *Limited Height Restrictions.* Sports lighting facilities owned by or under the control of a governmental entity and utility poles and towers owned by a public utility and used for the transmission and distribution of electricity may be erected to any height in any zoning district, unless prohibited by airport height regulations.

C. **Front Setback**. Every part of a required front setback shall be open and unobstructed of structures from ground level of the graded lot to the sky, except as follows:

1. Bay windows projecting not more than three feet, and not within five feet of a lot line;
2. Chimneys projecting not more than three feet, and not within five feet of a lot line;
3. Steps four feet or less above grade, which are necessary for access to a permitted building or for access to a lot from a street or public way;
4. Awnings and canopies attached to a principal building and projecting not more than three feet, and located at least eight feet above adjoining walkways and driveways;
5. Open entrances, stoops, and porches, when not covered, may project not more than 10 feet from a principal building, but not more than 18 inches above grade;
6. Access ramps; and
7. Landscaping, fountains, sculptures, lighting fixtures, basketball hoops, swings, flagpoles, and mailboxes, which are situated and constructed in compliance with all other provisions, provided it does not obstruct the view of traffic.

D. **Corner and Side Setbacks**.

1. *Exceptions.* Every part of a required side setback shall be open and unobstructed of structures from ground level of the graded lot to the sky, except as follows:
   a. Central air conditioning units, heat pumps and solar collecting equipment, extending not more than 10 feet from the principal structure;
   b. Balconies and chimneys not projecting more than three feet;
   c. Off-street parking spaces and loading areas;
   d. Open entrances, stoops, and porches, when not covered, may project not more than 10 feet from a principal building, but not more than 18 inches above grade;
   e. Awnings and canopies attached to a principal building and projecting not more than three feet from the side of the building, and located at least eight feet above adjoining walkways and driveways;
   f. Landscaping, fountains, sculptures, lighting fixtures, basketball hoops, swings, playground equipment, above-ground pools or hot tubs, flagpoles and mailboxes, which are situated and constructed in compliance with all other ordinances, provided it does not obstruct the view of traffic; and
   g. The projections of roof eaves, not to exceed 30 inches, provided such projection shall be no closer than three feet to any side lot line.

## 1-03-02 Interpretations

A. **General.**

1. *Limits of Interpretation.* No interpretation shall authorize any use in a zone or overlay zone district unless the Director of Community and Economic Development (the "Director") determines the use is substantially similar to an expressly permitted use or conditionally permitted use in the district. No interpretation shall permit the establishment of any use inconsistent with the statement of purpose for the district in question, and no interpretation shall have the effect of amending, abrogating, or waiving any other standard or requirement established in these standards and regulations.
2. *Relationship of Interpretation to Other Standards.* The Director may require any use determined to be substantially similar to a permitted use or conditionally permitted use in a district to comply with all other standards contained in these standards and regulations pertaining to the substantially similar use, including, but not limited to, dimensional requirements, parking requirements, design requirements, and performance standards.

B. **Map Interpretations.**

1. *Procedure for Obtaining a Boundary Determination.*
   a. Before a boundary interpretation may be provided by the Director, a request for interpretation must be submitted to the Community and Economic Development Department in a form established by the Director. After the Director receives the request of interpretation, the Director shall determine whether the request is complete, specific, clear, and ready for review. If the Director determines the request is not complete, a written notice shall be sent to the applicant specifying the deficiencies. The Director shall take no further action on the request until the deficiencies are remedied.
   b. After the request has been determined to be complete, the Director shall review and evaluate the request in light of the terms and provisions of these standards and regulations and the zoning map and render a written interpretation. The Director may consult the County Attorney and other departments before rendering an interpretation. The written interpretation shall be sent to the applicant by U.S. Mail or electronic mail. Interpretations not in writing shall have no force or effect. Written interpretations set no precedent and shall be limited to the property identified in the interpretation.
   c. The Director shall maintain an official record of all interpretations in the Community and Economic Development Department. Such official record shall be available for inspection.
2. *Division of a Lot by a Zone District Boundary.* Where a zone or overlay zone district boundary line divides a lot, and where the division makes impractical the reasonable use of the lot, the zone or overlay zone district boundary may be adjusted by the Director in either direction not to exceed 100 feet beyond the district boundary line into the remaining portion of the lot.

C. **Text Interpretations.**

1. *Procedure for Obtaining an Interpretation of the Text of these Standards and Regulations.*
   a. Before a text interpretation may be provided by the Director, a request for interpretation must be submitted to the Community and Economic Development Department in a form established by the Director. After the Director receives the request of interpretation, the Director shall determine whether the request is complete, specific, clear, and ready for review. If the Director determines the request is not complete, a written notice shall be sent to the applicant specifying the

deficiencies. The Director shall take no further action on the request until the deficiencies are remedied.

b. After the request has been determined to be complete, the Director shall review and evaluate the request in light of the terms and provisions of these standards and regulations and the zoning map and render a written interpretation. The Director may consult the County Attorney and other departments before rendering an interpretation. The written interpretation shall be sent to the applicant by U.S. Mail or electronic mail. Interpretations not in writing shall have no force or effect. Written interpretations set no precedent and shall be limited to the property identified in the interpretation.

c. The Director shall maintain an official record of all interpretations in the Community and Economic Development Department. Such official record shall be available for inspection.

D. **Use Interpretations.** The uses permitted in each zone or overlay zone district are specifically designated in Div. 2-06, *Principal Use Tables*. No use not specifically permitted or conditionally permitted shall be allowed in a district unless the Director determines the use is substantially similar to an expressly permitted use or conditionally permitted in the district in accordance with the following provisions.

1. *Authorization of Unlisted Uses*. On written request, if a proposed use is not listed as part of a use category table in Div. 3-02, *Use Categories*, the Director may determine whether the proposed use is functionally similar to a use that is listed. Depending on such determination, the proposed use is then permitted, permitted with standards, allowed with a Conditional Use Permit, or prohibited.

2. *If Not Authorized, Then Prohibited*. If the Director determines that a proposed use does not fit within a given use category and is not substantially similar to an expressly permitted use or conditionally permitted use, then the use is a prohibited use.

3. *Decision Criteria*. In making such determinations, the Director may consider, but is not limited to the following criteria to determine whether a proposed use is appropriate:

a. Hours of operation;

b. Traffic impacts;

c. Environmental impacts;

d. Potential for adverse impacts on surrounding properties;

e. Whether the proposed use is typically housed in buildings or structures similar and compatible to those used to house allowed uses in the zoning district;

f. Where the proposed use is consistent with the purpose and intent of the particular zoning district;

g. The actual or projected characteristics of the activity in relation to those of the use type;

h. The amount of lot area or floor space and equipment devoted to the activity;

i. Vehicle parking demand;

j. Average daily and peak hour trip generation (people, personal vehicles, and delivery vehicles);

k. Types of vehicles used and their parking requirements;

l. Building coverage;

m. Solid waste generation;

n. Use and storage of hazardous materials;

o. How the use is advertised;

p. Visibility of Equipment;

q. Any other pertinent considerations necessary to assess the nature and impacts of a proposed use; and

r. Compliance with all federal, state, and local laws.

4. *Official Record*. The Director shall maintain an official record of all interpretations in the Community and Economic Development Department. Such official record shall be available for inspection.

5. *Appeal*. Appeals of the Director's decision may be made following procedures under Sec. 13-07-04, *Appeal of Administrative Decisions*. Unless the Director's decision is overturned on appeal, the proposed use shall be prohibited until Chapter 2 is amended to indicate that such use is an allowed in one or more zoning districts.

# CHAPTER 2 ZONE DISTRICTS AND LAND USES

**Contents:**

Div. 2-01 Zoning Districts Established
Div. 2-02 Designated Building Types
Div. 2-03 Exterior Building Design Standards
Div. 2-04 Designated Amenity Space Types
Div. 2-05 Designated Development Types
Div. 2-06 Principal Use Tables
Div. 2-07 District Dimensional Standards
Div. 2-08 Special Purpose and Overlay Zone Districts

## Div. 2-01 Zoning Districts Established

### 2-01-01 Official Zoning Map

A. **Zone District Boundaries**. The boundaries of the zone districts are shown on the Official Zoning Map of the County. The Official Zoning Map is a part of this DSR. The Official Zoning Map is maintained in the office of the Clerk and Recorder. Where uncertainty exists as to the boundaries of zone districts as shown on the Official Zoning Map, the Director of Community and Economic Development shall apply the following rules for determination.

1. *Omitted Land*. It is the intent of this DSR that every part of the unincorporated County be included in one of the zone districts established by this DSR. Any land located now or in the future in the County not shown to be included in a zone district shall be deemed to be classified as a zone district associated with the Future Land Use designation of the property, based on Table 2-01-02-1, *Zone Districts Established,* pending approval of a rezoning pursuant to the requirements of Sec. 13-04-04, *Zoning Map Amendment (Rezoning)*.
2. *Multiple Zone Districts*. Whenever a lot of record is divided by a boundary, development of the lot shall conform to the standards of the zoning in place on that specific portion of the lot. Refer to subsection B, *Division of a Lot by a Zone District Boundary*.
3. *Zone District Boundaries*. Unless otherwise specified, zone district boundaries are lot lines, street centerlines, or the center of river channels. The following rules govern interpretations regarding the location of zoning district boundaries.
4. *Municipal Boundaries*. Zone district boundaries shown as following or approximately following the limits of the municipal boundary shall be construed as following those limits.
5. *Streets and Highways*. Zone district boundaries shown as following or approximately following streets and/or highways shall be construed to follow the centerlines of those streets and/or highways.
6. *Section Lines*. Zone district boundaries approximately following section lines, one-half section, or one-quarter-section shall be construed as following those lines.
7. *Watercourses*. Zone district boundaries approximately following the centerlines of streams, rivers, or other continuously flowing watercourses shall be construed as following

the channel centerline of those watercourses taken at mean low water. In the event of a natural change in the location of those streams, rivers, or other watercourses, the zone district boundary shall be construed as moving with the channel centerline.

B. **Division of a Lot by a Zone District Boundary**. Where a zone or overlay zone district boundary line divides a lot, and where the division makes impractical the reasonable use of the lot, the zone or overlay zone district boundary may be adjusted by the Director of Community and Economic Development in either direction not to exceed 100 feet beyond the district boundary line into the remaining portion of the lot.

C. **Procedure for Obtaining a Boundary Interpretation**. See Sec. 1-03-02(B), *Map Interpretations*.

D. **Amendment**. Zoning Map Amendments approved by the Board of Commissioners shall be promptly reflected on the Official Zoning Map.

E. **Status**. The Official Zoning Map that is on file in the office of the Clerk and Recorder shall control in the event of a conflict between the Official Zoning Map and any other paper or digital reproduction of the map.

## 2-01-02 Zoning Districts and Purpose Statements

A. **Generally**. In order to regulate the use of land and buildings, regulate the location, height, bulk and size of buildings and other structures, to provide for minimum separation between uses and structures, and regulate the use and development of land and buildings where specific issues or concerns must be mitigated due to unusual and unique circumstances or where alternative design concepts are desired or are necessary to mitigate specific conditions, the unincorporated areas of Adams County are divided into the zone districts listed in Table 2-01-02-1, *Zoning Districts Established*.

B. **Zone Districts Table**. Table 2-01-02-1 relates each zone district to the Future Land Use Categories in the Comprehensive Plan that each zone district implements and shows the former zone district designations that the County repealed and replaced on January 1, 2027, where applicable.

C. **Legacy Districts.** Refer to Appendix A, Legacy Districts, for provisions for zone districts that were part of the previous DSR, but that are not part of this DSR. Legacy districts may continue to regulate the development of a given property but shall not be the requested district for a Zoning Map Amendment after January 1, 2027. Appendix A in incorporated herein by reference and made a part hereof.

**Table 2-01-02-1, *Zone Districts Established***

| Zone District (Abbreviation) | **Purpose:** The purpose of this zone district is to provide for: | Former Zone District Designation |
|---|---|---|
| **Base Agriculture Zone Districts** | | |
| Agricultural-1 (A-1) | A rural single-family detached dwelling district where the minimum lot area for a home site is intended to provide for a rural living experience. Limited farming uses are permitted including the keeping of a limited number of animals for individual homeowner's use. This district is primarily designed | N/A |

| Table 2-01-02-1, *Zone Districts Established* | | |
|---|---|---|
| Zone District (Abbreviation) | **Purpose:** The purpose of this zone district is to provide for: | Former Zone District Designation |
| | for the utilization and enjoyment of the County's rural environment. | |
| Agricultural-2 (A-2) | A district for rural subdivisions of at least 10 acres in size. Farming uses are permitted, including the cultivation of land and the keeping of a limited number of animals, together with low density single-family detached residential. | N/A |
| Agricultural-3 (A-3) | Land primarily in holdings of at least 35 acres for dryland or irrigated farming, pasturage, or other related food production uses and their support uses together with extremely low density single-family detached residential. | N/A |
| **Base Residential Zone Districts** | | |
| Residential Estate (RE) | A single-family detached residential district for larger lots and larger homes in a spacious, open environment away from higher density uses and where agricultural uses and the keeping of livestock are substantially restricted. | N/A |
| Residential-Low Density (R-1-C) | A single-family district for smaller home sites and smaller homes compared to the RE zone district. | N/A |
| Residential Mixed (R-2) | A residential district that permits two-family dwellings, multiplexes, and single-family dwellings in a moderate-density setting. | N/A |
| Residential Moderate Density (R-3) | A moderate-density residential district that allows four or more dwelling units on a single lot. | N/A |
| Residential Mixed High Density (R-4) | A high-density residential district that allows multi-family residences on a single lot. | N/A |
| **Base Nonresidential and Mixed Use Zone Districts** | | |
| Neighborhood Commercial (NC) | A mix of light commercial uses and housing where smaller-scale developments serve nearby residents. The district does not include uses that generate intensive, high-traffic activity. | C-0, C-1 |
| General Commercial (GC) | More intensive commercial developments compared to the NC district, with auto-oriented retail, office, entertainment, restaurants, and overnight accommodations that need high visibility and that are situated primarily along major roadways. | C-2, C-3 |
| Heavy Commercial (HC) | Areas for commercial development incompatible with neighborhood or general commercial contexts. | C-4, C-5 |

| Table 2-01-02-1, *Zone Districts Established* | | |
|---|---|---|
| Zone District (Abbreviation) | **Purpose:** The purpose of this zone district is to provide for: | Former Zone District Designation |
| | Permitted uses may include outdoor storage and the transportation of materials by heavy trucks, which require loading and docking areas incompatible with neighborhood or regional-scale uses. | |
| Mixed Use (MU) | A district that provides a flexible approach to land uses and enhances the character of Adams County's commercial corridors and centers by promoting development that:<br>1. Creates a balanced mix of land uses;<br>2. Facilitates quality mixed use development that is consistent with the goals and strategies of the Comprehensive Plan;<br>3. Supports a sustainable and resilient local economy;<br>4. Provides unique places for people to live, work, shop, and play;<br>5. Improves the public realm through high quality design;<br>6. Promotes use by pedestrians, bicyclists, and transit users, in addition to automobiles;<br>7. Encourages active lifestyles; and<br>8. Maintains the character and integrity of adjacent residential neighborhoods. | N/A |
| Transit Oriented Development (TOD) | The purpose of the Transit-Oriented Development (TOD) district designation is to encourage compact urban growth patterns, provide opportunities for increased transportation mode choice, reduce reliance on the automobile, and create a safe and pleasant pedestrian environment. The district regulations help ensure an attractive streetscape, a functional mix of complementary uses, and provision of amenities that support the use of transit, bicycles, and pedestrian facilities. | N/A |
| Industrial-1 (I-1) | General commercial and limited industrial development designed to provide for a variety of compatible business, warehouse, wholesale, offices, and very limited industrial uses. | N/A |
| Industrial-2 (I-2) | Light manufacturing, processing, fabrication, assembly, and storage of non-hazardous and/or non-obnoxious material and products as well as allowing service facilities for industries and their employees. | N/A |

| Table 2-01-02-1, *Zone Districts Established* | | |
|---|---|---|
| Zone District (Abbreviation) | **Purpose:** The purpose of this zone district is to provide for: | Former Zone District Designation |
| Industrial-3 (I-3) | Heavy industrial development designed to accommodate most industrial enterprises. | N/A |
| **Special Purpose and Overlay Zone Districts** | | |
| Neighborhood Park (NP) | A district focused on open space, park and recreational uses that are compatible in a residential or mixed-use setting. These parks are typically centrally located within neighborhoods, along collector streets, along trail corridors, or in more urban areas. Active and passive recreational uses are permitted, as well as structures that support these recreational uses. Neighborhood parks are intended to be owned and operated by a public or quasi-public park, open space or recreation department or district and generally are open for all to use. | N/A |
| Regional Park (RP) | A district for facilities and recreational amenities intended to serve a broader area drawing users from the County as a whole and the region. Unique uses are also appropriate in this zone district, including but not limited to, indoor commercial recreation/entertainment, outdoor commercial recreation, fairgrounds, agricultural demonstration areas, agritourism uses, entertainment, cultural, educational uses, institutional uses and sports facilities with limited commercial uses so long as the uses are primarily operated by a public or quasi-public park, open space or recreation department or district on land owned by a public or quasi-public park, open space or recreation department or district. Additionally, regional parks may protect large areas with natural resource value of regional importance and include trails and opportunities for nature-based and play area-based recreation. | N/A |
| Natural Areas (NA) | Provide for a district for the preservation of open space and critical natural areas in Adams County. These areas may represent diverse types of land and possess varied physical and geographical conditions and are an important resource which should be protected. Because of the diversity of Adams County's ecology and environment, lot sizes will vary in this zone district to enable effective water conservation, preservation, and protection of the environment and wildlife. Development and active | N/A |

| Table 2-01-02-1, *Zone Districts Established* | | |
|---|---|---|
| Zone District (Abbreviation) | **Purpose:** The purpose of this zone district is to provide for: | Former Zone District Designation |
| | uses are limited in this zone district, and passive recreation is generally allowed. The most intensive uses of these areas will normally be for outdoor recreation activities or passive uses not requiring significant infrastructure such as roads or utility services. | |
| Public Lands and Facilities District (PL) | the protection of established public lands and to provide an area in the County for location of government buildings and facilities, schools and school grounds, quasi-public buildings and facilities, and related open space. | N/A |
| Aviation (AV) | Nonresidential land uses associated with aviation operations while minimizing risks to public safety and hazards to aviation users including those employed at public aviation facilities. | N/A |
| Denver International Airport (DIA) | Nonresidential land uses associated with aviation operations, roadways, or passive uses while minimizing risks to public safety and hazards to aviation users including those employed at public aviation facilities. The uses and standards established and enforced in the DIA District are provided in the Intergovernmental Agreement signed and dated April 21, 1988 and within any subsequent agreements or amendments. | N/A |
| Airport Height Overlay (AHO) | Providing protection of residential and nonresidential land uses in areas which may be subjected to frequent overflights by aircraft flying low to the ground upon an approach to landing, upon takeoff, or operating in a traffic pattern at an aviation facility. Within this area, the hazards of natural and man-made objects may create severe hazards to aviation and must be regulated accordingly. | N/A |
| Airport Influence Overlay (AIO) | For areas within the County suitable for the economical development and safe operation of air carrier and/or general aviation airports for public use without adversely affecting the activities upon surrounding properties.<br>The Airport Influence Overlay Zone District is also intended to provide for notice and disclosure of the airport location to owners of residential and non- | N/A |

|---|---|---|
| Zone District (Abbreviation) | **Purpose:** The purpose of this zone district is to provide for: | Former Zone District Designation |
| | residential properties in areas which may be subjected to aircraft activities of such duration and frequency which would constitute a nuisance to residential and other uses. | |
| Airport Noise Overlay (ANO) | For protection of residential and non-residential land uses in areas which may be subjected to noise levels of such duration and frequency which would constitute a nuisance to residential and other uses. | N/A |
| Flammable Gas Overlay (FGO) | Reasonable and uniform limitations, safeguards, and controls over uses of land designated as and/or adjacent to an operating or former solid waste disposal site. Any building, excavation, construction, or other use proposed in this zone district shall require testing and/or mitigation related to flammable gas, as specified in this section, prior to obtaining a Building Permit and after receiving a certificate of occupancy. The requirements of this section are intended to assure the protection of life and property from such related hazards as flammable gas, gas migration, asphyxiation, and explosion. | N/A |
| Floodplain Overlay (FO) | 1. Land use controls necessary to qualify unincorporated areas of the County for flood insurance under requirements of the National Flood Insurance Act of 1968, as amended; to protect life, property, and health; to ensure the best available data is used in making development decisions; to avoid increasing flood levels or flood hazards or creating new flood hazard areas; to minimize public and private losses due to flooding; to reduce the need for expenditures of public money for flood control projects; to reduce the need for rescue and relief efforts associated with flooding; to prevent or minimize damage to public infrastructure, facilities, and utilities; and to meet or exceed Federal Emergency Management Agency (FEMA) and Colorado Water Conservation Board (CWCB) minimum standards for floodplain regulation; and<br>2. Regulation of development that occurs within the Special Flood Hazard Area, in accordance with FEMA requirements for all communities that | Flood Control Overlay (FCO) |

|---|---|---|
| Zone District (Abbreviation) | **Purpose:** The purpose of this zone district is to provide for: | Former Zone District Designation |
| | participate in the National Flood Insurance Program (NFIP). | |
| Mineral Conservation Overlay (MCO) | Reasonable and uniform limitations, safeguards, and controls for the conservation and wise utilization of natural resources and for rehabilitation of excavated land. Land within this classification is designated as containing commercial mineral deposits in sufficient size parcels and in areas where extraction and rehabilitation can be undertaken while still protecting the health, safety, and welfare of the inhabitants of the area and the County. In cases where the location of the district or use abuts other zoning or use of land, structures, excavation, and rehabilitation may be restricted to be compatible with and protect the adjoining area. | N/A |
| Natural Resources Conservation Overlay (NRCO) | 1. The protection of natural, wildlife, wildlife habitat, agricultural, and cultural resources, which are an essential component of the community's economic base and establish the character of the community; and<br>2. The preservation and enhancement of the quality of life for County residents. | N/A |
| Planned Unit Development (PUD) | Establish an area of land, controlled by one or more landowners, to be developed under unified control or unified plan of development for a number of residential or nonresidential uses, the plan for which does not correspond in lot size, bulk, or type of use, density, lot coverage, open space, or other restriction or standard in this DSR.<br>A PUD allows greater flexibility in the design of a development, more variety and diversification in the relationships between buildings, open spaces and uses, and conservation and retention of historical and natural topographic features while meeting the goals, policies and objectives of the comprehensive plan. | N/A |
| **Legacy Districts** | | |
| Mobile Home Dwelling (MH) | A district that allows manufactured home parks and subdivisions with necessary facilities and amenity space. | |

# Div. 2-02 Designated Building Types

## 2-02-01 General Provisions

A. **Purpose**. This Division sets forth a common terminology for each type of building permitted as a principal use in each zone district, as shown in Table 2-02-01-1, *Permitted Building Types by Residential District*, and Table 2-02-01-2, *Permitted Building Types by Mixed Use and Nonresidential District*. It also provides a general description of the architectural and other physical features of each building type which contribute to an orderly and identifiable character in each zone district and throughout the County.

B. **Applicability**. This Division applies to:

1. *New.* New principal buildings and accessory dwelling units.
2. *Major Expansions or Alterations.* The entire existing principal building or accessory dwelling unit when an expansion or alteration exceeds 50% of the building's existing square footage prior to the expansion or alteration.

C. **Permitted Building Types by District**. Building types may be constructed only within districts where the building type is permitted.

D. **Permitted Building Types and Associated Land Use Types**. A building type may accommodate an associated land use type as established in each district in Div. 2-05, *Principal Use Tables.*

E. **Building Design Requirements**. All buildings shall comply with the building design requirements established in this Division and Div. 2-03, *Exterior Building Design Standards*.

F. **Most Similar Building Type**. If a property owner proposes to expand or alter an existing structure, standards of the most similar housing or building type shall apply. In cases of uncertainty, the Community and Economic Development Director may determine the building type that most closely corresponds to the existing structure. The Community and Economic Development Director's determination shall be based on the following aspects of the existing structure:

1. The general width, depth, and height;
2. The placement of the structure on the lot;
3. The type and appearance of the building frontage;
4. The land uses currently and customarily associated with the structure; and
5. The number of legally established residential and/or nonresidential units within the structure (where applicable).

G. **Permanence.** All principal and accessory buildings shall be erected on a permanent foundation. All buildings shall be connected to all required utilities.

H. **Agricultural Districts Exempt**. The standards of this Division do not apply in agricultural districts.

I. **Multiple Building Types on One Lot**. Unless otherwise expressly prohibited, multiple building types are permitted on a single lot, where the zone district allows more than one principal building on a lot.

**Table 2-02-01-1, *Permitted Building Types by Residential District***

**TABLE NOTES**:
"P" = permitted | "--" = prohibited | "*" = Pecos Junction Station Area Only

# 2-02-02 Single-Family Detached Dwelling or Modular Home

A. **Generally.** The single-family detached building type includes two subtypes, site-built houses and modular homes as depicted in Figure 2-02-02-1, *Single-Family Detached or Modular Home*. Both subtypes are detached dwelling units located on a single lot with private yards on all four sides.

B. **Single-Family Detached Dwelling**. This building subtype is a small-scale, freestanding dwelling that is constructed on site and is not attached to another dwelling. The primary entrance is defined by a porch, stoop, or recessed entry. Most have a pitched roof unless the building is art-deco or contemporary in style. High-quality and durable materials are features of this building type.

C. **Modular Home**. This building subtype is a customized house that is prefabricated offsite in a factory, transported to the site, and assembled on a permanent foundation. The term modular home does not include a recreational vehicle. As with stick-built single-family detached dwelling, a modular home has the following characteristics:

1. It shall not be attached to another dwelling.
2. It shall provide all of the accommodations necessary to be a dwelling unit; and
3. It shall be connected to all utilities in conformance with applicable regulations.
4. A modular home also meets these additional requirements:
   a. It is not designed to be moved once so erected or installed; and
   b. It is designed and manufactured to comply with a nationally recognized model building code or an equivalent local code, or with a state or local modular building code recognized as generally equivalent to building codes for site-built housing.

**Figure 2-02-02-1, *Single-Family Detached or Modular Home***

| Single-Family Detached Dwelling | Modular Home |
|---|---|
| | |

## 2-02-03 Zero Lot Line Dwelling

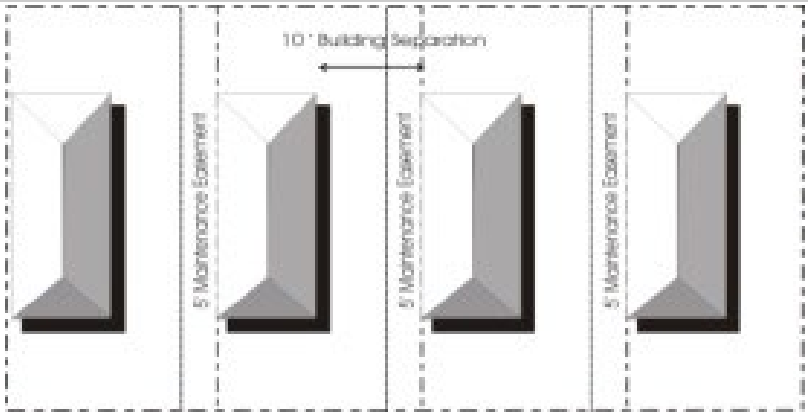
A. **Generally.** A zero lot line dwelling is a single-family detached dwelling unit located on a single lot with private yards on three sides, as depicted in Figure 2-02-03-1, *Zero Lot Line Dwelling*. The unit has a single side yard on one side, comprising the equivalent of two side yards of a single-family detached dwelling. A zero lot line development shall be created for an entire block, as a row of units, or as a cluster, to achieve an overall compatibility of design and to ensures that zero lot line dwellings are not situated immediately adjacent to traditionally sited dwellings.

B. **Site Area**. The site area designated for zero lot line development shall not be less than one acre or one-half block of a street.

C. **Location**. Zero lot line development shall be carried out for an entire block, as a row of units or as a cluster to achieve an overall compatibility of design. Zero lot line dwellings shall not be situated immediately adjacent to traditionally sited dwellings.

D. **Single Side Yard**. A single side yard shall be provided comprising the equivalent of two side yards of a conventional detached house, or 10 feet, whichever is more. This reduction shall not be allowed on the street yard or to the side yard adjacent to lots that are not part of the zero lot line development.

***Figure 2-02-03-1, Zero Lot Line Development***



E. **Easement**. An easement on the lot adjacent to the zero lot line shall be required to allow for maintenance or repair when the roof overhang or side wall of the house are within four feet of the adjacent property line. The easement on the adjacent property must provide at least six feet of unobstructed space. The easement shall be recorded on the subdivision plat.

F. **Eaves**. The eaves on the side of a house with a reduced setback may project a maximum of 18 inches over the adjacent property line. In this case, an easement for the eave projection must be recorded on the deed for the lot where the projection occurs.

G. **Windows**. If the side wall of the house is on the property line, or within three feet of the property line, windows or other openings that allow for visibility into the side yard of the adjacent lot shall not be allowed, unless required by the Building Code for emergency egress. Windows that do not allow visibility into the side yard of the adjacent lot, such as a clerestory window or a translucent window, shall be allowed.

H. **Encroachment**. The exterior wall plane of a dwelling unit in a zero lot line development shall not extend beyond the property line.

I. **Setbacks**. Corner lot/unit configurations must have a front and side setback.

**Figure 2-02-03-2, *Zero Lot Line Dwelling***

## 2-02-04 Manufactured Home Dwelling

A. **Manufactured Home Dwelling**. A single-family detached dwelling unit that is eight feet or more in width and is intended to be used for long-term residential occupancy. Such a unit is designed to be transported after fabrication and is capable of being installed in a permanent or semi-permanent location, with or without a permanent foundation, when the required plumbing, heating, and electrical facilities are connected.

B. **Certification Required.** A manufactured home is required to be certified by the United States Secretary of Housing and Urban Development to ensure it was constructed in compliance with the requirements of 42 U.S.C. § 5401, *Manufactured Home Construction and Safety Standards*.

C. **Applicable Use Standards.** Manufactured Homes are subject to specific use standards in Sec. 3-05-08, *Manufactured Home Dwelling or Park*.

**Figure 2-02-04-1, *Manufactured Home Dwelling***

## 2-02-05 Two-Family Dwelling

A. **Generally.** A two-family structure with two attached dwelling units in a single structure on a single lot or separate lots, with units located on separate floors (vertical two-family dwelling) or side by side (horizontal two-family dwelling). The primary entrance of each unit faces the street or a common area. Two-family dwellings may have a primary exterior entrance that is shared by each unit, or, each unit may have its own primary exterior entrance. Two-family dwellings are also referred to as duplexes.

**Figure 2-02-05-1, *Two-Family Dwelling***

| Vertical Two-Family Dwelling | Horizontal Two-Family Dwelling |
|---|---|

## 2-02-06 Townhouse Dwelling

A. **Generally.** This building type, as depicted in Figure 2-02-06-1, *Townhouse*, includes a minimum of three to a maximum of eight attached dwelling units located on the same or separately owned lots. The units span the entire width of each lot, are lined up in a row, and share side walls. Dwelling units cannot be mixed vertically.

B. **Yards**. Side yards are not required for interior townhouses, but front, corner, street side, interior side, and rear setbacks shall be provided to all dwelling units.

C. **Building Separation**. The minimum separation between each group of townhouses shall be 20 feet, provided that one additional foot of separation shall be required for every two and one-half feet of the average building height over 22.5 feet. The average building height equals the average height of all townhouses under consideration.

D. **Garages and Parking**. All townhouse parking shall be accommodated on the street, where such parking is permitted, in garages or parking areas located to the rear of the building, or within an interior courtyard area of the development.

E. **Structure Siting**. Structures shall be organized on the site in a clustered, efficient manner. There shall be a continuity of design in structure groupings. In larger projects, the unit type shall vary between groupings. Structures should be grouped in such a way to provide visual interest.

**Figure 2-02-06-1, *Townhouse***

## 2-02-07 Multiplex Dwelling

A. **Generally.** This building type is a single building on a single lot with the exterior appearance of a single-family detached dwelling, as depicted in Figure 2-02-07-1, *Multiplex Dwelling*. Each building contains three or four dwelling units and no nonresidential element. Depending on the zone district, the dwelling may be setback from the front property line with one or more garage doors facing the primary street or built to the front property line with parking in the rear.

B. **Appearance**. Multiplexes shall be designed to appear like a large single-family detached dwelling with a maximum of one entryway visible per facade.

C. **Building Scale and Massing**. Any portion of a multiplex that is closer than 50 feet from a common property line that abuts a single- or two-family dwelling shall be no higher than 12 feet above the highest point of the single- or two-family dwelling.

D. **Garages**. Attached street-facing garages shall meet one of the following standards:

1. The garage doors shall not be more than 34 feet in width; or

2. Garages shall be arranged in sets in no more than three single-bay doors that are offset by at least five feet from the front plane of an adjacent garage door.

E. **Buffering**. A multiplex adjacent to a single- or two-family dwelling in the same zone district shall provide a Type A bufferyard as established in Sec. 4-04-03, *Bufferyards and Screening*.

**Figure 2-02-07-1, *Multiplex Dwelling***

## 2-02-08 Multi-Family Dwelling

A. **Generally.** A single residential building or set of residential buildings on a single lot that contains five or more dwelling units that may be mixed vertically. Units share common walls, floors and ceilings with one or more units, as depicted in Figure 2-02-08-1, *Multi-Family Dwelling*. Depending on the zone district, the dwelling may be setback from the front property line or built to it.

B. **Interior Accessways.** Pedestrian access shall be constructed to link residential buildings with other on-site elements such as parking, adjoining public sidewalks and streets, mailboxes, and trash dumpsters.

C. **Building Separation.** The minimum building separation in a complex shall be 10 feet, provided that one additional foot of setback shall be required for every two and one-half feet of the average building height over 22.5 feet on the basis of the average height of the two buildings.

D. **Trash Receptacles**. Trash receptacles shall not be located in the front yard.

E. **Single- and Two-Family Dwelling Adjacency.**

1. *Buffering.* A multi-family dwelling adjacent to a single- or two-family dwelling in the same zone district shall provide a Type B bufferyard as established in Sec. 4-04-03, *Bufferyards and Screening*.
2. *Building Scale and Massing.* Any portion of a multi-dwelling household that is closer than 50 feet from a common property line that abuts a single- or two-family dwelling shall be no higher than 12 feet above the highest point of the single- or two-family dwelling.

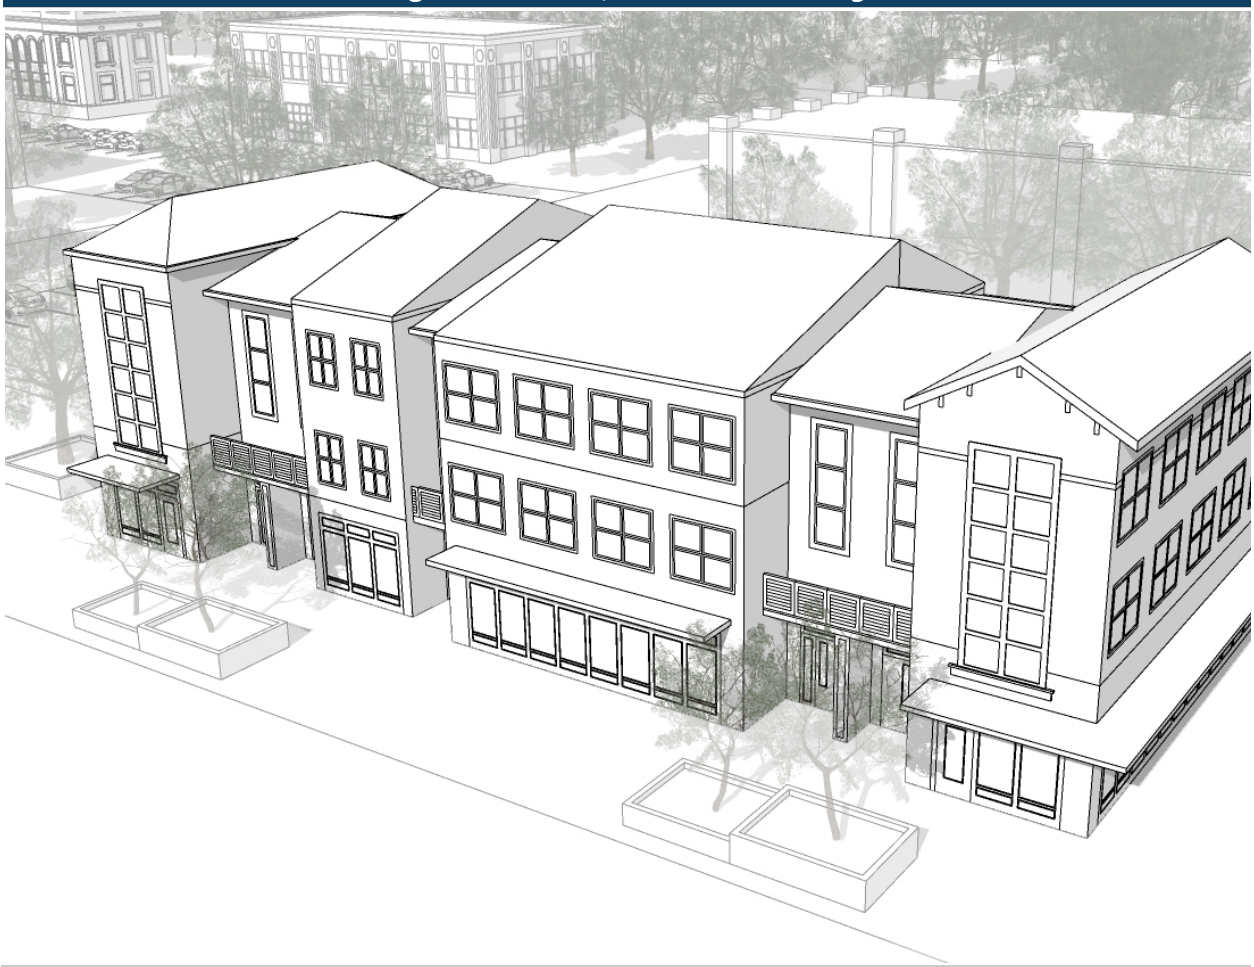
**Figure 2-02-08-1, *Multi-Family Dwelling***

## 2-02-09 Live-Work Building

A. **Generally.** A building that combines a dwelling unit with an integrated workspace that is principally used by one or more of the residents of the dwelling unit. The workspace is secondary or accessory to the primary residential use, as depicted in Figure 2-02-09-1, *Live-Work Building*.

B. **Live-Work Building Standards**. Refer to Sec. 2-02-10, *Mixed Use Building*.

**Figure 2-02-09-1, *Live-Work Building***



## 2-02-10 Mixed Use Building

A. **Generally.** A multi-story building designed for a vertical mix of uses, with space for retail, repair, sales, and service uses on the first floor and residential, office, or overnight accommodations on the upper floors, as depicted in Figure 2-02-10-1, *Mixed Use Building*. surface or structured parking in the rear or provided on the street or off site.

B. **Building Form**.

1. *Public Entrance.* Doorways adjacent to a public right-of-way shall be set back so that doors do not swing into a right-of-way.
2. *Scale and Orientation.* Mixed Use Buildings shall provide for pedestrians in both scale and structure orientation.

C. **Service Area Screening**. Service areas, garbage receptacles, utility meters, and mechanical and electrical equipment shall be screened from public view and located for convenient access by service vehicles. Screening of these areas shall be integrated into the overall building and landscape design.

D. **Loading and Unloading**. On-site space for stacking vehicles that are waiting to load or unload may be provided as necessary. Otherwise, accommodation shall be provided on-street.

E. **Increased Maximum Front Setback**.

1. *Angled Entrance*. If a public entrance is at the corner of a building, the angular façade containing the entrance may be recessed a maximum of eight feet from the intersection of the two right-of-way lines.
2. *Additional Setback*. Buildings may exceed the maximum setback to a maximum of 10 feet to provide:
   a. A wider sidewalk along the building frontage;
   b. A required amenity space area or other pedestrian amenities; or
   c. To accommodate the sight distance triangle.

**Figure 2-02-10-1, *Mixed Use Building***

## 2-02-11 Commercial Building

A. **Generally.** This building type is a single- or multi-story structure that accommodates a variety of commercial uses without a residential element, as depicted in Figure 2-02-11-1, *Commercial Building*. The building is typically setback from the front property line with parking or landscaping between the building and street.

B. **Building Entrances**. Each building shall have clearly defined customer entrances that include at least three of the following features:

1. Canopies, porticos, arcades, or overhangs;
2. Recesses or projections;
3. Over the door or peaked roof forms;
4. Arches;
5. Outdoor patios or plazas;
6. Display windows;
7. Obviously differentiating architectural details such as moldings that are integrated into the building structure and design; or

8. Integral planters or wing walls that incorporate landscaped areas and/or places for sitting.

C. **Elevations**.

1. *Front Elevation.* The front elevation of a building shall be oriented parallel to the primary street frontages and accessways and shall have:
   a. Architectural features that animate the façade along its entire length, spaced at intervals of not more than 30 feet in horizontal distance. These features may include wall sconces, display windows, faux windows, material patterning, entry areas, towers, pilasters, and columns, or other elements that create a pattern of light and shadow on the building wall.
   b. Awnings, arcades, or overhangs that project at least six feet along not less than 50% of the façade.
2. *Side and Rear Elevations.* Side and rear elevations shall have architectural features that animate a minimum of 50% of the façade, which shall include:
   a. Awnings, arcades, or overhangs that project at least six feet and connect to awnings, arcades, or overhangs on the front elevation;
   b. No blank wall surfaces that extend for more than 15 or 30 feet in vertical or horizontal distance, respectively; and
   c. Wall sconces, display windows, faux windows, material patterning, entry areas, towers, pilasters, and columns, or other elements that create a pattern of light and shadow on the building wall.

D. **Multiple Building Site Development Standards**. Where multiple commercial buildings are proposed, the building footprints may be configured as individual pads, pads wrapping the anchor(s), or the site may utilize Shop building types as liner buildings wrapping edges of the development. Multiple building layouts shall be completed in accordance with the following requirements.

1. *Location Standards.* Pad sites shall be clustered together to define street edges and entry points or to enclose and create community amenities and visual interest between buildings. Pad site building wall planes shall be no more than 100 feet from primary street frontages, minor arterial streets, or entrance driveway. Isolated pad buildings will be reviewed on a case-by-case basis but shall be adjacent to roads or entrance driveways as required herein.
2. *Orientation.* Buildings shall be oriented parallel or perpendicular to primary street frontages or entrance driveways.

**Figure 2-02-11-1, *Commercial Building***

## 2-02-12 Office-Institutional Building

A. **General**. A building designed for office or institutional uses, without a residential element, as depicted in Figure 2-02-12-1, *Office Building*. The building has a slight to moderate setback with a landscaped front yard with parking on the street, to the rear, or off site.

**Figure 2-02-12-1, *Office Building***

## 2-02-13 Industrial Building

A. **Generally**. A large building designed for industrial, warehousing, and wholesale uses that may also contain offices as a secondary element, as depicted in Figure 2-02-13-1, *Industrial Building*. The building is typically setback from the front property line with parking or landscaping predominating the frontage.

B. **Building Entrances**. Each building shall have clearly defined customer entrances that include at least one of the following features:

1. Canopies, porticos, arcades, or overhangs;
2. Recesses or projections;
3. Over the door or peaked roof forms;
4. Arches;
5. Obviously differentiating architectural details such as moldings that are integrated into the building structure and design; or
6. Integral planters or wing walls that incorporate landscaped areas and/or places for sitting.

C. **Elevations**.

1. *Front Elevation*. The front elevation of a building shall be oriented parallel to the primary street frontages and accessways and shall have architectural features that animate the façade along its entire length, spaced at intervals of not more than 100 feet in horizontal distance. These features may include faux windows, material patterning, entry areas, or other elements that create a pattern of light and shadow on the building wall.
2. *Side Elevations*.
   a. Side elevations visible from a public street shall have architectural features that animate a minimum of 50% of the façade, which shall include:
      (1) No blank wall surfaces that extend for more than 30 or 100 feet in vertical or horizontal distance, respectively; and
      (2) Faux windows, material patterning, entry areas, or other elements that create a pattern of light and shadow on the building wall.
3. *Rear Elevations*. Rear elevations are not subject to the standards of this Section.

**Figure 2-02-13-1, *Industrial Building***

## 2-02-14 Shop Building

A. **Generally**. A single- or two-story building of 19,999 square feet or less that accommodates a variety of commercial uses without a residential element. The building may be built to the

property line either as the principal structure or as a liner building in conjunction with a commercial or flex building.

B. **Building Entrances**. Each building shall have clearly defined customer entrances that include at least two of the following features:

1. Canopies, porticos, arcades, or overhangs;
2. Recesses or projections;
3. Over the door or peaked roof forms;
4. Arches;
5. Outdoor patios or plazas;
6. Display windows;
7. Obviously differentiating architectural details such as moldings that are integrated into the building structure and design; or
8. Integral planters or wing walls that incorporate landscaped areas and/or places for sitting.

C. **Elevations**.

1. *Front Elevation.* The front elevation of a building shall be oriented within 30 degrees of parallel to the primary street frontages and accessways and shall have:
   a. Architectural features that animate the façade along its entire length, spaced at intervals of not more than 20 feet in horizontal distance. These features may include wall sconces, display windows, faux windows, material patterning, entry areas, towers, pilasters, and columns, or other elements that create a pattern of light and shadow on the building wall.
   b. Awnings, arcades, or overhangs that project at least six feet along not less than 75% of the façade.
2. *Side and Rear Elevations.* Side and rear elevations shall have architectural features that animate a minimum of 75% of the façade, which shall include:
   a. Awnings, arcades, or overhangs that project at least six feet and connect to awnings, arcades, or overhangs on the front elevation;
   b. No blank wall surfaces that extend for more than 15 or 20 feet in vertical or horizontal distance, respectively; and
   c. Wall sconces, display windows, faux windows, material patterning, entry areas, towers, pilasters, and columns, or other elements that create a pattern of light and shadow on the building wall.

D. **Multiple Building Site Development Standards**. Where multiple shop buildings are proposed, the building footprints may be configured as individual pads, pads wrapping the anchor(s), or contiguous liner buildings wrapping edges of the development. Multiple building layouts shall be completed in accordance with the following requirements.

1. *Location Standards*. Pad sites shall be clustered together to define street edges and entry points or to enclose and create community amenities and visual interest between buildings. Pad site building wall planes shall be no more than 100 feet from primary street frontages, minor arterial streets, or entrance driveway. Isolated pad buildings will be reviewed on a case-by-case basis but shall be adjacent to roads or entrance driveways as required herein.

2. *Orientation*. Buildings shall be oriented parallel or perpendicular to primary street frontages or entrance driveways as depicted in Figure 2-02-14-1, *Shop Building*.

**Figure 2-02-14-1, *Shop Building***

## 2-02-15 Accessory Dwelling Unit

A. **Generally.** A dwelling unit that is located on the same site as but has a separate entrance from and is subordinate to, in floor area, a single-family detached dwelling or two-family dwelling and that complies with the standards of Sec. 3-13-02.A, *Accessory Dwelling Units.*

**Figure 2-02-15-1, *Accessory Dwelling Unit***

# Div. 2-03 Exterior Building Design Standards

## 2-03-01 General Provisions

A. **Applicability.**

1. *New Construction.* The building design standards in this Division apply to all new principal buildings unless otherwise specified in subsection A(3).
2. *Major Additions or Renovations.* These standards also apply to any building that is:
   a. Expanded by 50% or more of its gross floor area; or
   b. Altered in a way that modifies 50% or more of its street-facing facade.
3. *Exemptions.*
   a. Minor additions or renovations that do not exceed these thresholds are exempt, unless otherwise specified in Secs. 2-03-02 through 2-03-04.
   b. *Single-Family Detached and Two-Family Dwellings.* For single-family detached and two-family dwellings, only the material prohibitions in subsection C(1) apply, unless otherwise specified in Sec. 2-03-02, *Residential*.
   c. *Accessory Structures.* Accessory structures serving single-family detached and two-family dwellings (e.g., garages, sheds, or ADUs) are exempt from the standards of this Division.
   d. *Agricultural Zoned Properties.* The building design standards of this Division do not apply to structures on an Agricultural zoned property.
4. *Conflicts with Other Sections.* In the event of conflict between this Section and district-specific standards, the more specific or restrictive provision shall apply.

B. **Permitted Exterior Building Materials**.

1. *Material Standards.*
   a. All buildings shall use high-quality, durable exterior materials consistent with traditional architecture in Adams County.
   b. Materials visible from public streets or open space shall comply with Table 4-07-01-1, *Permitted Exterior Building Materials*.
   c. Where applicable, refer also to the building type-specific requirements in Secs. 2-03-02, 2-03-03, and 2-03-04.
2. *Facade Composition.*
   a. Building facades visible from public rights-of-way, parking areas, or amenity spaces shall incorporate at least two distinct exterior finish materials.
   b. The application of these materials shall be proportional and consistent across all visible elevations.
   c. Visual variety shall be achieved through one or more of the following:
      (1) Variation in materials and colors;
      (2) Architectural features (e.g., porches, porticos, dormers, bay windows, shutters, awnings).
3. *Material Transitions.* Where multiple materials are used:

a. Transitions shall coincide with architectural elements, changes in plane, or structural edges—not at flat wall surfaces.

b. Vertical changes should occur at inside corners or projections; horizontal transitions shall not occur at outside corners unless part of a design element (e.g., column, pilaster).

4. *Additions.* Exterior materials used for additions to existing structures shall match the color, style, texture, and quality of the original building.

**Table 2-03-01-1, Permitted Exterior Building Materials[1]**

| 1 Masonry | | Photo Example | | |
|---|---|---|---|---|
| 1a) | Modular Brick | 1a)  | 1b) | 1c) |
| 1b) | Modular Stone | | | |
| 1c) | Architectural cast or precast concrete (detailed) | | | |
| 1d) | Architectural reinforced concrete (glass fiber, fiber) | 1d)  | 1e)  | 1f)  |
| 1e) | Cement board siding | | | |
| 1f) | Terra cotta | | | |
| 1g) | Cast stone | 1g) | 1h) | 1i)  |
| 1h) | Architectural concrete masonry unit | | | |
| 1i) | Prefabricated brick | | | |

| 6a) Asphalt shingle | 6a) | 6b) | 6c) |
| 6b) Concrete or clay tile | | | |
| 6c) Standing seam metal | | | |
| 6d) Metal shingles | 6d) | 6e)  | 6f) |
| 6e) Solar Shingles | | | |
| 6f) Vinyl Membrane | | | |

**TABLE NOTES:**

1. Permitted material may not be used in some circumstances. Refer to 2-03-02 Residential, 2-03-03, Mixed Use and Commercial, and 2-03-04, Industrial, for additional requirements.

C. **Prohibited Exterior Building Materials**.

1. *Single-Family Detached Dwellings.* Exposed concrete block construction is prohibited.
2. *All Buildings.* Exterior materials shall exclude panelized plywood or similar materials lacking durable finishes, architectural trim, or design articulation.

3. *All Buildings (Except Industrial).*
   a. *Primary Exterior Material.* The primary exterior material on any building elevation, excluding industrial buildings, shall not consist of low-cost or industrial materials applied in a utilitarian or unfinished manner. The following materials are prohibited as the dominant exterior finish:
      (1) Exposed sheet or corrugated metal (e.g., aluminum, iron, or steel), unless part of a finished architectural panel system;
      (2) Unfinished or unarticulated concrete, such as plain tilt-up panels or precast walls without decorative formwork, texturing, or detailing; and
      (3) Plain concrete masonry units (CMU) without a decorative finish (for example, split-face, burnished, or integrally colored block).
   b. *Exceptions.*
      (1) Such materials may be used as secondary exterior finish materials if they cover no more than 10% of the surface area. Buildings designed for planned expansion may use architectural metal panels on the wall(s) to be removed for expansion of the building.
      (2) The Director of Community and Economic Development may approve high-quality architectural applications of otherwise restricted materials if they are finished to a high standard and clearly contribute to the overall design of the building. Examples include board-formed concrete, textured or articulated metal panels, or other contemporary materials that demonstrate thoughtful detailing and visual interest.
   c. *Glare-Producing Materials.* Façade materials shall not produce excessive glare as viewed from public streets or adjacent residential properties.

D. **Height Transition and Compatibility Standards.**
   1. *Applicability.* These standards apply to buildings over 35 feet in height that are located adjacent to single-family residential districts.
   2. *Light and Shadow Impacts.*
      a. New development shall avoid casting shadows or glare onto adjacent lots that:
         (1) Interfere with solar access;
         (2) Hinder snow/ice melt;
         (3) Impact usable yard or garden areas.
      b. Mitigation strategies include:
         (1) Building step-backs;
         (2) Orientation adjustments;
         (3) Increased side or rear setbacks.
   3. *Privacy Protection.* Design shall preserve the privacy of neighboring residential or park properties by using:
      a. Landscaping;
      b. Building orientation;
      c. Fenestration control (e.g., high sill windows, frosted glass);
      d. Fencing.

4. *Neighborhood Compatibility.*
   a. Buildings shall transition in height to relate to adjacent structures, especially where lower-scale housing exists.
   b. Step-backs and modulation shall be employed to soften the interface between taller and shorter buildings and maintain a human scale.

## 2-03-02 Residential

A. **Residential Building Design Standards.** All new residential buildings shall comply with Sec. 2-03-01, *General Provisions,* and the standards established in Table 2-03-02-1, *Residential Building Design Standards*.

B. **Building Types.** For the purposes of Table 2-03-02-1, *Residential Building Design Standards*, residential buildings are categorized into the following four types:
   1. *Single-Family Detached.* Includes traditional detached homes, manufactured homes, and modular homes.
   2. *Two-Family Dwelling.* Includes two-family dwellings (duplexes).
   3. Townhouse / *Multiplex*. Includes townhouses and multiplexes.
   4. *Multi-Family.* Includes buildings located on a single lot containing five or more dwelling units.

**Table 2-03-02-1, Residential Building Design Standards**

**Legend**

**• = Standard applies | -- = Not applicable**

**SFD = Single-Family Detached | TFD = Two-Family Dwelling**
**T/M = Townhouse / Multiplex | MF = Multi-Family**

| Standard | Building Type | | | | Requirement | Additional Criteria |
|---|---|---|---|---|---|---|
| | SFD | TFD | T/M | MF | | |
| **Site Planning Standards** | | | | | | |
| **Entry Orientation** | ● | ● | ● | ● | Primary entrances shall face the street or provide a clear pedestrian path. | Rear-loaded units may front open spaces/courtyards but shall include a visible, prominent entry (porch, stoop, awning, etc.). |
| **Garage Placement and Driveways** (Figure 4-07-02-3) | ● | ● | -- | -- | Garages facing the street must be recessed a minimum of 4 feet behind the front facade or articulated with architectural features. | ▪ Double-width garages not permitted on lots <50' in width.<br>▪ Alley access preferred where feasible.<br>▪ Driveways shall not exceed 50% of the lot frontage. |
| **Architectural Design** | | | | | | |

## Table 2-03-02-1, Residential Building Design Standards

**Legend**

**• = Standard applies | -- = Not applicable**

**SFD = Single-Family Detached | TFD = Two-Family Dwelling**
**T/M = Townhouse / Multiplex | MF = Multi-Family**

| Standard | Building Type | | | | Requirement | Additional Criteria |
|---|---|---|---|---|---|---|
| | SFD | TFD | T/M | MF | | |
| **All-Facade Design** (Figure 4-07-02-1) | -- | -- | ● | ● | All sides of a building shall have similar quality and detailing as the front elevation. | Applies when visible from:<br>▪ Single-family properties (used or designated)<br>▪ Public street right-of-way<br>▪ Public lands or open spaces |
| **Attached Units (max.)** | -- | -- | ● | -- | 8 units per row (e.g., townhouses) | -- |
| **Facade Variation** (Figure 4-07-02-1) | -- | -- | ● | ● | No identical facades may repeat more than once every 4 structures | Individual units shall be distinguished by material, texture, offset, or architectural feature. |
| **Public-Facing Facades** (Figure 4-07-02-1) | -- | -- | ● | ● | Shall mimic front façade. | Shall incorporate comparable materials, fenestration, and architectural elements as the front façade. |
| **Transparency (min.)** | -- | -- | ● | ● | ▪ 30% (ground floor windows)<br>▪ 20% transparency (upper story windows) | Ground-floor glazing must promote pedestrian interaction; use vertical or grouped windows. |
| **Materials** | -- | -- | ● | ● | Primary façade materials shall be durable and of high quality:<br>▪ Brick<br>▪ Stone<br>▪ Fiber cement<br>▪ Stucco (synthetic discouraged on first story) | ▪ At least 2 material types per façade (see 4-07-01, *General Provisions*)<br>▪ Vinyl prohibited on street-facing façades |
| **Roof Design** (Figure 4-07-02-1) | -- | -- | ● | ● | ▪ Roofs shall vary by pitch, height, or orientation.<br>▪ Flat roofs shall include parapets or cornices. | Roof-mounted equipment shall be screened. |

## Table 2-03-02-1, Residential Building Design Standards

# 2-03-03 Mixed Use and Commercial

A. **General Mixed Use and Commercial Building Standards.** All new mixed use, commercial, office, and institutional buildings shall comply with Sec. 2-03-01, *General Provisions*, and the standards established below.

B. **Building Types.** For the purposes of Table 2-03-03-1, *Mixed Use and Commercial Building Design Standards*, buildings are categorized into the following three types:

1. *Mixed Use / Live-Work.* Includes buildings that vertically or horizontally integrate residential units with commercial, office, or civic uses within the same structure or development.
2. *Commercial.* Includes buildings used for retail, service, dining, or entertainment purposes, such as shops, restaurants, and storefronts.
3. *Office-Institutional.* Includes buildings designed for professional office, medical, civic, or institutional uses such as clinics, government buildings, or educational facilities, whether public or private.

**Table 2-03-03-1 Mixed Use and Commercial Building Design Standards**

**Legend**

**MU = Mixed Use / Live-Work | C = Commercial | O = Office-Institutional**

| Standard | Building Type | | | Requirement | Additional Criteria |
|---|---|---|---|---|---|
| | MU | C | O | | |
| **Site Planning Standards** | | | | | |
| **Entry Orientation** | ● | ● | ● | Primary façades shall face a public or private street and include a clearly defined pedestrian entry from the sidewalk or open space. | Entrances shall be visible from the street and shall not be accessed solely through driveways or parking lots. |
| **Sense of Place Elements** | ● | ● | ● | At least two of the following elements shall be provided between the sidewalk and primary building façade to create a pedestrian-friendly environment:<br>▪ Small plaza or forecourt<br>▪ Pedestrian-scale seating or furniture<br>▪ Water features or public art<br>▪ Decorative paving or special hardscape<br>▪ Pedestrian-scale lighting accents<br>▪ Architectural gateway or entry marker | Applies to buildings fronting arterial or collector streets or located within centers or mixed-use areas. |

## Table 2-03-03-1 Mixed Use and Commercial Building Design Standards

**Legend**

**MU = Mixed Use / Live-Work | C = Commercial | O = Office-Institutional**

| Standard | Building Type | | | Requirement | Additional Criteria |
|---|---|---|---|---|---|
| | MU | C | O | | |
| **Pedestrian Connectivity** | ● | ● | ● | Pedestrian walkways shall be provided to connect building entrances to public sidewalks, parking areas, and on-site open spaces. | Walkways shall be a minimum of 5 feet wide and clearly distinguishable from vehicle travel lanes. |
| **Architectural Design** | | | | | |
| **All-Facade Design** (Figure 4-07-03-1) | ● | ● | ● | All sides of a building shall have similar quality and detailing as the front elevation. | Includes primary, secondary, and rear façades visible from streets, open space, or residential areas. |
| **Transparency** | ● | ● | ● | Street-level façades: min. 40% transparency; upper floors: min. 25%. | Windows shall be clear, non-reflective, and allow direct views into active interior spaces. Ground-floor transparency shall begin between 18 and 30 inches above grade. |
| **Materials** | ● | ● | ● | Primary façade materials shall be durable and of high quality:<br>▪ Brick<br>▪ Stone<br>▪ Fiber cement<br>▪ Stucco (synthetic discouraged on first story) | ▪ At least 2 material types per façade (see 2-03-01, *General Provisions*)<br>▪ Vinyl prohibited on street-facing façades |
| **Roof Design** | ● | ● | ● | Buildings shall incorporate variation in roof form through changes in height, pitch, or direction. Flat roofs shall include parapets, cornices, or other horizontal treatments to define the building top. | See Table 2-03-03-2, *Varied Massing Techniques* |
| **Massing and Compatibility** | | | | | |

**Table 2-03-03-1 Mixed Use and Commercial Building Design Standards**

**Legend**

**MU = Mixed Use / Live-Work | C = Commercial | O = Office-Institutional**

| Standard | Building Type | | | Requirement | Additional Criteria |
|---|---|---|---|---|---|
| | MU | C | O | | |
| **Building Mass** | ● | ● | ● | All elevations shall incorporate 3 or more of:<br>▪ Height variation<br>▪ Increased Stepbacks<br>▪ Upper level front stepback<br>▪ Upper level side stepback<br>▪ Building corner or focal point<br>▪ Roof variation | See Table 2-03-03-2, *Varied Massing Techniques*, for additional criteria. |
| **Vertical Articulation** | ● | ● | ● | Buildings over 30 feet in height or three stories shall include a base (ground level), middle (primary mass), and top (roof/parapet/cornice) differentiated through materials, projections, or horizontal elements. | Middle shall be ≥50% of total height. |
| **Wall Articulation** | ● | ● | ● | All façades over 50 feet in length shall include at least 3 or more of:<br>▪ Accent lines<br>▪ Wall plane offsets<br>▪ Variations in material and/or color<br>▪ Awnings and canopies | See Table 2-03-03-3, *Wall Articulation Techniques*, for additional criteria. |

## Table 2-03-03-1 Mixed Use and Commercial Building Design Standards

**Legend**

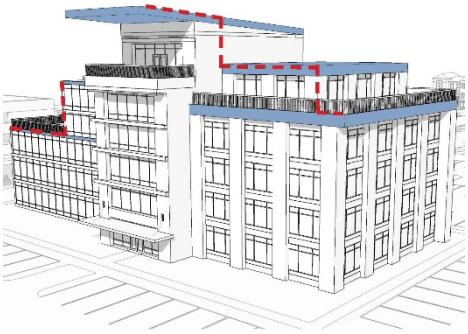
**MU = Mixed Use / Live-Work | C = Commercial | O = Office-Institutional**

| Standard | Building Type | | | Requirement | Additional Criteria |
|---|---|---|---|---|---|
| | MU | C | O | | |
| **Blank Wall (max.)** | ● | ● | ● | No portion of a street-facing façade shall exceed 30 linear feet without a window, door, material change, or architectural element. | -- |
| **Compatibility with Adjacent Development** | ● | ● | ● | New development shall demonstrate transitions in height, mass, and scale when abutting lower-intensity residential areas. | -- |
| **Operational / Support Standards** | | | | | |
| **Exterior Lighting** | ● | ● | ● | All exterior lighting shall be shielded and directed downward. | Refer to Div. 4-06, *Outdoor Lighting* |
| **Buffering/Screening** | ● | ● | ● | Mechanical equipment, refuse areas, and blank walls shall be screened from view of adjacent residential | Refer to Sec. 3-07-01 *General Commercial Use Standards* |
| **Service & Loading Areas** | ● | ● | ● | Shall be screened from streets and adjacent residential uses. | Locate away from primary façades and public view. Refer to Sec. 3-07-01 *General Commercial Use Standards* |

## Table 2-03-03-2, Varied Massing Techniques

**Height Variation**

A noticeable change in building height for a portion of the structure to reduce visual bulk and create a more varied and engaging roofline.



A change in height shall count as a massing variation technique when it:

- Involves a height difference of at least one full story and no more than two stories; and
- Extends a minimum of 10% of the building frontage and continues at least 50% of the depth of the building, measured from the façade where the change occurs.

**Increased Setbacks**

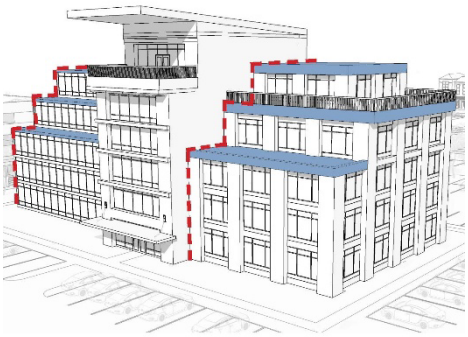
A substantial offset in wall planes to express building modules and avoid monolithic facades.

Dimensions

- Minimum offset depth: Four feet
- Minimum width: Eight feet
- Shall extend at least one story.

**Upper Level Front Stepback**

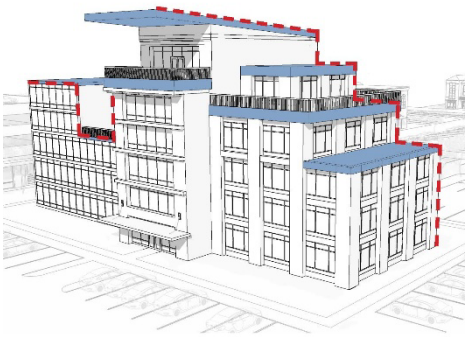
Stepback of upper floors to reduce mass and improve pedestrian scale along the primary frontage.



- Minimum stepback of 15 feet from base wall plane on the front facade.

**Upper Level Side Stepback**

A side stepback occurs at the end of a building and is effective in providing a transition to adjacent buildings of lesser height and usable open spaces.



- A change in height at the end of a building shall count as a massing variation technique when the stepback extends a minimum of 50% of the total building length (measured from end-to-end).

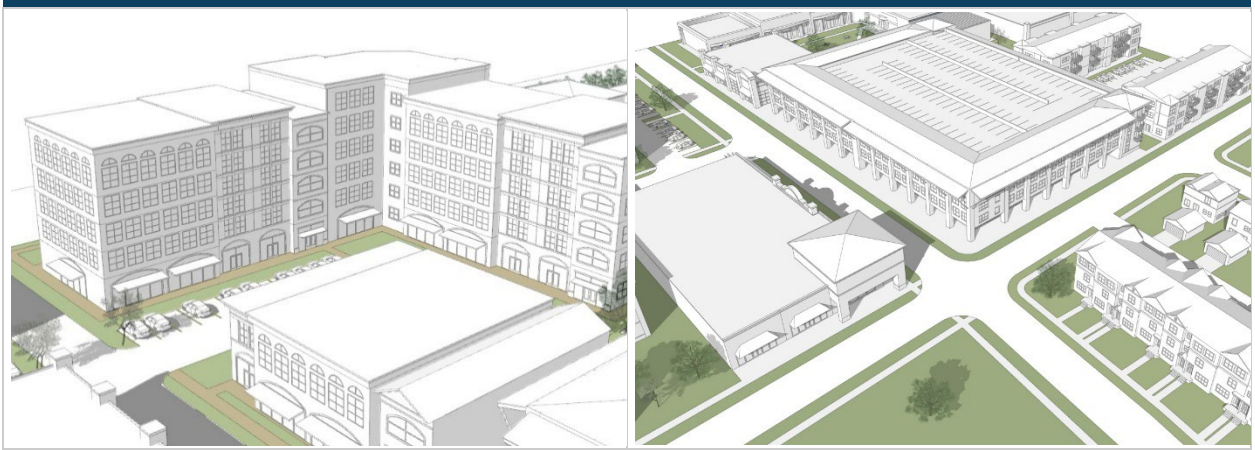
| Building Corner or Focal Point | | |
|---|---|---|
| Distinct visual treatment at prominent corners or entrances using towers, projections, or unique roof forms. |  | ▪ Visual elements may extend 15 feet above the maximum height at building corners.<br>▪ Feature must be architecturally integrated and visually prominent. |
| **Roof Variation** | | |
| Roof articulation to break up the roofline and reduce perceived bulk. |  | ▪ A roof variation shall count as a varied massing technique when the minimum roof pitch of at least one roof is: 2:12 and is at least 80% along the frontage. |

## Table 2-03-03-3, Wall Articulation Techniques

| Accent Lines | | |
|---|---|---|
| Vertical or horizontal architectural elements such as pilasters, columns, cornices, or belt courses that create visual rhythm and scale on a façade. | | ▪ Minimum projection from the primary wall plane: Four inches<br>▪ Minimum width: Four inches |
| **Wall Plane Offsets** | | |
| Changes in wall depth that break the façade into smaller modules, reduce bulk, and add visual interest. | | ▪ Minimum depth of wall offset: One foot<br>▪ Minimum width of offset: Three feet |
| **Variations in Material and/or Color** | | |

| Table 2-03-03-3, Wall Articulation Techniques | | |
|---|---|---|
| A change in exterior cladding or color that reflects traditional building module proportions and enhances visual articulation. | | ▪ May only count when combined with at least one other articulation technique.<br>▪ Must extend the full height of one story or one horizontal module. |
| **Awnings & Canopies** | | |
| Functional projections over doors or windows that define entries, offer shade, and reinforce the ground-floor pedestrian environment. | | ▪ Minimum projection: 3 feet from the wall plane<br>▪ Minimum vertical clearance: 8 feet<br>▪ Shall be scaled and spaced to correspond with individual building bays or entries. |

**Figure 2-03-03-1, All-Facade Design**



# 2-03-04 Industrial

A. **General Industrial Building Standards.** All new industrial buildings shall comply with Sec. 2-03-01, *General Provisions,* and Table 2-03-04-1, *Industrial Building Design Standards*.

B. **Building Types.** For the purposes of Table 2-03-04-1, *Industrial Building Design Standards*, buildings are categorized into the following three types. Uses shall be classified according to the principal function of the building or structure.

1. *Light Industrial.* Includes buildings used for low-intensity manufacturing, assembly, packaging, or repair operations that are generally enclosed and have minimal off-site impacts.
2. *General Industrial.* Includes buildings designed for moderate- to high-intensity industrial activities such as fabrication, processing, large-scale warehousing, or distribution that may generate noise, odors, or heavy truck traffic.
3. *Office-Industrial/Flex.* Includes adaptable buildings that combine office space with light industrial or warehousing functions, often designed to accommodate a variety of business or technology uses in a single structure.

**Table 2-03-04-1, Industrial Building Design Standards**

**Legend**

**• = Standard applies | -- = Not applicable**

**OI = Office/Institutional | LI = Light Industrial | GI = General Industrial**

| Standard | Building Type | | | Requirement | Additional Criteria |
|---|---|---|---|---|---|
| | OI | LI | GI | | |
| **Site Planning Standards** | | | | | |
| **Entry Orientation** | ● | ● | – | Primary façades should face the street and include a clear pedestrian entry; where street orientation is not feasible, an alternative frontage (such as a shared internal drive or courtyard) may be approved. | -- |
| **Sense of Place Elements** | ● | – | – | At least two pedestrian-focused elements shall be included along the primary frontage or customer-facing side. Industrial campuses may cluster these elements at shared access points or amenity nodes. | Options include:<br>▪ Plazas;<br>▪ Seating;<br>▪ Water features<br>▪ Pavers;<br>▪ Lighting accents; or<br>▪ Architectural gateways. |

**Table 2-03-04-1, Industrial Building Design Standards**

**Legend**

**• = Standard applies | -- = Not applicable**

**OI = Office/Institutional | LI = Light Industrial | GI = General Industrial**

| Standard | Building Type | | | Requirement | Additional Criteria |
|---|---|---|---|---|---|
| | OI | LI | GI | | |
| **Pedestrian Connectivity** | ● | ● | – | Continuous internal sidewalks or walkways shall connect building entrances to parking areas, site amenities, and public sidewalks. | Where pedestrian routes cross driveways, use differentiated materials or raised crossings. |
| **Architectural Design** | | | | | |
| **Public Facing Facade Design** (Figure 2-03-04-1) | ● | ● | ● | All publicly visible façades shall maintain consistent materials and articulation; rear service façades may be simplified if screened or not visible from the public realm. | Applies to façades visible from public streets, open space, or residential areas; secondary façades may use simplified articulation but same materials/colors. |
| **Transparency** | ● | – | – | Minimum 25% transparency on street-facing office or showroom portions. | ▪ Not required for warehouse/loading areas.<br>▪ Mirrored or opaque glazing is discouraged on public-facing façades and may only be used on rear or service areas not visible from public view. |

**Table 2-03-04-1, Industrial Building Design Standards**

**Legend**

**• = Standard applies | -- = Not applicable**

**OI = Office/Institutional | LI = Light Industrial | GI = General Industrial**

| Standard | Building Type | | | Requirement | Additional Criteria |
|---|---|---|---|---|---|
| | OI | LI | GI | | |
| **Materials** | ● | ● | – | Primary façade materials shall be durable and of high quality:<br>▪ Precast concrete<br>▪ Tilt-wall concrete (with architectural detailing)<br>▪ Masonry (brick, stone, decorative CMU)<br>▪ Metal panels (architectural-grade)<br>▪ Curtain wall or commercial-grade glazing system | ▪ At least 2 material types per public facing façade (see 2-03-01, *General Provisions*)<br>▪ Vinyl and plain CMU prohibited.<br>▪ Metal panels shall be architectural-grade, factory-finished, and non-reflective. Ribbed metal siding is permitted only on secondary façades. |
| **Roof Design** | ● | ● | – | Parapets or roofline variation on primary façades. | ▪ Flat roofs shall include parapets at least 2' above roofline.<br>▪ Alternate roof forms (e.g., sawtooth, barrel vaults) are encouraged where consistent with architectural design. |
| **Massing and Compatibility** | | | | | |

## Table 2-03-04-1, Industrial Building Design Standards

| Standard | Building Type | | | Requirement | Additional Criteria |
|---|---|---|---|---|---|
| | OI | LI | GI | | |
| **Compatibility with Adjacent Development** | ● | ● | – | New development shall demonstrate transitions in height, mass, and scale when abutting lower-intensity residential areas | Flexibility may be granted where physical transitions are provided via setbacks, berms, landscape buffers, or screening walls. |
| **Operational / Support Standards** | | | | | |
| **Exterior Lighting** | ● | ● | ● | All exterior lighting shall be shielded and directed downward. | Refer to Div. 4-06, *Outdoor Lighting* |
| **Buffering/Screening** | ● | ● | ● | Mechanical equipment, refuse areas, and blank walls shall be screened from view of adjacent residential | Refer to Sec. 3-09-01, *General Industrial Use Standards* |
| **Service & Loading Areas** | ● | ● | ● | Shall be screened from streets and adjacent residential uses. | Locate away from primary façades and public view. Refer to Div. 4-05, *Fencing, Walls, and Screening* |

## Table 2-03-04-2, Varied Massing Techniques

**Height Variation**

| | | |
|---|---|---|
| A substantial change in building height for a portion of the structure to reduce visual bulk and create a more varied and engaging roofline. | | Height variation may be counted as one massing technique only if it meets all the following:<br>▪ The height change is at least one full story;<br>▪ The change extends a minimum of 10% of the building frontage and back at least 50% of the building depth; and<br>▪ The portion does not exceed one additional story above the adjacent mass. |
| **Increased Setbacks** | | |
| Substantial offset in wall planes to express building modules and avoid monolithic facades. |  | Wall plane offsets shall have a minimum depth of 4 feet and extend for a width of at least 8 feet, continuing for at least one story in height. Offsets should be spaced to align with structural or programmatic elements such as bays or loading areas. |
| **Building Corner or Focal Point** | | |

| | | |
|---|---|---|
| Distinct visual treatment at prominent corners or entrances using towers, projections, or unique roof forms. |  | Distinct architectural features, such as towers, roof projections, or material changes, may extend up to 15 feet above the maximum building height at corners or entries to create visual emphasis. These features should be integrated into the building design and not interfere with industrial operations. |
| **Roof Variation** | | |
| Roof articulation to break up the roofline and reduce perceived bulk. | | Roofline variation may include parapets, changes in roof pitch, clerestories, or changes in height along at least 80% of the primary façade. Minimum pitch of 2:12 required for sloped elements. Rooftop equipment shall be screened. |

| Table 2-03-04-3, Wall Articulation Techniques | | |
|---|---|---|
| **Accent Lines** | | |
| Vertical or horizontal architectural elements such as pilasters, columns, cornices, or belt courses that create visual rhythm and scale on a façade. |  | ▪ Minimum projection from the primary wall plane: Four inches<br>▪ Minimum width: Four inches |
| **Wall Plane Offsets** | | |
| Changes in wall depth that break the façade into smaller modules, reduce bulk, and add visual interest. |  | ▪ Minimum depth of wall offset: One foot<br>▪ Minimum width of offset: Three feet |
| **Variations in Material and/or Color** | | |
| A change in exterior cladding or color that reflects traditional building module proportions and enhances visual articulation. |  | ▪ May only count when combined with at least one other articulation technique.<br>▪ Must extend the full height of one story or one horizontal module. |
| **Awnings & Canopies** | | |

| | | |
|---|---|---|
| Functional projections over doors or windows that define entries, offer shade, and reinforce the ground-floor pedestrian environment. | | ▪ Minimum projection: 3 feet from the wall plane<br>▪ Minimum vertical clearance: 8 feet.<br>▪ Shall be scaled and spaced to correspond with individual building bays or entries. |

**Figure 2-03-04-1, Public Facing Facade Design**

# Div. 2-04 Designated Amenity Space Types

## 2-04-01 General Provisions

A. **General.** Amenity space may be required within a development, through the required amenity space percentages. For those zoning districts or development types that require open or amenity space, a menu of such options is provided in Sec. 2-04-02, *Amenity Space Standards*.

B. **Applicability.** Open or amenity space requirements apply to:

1. *Residential Developments.* Amenity space requirements apply to all residential development under the Cluster and Compact Development Types. Amenity space

requirements apply to residential developments with five or more dwelling units under the Conventional and Infill Development Types;

2. *Nonresidential or Mixed-Use.* Nonresidential or mixed-use developments with 2,001 or greater square feet of gross floor area.

C. **Exemptions.** Open or amenity space requirements do not apply to:

1. *Park Proximity*. Residential developments that are within a quarter-mile of the center point of a park or other amenity space, as depicted in Figure 2-03-01-1, *Development Within Quarter-Mile of a Park or Amenity Space,* if the Director of Community and Economic Development determines that the park or other amenity space has adequate capacity to serve the development; or
2. *Agricultural Lots.* Lots created using the conventional development type in the RE, A-1, A-2, or A-3 lots.
3. *Industrial Development.* Developments consisting of industrial buildings and/or uses.

**Figure 2-04-01-1, *Development Within Quarter-Mile of a Park or Amenity Space***

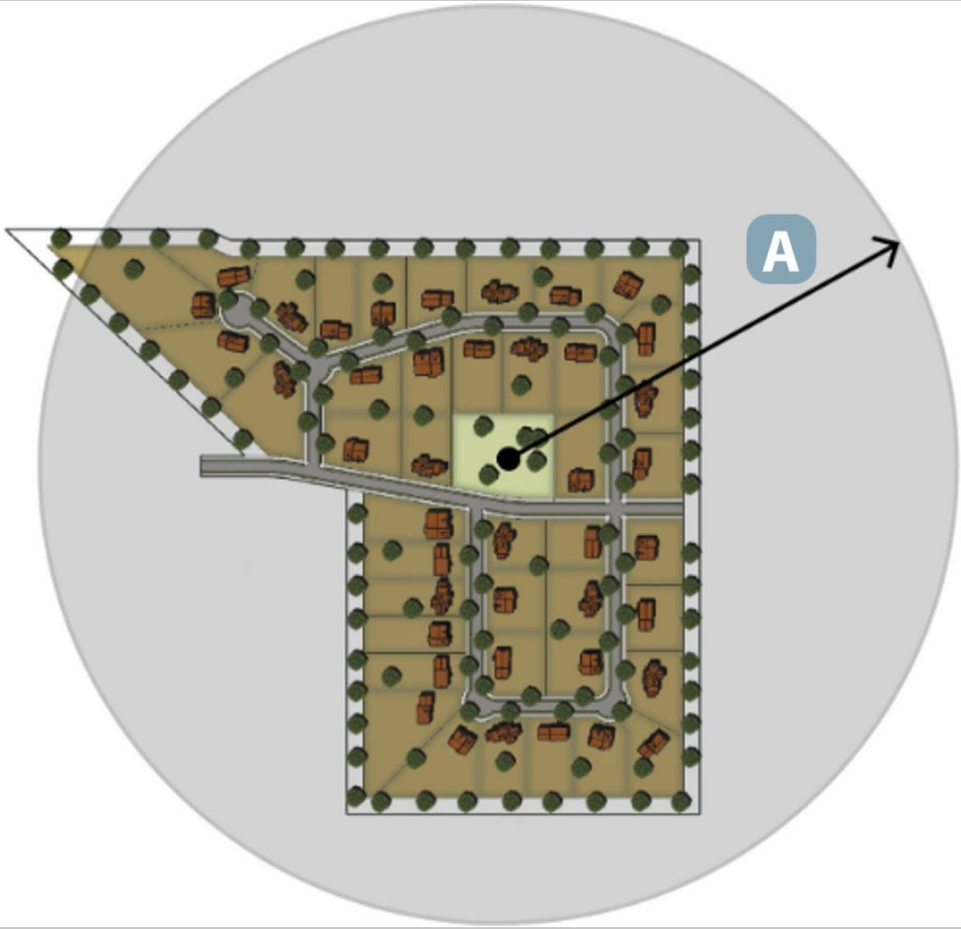

**FIGURE NOTE:**
A = 1/4-mile radius from center of park or other amenity space, which exempts the development from providing additional park or amenity space

## 2-04-02 Amenity Space Standards

A. **Required Open or Amenity Space**. Where the zone district and development type require amenity space, Table 2-04-02-1, *Amenity Space Types*, details the options permitted to fulfill the requirement.

B. **Design Principles.**

1. *Integrated Design.* Amenity spaces shall be integrated into the development to bring significant space to the maximum number of properties, as well as visibility from the public rights-of-way within the development. Visual or physical access to amenity spaces may be limited if such limitations would materially enhance natural resource preservation and management.
2. *Character and Location.* Land reserved by the developer for amenity space shall be of a character and location suitable for the proposed use and must meet the minimum requirements for each amenity space type allowed in each district.
3. *Trails and Drainage Corridors, Waterbodies, and Watercourses.* Amenity space shall be designed to provide trails along drainage corridors, water bodies, and watercourses. Green spaces along drainage corridors, waterbodies, and watercourses shall be designed to enhance the filtering of surface and subsurface water flows. Trails shall provide access along the drainage corridor or watercourse for the residents of the development. All features shall be constructed in accordance with applicable County standards.

C. **Unusable Land**. A maximum of 25% of steep or unstable land, drainage areas, and land subject to inadequate drainage shall be eligible to serve as amenity space. The remaining area shall not receive credit for amenity space requirements.

D. **Multiplier.**

1. A multiplier is used to weigh how much each amenity space type counts toward the overall requirement. This is meant to ensure a variety of open or amenity space selections and to promote equal investment for each open or amenity space option selected.
2. *Multiplier Example.* The multiplier quantifies the square footage of amenity space that is required based on the type of amenity space provided. For example, enhanced parking lot landscaping has a multiplier of 0.4. If a developer installs 10,000 square feet of enhanced parking lot landscaping, it would count as 4,000 square feet of amenity space toward the requirement. If a developer dedicates 10,000 square feet to a recreation area, then it would count as 12,000 square feet of amenity space, as the multiplier is 1.2.

E. **Category Diversity**. There are three categories of amenity types: Site Improvements, Common Open Space, and Civic Spaces.

1. *One Category*. Residential developments of ten or fewer dwelling units and nonresidential and mixed use developments with a gross floor area of 20,000 square feet or less shall require open or amenity space from one category;
2. *Two Categories*. Residential developments of 11 to 50 units and nonresidential and mixed use developments with a gross floor area of 20,001 to 60,000 square feet for shall provide open or amenity spaces from two categories; and
3. *Three Categories*. Residential developments of 51 or more units and nonresidential and mixed use developments with a gross floor area of more than 60,000 square feet shall provide open or amenity spaces from all three categories.

F. **Active and Passive Recreation**.

1. *Plantings and Features*. Amenity spaces, other than open space lands preserved as natural features or areas, shall include trees, planting beds, courtyards, recreation or play areas.

2. *Active and Passive Spaces*. Residential developments with 11 or more units and nonresidential or mixed use developments with a gross floor area of 50,000 or more square feet shall provide a minimum of one active and one passive feature as designated in Table 2-03-02-1, *Amenity Space Types.* All features shall be constructed in accordance with applicable County standards. The Director of Community and Economic Development may approve other features not listed in Table 2-04-02-1.

G. **Additional Amenity Space Standards.**

1. *Amenity Space Designation.* All amenity space shall be noted on the Plat: "Reserved for Amenity Space."
2. *Amenity Space Ownership and Maintenance.* All amenity spaces shall be owned and maintained as common (private) areas by the developer, owner of the property, or an organization established for the ownership and maintenance of common amenity spaces, unless the Board of County Commissioners accepts public dedication of the amenity space.
3. *Light and Noise*. Active recreation areas shall be located where light and noise will not adversely impact adjacent properties or wildlife.
4. *Coordination with Adjacent Properties*. Open space and trail design shall be coordinated with adjacent properties.

H. **Amenity Spaces in Residential Developments.**

1. *Maintenance*. A registered Homeowners or Property Owners Association, established in accordance with Sec. 5-03-09, *Private Facilities and Owners Associations*, or other entity such as a public or private organization, land trust, or corporation shall own, maintain, and manage the amenity space.
2. *Easements*. Designated amenity space owned by individual lot owners shall be subject to easements in favor of residents of the development. The easements shall provide that the lot owners shall bear the responsibility for maintenance of the amenity space.
3. *Access*. For amenity space to satisfy the requirements of this DSR, such amenity space shall be accessible to the general public and wildlife and shall not be fenced except for portions where fences are needed for safety or security concerns such as swimming pools and equipment storage. This requirement will be clearly indicated by a note on the Plat.
4. *Structures*. No structures shall be built in designated amenity space areas in the Site Improvements and Common Open Space categories in Table 2-03-02-1 except for features typically associated with recreational and pedestrian activities such as sidewalks, trails, walkways, footbridges, gazebos, pavilions, benches, playground equipment, ball courts and fields, swimming pools, and buildings for storage of maintenance equipment.
5. *Light and Noise*. Active recreation areas shall be located where light and noise will not adversely impact adjacent properties or wildlife.

I. **Amenity Spaces in Agricultural Districts.** All land reserved for public amenity space in an agricultural zone district shall consist of natural areas or small-scale agriculture.

J. **Community Centers or Other Public Facilities.** All land reserved for dedication for a community center or other public facility use shall be reviewed by a public entity with responsibility, capacity, and jurisdiction for acceptance, development, operation, and maintenance of the facility. All land reserved for dedication to the public facility shall be noted on the Plat "Reserved for public (type of facility)."

K. **Additional Standards.** For additional standards related to amenity space in various neighborhood types, refer to Div. 2-05, *Designated Development Types*.

| Table 2-04-02-1, *Amenity Space Types* | | | | | |
|---|---|---|---|---|---|
| Category | Zone District | Character and Location | Minimum Size | Multiplier | Active/ Passive |
| **Site Improvements[1]** | | | | | |
| **Enhanced Parking Lot Landscaping** | All | Landscaped walkway with landscaping and streetscaping of at least 10 feet in width that connects public sidewalks through off-street parking lots to the front building entrance. | 100 sf. | 0.4 | Passive |
| **Enhanced Foundation Plantings** | All | Nonresidential foundation plantings consist of beds of plants such as shrubs planted along building foundations. | 100 sf. | 0.5 | Passive |
| **Enhanced Stormwater Management** | All | Nonresidential stormwater management features that comply with the County's drainage standards and are designed for recreational use or as a common amenity. Design requirements: (1) Minimum 0.5 contiguous acres in size; (2) Not subject to inundation that renders recreational or open spaces as unusable; (3) Capable of draining within 24 hours during a 10-year storm event; and (4) Constructed of natural materials with terracing, berms, or contouring to naturalize and enhance the aesthetics of the features with maximum slopes of 3:1. | 0.5 acres | 0.5 | Passive |
| **Common Open Spaces[2]** | | | | | |

| Table 2-04-02-1, *Amenity Space Types* | | | | | |
|---|---|---|---|---|---|
| Category | Zone District | Character and Location | Minimum Size | Multiplier | Active/ Passive |
| **Natural Area** | A-1<br>A-2<br>A-3<br>RE<br>R-1-C | Areas established for the protection of natural attributes of local, regional, and statewide significance, which may be used in a sustainable manner for scientific research, habitat preservation, education, aesthetic enjoyment, and appropriate use not detrimental to the primary purpose (other than wetlands as provided above). Areas are resource-based rather than user-based but may provide some passive recreational activities such as hiking, nature study, and picnicking. Natural Areas may include unimproved grasslands or ranchlands, prairie dog or other habitat, riparian buffers, floodplains, or natural wetlands which may be visible from walkways provided in and through the wetland. | 1 acre | 1.5 | Passive |
| **Greenway** | A-2<br>A-3<br>RE<br>R-1-C<br>R-2<br>R-3<br>R-4 | A series of connected natural areas (including areas protected by state or federal law) such as ravines, creeks, streams, woodlands, floodplains, or protected tree canopy that connect buildings or gathering spaces with trail systems that conform to the Parks, Open Space, and Trails Master Plan, or that buffer the site from streets or neighboring areas. | 5 acres | 1.2 | Active |

| Table 2-04-02-1, *Amenity Space Types* | | | | | |
|---|---|---|---|---|---|
| Category | Zone District | Character and Location | Minimum Size | Multiplier | Active/ Passive |
| **Community Garden** | All | A site operated and maintained by a homeowners association or other private entity, or the public to cultivate trees, herbs, fruits, vegetables, flowers, or other ornamental foliage for personal use, consumption, donation or off-site sale of items grown on the site. | 0.1 acres | 1.4 | Active |
| **Park** | All | An open space area improved with playground equipment, or other active open space improvements, or dog park facilities. These may be surrounded by street frontages and building frontages, but this is not required. | 0.1 acres | 1.0 | Active |
| **Small-Scale Agriculture** | A-1<br>A-2<br>A-3, RE,<br>R-2, R-1-C | The cultivation of fruits, vegetables, herbs, flowers, and other edible or ornamental plants, in a manner that is integrated into a development as a compatible amenity. These agricultural uses are low-impact and compatible with residential and mixed-use areas. Such uses shall adhere to best management practices to minimize noise, odor, and runoff while enhancing local food production, sustainability, and community engagement. | 0.5 acres | 1.0 | Active |
| **Civic Spaces** | | | | | |
| **Playscape** | R-3<br>R-4<br>MU<br>NC<br>GC | A more urbanized recreational amenity compared to a Park that may contain artificial turf, splash pads, and other facilities for recreation for children. | 0.1 acres | 1.4 | Active |

| Table 2-04-02-1, *Amenity Space Types* | | | | | |
|---|---|---|---|---|---|
| Category | Zone District | Character and Location | Minimum Size | Multiplier | Active/ Passive |
| **Plaza** | MU<br>NC<br>GC | An open area with seating that is adjacent to, or part of, a building. Plazas function as gathering places and may incorporate a variety of non-permanent activities such as vendors and display stands. A plaza requires a minimum depth length and width of 10 feet and a minimum total area of 300 square feet. | 300 sf. | 0.8 | Passive |
| **Square** | MU<br>NC<br>GC | An area improved with a combination of lawn, landscaping and seating areas, and that are accessible to the public or the project's tenants or customers. A square shall be a minimum of 10,000 square feet. | 10,000 sf. | 1.0 | Passive |
| **Courtyard** | R-3<br>R-4 | A contiguous open area, open to the public, that may be paved or landscaped and that is at least partially enclosed by the walls of an adjacent building. | 10,000 sf. | 1.0 | Passive |
| **Green** | RE,<br>R-1-C<br>R-2<br>R-3<br>R-4 | A common open space available for unstructured recreation, its landscaping consisting of grassy areas, trees, shrubs, and other landscaping. | 0.1 acres | 0.8 | Active |
| **Recreation Area** | RE,<br>R-1-C<br>R-2<br>R-3<br>R-4 | A hard surfaced recreation area~~s~~ such as a tennis or pickleball court. | 1,000 sf. | 1.2 | Active |
| **Community Center or Other Public Facility** | RE,<br>R-1-C<br>R-2<br>R-3<br>R-4 | A building and grounds used as a place of meeting, recreation, social activity, or common outdoor cooking facility. | 1,000 sf. | 1.2 | Active |

| Table 2-04-02-1, *Amenity Space Types* | | | | | |
|---|---|---|---|---|---|
| Category | Zone District | Character and Location | Minimum Size | Multiplier | Active/ Passive |
| **Activated Alley** | MU<br>NC | A linear, shaded amenity space between buildings and allow for social and commercial activity to spill into the public realm. | 100 sf. | 0.8 | Passive |

**TABLE NOTES:**

1. Where one of the Site Improvement options is chosen, the following standards apply: (1) The option (or combination of options in this category) may not comprise more than 25% amenity space requirement for the development; and (2) To receive the full multiplier amount, the option selected must exceed the minimum standards.
2. A Common Open Space option shall comprise a minimum of 50% of the required amenity space for all Residential Zoning District development options requiring Amenity Space.

# Div. 2-05 Designated Development Types

## 2-05-01 General Provisions

A. **Applicability**. This Division establishes standards that are specific or unique to the various permitted development types for residential developments.

B. **Development Types**. New developments that are primarily residential are classified as Conventional, Cluster, Compact, and Infill. The applicant has the option to select from any of the Development Types that are permitted in each zone district, as established in Table 2-04-01-1, *Permitted Development Type in Agricultural and Residential Districts*.

C. **Density Bonuses.** The Cluster, Compact, and Infill Development Types each provide the applicant with an option to increase the number of dwelling units permitted on a site above what is permitted in the Conventional Development option. The additional development density is allowed in exchange for the applicant agreeing to set aside a portion of the site for amenity space as articulated in Div. 2-04, *Designated Amenity Space Types*.

D. **Development Type Options**. Where more than one development type is permitted in a zone district, no development type is mandatory. Refer to Sec. 2-07-02, *Agricultural and Residential Dimensional Standards*, for lot density and dimensional standards applicable to each permitted development type.

E.

**Table 2-05-01-1, *Permitted Development Type in Agricultural and Residential Districts***

| Development Types | A-1, A-2, A-3 | RE | R-1-C | R-2 | R-3 | R-4 |
|---|---|---|---|---|---|---|
| | "P" = Permitted \| "--" = Not Permitted | | | | | |
| Conventional | P | P | P | P | P | P |
| Cluster | P | P | P | P | -- | -- |
| Compact | -- | -- | P | P | -- | -- |
| Infill | -- | -- | -- | P | P | P |

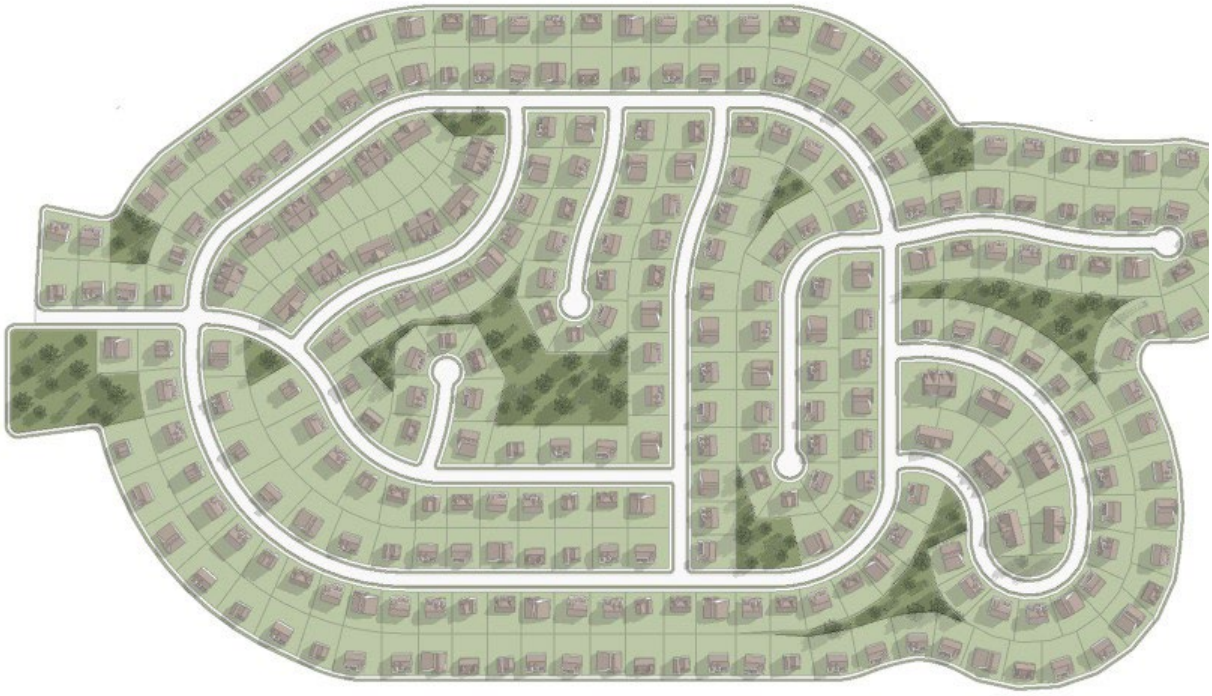
## 2-05-02 Conventional Development

A. **Purpose**. A Conventional Development, as depicted in Figure 2-05-02-1, *Conventional Development*, mimics the historical zoning for each district. Lot sizes, lot widths, and setback requirements are typically uniform throughout a Conventional Development.

B. **Minimum Site Area.** There is no minimum site area for a Conventional Development.

C. **Minimum and Maximum Standards**. Refer to Div. 2-07, *District Dimensional Standards*, for minimum and maximum requirements for site area, lot size, lot width, and setbacks in Conventional Developments.

**Figure 2-05-02-1, *Conventional Development***



## 2-05-03 Cluster Development

A. **Purpose.** To conserve open space, provide areas for community amenities, and protect the environment by minimizing impervious surfaces and allowing the movement and migration of wildlife, an applicant may develop a Cluster Development, as depicted in Figure 2-05-03-1, *Cluster Development,* which increases the density of development by modifying required lot areas and widths, provided the development conforms to all applicable regulations for residential subdivisions and the following requirements. (The Cluster Development type depicted in Figure 2-05-03-1 is distinguishable from a "cluster development" as defined in C.R.S. § 30-28-403(1).)

B. **Applicable Zone Districts.** Refer to Sec. 2-05-01, *General Provisions*.

C. **Amenity Space Required.** The owner shall commit the amount of amenity space required in the dimensional tables in Div. 2-07, *District Dimensional Standards.*

D. **Minimum Site Area.** There is no minimum site area required for a Cluster Development.

E. **Qualifying Amenity Spaces.** An area may be accepted as amenity space within a Cluster Development provided it meets the following requirements:

1. *Location, Size, and Character*. The location, size, and character of the area is suitable for the residential development;
2. *Preservation*. The areas not intended for residential lots shall be used for preservation of natural flora and fauna, wildlife movement corridors (when applicable), amenity or recreational purposes, or agricultural use; and

3. *Improvements and Amenities*. The improvements and amenities authorized within the area are appropriate to the scale and character of the development, considering its size, density, expected population, topography and the number and type of dwellings provided.

F. **Use of Amenity Space.** A minimum of 66% of the required amenity space in the development shall consist of amenity spaces in the Common Open Space category of Table 2-04-02-1, *Amenity Space Types*. No more than 25% of the minimum required amenity space shall be designated for amenities or active recreation purposes that require paved or impervious surfaces, the purpose of which is to preserve a reasonable proportion of natural areas on the site. The purposes for which open space areas are proposed shall be documented.

G. **Concentration and Contiguity of Open Space.**

1. *Internal Connection*. Where practical, common open space shall be concentrated in large usable areas.
2. *External Connection*. Where possible, common open space conservation areas shall connect to adjacent off-site open space areas and designated greenways. Where the intended use of the conservation area is agricultural, the conservation area shall be connected to adjacent off-site agricultural areas when possible.

H. **Prioritization of Open Space Types.** The following list represents the relative desirability of different types of common open space areas, and shall be used as the basis for determining the optimum location for open space s within a Cluster Development:

1. Critical areas including riparian areas and floodplain.
2. Pastures and farmland currently or traditionally used for agriculture.
3. Trails and greenways.
4. Significant stands of trees.
5. Mature vegetation on ridgelines.
6. Significant wildlife habitats, including, but not limited to, CPW high priority habitats, wildlife movement corridors, and endangered and threatened species habitats. It is recommended to consult with CPW in these instances to determine the best avoidance, minimization, and mitigation practices.

I. **Calculation of Amenity Spaces**. The calculation of open space/conservation shall be as provided in the definition of the term "amenity space."

1. *Inclusion*. Such areas shall include all common public or privately held amenity space.
2. *Exclusion*. Such areas shall not include rights-of-way for public roads; the easement width for private roads, or areas used for stormwater facilities. Individual private residential lot areas (e.g., private yards) shall not be included in the open space and conservation area calculation.

J. **Ownership of Open Space.** Land shown on the final plat as common open space, including any physical improvements, landscaping and/or planting contained therein, shall be permanently maintained by, and conveyed to one of the following:

1. *Property Owners or Homeowners Association*. An association of owners that is formed and continued in accordance with Sec. 5-03-09, *Private Facilities and Owners Associations,* for the purpose of maintaining the amenity space. The association shall establish itself as follows:
   a. It shall be created as an association of owners under State law;
   b. It shall adopt and propose articles of incorporation or association and bylaws; and

c. It shall adopt and improve a declaration of covenants and restrictions on the common open space acceptable to the County in providing for the continuing care of the space.

2. *Public Entity*. A public agency or district, which agrees to maintain the common open space and any buildings, structures or other improvements which have been placed on it.

3. *Land Trust or Other Entity*. A non-profit organization with a mission to conserve natural or historic resources.

K. **Ownership of Open Space Areas.**

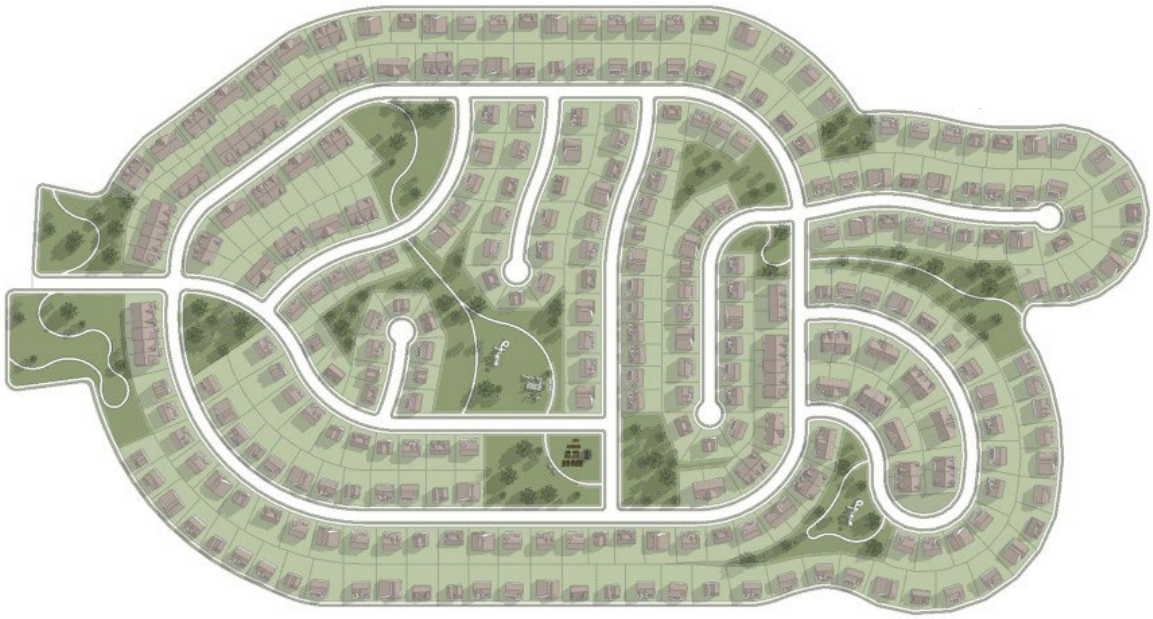
1. A conservation area in a Cluster Development shall be maintained by and conveyed to a homeowner's association or public agency or district, as described above with regard to ownership of open space.

2. The conservation area may be held in private ownership where the intended purpose of the conservation area is agricultural use. The maintenance of the conservation area in private ownership shall be approved by the Board of County Commissioners based on the appropriateness of the land's continued agricultural use and the adequacy of the proposed maintenance plan.

L. **Maintenance of Open Space and Amenity Areas.** A maintenance plan shall be submitted and approved as part of the Cluster Development review process. The maintenance plan shall meet the landscape and open space and conservation maintenance requirements contained in Sec. 5-03-09, *Private Facilities and Owners Associations*. Where the Conservation Area is intended to be used for agriculture, the maintenance plan shall be approved by the Conservation District and shall meet the requirements of Sec. 5-03-09.

M. **Relationship to Parks and Open Space Requirements.** All Cluster Developments shall also meet the parkland dedication requirements of the Adams County Subdivision Regulations. Open space and conservation areas established for the purpose of meeting the requirements of this Section shall not be counted toward the parkland dedication requirements contained in Div. 5-05, *Land Dedication Standards*, unless it meets the minimum dedication standards outlined in Div. 5-05.

**Figure 2-05-03-1, *Cluster Development***



## 2-05-04 Compact Development

A. **Purpose**. A Compact Development typically consists of two or more residential building types per the standards in this Division, with smaller lots grouped together to provide ample open space and community amenities.

B. **Amenity Space**.

1. *Variety of Amenity Spaces.* Amenity spaces in Compact Developments shall include at least one type from each of the three categories of Table 2-03-02-1, *Amenity Space Types,* for features such as common green space, courtyards, gardens, parking, and community rooms. See Figure 2-05-04-1, *Compact Development.*
2. *Maintenance and Ownership*. The maintenance and ownership provisions for Cluster Developments in Sec. 2-05-03, *Cluster Development*, shall apply to amenity spaces in Compact Developments as well.

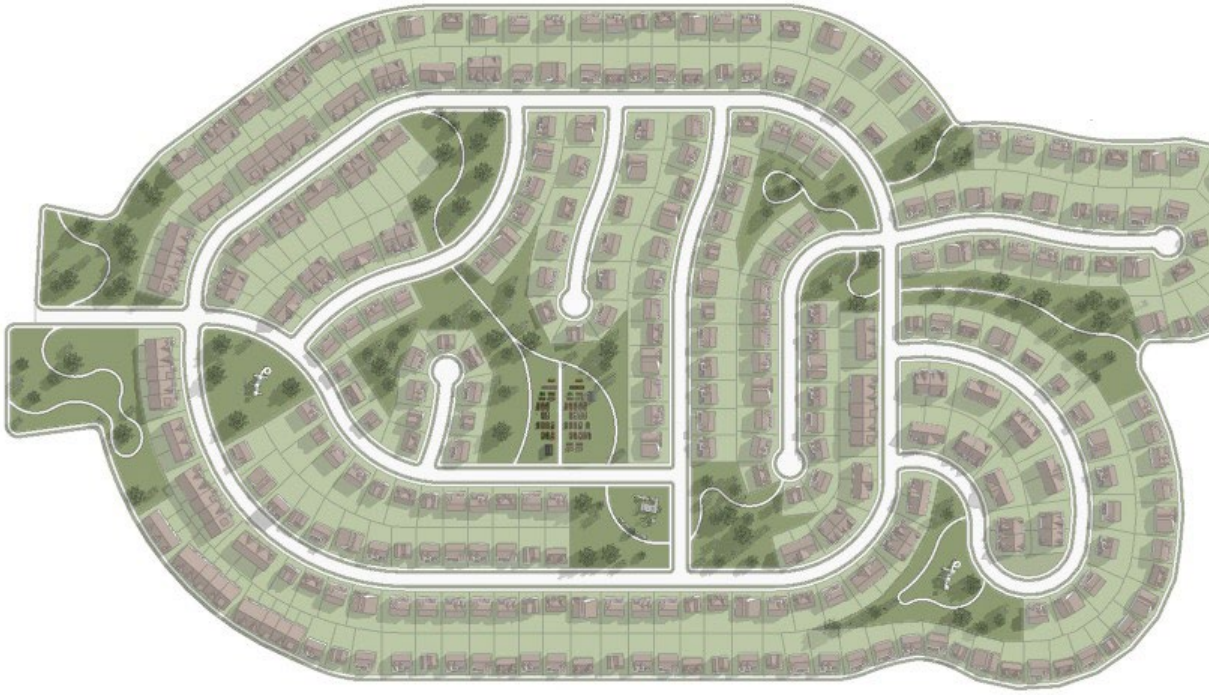
C. **Minimum Site Area**. The minimum site area required for a Compact Development is three acres.

D. **Compact Development Requirements**.

1. *Housing Type Integration.* Varied housing types in a Compact Development may be integrated together or may be located within separate areas with the required open space providing a buffer between the housing types.
2. *Housing Type Mix.* A Compact Development shall have a minimum of two housing types as established in Div. 2-02, Designated Building Types, a maximum of 40% of the housing types in a Compact Neighborhood may consist of single-family detached dwellings.

3. *Bufferyard.* Where dwellings are proposed to abut single-family detached residences within the same development and zone district, a Type A Bufferyard, in accordance with Sec. 4-04-03, *Bufferyards and Screening*, shall be used to provide for enhanced compatibility between housing types.
4. *Minimum Lot Area Adjacent to Other Development.* Where a Compact Development is adjacent to single-family detached development that was platted before January 1, 2027, and where the average lot area of the lots on the abutting perimeter of the existing development is 120% or more of that of the perimeter lots of the Compact Development, the lots on the perimeter of the Compact Development shall use one of the following mitigation measures:
    a. Have setbacks from the shared boundary with the existing single-family detached development that are a minimum of the following distances based on the number of lots being developed:
        (1) One to 10 lots: Required rear or side setback;
        (2) 11 to 50 lots: 30 feet; and
        (3) 51 or more lots: 50 feet.
    b. Be equal to or greater than the lot area and width of the abutting lots; or
    c. Provide a Type B bufferyard, as established in Sec. 4-04-03, *Bufferyards and Screening*, along the adjacency with the existing development. This bufferyard on the perimeter of the development may count toward a maximum of 25% of the required amenity space.

**Figure 2-05-04-1, *Compact Development***



## 2-05-05 Infill Development

A. **Purpose**. An Infill Development, as depicted in Figure 2-05-05-1, *Infill Development*, consists of smaller lots and greater densities than in a Cluster Development, making efficient use of land and existing infrastructure on vacant or underutilized lots in already developed areas.

B. **Amenity Space**.

1. Variety of Amenity Spaces. Amenity spaces in Infill Developments shall be selected from the categories of Table 2-04-02-1, *Amenity Space Types*.
2. *Maintenance and Ownership*. The maintenance and ownership provisions for Infill Developments in Sec. 2-05-03, *Cluster Development*, shall apply to amenity spaces in Infill Developments as well.

C. **Site Area**. The maximum site area for Infill Development is three acres. There is no minimum site area required for an Infill Development.

D. **Eligibility for Infill.** An Infill Development may be located on any property with one or more of these characteristics:

1. *Existing Development.* Where adjacent properties abutting at least 50% of the non-street perimeter of the subject property are developed with single-family detached dwellings of higher density or intensity uses;
2. *Underused Property.* Where the subject property consists of less dense or intense development than what is permitted based on the zone district;

3. Environmental Constraints. Where adjacent properties abutting at least 50% of the non-street perimeter of the subject property are encumbered by environmentally sensitive or constrained areas such as floodplains;
4. *Utility Easements.* Where adjacent properties abutting at least 50% of the non-street perimeter of the subject property are utility easements that create a substantial break in development or redevelopment potential;
5. *Vacant or Unoccupied.* Where adjacent properties abutting at least 66% of the non-street perimeter of the subject property consist of properties that have been vacant or unoccupied for more than one year; or
6. *Access to Frequent Transit.* The percentage requirements in subsections (1) through (5), above, may be reduced by half on properties where transit service currently operates or where the Regional Transportation District plans to operate at frequencies of 20 minutes or better, accessible within a walk of a quarter mile or less.

E. **Appearance.** Infill Developments shall be constructed to be generally compatible in appearance with other existing structures in the context, as established in subsection G, *Context*, below, that comply with this DSR. This provision shall be satisfied by constructing the proposed building(s) so that at least three of the following features are substantially similar to the majority of other buildings in the context:

1. Scale, bulk;
2. Roof pitch and overhang;
3. Shape, size, and alignment of windows and doors;
4. Front porches or porticos;
5. Exterior building color; or
6. Location and style of garage or carport.

F. **Alternative Standards.** An Infill Development shall be eligible to use the following alternative dimensional standards in place of Sec. 2-07-02, *Agricultural and Residential District Dimensional Standards*.

1. *Lot Width.* The minimum lot width may be that of the narrowest lot in the context of the development.
2. *Maximum Building Height.* The maximum building height may be that of the tallest building in the context, plus 15% of the height.
3. *Minimum / Maximum Setbacks.*
   a. The minimum front, corner, side, or rear setback may be that of 80% of the average front or corner setbacks in the context of the development. For example, if the average minimum front setback in the context is 20 feet, the minimum front setback in the Infill Development may be 16 feet.
   b. The maximum front and corner setback may be the average of the front and corner setbacks of the context of the development, plus 10%. For example, if the average maximum front setback in the context is 10 feet, the maximum front setback in the Infill Development may be 11 feet.
4. *Buffering.* Except as required for specific uses in Chapter 3, *Specific Use Standards*, where an increased bufferyard is required along a street or parking area or between zone districts, the bufferyard width and planting materials per 100 feet may be reduced by 50%.

G. **Context.** This Subsection identifies various contexts that inform the allowances provided in subsection E, *Alternative Standards*, above, and as depicted in Figure 2-04-05-2, *Context Illustrations*.

1. *Corner Lot.* If the infill site is a corner lot (shown in blue), then the context consists of both block faces that include the infill site and the nearest three lots directly across the street from the narrowest dimension of the infill site (shown in green).
2. *Interior Lot.* If the infill site is an interior lot, then the context consists of the block face that includes the infill site and the nearest three lots directly across the street from the infill site.
3. *Lots in Unimproved Block Face.* If the infill site is within a block face that does not include other lots improved with buildings, then the context consists of the opposing block faces (being immediately opposite the front and side streets as of the project site) and the remaining lots on the block of the infill site.
4. *Lots in Unimproved Block.* If the infill site is within a block that does not include other lots improved with buildings, and the block face opposite the given project site does not include other lots improved with buildings, then the context consists of the block faces surrounding the block that includes the infill site.

# Div. 2-06 Principal Use Tables

## 2-06-01 Use Table Legend and Instructions

A. **Permitted Uses.** A "P" indicates that a use is allowed by right in the respective zone district and may be eligible for administrative review and approval by the Director of Community and Economic Development. All permitted uses shall be subject to the requirements of this Chapter and Chapter 3, Specific Use Standards (as indicated by a link in the far-right column of the Principal Use Tables) unless otherwise noted. Permitted uses are further subject to all other applicable regulations of this DSR.

B. **Conditional Uses.** A "C" indicates that a use is allowed only if reviewed and approved as a Conditional Use, in accordance with the Conditional Use review procedures of Sec. 13-03-02 and Chapter 3, *Specific Use Standards*. Conditional uses that do not have a specific use standard assigned to them in the use table shall comply with the review criteria in Sec. 13-03-02.

C. **Certificate of Designation.** A "CD" indicates that a use needs a Certificate of Designation in accordance with the Certificate of Designation review procedures in Sec. 13-03-01.

D. **Administrative Review Uses.** An "A" in a cell indicates that a use is allowed only if reviewed and approved for an Administrative Review Permit, in accordance with procedures in Sec. 13-02-01, *Administrative Review Permit.*

E. **Oil and Gas Facility Uses.** An "O" in a cell indicates that a use is allowed only if reviewed and approved for an Oil and Gas Facility Permit, in accordance with procedures in Sec. 13-02-05, *Oil and Gas Facility Permit.*

F. **Uses Not Allowed.** A "-" in a cell indicates that a use is not allowed in that specific zone district.

G. **Specific Use Regulations.** The final column, titled "Specific Use Standards" contains cross-references to related standards established in Chapter 3, *Specific Use Standards*. Where "-" is shown, no additional use standards shall apply.

H. **Unlisted Uses**. A specific use is prohibited if it is not listed in Sec. 2-06-02, *Principal Use Tables*, and if the Director of Community and Economic Development cannot interpret an unlisted specific use as functionally similar to a use that is allowed, based on the criteria in Sec. 103-02(D), *Use Interpretations*.

# 2-06-02 Principal Use Tables

The following tables summarize the permitted, conditionally permitted, and prohibited uses in each zone district. These tables are provided for ease of comparing allowed and prohibited uses between zone districts. Additional standards or restrictions for some of the land uses in this table are indicated by a link in the Specific Use Standards column for such uses. Land uses in this table are further subject to the requirements of Table 2-02-01-1, *Permitted Building Types by Agricultural and Residential Districts,* Table 2-02-01-2, *Permitted Building Types by Mixed Use and Nonresidential Districts,* and Table 2-07-01-1, *District Dimensional Standards*. If there is a conflict between the Principal Use Tables, and Div. 2-07, *District Dimensional Standards*, or any specific language in the zone district, the language in this table shall prevail.

2. Class III Composting Facilities require a *Certificate of Designation.*

# Div. 2-07 District Dimensional Standards

## 2-07-01 Purpose and General Provisions

A. **Purpose.** This Section establishes standards for lot area, lot width, setbacks, building height, and other standards for all development in the base zone districts. These standards allow for variety in development intensity and density while maintaining the overall character of neighborhoods and ensuring that development intensity aligns with existing and proposed infrastructure investments.

B. **General Provisions**.

1. *Single-Family Detached Dwelling and Modular Home.* As established in Div. 2-02, the single-family detached dwelling building type includes the modular home building type.
2. *Resource Protection Standards.* Density calculations for residential development may be subject to requirements of Chapter 9, Natural, Agricultural, and Cultural Resource Protection Standards.
3. *Minimum and Maximum Setbacks*. Where a zone district has a minimum and maximum front or street side setback, the district dimensional tables in this Division express such standard as "*X* ft. / Y ft." with the number before the slash being the minimum and the number after the slash being the maximum.
4. *Setbacks Related to Driveways and Garages*. Some zone districts allow for a minimum front setback that is less than 25 feet. However, a minimum setback of 25 feet shall apply to front-loaded garages where a driveway provides access to the garage from a street, other than an alley. The front setback that is less than 25 feet shall apply to the remainder of the

building, exclusive of the front-loaded garage. This maintains an adequately sized parking space on the driveway between the structure and the street and helps to avoid encroachment into public sidewalks.

5. *Right-of-Way and Section Line Setbacks*. The following right-of-way and section line setbacks apply to all base zone districts and development types. Right-of-way/section line setbacks are measured from the centerline of the existing traveled way.

| ROW Setback* | |
|---|---|
| Regional Arterial (ft) | 75 |
| Limited Access Highways (ft) | 75 |
| Principal Arterial (ft) | 75 |
| Rural Principal Arterial - 4 Lanes (ft) | 60 |
| Rural Principal Arterial - 2 Lanes (ft) | 40 |
| Minor Arterial (ft) | 60 |
| Transit Oriented Development Arterial (ft) | 70 |
| Collector (ft) | 40 |
| Transit Oriented Development Collector (ft) | 52 |
| Local Residential (ft) | 25 |
| Local Residential Rural (ft) | 30 |
| Local Industrial & Commercial (ft) | 30 |

| Section Line Setback* | |
|---|---|
| Regional Arterial (ft) | 95 |
| Limited Access Highways (ft) | 95 |
| Principal Arterial (ft) | 95 |
| Rural Principal Arterial - 4 Lanes (ft) | 80 |
| Rural Principal Arterial - 2 Lanes (ft) | 60 |
| Minor Arterial (ft) | 80 |
| Transit Oriented Development Arterial (ft) | 90 |
| Collector (ft) | 60 |
| Transit Oriented Development Collector (ft) | 72 |
| Local Residential (ft) | 35 |
| Local Residential Rural (ft) | 40 |
| Local Industrial & Commercial (ft) | 50 |

6. *Overlay Districts*. An overlay zone district that applies over a base zone district in this Division may further limit dimensional requirements, permitted land uses, and development standards.

# 2-07-02 Agricultural and Residential District Dimensional Standards

## 2-07-02.A A-1, Agriculture 1

| Table 2-07-02.A-1, *A-1 Agriculture 1, Dimensional Standards* | | | |
|---|---|---|---|
| | | Conventional Development Option | Cluster Development Option |
| | **Maximum Density** | | |
| | On well/Onsite WWTS | 1 du/2.5 ac. | 1 du/2.5 ac. |
| | On public water or sewer | N/A | 1 du/2.5 ac. |
| | **Minimum Lot Area per Dwelling Unit** | | |
| **A** | On well /Onsite WWTS | 2.5 ac. | 2.5 ac. |
| | On public water or sewer | N/A | 1 ac. |
| | **Minimum Amenity Space Requirement[1]** | | |
| | On well / Onsite WWTS | None | 60% |
| | On public water or sewer | N/A | 60% |
| | **Minimum Lot Width** | | |
| **B** | On well/Onsite WWTS | 150 ft. | 150 ft. |
| | On public water or sewer | 100 ft. | 100 ft. |
| | **Maximum Lot Coverage** | | |
| **C** | On well / Onsite WWTS | 7.5% | 10% |
| | On public water or sewer | 10% | 12.5% |
| | On public water and sewer | 12.5% | 15% |
| | **Maximum Building Height[2]** | | |
| **D** | Maximum Residential Building Height | 35 ft. | 35 ft. |
| | Maximum Agricultural Building Height | 70 ft.[3] | 70 ft.[3] |
| | **Building Setbacks** | | |
| **E** | Minimum Front | 30 ft. | 30 ft. |
| **F** | Minimum Corner | 30 ft. | 30 ft. |
| **G** | Minimum Interior Side | 10 ft.[4] | 10 ft.[4] |
| **H** | Minimum Rear | 20 ft.[5] | 20 ft.[5] |
| **I** | Right-of-Way/Section Line Setbacks | See Sec. 2-07-01.B(6) | |

**TABLE NOTES**:
sf = Square Feet | ft. = Feet | du = Dwelling Unit

1. The amenity space percentage applies to subdivisions or developments with 4 or more units, and applies to the entire development rather than individual lots. Refer to Div. 2-04, *Designated Amenity Space Types*.
2. The methodology for measuring Maximum Building Height ("D") as presented in Figure 2-07-02.A-1 below, will be dependent upon roof type. Refer to the definition of "building height" for specific methods of measuring building height.
3. Except for agricultural structures located on a lot established by a recorded subdivision plat, where the maximum shall be 25 feet.
4. Or one foot per two feet of building height, whichever is greater.
5. If the rear property line fronts a public right-of-way where access is taken, the rear setback shall be the same as the front setback.

**Figure 2-07-02.A-1, *Building Type Measurement Illustrations***

|---|---|---|---|
| | Conventional Development Option | Cluster Development Option | Compact Development Option |

**TABLE NOTES**:
sf = Square Feet | ft. = Feet | du = Dwelling Unit

1. Accessory dwelling units shall not count towards the maximum units per lot.
2. Add 500 square feet for corner lots.
3. The amenity space percentage applies to subdivisions or developments with 4 or more units, and applies to the entire development rather than individual lots. Refer to Div. 2-04, *Designated Amenity Space Types*.
4. Add 5 feet for corner lots. Accessory dwelling units shall not count towards dwelling unit calculation for lot width.
5. The methodology for measuring Maximum Building Height ("D") as presented in Figure 2-07-02.E-1 below, will be dependent upon roof type. Refer to the definition of "building height" for specific methods of measuring building height.
6. The maximum height of a new structure shall not exceed 150% of the average height of principal structures of immediately adjacent existing lots. If the subject property is surrounded by vacant lots, then the maximum height of the zone district applies. A minimum height of 25 feet is permitted regardless of context.
7. Refer to Sec. 2-07-01(B)(5), *Setbacks Related to Driveways and Garages*, for setbacks less than 25 feet.

**Figure 2-07-02.E-1, *Building Type Measurement Illustrations***

|---|---|---|
| | Conventional Development Option | Infill Development Option |
| **Maximum Density** | | |
| All Permitted Building Types | 15 du / ac. | 23 du / ac. |

| Table 2-07-02.G-1, *R-3, Residential Moderate Density, Dimensional Standards* | | | |
|---|---|---|---|
| | | Conventional Development Option | Infill Development Option |
| | Minimum Units per Lot[1] | 2 | 2 |
| | **Minimum Lot Area [2]** | | |
| A | Two-Family Dwelling | 2,250 sf. per unit | 2,000 sf. per unit |
| | Multiplex (3 or 4 units) | 2,000 sf. per unit | 1,500 sf. per unit |
| | Townhouse Dwelling | 1,500 sf. per unit | 1,250 sf. per unit |
| | Multi-family Dwelling | 10,000 sf. | 10,000 sf. |
| | All Other Permitted Building Types | 5,000 sf. | 5,000 sf. |
| | **Minimum Amenity Space Requirement[3]** | | |
| | Two-Family Dwelling, Townhouse Dwelling, Multiplex (3 or 4 units) | 10% | 5% |
| | Multi-family Dwelling | 20% | 10% |
| | All Other Permitted Building Types | 10% | 5% |
| | **Minimum Lot Width[4]** | | |
| B | Two-Family Dwelling, Townhouse Dwelling | 25 ft. per unit | 25 ft. per unit |
| | Multiplex (3 or 4 units), Multifamily Dwelling | 50 ft. | 50 ft. |
| | All Other Permitted Building Types | 50 ft. | 50 ft. |
| | **Maximum Lot Coverage** | | |
| C | All Permitted Building Types[5] | 70% | 70% |
| | **Maximum Building Height[6]** | | |
| D | All Permitted Principal Building Types[7] | 45 ft. | 45 ft. |
| | All Permitted Accessory Building Types | 16 ft. | 16 ft. |
| | **Building Setbacks** | | |
| E | Minimum Front<br>All Permitted Building Types | 10 ft.[8] | 10 ft.[8] |
| F | Minimum Corner<br>-All Permitted Building Types | 10 ft. | 10 ft. |
| G | Minimum Interior Side<br>Townhouse Dwelling[9] | 0 ft./5 ft./10 ft. | 0 ft./5 ft./10 ft. |
| | All Other Permitted Building Types | 5 ft. | 5 ft. |
| H | Minimum Rear<br>All Permitted Building Types | 5 ft. | 5 ft. |
| I | Right-of-Way/Section Line Setbacks | See Sec. 2-07-01.B(6) | |

| Table 2-07-02.G-1, *R-3, Residential Moderate Density, Dimensional Standards* | | | |
|---|---|---|---|
| | | Conventional Development Option | Infill Development Option |

**TABLE NOTES**:
sf = Square Feet | ft. = Feet | du = Dwelling Unit

1. Accessory dwelling units shall not count towards the minimum units per lot.
2. Add 500 square feet for corner lots.
3. The amenity space percentage applies to subdivisions or developments with 4 or more units, and applies to the entire development rather than individual lots. Refer to Div. 2-04, *Designated Amenity Space Types*.
4. Add 5 feet for corner lots.
5. For multiplexes, principal and accessory structures: Maximum 50%. Paved area (including driveways): Maximum 20%.
6. The methodology for measuring Maximum Building Height ("D") as presented in Figure 2-07-02.G-1 below, will be dependent upon roof type. Refer to the definition of "building height" for specific methods of measuring building height.
7. The maximum height of a new structure shall not exceed 150% of the average height of principal structures of immediately adjacent existing lots. If the subject property is surrounded by vacant lots, then the maximum height of the zone district applies. A minimum height of 35 feet is permitted regardless of context.
8. Refer to Sec. 2-07-01(B)(5), *Setbacks Related to Driveways and Garages*, for setbacks less than 25 feet.
9. The first number is the zero-side setback, the second number is the non-zero-side setback for an end unit to an interior lot line.

**TABLE NOTES**:

sf = Square Feet | ft. = Feet | du = Dwelling Unit

1. The amenity space percentage applies to subdivisions or non-residential or mixed use developments with 2,001 or greater square feet gross floor area. The percentage applies to the entire development rather than individual lots. Refer to Div. 2-04, *Designated Amenity Space Types*.
2. The methodology for measuring Maximum Building Height ("D") as presented in Figure 2.07.03.F-1 below, will be dependent upon roof type. Refer to the definition of "building height" for specific methods of measuring building height.
3. Zero-foot setbacks may be approved for fireproof structures. 50-foot setback from residentially zoned or used properties.
4. 50-foot setback from residentially zoned or used properties.

# Div. 2-08 Special Purpose and Overlay Zone Districts

## 2-08-01 General Provisions and Use Table

A. **Applicability.** The standards of this Section apply to all special purpose and overlay zone districts unless otherwise expressly specified within the special purpose or overlay zone district itself.

B. **Use Table Legend**.

1. *Permitted Uses*. A "P" indicates that a use is allowed by right in the respective zone district and may be eligible for administrative review and approval by the Director of Community and Economic Development. All permitted uses shall be subject to the requirements of this Chapter and Chapter 3, *Specific Use Standards,* (as indicated by a link in the far-right

column of Use Table) unless otherwise noted. Permitted uses are further subject to all other applicable regulations of this DSR.

2. *Conditional Uses*. A "C" indicates that a use is allowed only if reviewed and approved as a Conditional Use, in accordance with the Conditional Use review procedures of Sec. 13-03-02 and Chapter 3, *Specific Use Standards*. Conditional uses that do not have a specific use standard assigned to them in the use table shall comply with the review criteria in Sec. 13-03-02.
3. *Uses Not Allowed*. A "-" in a cell indicates that a use is not allowed in that specific zone district.
4. *Specific Use Regulations*. The final column, titled "Specific Use Standards" contains cross-references to related standards established in Chapter 3, *Specific Use Standards.* Where "-" is shown, no additional use standards shall apply.
5. *Unlisted Uses*. A specific use is prohibited if it is not listed in the use tables of this Section and if the Director of Community and Economic Development cannot interpret an unlisted specific use as functionally similar to a use that is allowed, based on the criteria in Sec. 1-03-02(D), *Use Interpretations*.

C. **Special Purpose District Use Table**.

1. *Generally*. Refer to Sec. 2-06-01, *Use Table Legend and Instructions*, for the meaning of the symbols used in the use tables below. Table 2-08-01-1, *Special Purpose Zone District Use Table,* shows which uses are permitted, require a Conditional Use Permit, or are prohibited in the special purpose and overlay zone districts.
2. *Prohibited Uses*. All uses are prohibited in the special purpose and overlay zone districts that are:
   a. Not expressly identified as permitted uses in Table 2-08-01-1, *Special Purpose Zone District Use Table*;
   b. Not determined to be permitted by the Director of Community and Economic Development pursuant to Sec. 1-02-05, *Interpretation and Administration*;
   c. In the AV zone district, not permitted by the Airport Layout Plan established for the particular lot(s); and
   d. Listed in an overlay zone district as prohibited.

D. **Overlay District Uses**. All uses permitted by the underlying zone as permitted uses or conditional uses are permitted in an overlay district specifically prohibited, subject to Building Permit review and approval.

E. **PUD Reference**. Refer to Sec. 2-08-15, *PUD, Planned Unit Development*, for use, dimensional, and development standards for PUDs.

F. **Right-of-Way and Section Line Setbacks.** The following right-of-way and section line setbacks apply to all special purpose zone districts and development types. Right-of-way/section line setbacks are measured from the centerline of the existing traveled way.

| ROW Setback* | |
|---|---|
| Regional Arterial (ft) | 75 |
| Limited Access Highways (ft) | 75 |
| Principal Arterial (ft) | 75 |
| Rural Principal Arterial - 4 Lanes (ft) | 60 |
| Rural Principal Arterial - 2 Lanes (ft) | 40 |

| | |
|---|---|
| Minor Arterial (ft) | 60 |
| Transit Oriented Development Arterial (ft) | 70 |
| Collector (ft) | 40 |
| Transit Oriented Development Collector (ft) | 52 |
| Local Residential (ft) | 25 |
| Local Residential Rural (ft) | 30 |
| Local Industrial & Commercial (ft) | 30 |

| Section Line Setback* | |
|---|---|
| Regional Arterial (ft) | 95 |
| Limited Access Highways (ft) | 95 |
| Principal Arterial (ft) | 95 |
| Rural Principal Arterial - 4 Lanes (ft) | 80 |
| Rural Principal Arterial - 2 Lanes (ft) | 60 |
| Minor Arterial (ft) | 80 |
| Transit Oriented Development Arterial (ft) | 90 |
| Collector (ft) | 60 |
| Transit Oriented Development Collector (ft) | 72 |
| Local Residential (ft) | 35 |
| Local Residential Rural (ft) | 40 |
| Local Industrial & Commercial (ft) | 50 |

G. **DIA Zone District.** Permitted uses in the DIA zone district are subject to building permit review and approval and are limited to those described in the Adams County/Denver Intergovernmental Agreement on a New Airport signed and dated April 21, 1988, and any subsequent agreements or amendments. The Adams County/Denver Intergovernmental Agreement can be found in Appendix D. Appendix D is incorporated herein by reference and made a part hereof.

## 2-08-02 NP, Neighborhood Park

A. **Permitted Principal and Conditional Uses**. Refer to Table 2-08-01-1, *Special Purpose Zone District Use Table*.

B. **Permitted Accessory Uses**. Permitted accessories uses are tied to the principal uses that they support. Refer to the tables in Div. 3-02, *Use Categories*.

C. **Permitted Temporary Uses**. Temporary uses are subject to the issuance of a Temporary Use Permit in accordance with Sec. 13-03-05, *Temporary Use Permit*. The Director may require the temporary Use meet performance standards for similar uses permitted by these standards and regulations.

D. **Setback and Dimensional Requirements for Accessory Structures or Agriculture Buildings**.

1. *Minimum Front Setback*. The minimum front setback for accessory structures in a Neighborhood Park District shall be no less than the existing or proposed setback of the principal structure.
2. *Minimum Side Setback*. The minimum side setback for accessory structures in a Neighborhood Park District shall be no less than the existing or proposed setback of the principal structure.
3. *Minimum Rear Setback*. The minimum rear setback for accessory structures in a Neighborhood Park shall be no less than the existing or proposed setback of the principal structure.
4. *Right-of-Way/Section Line Setbacks*. See Sec. 2-08-01(F).

E. **Relationship to Design Requirements and Performance Standards**. All design requirements and specific use standards contained in Chapter 3 of this DSR shall apply in a Neighborhood Park District unless inconsistent with a provision for the A-1 zone district, in which case the specific standard or requirement provided for the A-1 zone district shall apply.

## 2-08-03 RP, Regional Park

A. **Permitted Principal and Conditional Uses**. Refer to Table 2-08-01-1, *Special Purpose Zone District Use Table*.

B. **Permitted Accessory Uses**. Permitted accessories uses are tied to the principal uses that they support. Refer to the tables in Div. 3-02, *Use Categories*.

C. **Permitted Temporary Uses**. Temporary uses are subject to the issuance of a Temporary Use Permit in accordance with Sec. 13-03-05, *Temporary Use Permit*. The Director may require the temporary use meet performance standards for similar uses permitted by these standards and regulations.

D. **Setback and Dimensional Requirements for Accessory Structures or Agriculture Buildings**.

1. *Minimum Front Setback*. The minimum front setback for accessory structures and agricultural buildings in a Regional Park District shall be no less than the existing or proposed setback of the principal structure.
2. *Minimum Side Setback*. The side front setback for accessory structures and agricultural buildings in a Regional Park District shall be no less than the existing or proposed setback of the principal structure.
3. *Minimum Rear Setback*. The minimum rear setback for accessory structures and agricultural buildings in a Regional Park District shall be no less than the existing or proposed setback of the principal structure.
4. *Right-of-Way/Section Line Setbacks*. See Sec. 2-08-01(F).

E. **Relationship to Design Requirements and Performance Standards**. All design requirements and specific use standards contained in Chapter 3 of this DSR shall apply in a Neighborhood Park District unless inconsistent with a provision for the A-2 zone district, in which case the specific standard or requirement provided for the A-2 zone district shall apply.

# 2-08-04 NA, Natural Areas

A. **Permitted Principal and Conditional Uses**. Refer to Table 2-08-01-1, *Special Purpose Zone District Use Table*.

B. **Permitted Accessory Uses**. Permitted accessories uses are tied to the principal uses that they support. Refer to the tables in Div. 3-02, *Use Categories*.

C. **Permitted Temporary Uses**. Temporary uses are subject to the issuance of a Temporary Use Permit in accordance with Sec. 13-03-05, *Temporary Use Permit*. The Director may require the temporary use meet performance standards for similar uses permitted by these standards and regulations.

D. **Setback, and Dimensional Requirements for Accessory Structures**.

1. *Minimum Front Setback*. The minimum side setback for accessory structures in a Natural Area District shall be no less than the existing or proposed setback of the principal structure.
2. *Minimum Side Setback*. The minimum side setback for accessory structures in a Nature Area District shall be no less than the existing or proposed setback of the principal structure.
3. *Minimum Rear Setback*. The minimum side setback for accessory structures in a Nature Area District shall be no less than the existing or proposed setback of the principal structure.
4. *Right-of-Way/Section Line Setbacks*. See Sec. 2-08-01(F).

E. **Relationship to Design Requirements and Performance Standards.** All design requirements and specific use standards contained in Chapter 3 of this DSR shall apply in a Nature Area District unless inconsistent with a provision for the Floodplain Overlay (FO) District, in which case the specific standard or requirement provided for the FO zone district shall apply.

# 2-08-05 PL, Public Lands and Facilities

A. **Permitted Principal and Conditional Uses**. Refer to Table 2-08-01-1, *Special Purpose Zone District Use Table*.

B. **Permitted Accessory Uses**. Permitted accessories uses are tied to the principal uses that they support. Refer to the tables in Div. 3-02, *Use Categories*.

C. **Permitted Temporary Uses**. Temporary uses are subject to the issuance of a Temporary Use Permit in accordance with Sec. 13-03-05, *Temporary Use Permit*. The Director may require the temporary use meet performance standards for similar uses permitted by these standards and regulations.

D. **Relationship to Performance Standards**. All design requirements and specific use standards contained in Chapter 3 of this DSR shall apply in the Public Lands and Facilities District unless inconsistent with a provision for the NP zone district in which case the specific standard or requirement provided for the NP zone district shall apply.

# 2-08-06 AV, Aviation

A. **Boundaries**. The boundaries of the Aviation District shall, at a minimum, encompass runways, clear zones, aprons, aviation-related structures including terminals and hangars, and other aviation-related services and support facilities as depicted on the approved Airport Layout Plan.

Minimum areas to be included within the Aviation District are illustrated in the official zoning map. The size of the area may vary according to the type of aviation facility. The Board of County Commissioners, following a review and recommendation for action by the Planning Commission, establishes the official boundary of the Aviation District at the time the aviation facility is zoned. Changes in the size of the Aviation District are reviewed through the Zone Map Amendment process.

B. **Setback for Structures, Runways, Taxiways, Take Off and Landing Areas**.

1. *Setback from Property Lines for Airport Runways, Taxiways, and Related Facilities*. The setback for airport runways, taxiways, and related facilities in an Aviation District shall be 700 feet from centerline of the runway or taxiway.
2. *Setback for Helicopter Take Off and Landing Areas*. The setback for helicopter takeoff and landing areas in an Aviation District shall be 300 feet.
3. *Setback to Nearest Residential Uses and Structures*. The setback from airport runways, taxiways, and related facilities to the nearest residential uses and structures in an Aviation District shall be 1,700 feet from the centerline of the runway or taxiway. The setback from helicopter takeoff and landing areas to the nearest residential uses and structures in an Aviation District shall be 1,300 feet from the takeoff and landing areas.
4. *Minimum Front Setback*. The minimum front setback for structures in an Aviation District shall be 25 feet.
5. *Minimum Side Corner Setback*. The minimum side corner setback for structures in an Aviation District shall be 25 feet.
6. *Minimum Side Setback*. The minimum side setback for structures in an Aviation District shall be 15 feet
7. *Minimum Rear Setback*. The minimum rear setback for structures in an Aviation District shall be 15 feet.
8. *Right-of-Way/Section Line Setbacks*. See Sec. 2-08-01(F).

C. **General Site Design and Performance Standards**. The following general site design and performance standards shall be met by all uses within an Aviation District.

1. *Manufacturing and Distribution Facilities*. No manufacturing or distribution operation shall:
   a. Conduct an activity that involves the generation or storage of animal, vegetable, or other wastes, which attract insects, rodents, or birds, or otherwise create a hazard to aircraft operations;
   b. Conduct an activity, which emits smoke, fly ash, dust, vapor, gases, or other forms of air pollution, which would interfere with the safe operation of aircraft, or may conflict with present or planned operations of the airport;
   c. Conduct an activity, which involves water impoundments, solid waste disposal, or other uses, which attract birds or other animal species, which may present a hazard to aircraft operations;
   d. Conduct an activity, which emits glaring light or employs highly reflective surfaces, which interfere with a pilot's ability to locate runways or landing pads; or
   e. Conduct an activity, which creates electronic interference with communications among aviators and ground control personnel.
2. *Accessory Storage*.

a. *Enclosed*. Accessory storage shall be enclosed and concealed by a six foot to eight foot-closed fence to prevent views of the interior.

b. *Screening Materials*. Screen fencing shall be maintained in an attractive condition. Fencing material shall be approved in advance by the Director of Community and Economic Development.

c. *Height of Storage Materials*. Outside storage shall not exceed the height of the fence, except for operable vehicles, trailers, and other equipment designed to be towed or lifted as a single component.

3. *Fencing*. A perimeter fence 60 inches or taller shall be erected to surround the Aviation District area.

D. **Relationship to Design Requirements and Performance Standards**. All design requirements and specific use standards contained in Chapter 3 of this DSR shall apply in an Aviation District.

## 2-08-07 DIA, Denver International Airport

A. **Boundaries**. The boundaries of the DIA District are limited to those areas described in Exhibit 'A' in Article IV entitled "Annexation and Land Acquisition"; A Part of the Adams County/Denver Intergovernmental Agreement on a New Airport signed and dated April 21, 1988, and any subsequent agreements or amendments. The Adams County/Denver Intergovernmental Agreement can be found in Appendix D. Appendix D is incorporated herein by reference and made a part hereof.

B. **Permitted Principal Uses**. Permitted uses in the DIA zone district are subject to building permit review and approval and are limited to those described in the Adams County/Denver Intergovernmental Agreement on a New Airport signed and dated April 21, 1988, and any subsequent agreements or amendments. The Adams County/Denver Intergovernmental Agreement can be found in Appendix D. Appendix D is incorporated herein by reference and made a part hereof.

C. **General Site Design and Performance Standards**. The following general site design and performance standards shall be met by all uses within the DIA District.

1. *Road and Trails*. No public road or trail may be closer than 2,700 feet from the end of the runway in the area defined as the Runway Protection Zone (RPZ).

2. *Interference of Use*. Uses may not interfere with airport operations, nor interfere with aerial approaches.

## 2-08-08 AHO, Airport Height Overlay

A. **Boundaries**. The Airport Height Overlay area includes all land where the height of structures or natural features may obstruct or otherwise influence aviation activities. The extent of this area is determined by applying the standards and criteria listed in Title 14 of the Code of Federal Regulations, Subchapter E, Federal Aviation Regulations ("F.A.R.") Part 77 entitled "Objects Affecting Navigable Airspace". The official zoning map illustrates how the geographic extent of the navigable airspace is determined. The geographic extent of the Airport Height Overlay for each aviation facility affecting Adams County is drawn to the nearest quarter-section of land lying outside the Airport Height Overlay as illustrated on the Adams County Zoning Map.

B. **General Site Design and Performance Standards**. The following general site design and performance standards shall be met by all uses within the Airport Height Overlay District.

1. *Proposed Development to Complete Aeronautical Study*. Applicants requesting Zoning Map Amendments, Conditional Use Permits, Temporary and Special Use Permits, Certificates of Designation, Site Plan approval, Site Specific Development Plans, and Building Permits must complete an FAA aeronautical study on obstructions to determine if the proposed development could be a hazard to air navigation. If no hazard is determined, the proposed development may proceed, pending compliance with other County requirements. If a hazard to air navigation is found to exist by the FAA, then:
   a. The applicant may alter the proposal in a manner which does not present a hazard to air navigation and may proceed subject to compliance with other County requirements; or
   b. If alternative designs or locations do not pose compelling reasons to allow the use or structure within the Airport Height Overlay District, the County will prepare Findings of Fact, to be entered in the application record by the Director of Community and Economic Development citing the reasons why the use is compatible with the intent of the Airport Height Overlay District. Factors to consider in these findings include the importance of services provided by the proposed facility to the community, and the compatibility of the proposed use with the airport layout plan, and the Adams County Comprehensive Plan. The Director of Community and Economic Development or Manager of the pertinent aviation facility shall be notified of the denial.
2. *Proposed Development to Document Elevations.* Applicants for development shall fully document site elevations in relation to the F.A.R. Part 77 height restrictions. Documentation of site elevations shall consist of a topographic map of the site showing contours for every five feet of elevation change to illustrate the elevation above mean sea level; the location and height of any proposed buildings or structures, as well as natural features that impinge upon the F.A.R. Part 77 surfaces; and the elevation of the aviation facility affecting the applicant's property.
3. *Landowners to Install Markers.* Landowners may be required to install, operate, and maintain, at the owner's expense, such markers and lights which may be necessary to indicate to flyers the presence of a hazard which affects the aviation facility. This marking and lighting requirement may also extend to objects of natural growth (trees, primarily) on site.
4. *Airport Manager Given Opportunity to Review Applications*. Applications for zone changes, Conditional Use Permits, Temporary and Special Use Permits, Certificates of Designation, Site Plans, and Site-Specific Development Plans will be forwarded to the Director of the aviation facility(ies) for review and comment concerning the impact of the proposal on aviation operations.

C. **Relationship to Design Requirements and Performance Standards**. All design requirements and specific use standards contained in Chapter 3 of this DSR shall apply in an Airport Height Overlay District unless inconsistent with a provision contained in Sec. 2-08-06, *AV, Aviation*, in which case the specific standard or requirement contained in Sec. 2-08-06 shall apply.

## 2-08-09 AIO, Airport Influence Overlay

A. **Boundaries**.

1. *Generally*. The Airport Influence Zone Overlay includes all land impacted by the location of the Colorado Air and Space Port and the noise created by low-flying aircraft. The general boundaries of the Airport Influence Zone are as follows:
   a. 80th Avenue on the north;
   b. Interstate 70 (County line) on the south;
   c. Harback Mile Road on the east; and
   d. Hayesmount Mile Road on the west.
2. *Restriction Areas*. The Airport Influence Zone Overlay also contains two Restriction Areas, which further restrict the land uses within the overlay zone district. The geographic extent of the Airport Influence Zone and the Restriction Areas are delineated on the official Adams County Zoning Map.

B. **General Site Design and Performance Standards**. The following general site design and performance standards shall be met by all uses within an Airport Influence Zone Overlay District.
1. *Restriction Area One*. No structures designed for full or part-time occupation for residential, commercial, institutional, or industrial uses shall be permitted.
2. *Restriction Area Two.* Prohibits the construction of residences, except existing residences may be occupied and new homes may be built on lots or parcels created prior to the adoption of the Airport Influence Zone, August 1, 1983 or on 35 acre parcels, which meet the requirements of the A-3 Zone District, regardless of creation date.
3. *Federal Aviation Administration Standards.* All uses and building plans are subject to FAA Obstruction and Approach Zone Regulations (Part 77).
4. *Affidavit Required to Obtain Subdivision or Building Permit*. A signed "Aircraft Activity Covenant with Disclosure" must be filed prior to approval of a subdivision, if applicable, or the issuance of a Building Permit.
5. *Uses Not to Interfere with Aviation*.
   a. *No Emissions*. Uses must not produce steam, smoke, or otherwise pose a hazard to aviators.
   b. *No Glare*. Uses must not emit glaring light or employ highly reflective surfaces which may impair the visibility of aviators, nor shall the use create interference with the electronic communication among aviators and ground control.
   c. *Not Attractive to Wildlife*. Uses must lack the potential of attracting birds and other wildlife species which may pose a hazard to flight operations.

C. **Relationship to Design Requirements and Performance Standards**. All design requirements and specific use standards contained in Chapter 3 of this DSR shall apply in a Noise Overlay District unless inconsistent with a provision contained in Sec. 2-08-06, *AV, Aviation*, in which case the specific standard or requirement contained in Sec. 2-08-06 shall apply.

## 2-08-10 ANO, Airport Noise Overlay

A. **Boundaries**. The Airport Noise Overlay includes all land heavily impacted by the noise created by low-flying aircraft and lying within the 60 Ldn or greater noise contour area. The extent of this area is determined based upon the measurements of sound computed by the methods contained in Title 14 of the Code of Federal Regulations, Subchapter I, Federal Aviation Regulations ("F.A.R.") Part 150, "Airport Noise Compatibility Planning". These computations are based upon the fleet mix that forms the "worst case scenario" for the type and volume of

aircraft activity proposed at full build-out of the facility. The geographic extent of the noise overlay for each aviation facility affecting Adams County is delineated on the official Adams County Zoning Map.

B. **Prohibited Uses**. The following uses are specifically prohibited in an Airport Noise Overlay Zone:

1. Public or private primary and secondary schools; branch libraries, gymnasiums, and indoor skating rinks;
2. Uses in the Social Service Establishments use category as listed in Table 3-02-03-9;
3. Uses in the Day Care use category as listed in Table 3-02-03-2; and
4. Universities.

C. **General Site Design and Performance Standards**. The following general site design and performance standards shall be met by all uses within an Airport Noise Overlay District.

1. *Residential Uses*.
   a. No New Residential Zoning. No residential rezoning shall be considered or approved.
   b. Existing Lots Developable. One single-family detached dwelling may be constructed per lot lawfully in existence as of January 1, 1991, or as may be created per C.R.S. § 30-28-101(10).
   c. Existing Residential Use Nonconforming. Existing residential uses may continue but shall be limited by the non-conforming use provisions of these standards and regulations.
   d. Approved Residential Uses. Residential uses allowed in accordance with an approved Site-Specific Development Plan, or Building Permit effective at the time airport construction commences may be allowed if the use conforms with the performance standards listed below.
   e. Noise Reduction Required. All newly established residential uses must incorporate noise level reduction measures sufficient to achieve an interior noise level of 45 dB on the A-weighted scale. Assurance that these measures have been incorporated into the structure is illustrated by submission of noise reduction plans certified by a registered professional engineer at the time of application for a Building Permit, and implemented prior to issuance of a Certificate of Occupancy.
2. *Affidavit Required to Obtain Building Permit*. A signed "Aircraft Activity Covenant with Disclosure" must be filed prior to issuance of a Building Permit.
3. *Commercial and Industrial Uses to Incorporate Noise Reduction*. The portions of the nonresidential structures devoted to uses in the Office use category as listed in Table 3-02-04-1 or occupied by members of the public must incorporate noise level reduction measures sufficient to achieve an interior noise level of 45 dB on the A-weighted scale. The noise reduction measures cited above are described in the Building Codes as adopted by Adams County. Assurance that these measures have been incorporated into the structure is illustrated by submission of noise reduction plans certified by a registered professional engineer at the time of application for a Building Permit and implemented prior to issuance of a Certificate of Occupancy.
4. *Uses Not to Interfere with Aviation*.
   a. No Emissions. Uses must not produce steam, smoke, or otherwise pose a hazard to aviators.

b. No Glare. Uses must not emit glaring light or employ highly reflective surfaces which may impair the visibility of aviators, nor shall the use create interference with the electronic communication among aviators and ground control.

c. Not Attractive to Wildlife. Uses must lack the potential of attracting birds and other wildlife species which may pose a hazard to flight operations.

D. **Relationship to Design Requirements and Performance Standards**. All design requirements and performance standards for specific uses contained in Chapter 4 of these standards and regulations shall apply in the Airport Noise Overlay District unless inconsistent with a provision contained in Sec. 2-08-06, *AV, Aviation*, in which case the specific standard or requirement contained in Sec. 2-08-06 shall apply.

# 2-08-11 FGO, Flammable Gas Overlay

A. **Location and Boundaries of Known Flammable Gas Hazard Area (Solid Waste Disposal Sites)**. Those areas identified in the report dated April 19, 1978 titled "Landfills in Which Methane Generation Has Been Documented," prepared by Adams County Health Department, as well as the surrounding property to within one 1,000 feet are located within the Flammable Gas Overlay District. These areas are defined as:

1. *Berkeley Village*. The hazardous area is bounded by the Adams County line on the south and west, Clear Creek on the north, and the north-south line 500' east of the centerline of Tennyson Street. This area corresponds to No. 1 on the Zoning Restriction Map: Overlay Restriction Flammable Gas hereinafter called Zoning Restriction Map.

2. *Adams County Landfill*. The hazardous area is bounded beginning at the intersection of Federal Blvd. and the Denver Salt Lake Railroad Crossing tracks, thence 6375' east along the Denver Salt Lake Railroad tracks, thence north 1800', thence west 2250', thence south 1000', thence west 3350', thence north 200' to Clear Creek, thence west along Clear Creek to the centerline of Federal Blvd., thence south to the point of beginning. This area corresponds to No. 2 on the Zoning Restriction Map.

3. *Adams County Landfill*. The hazardous area is bounded beginning at Clear Creek 900' from the centerline of Federal Blvd., thence east along Clear Creek 3500', thence east 300', thence south 1700', thence west 3350', thence north 200' to the point of beginning. This area corresponds to No. 3 on the Zoning Restriction Map.

4. *Property Improvements, Inc*. The hazardous area is bounded by the area beginning at the point of intersection of West 62nd Avenue and Huron Street, thence north along Huron 2300', thence east 3300', thence south 3300', thence west 2600' along West 60th Avenue, thence north 1000', thence west 700', to the point of beginning. This area corresponds to No. 4 on the Zoning Restriction Map.

5. *Property Improvements, Inc*. The hazardous area is bounded beginning at a point 900' east from the centerline of Pecos Street at Clear Creek, thence south 2300', thence east 250', thence south 650', thence east 1500', thence north 3350' along Huron Street, thence west 500' to Clear Creek, thence west 1400' along Clear Creek to the point of beginning. This area corresponds to No. 5 on the Zoning Restriction Map.

6. *Landfill, Inc*. The hazardous area is bounded beginning at a point at Clear Creek 150' west from the centerline of I-25, thence west along Clear Creek 4100', thence south 150', thence east 3300', thence south 650', thence east 300', thence north 2500' to the point of beginning. This area corresponds to No. 6 on the Zoning Restriction Map.

7. *Western Paving*. The hazardous area is bounded beginning at a point 900' east from the centerline of Pecos Street at Clear Creek, thence west along Clear Creek, thence south 1100', thence east 1750', thence north 2300' to the point of beginning. This area corresponds to No. 7 on the Zoning Restriction Map.
8. *Fiore & Sons*. The hazardous area is bounded by the area beginning at a point at the intersection of West 62nd Avenue and Huron, thence 700' east, thence 950' south, thence 1000' east on 60th Avenue, thence 1050' south, thence 2700' west, thence 1000' north, thence 1000' east, thence 950' north to the point of beginning. This area corresponds to No. 8 on the Zoning Restriction Map.
9. *Property Improvements, Inc*. The hazardous area is bounded by the area beginning at the intersection of the Brantner Ditch and East 144th Avenue, thence north 2300' along the Brantner Ditch, thence west 3000', thence south 2350', thence 1700' east to the Brantner Ditch, thence north 500' to the point of beginning. This area corresponds to No. 13 on the Zoning Restriction Map.
10. *Eaton Industrial Subdivision*. The hazardous area is bounded by the area beginning at a point 950' north of the intersection of 56th Avenue and Washington Street, thence 1250' east, thence 850' southeast, thence 950' south, thence 1750' southwest, thence 900' west of Washington Street, thence 1200' northwest, thence 1200' north of 56th Avenue, thence 1400' northeast to the point of beginning, excluding those areas within the City and County of Denver. This area corresponds to No. 15 on the Zoning Restriction Map.

B. **Unknown Flammable Gas Hazard Areas (Solid Waste Disposal Sites)**. The Flammable Gas Overlay District restrictions shall also apply to any site discovered to have been a solid waste disposal site or to any site which is located within 1,000 feet of a former solid waste disposal site.

C. **Referrals of Proposed Construction on Solid Waste Disposal Site**. Any proposal to construct or change the use of any lot that is or has been a solid waste disposal site shall be referred to the Community and Economic Development Department, the applicable fire district, Adams County Health Department, and the Colorado Department of Public Health and Environment for review and comment.

D. **Review Responsibilities**.

1. *Adams County Health Department*. Adams County Health Department is primarily responsible for reviewing the plan for and the results of the flammable gas investigation for the site and reviewing the plans for flammable gas control systems and shall supply safety information related to construction on or within one 1,000 feet of any solid waste disposal site.
2. *Applicable Fire District*. The applicable fire district is primarily responsible for reviewing the building plans; reviewing the design, operation and maintenance plans for the flammable gas control system; and reviewing the emergency procedures for buildings constructed in the Flammable Gas Overlay District. All construction or excavation is subject to inspection by the applicable fire district.
3. *Community and Economic Development Director*. The Community and Economic Development Director is primarily responsible for reviewing the proposed land use. The Community and Economic Development Director shall review and keep for the record a final copy of the engineering design, the plan for the flammable gas investigation, and the plan for the flammable gas control system.

4. *Colorado Department of Public Health and Environment*. The Colorado Department of Public Health and Environment is primarily responsible for reviewing and approving the plans in accordance with their rules and regulations.
5. *Comments Concerning Development Proposals*.
   a. The Community and Economic Development Director, Adams County Health Department the applicable fire district, and the Colorado Department of Public Health and Environment shall prepare and submit comments and recommendations to the Chief Building Official for review within 30 days following receipt of the request for review and comments.
   b. No new residential zoning shall be considered or approved unless the property owner demonstrates, based on the criteria in subsection E(1), *Safety Criteria for Building Permits*, below, flammable gas is not present and the potential does not exist for the buildup of flammable gases to reach 20% of the lower explosive limit in the soil surrounding the proposed building(s).

E. **Building Permits and Construction on or Within One 1,000 Feet of a Former Solid Waste Disposal Site**. The Chief Building Official shall issue a Building Permit for construction within a Flammable Gas Overlay District within the boundaries of or within one 1,000 feet of a former solid waste disposal site only after receiving comments from the Community and Economic Development Department, Adams County Health Department the applicable fire district, and the Colorado Department of Public Health and Environment after determining the property owner has met the specified safety criteria (Note: These standards are based on the 20% lower explosive limit (LEL) standard formulated by the National Institute of Occupational Safety and Health of the Bureau of Mines of the U.S. Department of the Interior):

1. *Safety Criteria for Building Permits*. Property owners may meet safety criteria by doing either of the following:
   a. Completing a flammable gas investigation demonstrating no flammable gas is present and there is no potential for flammable gas to reach 20% of the lower explosive limit in the soil surrounding the proposed building(s).
   b. The owner shall receive prior approval of the flammable gas investigation plan from the Chief Building Official. The flammable gas investigation plan shall be done by, or under the direct supervision of, a registered professional engineer with experience in evaluation and control of subsurface gas. At a minimum, the plan shall include the following:
      (1) A description of representative soils at the site.
      (2) Monitoring for flammable gas to the depth of the fill material or to bedrock, whichever is more applicable, and a rationale for the number and location of proposed monitoring probes. Adams County Health Department shall be given the opportunity to oversee installation of the probes, and probes shall remain undisturbed, intact and accessible for a minimum of three weeks to provide Adams County Health Department the opportunity to conduct sampling for flammable gas.
      (3) A detailed description of the sampling methodology and data collection techniques to be utilized.

(4) If any flammable gas is detected, a rationale for why there is no potential for flammable gas to reach 20% of the lower explosive limit in the soil surrounding proposed building(s).

c. Submitting building plans to include all necessary flammable gas control systems to protect against buildup of over 1% of flammable gas in the buildings. The building plans shall also include an automatic gas detection system to alert building occupants in the event of buildup of 1% of flammable gas in the structure. An operation and maintenance plan for the flammable gas control system, including emergency procedures, shall also be submitted with the building plan. The building plans and operation and maintenance plan for the flammable gas control system shall be prepared by a registered professional engineer with experience in the design of subsurface gas control systems.

(1) The building plans for all buildings shall meet the following minimum standards, or propose an equivalent design which will prevent flammable gas migration into the building:

(A) A geomembrane or equivalent system with low permeability to flammable gas shall be installed between the concrete floor slab of the building and the subgrade;

(B) A venting system to provide venting to the outside of the building. The system shall consist of a permeable layer of open graded material of clean aggregate with a minimum thickness of 12 inches;

(C) A geotextile filter shall be utilized to prevent the introduction of fines into the permeable layer;

(D) Perforated venting pipes shall be constructed with the ability to be connected to an induced draft exhaust system;

(E) Automatic methane gas sensors shall be installed inside the building to trigger an audible alarm when methane gas concentrations are detected; and

(F) Unenclosed buildings are exempt from requirements in subsection (A) through (E), above. Enclosed rooms located within the unenclosed building shall comply with all of the above requirements.

(2) The operation and maintenance plan for the flammable gas control system shall address testing, maintenance and service procedures consistent with the manufacturer's current written specifications.

(3) All buildings that are required to have a flammable gas control system shall have established emergency procedures which shall be subject to the approval of the fire department. The emergency procedures shall include, but not be limited to, the following:

(A) Assignment of a responsible person as safety Director to work with the fire department in the establishment, implementation and maintenance of an emergency plan.

(B) Conspicuous posting of the fire department's telephone number in areas designated by the fire department.

(C) Conspicuous posting of emergency plan procedures approved by the fire department.

2. *Safety Practices During Construction*.
   a. If it has not been demonstrated flammable gas is not present, the following health and safety practices shall be followed:
      (1) A flammable gas indicator will be utilized at all times during trenching, excavation, drilling, or when working within 10 feet of an open excavation.
      (2) Before personnel are permitted to enter an open trench or excavation, the trench or excavation will be monitored to ensure flammable gas is not present in concentrations exceeding 1% and oxygen is present at a minimum concentration of 19.5%. When in an excavation or trench, each work party will work no more than five feet from a continuous flammable gas and oxygen monitor.
      (3) When trenching, excavating, or drilling deeper than 2 feet into the fill, or in the presence of detectable concentrations of flammable gas, the soils will be wetted and the operating equipment will be provided with spark proof exhausts.
      (4) A dry chemical fire extinguisher, ABC rated, will be provided on all equipment used in the landfill.
      (5) Personnel within or near an open trench or drill hole will be fully clothed, and wear shoes with non-metallic soles, a hard hat and safety goggles or glasses.
      (6) Exhaust blowers will be used where trenches show a concentration of 1% flammable gas or a concentration of less than 19.5% oxygen.
      (7) Smoking will not be permitted in any area within 100 feet of the excavation.
      (8) Personnel will be kept upwind of any open trench unless the trench is continuously monitored.
      (9) All other applicable Safety and Health Regulations for Construction, as promulgated in 29 CFR by the Occupational Safety and Health Administration, shall be met. Applicable regulations include, but may not be limited to, the confined space standard (Part 1926.21(b)(6)(i) and (ii) in Subpart C); gases, vapors, fumes, dusts and mists (Part 1926.55 in Subpart E); fire protection and prevention (Part 1926 Subpart F); and trenching and excavation (Part 1926 Subpart P).
      (10) Compliance with the Occupational Safety and Health Administration's confined space requirements for general industry, as promulgated in 29 CFR § 1910.146 and Appendices A-F.
3. *Inspection And Certification of Gas Control System*. The registered engineer who designed the flammable gas control system shall be responsible for supervising installation of the approved system. After completion of the work, the engineer shall certify in writing that all flammable gas control systems designed to mitigate hazardous concentrations of flammable gas have been installed in accordance with the approved plans and specifications. The written certification shall be submitted to the Chief Building Official.
4. *Post Construction Maintenance of Flammable Gas Control Systems*. The property owner shall be responsible for maintenance of flammable gas control systems to include post-construction testing, calibration and service of automatic gas detection systems in buildings, consistent with the approved operation and maintenance plan. These activities shall be conducted on a schedule to be determined by the applicable fire district, but shall occur at least quarterly. System calibration and maintenance records shall be submitted to

the fire district on a schedule determined by the district, but shall be submitted at least quarterly.

F. **Additional Remedial Measures**.

1. *Mitigation Measures*. In the event the concentration of flammable gas in any building located in the FGO reaches or exceeds 1%, the owner shall hire a qualified engineer to investigate, recommend, and implement mitigation measures. Such measures shall be subject to approval of the Chief Building Official and the fire department.
2. *Appeal of Flammable Gas Hazard Boundaries*. Boundaries of the Flammable Gas Overlay District may be appealed to the Director of the Community and Economic Development Department based on completion of a flammable gas investigation as specified in subsection E of this Section.

G. **Relationship to Design Requirements and Performance**. All design requirements and specific use standards contained in Chapter 3 of this DSR shall apply in a Flammable Gas Overlay District unless inconsistent with a provision contained in this Section in which case the specific standard or requirement contained in this Section shall control.

# 2-08-12 FO, Floodplain Overlay

A. **Applicability**. This Section applies to any land located within the 100-year (1% frequency in any given year) floodplain and areas removed from the floodplain by the issuance of a FEMA Letter of Map Revision Based on Fill (LOMR-F) within unincorporated Adams County. If a lot or other parcel of land lies partly within the Floodplain Overlay District, this Section applies to the part of such lot or parcel lying within the FO District. If a building or structure lies partly within the Floodplain Overlay District, then this Section applies to the entire building or structure.

B. **Relationship to Other Regulations**. The Floodplain Overlay District standards and regulations supplement all land use restrictions associated with the underlying zone district, which remain in full force and effect. Restrictions associated with the Floodplain Overlay District apply to the use, performance, and design of property located within the district. In the case of conflicting requirements, the most restrictive provision shall apply.

C. **FO District Boundaries**. The Floodplain Overlay District is defined as the FEMA Floodplain together with the Adams County Floodplain, as those floodplains are defined below.

1. *FEMA Floodplain*. The Special Flood Hazard Area identified by FEMA in a scientific and engineering report entitled "Flood Insurance Study, Adams County, Colorado and Incorporated Areas" dated December 2, 2021, with the accompanying series of Flood Insurance Rate Maps (FIRM) and/or Flood Boundary and Floodway Maps (FBFM), and any revisions thereto, are hereby incorporated herein by reference and constitute the "FEMA Floodplain".
2. *Adams County Floodplain*. To augment the FEMA Floodplain, the Board of County Commissioners may, after review and recommendation by the Planning Commission, adopt an "Adams County Floodplain." The purpose of adopting an Adams County Floodplain is to facilitate the use of the best data available to the County to establish floodplain boundaries and Base Flood Elevations (BFE) to better protect residents of the County from flood hazards. The Adams County Floodplain must be comprised of the following:
    i. The same flood risk zone designations as the FEMA Floodplain.

ii. In no instance may the Adams County Floodplain remove from the Floodplain Overlay District an area or property designated as within the FO District by the FEMA Floodplain.

The Adams County Floodplain is also comprised of the following:

a. Flood Hazard Area Delineation studies produced through the Mile High Flood District (f/k/a Urban Drainage and Flood Control District), designated by the Colorado Water Conservation Board (CWCB), and approved by resolution of the Board of County Commissioners. Once approved by the Board of County Commissioners, these studies are incorporated herein by reference.

b. Other 100-year floodplain studies as approved by resolution of the Board of County Commissioners. Once approved by the Board of County Commissioners, these studies are incorporated herein by reference.

c. The maps in these reports depicting the floodplain for the base flood shall be considered the official maps for the purposes of locating the Adams County Floodplain. These maps and reports, together with all amendments, explanatory matter, technical addenda, water surface elevations, profiles and cross sections (where available) are incorporated herein by reference.

D. **Official Map of the FO District.** The Floodplain Administrator or their designee shall maintain digital maps delineating the location and boundaries of the FEMA Floodplain and, if practical, the Adams County Floodplain. The FEMA Floodplain map shall depict in plan view the horizontal boundary of the flood hazards described in the underlying flood studies, as published by FEMA. These FEMA Floodplain digital maps, plus any digital maps prepared by the County delineating the Adams County Floodplain, or in the absence thereof, the maps in these reports depicting the floodplain for the base flood for the purposes of locating the Adams County Floodplain, shall together be considered the official map of the Floodplain Overlay District ("Official Map of the FO District"). The most current Official Map of the FO District and supporting data shall be on file in the Community and Economic Development Department in electronic format, available for public inspection during normal business hours, with electronic and paper copies available upon request.

E. **Interpretation of Official Map of the FO District.**

1. The Floodplain Administrator shall determine which uses, parcels, structures, or other facilities are located in the Floodplain Overlay District, including in situations where a mapped boundary appears to conflict with actual field conditions. In making such interpretations, the Floodplain Administrator shall refer, as necessary, to the best available data at that time.

2. Sources of best available data for interpretations include the engineering study upon which the maps and elevations are based, the professional engineers who prepared the study, the most recent detailed terrain data certified by a registered Colorado Professional Engineer (PE) or a registered Colorado Professional Land Surveyor (PLS), survey data certified by a PE or PLS, any Base Flood Elevation/water surface elevation, Floodway, and other flood risk data available from state or federal agencies, and any other reliable source that the Floodplain Administrator finds meets an acceptable level of technical accuracy as determined through prevailing industry practices.

3. To the extent the FEMA Floodplain and the Adams County Floodplain (if any) conflict, the most restrictive provision controls.

4. The use of aerial, satellite and Light Detection and/or Ranging (LIDAR) imagery to interpret Floodplain Overlay District boundaries, but without the consideration of local terrain data, shall be for informational purposes only, and not for making determinations as to the exact location of the boundaries of the FO District.
5. If the Floodplain Administrator makes a determination regarding the relationship of the Official Map of the FO District to a use, parcel, structure, or other facility, the interpretation must be noted in the records associated with any related permit(s) and available for public inspection.
6. The Floodplain Administrator's determinations under this subsection are interpretations of precisely where the existing regulatory boundaries lie on the ground. A determination as to which uses, parcels, structures, or other facilities are located in or out of a previously adopted Special Flood Hazard Area does not itself contract or expand the boundaries of the Floodplain Overlay District. Therefore, such determinations do not result in an amendment to the Official Map of the FO District that requires review by the Planning Commission and approval of the Board of County Commissioners.

F. **Amendment of Official Map of the FO District.**

1. The Floodplain Overlay District boundaries will be deemed updated when FEMA issues a Letter of Final Determination associated with any map action, or after the effective date of any Letter of Map Change ("LOMC"), without need for review by the Planning Commission or approval of the Board of County Commissioners, regardless of how many parcels are affected.
2. Except for an automatically adopted DFIRM update, a change in the boundary of the Floodplain Overlay District shall be made by resolution of the Board of County Commissioners following review and recommendation by the Planning Commission. Written notice to affected property owners shall be mailed at least fifteen (15) days prior to the first Planning Commission meeting date concerning the amendment stating the date, time, place and purpose of the meeting. Failure of such notice shall not affect the validity of any action by the Planning Commission or Board of County Commissioners.
3. The Floodplain Administrator may generate or receive draft and/or preliminary flood risk analyses and reports affecting the Floodplain Overlay District. These analyses may be any flood risk analyses, including those designated by CWCB or distributed by FEMA, as well as any other water surface elevation and/or Floodway data available from state or federal agencies or any other reliable source. Upon notification of such new information, the Floodplain Administrator shall evaluate whether a change to the boundaries of the FO District is required. If so, the Floodplain Administrator will submit a proposed map amendment to the Planning Commission and the Board of County Commissioners for review and approval as set forth in subsection 2 above.
4. In accordance with 44 C.F.R. § 65.3 and the Rules and Regulations for Regulatory Floodplains in Colorado, project proponents must submit technical data to FEMA in the form of a LOMR request within six months of the date of completion of a project if the project received a CLOMR from FEMA before construction or results in changes (either increases or decreases) in the 100-year water surface elevation greater than 0.3 feet.
5. The Floodplain Administrator will monitor large-scale natural physical changes as they occur. If the Floodplain Administrator deems it necessary to restudy a mapped Floodplain or Floodway as a result of such changes, the Floodplain Administrator will coordinate with

the CWCB and FEMA and, as appropriate, submit a proposed map amendment to the Planning Commission and the Board of County Commissioners for review and approval.

G. **General Administration.**

1. *Floodplain Administrator*. The Director of Community and Economic Development or their designee shall be responsible for administering the Floodplain Overlay District.
2. *Record Keeping*. The Community and Economic Development Department shall keep a copy of the Flood Insurance Study (FIS), DFIRMs and FIRMs on file and available for public inspection. The Community and Economic Development Department shall maintain all records pertaining to the development in the Floodplain Overlay District, including the actual elevation (in relation to mean sea level as that term is defined herein) of the lowest floor (including basement) of all new or substantially improved structures, verify and maintain floodproofing certifications, and maintain for public inspection all records pertaining to these FO District standards and regulations. All records of Floodplain Use Permit Variances, appeals, boundary interpretations, map amendments and Floodplain Use Permits shall also be maintained by the Community and Economic Development Department.
3. *Reporting*.
   a. *Reporting Watercourse Alterations*. Before approval of any watercourse alterations, major or minor development, the Floodplain Administrator, as appropriate, shall refer the case to the adjacent communities, the Mile High Flood District, the CWCB, and FEMA for their comments.
   b. *Reporting Floodplain Use Permit Variances*. Variances to these standards and regulations shall be reported to FEMA annually by the Floodplain Administrator.
4. *Cumulative Substantial Improvements*. The purpose of this subsection is to prevent incremental improvements to structures located within the Floodplain Overlay District from avoiding the Substantial Improvement requirements of this Section by dividing work into multiple permits or projects over time. For purposes of determining whether a structure has undergone a Substantial Improvement, the Floodplain Administrator shall aggregate the cost of all improvements to the structure authorized by permits issued during the preceding five (5) years. The cumulative cost of all improvements made during the ten-year period shall be compared to the market value of the structure, exclusive of land value, determined by one of the following methods as approved by the Floodplain Administrator: (i) the market value of the improvements for property tax purposes, updated as necessary by the increase in the consumer price index since the date of the last valuation; (ii) the market value determined by an independent qualified appraiser, mutually selected by the Floodplain Administrator and the property owner and paid for by the applicant; or (iii) another method approved by the Floodplain Administrator that reasonably reflects the market value of the structure. Where the cumulative cost of improvements equals or exceeds 50% of the market value of the structure before commencement of the first improvement included in the cumulative calculation, the proposed work shall constitute a Substantial Improvement and the structure shall be brought into compliance with all applicable floodplain management requirements of this DSR before issuance of a Certificate of Occupancy.

H. **Permitting.**

1. *Permit Required*. A Floodplain Use Permit is required for any structure, facility, fill, development, storage or processing of materials or equipment, or change in the channel of a watercourse in the Floodplain Overlay District. These uses may only be permitted if the

use meets the requirements of these standards and regulations including all applicable performance standards.

2. *Permit Exemptions*. The following principal and accessory uses shall be allowed within a Floodplain Overlay District to the extent the use is allowed in the underlying zone district, do not require any structures, facilities, fill, storage of materials or equipment, or change in a channel of a watercourse, and meet the requirements of other County regulations. These uses are allowed without a Floodplain Use Permit, provided the use meets all other requirements and standards.
   a. Agricultural uses not requiring structures, facilities, fill, storage or processing of materials, or change in the channel of a watercourse, such as general farming, pasture, truck farming, forestry, sod farming, and wild crop harvesting.
   b. Industrial-commercial uses not requiring structures, facilities, fill, storage or processing of materials, or change in the channel of a watercourse, such as loading areas, parking areas, airport landing strips, runways and taxiways, railroad rights-of-way (not including freight yards or switching, storage or industrial sidings).
   c. Accessory residential uses, such as lawns, gardens, driveways, and play areas.
   d. Public and private recreational uses not requiring structures, facilities, fill, storage or processing of materials, or change in the channel of a watercourse, such as parks, swimming pools, golf course, driving ranges, picnic grounds, wildlife and nature preserves, game farms, fish hatcheries, shooting preserves, target ranges, trap and skeet ranges, and hunting, fishing and hiking areas.
   e. Utility facilities such as: flowage areas, transmission lines, (not including support towers), pipelines, water monitoring devices, and roadways (which do not require fill and not including bridges).
   f. Barbed wire, three-strand wire, and split rail fence. Other types of fences such as wooden privacy and other solid screen types are allowed only if necessary for safety or security reasons provided the fence is specially designed to minimize impeding the flow of floodwaters, accumulation of debris or being subject to being easily moved during flood periods. A Building Permit shall be obtained for all fences. Fence designs which meet the above criteria, such as certain “breakaway” fencing or fencing with slatted design allowing water to pass through will be allowed if properly certified by a registered Colorado Professional Engineer as meeting the identified performance standards. All fences in the Floodway shall require a Floodplain Use Permit.
3. *Certificate of Occupancy Required for Floodplain Overlay District Activities*. A Certificate of Occupancy shall be applied for upon completion of any project construction or site preparation for which a Floodplain Use Permit was granted, and the approved land use shall not commence until a Certificate of Occupancy is issued.
4. *Certification of Engineer Required*. The applicant shall submit a certification by a registered Colorado Professional Engineer indicating the finished fill and building floor elevations, floodproofing measures, or other flood protection factors were accomplished in compliance with the provisions of these standards and regulations. Only after the Director of Community and Economic Development has received such certification shall a Certificate of Occupancy be issued.

I. **General Standards.**

1. *Use of Floodplain Overlay District as Open Space*. Development outside the urban developed areas of unincorporated Adams County shall maximize the use of Floodplain Overlay District areas for open space and recreational/wildlife preservations uses, in accordance with

policies of the Adams County Comprehensive Plan for use of Floodplain Overlay District areas as open space corridors with minimal and no channelization of waterways allowed.

2. *Alteration of a Watercourse/Channelization in Urbanized Areas*. In those existing urbanized areas with utilities, streets, and nonconforming structures, channelization to remove these areas from the Floodplain Overlay District in accordance with a major drainageway plan adopted by the Board of County Commissioners shall be encouraged, subject to the following provisions:
    a. Channelization and flow diversion projects shall appropriately consider issues of sediment transport, erosion, deposition, and channel migration and properly mitigate potential problems through the project as well as upstream and downstream of any improvement activity. A detailed analysis of sediment transport and overall channel stability should be considered, when appropriate, to assist in determining the most appropriate design.
    b. Channelization projects that do not convey the entire base flood flow rate must evaluate the residual 100-year floodplain.
    c. Any channelization or other stream alteration activity proposed by a project proponent must be evaluated for its impact on the regulatory floodplain and be in compliance with all applicable federal, state, and local floodplain rules, regulations, and ordinances.
    d. Any stream alteration activity shall be designed and sealed by a registered Colorado Professional Engineer or a Certified Professional Hydrologist.
    e. All activities within the regulatory floodplain shall meet all applicable federal, state and County floodplain requirements and regulations.
    f. Stream alteration activities shall not be constructed unless the project proponent demonstrates through a floodway analysis and report, sealed by a registered Colorado Professional Engineer, that there is not more than a 0.00-foot rise in the proposed conditions compared to existing conditions of the floodway resulting from the project. This requirement only applies on stream reaches with Base Flood Elevations established.
    g. A CLOMR shall be obtained for all proposed channelization or other stream alteration activity that increases or decreases the established Base Flood Elevation in excess of 0.3 vertical feet in areas for which BFE have been established and without an established Floodway.
    h. A CLOMR shall be obtained for all proposed channelization or other stream alteration activity that increases the established Base Flood Elevation more than 0.00 vertical feet or decreases the established BFE in excess of 0.3 vertical feet.
    i. In areas with an established Floodway, whenever channelization or other stream alteration activity is known or suspected to increase the established Base Flood Elevation in excess of 0.00 vertical feet or decrease the established BFE in excess of 0.3 vertical feet, a LOMR showing such changes shall be obtained in order to accurately reflect the changes on FEMA's regulatory floodplain map for the stream reach.
    j. In areas without an established Floodway, whenever channelization or other stream alteration activity is known or suspected to increase or decrease the established Base Flood Elevation in excess of 0.3 vertical feet, a LOMR showing such changes shall be obtained in order to accurately reflect the changes on FEMA's regulatory floodplain map for the stream reach.

3. *Maintenance of Altered Watercourses*.
   a. Watercourses may be realigned and reworked provided there is:
      (1) No decrease in the efficiency or the capacity of a channel or Floodway of any river, stream, tributary, drainage ditch, or any other drainage facilities or systems.
      (2) No increase in the Base Flood Elevation.
   b. The Floodplain Administrator shall require maintenance to be provided within any altered or relocated portion of said watercourse so the resulting flood carrying capacity is not diminished over time.
4. *Floodproofing*.
   a. Any portion of a nonresidential structure located less than one foot above the Base Flood Elevation shall be floodproofed so that the structure is watertight with walls impermeable to the passage of water and structural components, capable of resisting hydrostatic and hydrodynamic loads and effects of buoyancy.
   b. Floodproofing methods must be adequate to withstand the flood depths, pressures, velocities, uplift, and impact forces associated with the base flood as demonstrated by certification by a registered Colorado Professional Engineer. Possible floodproofing methods include: anchorage to resist flotation and lateral movement; installation of watertight doors bulkheads and shutters; reinforcement of walls to resist water pressures; use of paints, membranes or mortars to reduce seepage of water through walls; addition of mass or weight to structures to resist flotation; installation of pumps to lower water levels in structures; construction of water supply and waste treatment systems to prevent the entrance of floodwaters; pumping facilities for subsurface drainage systems for buildings to relieve external foundation wall and basement floor pressures; construction to resist rupture or collapse, caused by water pressure or floating debris; cutoff valves on sewer lines or the elimination of gravity flow basement drains.
   c. The only method of floodproofing allowed for residential structures is the elevation of the lowest floor to one foot or more above the Base Flood Elevation.
5. *Anchoring Required*. All new construction and Substantial Improvements within the Floodplain Overlay District shall be anchored to prevent flotation, collapse or lateral movement of the structure, and be capable of resisting the hydrostatic and hydrodynamic loads.
6. *Construction Materials and Methods*.
   a. *Materials and Equipment Resistant to Flooding*. All new construction and Substantial Improvements within the Floodplain Overlay District shall be constructed with materials and utility equipment resistant to flood damage.
   b. *Mechanical Equipment and Service Facilities*. All new construction and Substantial Improvements shall be constructed with electrical, heating, ventilation, plumbing, and air *conditioning* equipment and other service facilities, which are designed and/or located to prevent water from entering or accumulating within the components during conditions of flooding.
   c. *Minimize Flood Damage*. All new construction and Substantial Improvements shall be constructed using methods and practices to minimize flood damage.

d. *Below-Grade Crawlspace Construction*. New construction and Substantial Improvement of any below-grade crawlspace shall:

Have the interior grade elevation below Base Flood Elevation, no lower than two feet below the lowest adjacent grade;

(1) Have the height of the below-grade crawlspace measured from the interior grade of the crawlspace to the top of the foundation wall, not to exceed four feet at any point;

(2) Have an adequate drainage system to allow floodwaters to drain from the interior area of the crawlspace following a flood;

(3) Be anchored to prevent flotation, collapse, or lateral movement of the structure and be capable of resisting the hydrostatic and hydrodynamic loads;

(4) Be constructed with materials and utility equipment resistant to flood damage;

(5) Be constructed using methods and practices to minimize flood damage;

(6) Be constructed with electrical, heating, ventilation, plumbing, and air conditioning equipment and other service facilities, which are designed and/or located so as to prevent water from entering or accumulating within the components during conditions of flooding; and

(7) Be designed to automatically equalize hydrostatic flood forces on exterior walls by allowing for the entry and exit of floodwaters. Designs for meeting this requirement must either be certified by a registered Colorado Professional Engineer or a registered Colorado architect or must meet or exceed the following minimum criteria:

(I) A minimum of two openings having a total net area of not less than one square inch for every square foot of enclosed area subject to flooding shall be provided;

(II) The bottom of all openings shall be no higher than one foot above grade and located on opposing or adjacent walls to optimize flood water cross flow; and

(III) Openings must be equipped with screens, louvers, or other coverings or devices and shall permit the automatic entry and exit of floodwaters.

J. **Performance Standards in Floodplain Overlay District.**

1. *Residential Structures (Except Manufactured Homes)*. New construction and Substantial Improvement of any residential structure shall have the lowest floor (including basement), electrical, heating, ventilation, plumbing, and air conditioning equipment and other service facilities (including ductwork), elevated to one foot above the Base Flood Elevation. A registered Colorado Professional Engineer shall certify to the Director of Community and Economic Development the lowest floor of the structure will be elevated to the Base Flood Elevation prior to issuance of a Floodplain Use Permit. Upon completion of the structure, the elevation of the lowest floor, including basement, shall be certified by a registered Colorado Professional Engineer. Such certification shall be submitted to the Floodplain Administrator.

2. *Manufactured Homes.*
   a. *Applicability*. The following standards apply to all manufactured homes or those to be substantially improved on:
      (1) Sites located outside of a manufactured home park or subdivision;
      (2) Sites located in a new manufactured home park or subdivision;
      (3) Sites located in an expansion to an existing manufactured home park or subdivision; and
      (4) Sites where a manufactured home has incurred substantial damage as the result of a flood.
   b. *Elevation*. All manufactured homes shall be elevated on a permanent foundation with the lowest floor of the manufactured home elevated at least one foot above the Base Flood Elevation.
   c. *Anchoring*.
      (1) All manufactured homes shall be elevated and anchored to resist flotation, collapse, or lateral movement. Methods of anchoring may include, but are not limited to, use of over-the-top or frame ties to ground anchors. This requirement is in addition to applicable state and local anchoring requirements for resisting wind forces. Specific requirements may be:
         (A) Over-the-top ties are provided at each of the four corners of the manufactured home, with two additional ties per side at intermediate locations. Manufactured homes more than 50 feet long shall require one additional tie per side.
         (B) Frame ties shall be provided at each corner of the home with, at minimum, five additional ties per side at intermediate points. Manufactured homes more than 50 feet long require, at minimum, four ties per side.
         (C) All components of the anchoring system shall be capable of carrying a force of 5,000 pounds.
      (2) Any additions to the manufactured home shall be similarly anchored.
3. *Manufactured Homes Placed/Replaced in Existing Manufactured Home Parks or Manufactured Home Subdivisions Developed Prior to May 1, 1990*.
   a. *Elevation*. All manufactured homes placed or replaced in a manufactured home park or subdivision developed prior to May 1, 1990 shall be elevated so that either the lowest floor of the manufactured home is at or above the Base Flood Elevation or the manufactured home chassis shall be supported by reinforced piers or other foundation elements that are no less than 36 inches in height above grade and are securely anchored to foundation to resist flotation, collapse, and lateral movement as certified by a registered Colorado Professional Engineer.
   b. *Anchoring*.
      (1) All manufactured homes shall be elevated and anchored to resist flotation, collapse, or lateral movement. Methods of anchoring may include, but are not limited to, use of over-the-top or frame ties to ground anchors. This requirement is in addition to applicable state and local anchoring requirements for resisting wind forces. Specific requirements may be:

(A) Over-the-top ties are provided at each of the four corners of the manufactured home, with two additional ties per side at intermediate locations. Manufactured homes more than 50 feet long shall require one additional tie per side.

(B) Frame ties shall be provided at each corner of the home with, at minimum, five additional ties per side at intermediate points. Manufactured homes more than 50 feet long require, at minimum, four ties per side.

(C) All components of the anchoring system shall be capable of carrying a force of 5,000 pounds.

(2) Any additions to the manufactured home shall be similarly anchored.

4. *Recreational Vehicles*. All Recreational Vehicles placed on sites within Zones A1-30, AH, and AE on Adams County's FIRM shall:

   a. Be on the site for fewer than 180 consecutive days, and

   b. Be fully licensed and ready for highway use, or

   c. Meet the Floodplain Use Permit requirements, and the elevation and anchoring requirements for Manufactured Homes in Sec. 2-08-12(J)(2) above.

   A Recreational Vehicle is ready for highway use if it is on its wheels or jacking system, is attached to the site only by quick disconnect type utilities and security devices, and has no permanently attached additions.

5. *Nonresidential Structures*.

   a. *Critical Facilities*. The lowest floor, including basement for all new nonresidential construction or Substantial Improvement of any nonresidential structure shall be:

      a. Elevated at least two feet above the Base Flood Elevation; or

      b. Floodproofed so that all portions of the structure less than two feet above the Base Flood Elevation, including the attendant utility and sanitary facilities, are watertight. Walls shall be substantially impermeable to the passage of water and with structural components having the capability of resisting hydrostatic and hydrodynamic loads and effects of buoyancy.

      New Critical Facilities shall, when practicable as determined by the Floodplain Administrator, have continuous non-inundated access (ingress and egress for evacuation and emergency services) during a 100-year flood event.

   b. *Non-Critical Facilities*.

      a. The lowest floor, including basement for all new construction of non-critical facilities or Substantial Improvement to any non-critical facility shall be:

         (A) Elevated at least one foot above the Base Flood Elevation; or

         (B) Floodproofed to an elevation one foot above the Base Flood Elevation, including all attendant utility and sanitary facilities. Floodproofed exterior walls shall be substantially impermeable to the passage of water and with structural components having the capability of resisting hydrostatic and hydrodynamic loads and effects of buoyancy.

      b. Elevation to one foot or more above the Base Flood Elevation is the only type of floodproofing allowed for residential structures.

c. A registered Colorado Professional Engineer shall certify to the Director of Community and Economic Development that the design and methods of construction are in accordance with accepted standards of practice for meeting these standards prior to the issuance of a Floodplain Use Permit.

6. *Enclosures.* New construction and Substantial Improvements, with fully enclosed areas below the lowest floor that are usable solely for parking of vehicles, building access, or storage in an area other than a basement and which are subject to flooding shall be designed to automatically equalize hydrostatic flood forces on exterior walls by allowing for the entry and exit of floodwaters. Designs for meeting this requirement must either be certified by a registered Colorado Professional Engineer or a registered Colorado architect or meet or exceed the following minimum criteria:
   a. A minimum of two openings having a total net area of not less than one square inch for every square foot of enclosed area subject to flooding shall be provided.
   b. The bottom of all openings shall be no higher than one foot above grade.
   c. Openings may be equipped with screens, louvers, valves, or other coverings or devices provided that they permit the automatic entry and exit of floodwaters.
7. *Utilities*.
   a. *Water Supply*. All new and replacement water supply systems within the Floodplain Overlay District shall be designed to minimize or eliminate infiltration of floodwaters into the system.
   b. *Sanitary Sewer*. All new and replacement sanitary sewage systems shall be designed to minimize or eliminate infiltration of floodwaters into the systems and discharges from the systems into floodwaters.
   c. *Individual Sewage Disposal*. The Adams County Health Department regulates the installation, repair and replacement of on-site wastewater treatment systems within the Floodplain Overlay District.
8. *Roads, Access, and Parking Lot Construction*. Private access drives and parking lots within a proposed development shall be built no lower than 12 inches below the Base Flood Elevation. Public roads, bridges, and other access ways shall be built in accordance with the standards and regulations for storm drainage design.
9. *Fills and Deposits*.
   a. *Beneficial Purpose*. Fills or deposits of materials shall have some beneficial purpose and the amount shall not be greater than is necessary to achieve the intended purpose. The plans submitted by the owner shall show the final dimensions of the proposed fill or other material and the specific use to which the filled land will be put.
   b. *No Encroachment into Flow Areas*. The fill or deposit of materials shall not encroach on any portion of a Floodplain Overlay District which would have significant flow during the base flood, and which for that reason would help convey the floodwaters (any filling which potentially reduces the hydraulic capacity requires appropriate hydraulic studies and a review of the urban impact of such reduction).
10. *Storage and Processing*. The storage or processing of materials which are buoyant, flammable, hazardous, explosive, or those materials defined as solid waste by the Colorado Health Department, or those materials in times of flooding could be injurious to human, animal, or plant life, shall be located at or above the Base Flood Elevation.

11. *Extraction/Excavation of Sand and Gravel*.
    a. *No Reduction in Flood Storage Capacity*. Gravel mining or grading/hauling/excavating operations shall meet the specific performance standards and guidelines described in the "Technical Review Guidelines for Gravel Mining Activities Within or Adjacent to 100 Year Floodplains" prepared by Wright Water Engineers, Inc., for Urban Drainage and Flood Control District (n/k/a Mile High Flood District) dated January 2013, or shall meet comparable standards as recommended by the Executive Director of Mile High Flood District for unique situations not anticipated within the "Technical Review Guidelines" referenced above, but that accomplish the same purpose (to protect rivers and streams from erosion and degradation which may result from such operations).
    b. *No Encroachment into Flow Areas*. The storage or deposit of extracted materials, or site grading shall not encroach on any portion of a Floodplain Overlay District which may have significant flow during the base flood, and which may subsequently help convey the floodwaters (any filling that potentially reduces the hydraulic capacity requires appropriate hydraulic studies and a review of the urban impact of such reduction).
    c. *Not Restrict Floodwaters*. No storage or deposit of extracted materials, or site grading shall restrict floodwaters from reaching the major watercourse in an area.
12. *Properties Removed From the Floodplain by Fill*. A Floodplain Use Permit shall not be issued for the construction of a new structure or addition to an existing structure on a property removed from the floodplain by the issuance of a FEMA Letter of Map Revision Based on Fill (LOMR-F), unless such new structure or addition complies with the following:
    a. For residential construction, the lowest floor (including basement), electrical, heating, ventilation, plumbing, and air conditioning equipment and other service facilities (including ductwork), is elevated to one foot above the Base Flood Elevation that existed prior to the placement of fill.
    b. For nonresidential construction, the lowest floor (including basement), electrical, heating, ventilation, plumbing, and air conditioning equipment and other service facilities (including ductwork), is elevated to one foot above the Base Flood Elevation that existed prior to the placement of fill, or together with attendant utility and sanitary facilities be designed so that the structure or addition is watertight to at least one foot above the base flood level that existed prior to the placement of fill with walls substantially impermeable to the passage of water and with structural components having the capability of resisting hydrostatic and hydrodynamic loads of effects of buoyancy.
13. *Subdivisions*. All subdivision proposals shall be consistent with the need to minimize flood damage. For instance, all subdivisions approved for development shall have adequate land area within each lot for the type of development allowed by the underlying zone district as constrained by the requirements of the Floodplain Overlay District. All subdivisions shall have public utilities and facilities such as sewer, gas, electrical, and water systems located and constructed to minimize flood damage. All subdivisions shall have adequate drainage provided to reduce exposure to flood damage. Base Flood Elevation data and floodplain delineation plans shall be provided for all subdivision proposals.
14. *Other Uses Not Identified*. The Director of Community and Economic Development may require any structure, use, or activity being conducted within the Floodplain Overlay District

to comply with such conditions and restriction deemed necessary to protect the public health, safety and welfare provided they are consistent with these standards and regulations.

15. *Nonconforming Uses Within the Floodplain Overlay District*. The lawful use of an existing structure or premises not in conformity with the provisions of this Section may be continued subject to the following provisions.
    a. *No Expansion of Nonconforming Uses*. No such use shall be expanded or enlarged except in conformity with the provisions of this DSR.
    b. *Change in Nonconforming Use Limited*. Any Substantial Improvement to any nonconforming structure or use in the Floodplain Overlay District shall require the structure or use be converted to a conforming use.
    c. *Discontinued Use*. If a nonconforming use is discontinued for a continuous period of six months, any future use of the structure and land shall conform to these regulations and standards. Evidence of discontinuance may include removal of equipment or signage, disconnection of utilities, lack of land use activity, or lack of occupancy.
    d. *Public Nuisances*. Uses, or their accessory uses, in the Floodplain Overlay District, which are public nuisances, shall not be permitted to continue as nonconforming uses.
    e. *Floodproofing of Alterations, Additions, or Repairs*. Any alteration, addition, or repair to any existing nonconforming structure in a Floodplain Overlay District shall be protected, where applicable, by approved floodproofing measures. Substantial Improvements shall be subject to additional restrictions as described in the standards for new construction and improvements in the Floodplain Overlay District.

K. **Performance Standards for Areas of Shallow Flooding (AO/AH Zones)**

Located within the Special Flood Hazard Area are areas designated as shallow flooding. These areas have special flood hazards associated with base flood depths of 1 to 3 feet where a clearly defined channel does not exist and where the path of flooding is unpredictable and where velocity flow may be evident. Such flooding is characterized by ponding or sheet flow; therefore, the following provisions apply:

1. *Residential Construction*. All new construction and Substantial Improvements of residential structures must have the lowest floor (including basement), electrical, heating, ventilation, plumbing, and air conditioning equipment and other service facilities (including ductwork), elevated above the highest adjacent grade at least one foot above the depth number specified in feet on Adams County's FIRM (at least three feet if no depth number is specified). A registered Colorado Professional Engineer shall certify to the Director of Community and Economic Development the lowest floor of the structure will be elevated to the Base Flood Elevation prior to issuance of a Floodplain Use Permit. Upon completion of the structure, the elevation of the lowest floor, including basement, shall be certified by a registered Colorado Professional Engineer. Such certification shall be submitted to the Director of Community and Economic Development.
2. *Nonresidential Construction*. With the exception of Critical Facilities, outlined in Sec. 2-08-12(J)(5)(a), all new construction and Substantial Improvements of nonresidential structures must have the lowest floor (including basement), electrical, heating, ventilation, plumbing, and air conditioning equipment and other service facilities (including ductwork), elevated above the highest adjacent grade at least one foot above the depth number specified in feet on Adams County's FIRM (at least three feet if no depth number is specified), or together

with attendant utility and sanitary facilities, be designed so that the structure is watertight to at least one foot above the base flood level with walls substantially impermeable to the passage of water and with structural components having the capability of resisting hydrostatic and hydrodynamic loads of effects of buoyancy. A registered Colorado Professional Engineer or registered Colorado architect shall submit a certification to the Director of Community and Economic Development that the standards of this subsection are satisfied.

3. Within Zones AH or AO, adequate drainage paths around structures on slopes are required to guide flood waters around and away from proposed structures.

L. **Performance Standards for Floodways.**

1. *No Reduction in Floodway Efficiency or Capacity*. No new construction, Substantial Improvement, fill (including fill for roads and levees), deposit, obstruction, storage of materials, or other floodplain uses which acting alone or in combination with existing or future floodway uses, shall be permitted which decreases the efficiency or the capacity of a channel or floodway of any river, stream, tributary, drainage ditch, or any other drainage facilities or systems.
2. *No Increase in Base Flood Elevation*. Encroachments within the Floodway are prohibited, including fill, new construction, Substantial Improvements and other development within the Floodway unless it has been demonstrated through hydrologic and hydraulic analyses performed by a registered Colorado Professional Engineer and in accordance with standard engineering practice that the proposed encroachment would not result in any increase (requires a No-Rise Certification) in flood levels during the occurrence of the base flood discharge
3. *No New Structures or Substantial Improvements to Structures*. No new structures or Substantial Improvements to an existing structure designed for human occupancy shall be allowed in the Floodway.
4. *No Manufactured Homes*. No manufactured homes (including such structures to be used for nonresidential purposes) or any Substantial Improvement to a manufactured home shall be allowed in the Floodway.

M. **Disclaimer of Liability.** The degree of flood protection required by this DSR is considered reasonable for the protection of life and property and is based on engineering and scientific methods of study. Larger floods may occur periodically or the flood height may be increased by man-made or natural causes. These standards and regulations do not imply areas outside the designated Floodplain Overlay District or land uses permitted within such district will be free from flooding or flood damages. These standards and regulations shall not create liability on the part of Adams County, any agent, officer or employee thereof, or the part of FEMA, the CWCB, or the Mile High Flood District, for any flood damages resulting from reliance on these standards and regulations or any administrative decision lawfully made hereunder.

## 2-08-13 MCO, Mineral Conservation Overlay

A. **Mineral Conservation Area**. Pursuant to state law, those areas identified with resource classification "1" on maps contained in Special Publications 5A and 5B "Atlas of Sand, Gravel, and Quarry Aggregate Resources, Colorado Front Range Counties" (1975) prepared by the Colorado Geological Survey are designated to be within the Mineral Conservation Overlay District.

B. **Areas Exempted by the Board of Adjustment**. The Board of Adjustment may exempt any lot from the restrictions of the Mineral Conservation Overlay District where a property owner can demonstrate the restriction would make it impossible to develop the land for any reasonable economic and compatible use in the area including gravel extraction.

C. **Restriction on Uses**. For any land within the Mineral Conservation Overlay, no permanent structures or permanent uses may be allowed except:

1. Fences, not needed during excavation and rehabilitation, subject to the minimum requirements of the underlying zone district. Structures within 200 feet of a publicly maintained and constructed road or an existing principal structure subject to the structures and use being in conformance with the requirements of the underlying zone district.
2. Non-permanent use of the land provided such use is in conformance with the underlying zone district and would not prohibit the eventual extraction of commercial mineral deposits.

D. **Areas Exempted from these Restrictions**.

1. *Areas Exempted by the Director*.
   a. The Director of Community and Economic Development shall exempt lands meeting the following criteria from the restrictions of the Mineral Conservation Overlay District.
      (1) Any parcel of land intended for uses that were allowed in the underlying zone district prior to July 1, 1973.
      (2) Any parcels of land five acres or less in size in existence as a separate parcel prior to July 1, 1973.
      (3) Any parcel of land in excess of five acres where it can be demonstrated the mineral resource is not of commercial quality and quantity.
   b. The Director of Community and Economic Development may require competent proof a lot meets these criteria, including a written opinion from the State Geological Survey, where deemed appropriate.

E. **Standards for Excavation and Rehabilitation**. The extraction of commercial mineral deposits with necessary accessory uses shall be allowed in all zone districts as a conditional use upon approval and in conformance with the requirements set forth in Section 3-09-05.B, Aggregate Mining and Extraction Uses, and of the Colorado Division of Reclamation, Mining, and Safety (DRMS).

F. **Appeal of Mineral Conservation District Boundaries**. The boundaries of the Mineral Conservation Overlay District may be appealed to the Board of Adjustment based on technical information.

## 2-08-14 NRCO, Natural Resources Conservation Overlay

A. **NRCO District Created**. There is hereby established a Natural Resources Overlay District, which, in areas where it applies, shall overlay all other base zone districts established by these standards and regulations. Included within the NRCO District are:

1. Important wildlife areas;
2. Designated floodplains and associated riparian areas; and
3. Important reservoir sites to provide wetlands and other habitat areas.

B. **NRCO District Map**.

1. *General*. The Natural Resources Conservation Overlay (NRCO) District Map, which is incorporated into this DSR by reference depicts the general location of:
   a. Important wildlife areas;
   b. Designated floodplains and associated riparian areas; and
   c. Important reservoir sites to provide wetlands and other habitat areas.
2. *General NRCO District Map/Site Specific Review is Required*. The NRCO District Map is a general map, which identifies, on a general scale, the locations of those areas protected by the NRCO District. Its purpose is to place the landowner on notice the land may be within the NRCO District and to assist in the general administration of this Section. A site-specific Resources Assessment to determine whether land is included within the NRCO District is required, prior to review of the first development application for the land. See Div. 9-02 for Resource Assessment procedures.
3. *Development Exemptions in the NRCO*. In addition to all other standards required by these standards and regulations, all development within the NRCO shall comply with the standards of this Section and Chapter 9, unless exempted. Exemptions are as follows:
   a. *Remodeling or Expansion of Existing Structures*. Remodeling or expansion of structures existing prior to the adoption date of these standards and regulations shall be exempt from the provisions of this subsection.
   b. *Agricultural Operations*. Agricultural operations and uses shall be exempt.

C. **Standards**. All development within the NRCO District shall comply with the following standards:
1. *Site Capacity*. The maximum density of any use in any zone district is controlled by the maximum density set forth in the zone district. For lands located within the NRCO District, the density calculations are based on the net available land as determined by applying the Natural Resource Protection Factor to the protected resource area and subtracting the resulting land area from the total area of the property.
2. *Methodology for Calculating Natural Resource Conservation Area*. All land area consisting of natural resources or natural features (*i.e.*, floodplains, wetlands, riparian areas, lakes, and reservoirs) lying within a site proposed for development shall be measured. The total acreage of each resource type shall be multiplied by its respective natural resource protection factor to determine the amount of resource protection land or area required to be kept in open space in order to protect the resource or feature. In conducting this calculation, if two or more resources are present on the same area of land, only the most restrictive natural resource protection factor shall be used. For example, if floodplain and riparian area occupy the same space on a site, the resource protection standard would be 1.5, which represents the higher of the two standards.
3. *Natural Resource Protection Factors*. The following natural resource protection factors shall be used to calculate natural resource conservation areas as noted above:
   a. 100-Year Floodplains: 1.0;
   b. Riparian Areas: 1.5;
   c. Wetlands: 2.0; and
   d. Lakes/Reservoirs: 1.5.

# 2-08-15 PUD, Planned Unit Development

A. **Minimum Requirements**. A PUD is a form of a customized zone district. The PUD may modify certain standards in this DSR such as permitted uses, site area, density, setbacks, height restrictions, improvement standards, and related requirements that would be otherwise applicable to a particular zone district or land use, if such modification furthers the objectives of these PUD regulations.

1. *Minimum Site Area*. The minimum site area within a PUD shall be one acre.
2. *Permitted Principal, Accessory, Conditional, Special and Prohibited Uses*. All uses that are in general conformity with the Adams County Comprehensive Plan including, but not limited to, the contemplated density or intensity of land use, and compatible with the site's physical and environmental characteristics may be allowed within the PUD. The proposed land uses shall be compatible or designed to mitigate externalities with the existing, allowed or conditional land uses adjacent to the proposed development. The PUD document for the specific development shall establish the permitted uses. The uses shall be specifically defined and approved as part of the PUD.
3. *Minimum Lot Area Requirement*. The minimum lot area shall be established by PUD.
4. *Minimum Lot Width Requirements*. The minimum lot width shall be established by PUD.
5. *Minimum Setbacks*. The minimum required setbacks shall be established by PUD.
6. *Maximum Height*. The maximum height of structures shall be established by PUD.

B. **General Site Design Standards**. The following general site design standards shall be met by all PUDs.

1. *Superior Design*.
   a. Use of Flexibility to Improve Design. Accomplish, by flexible and varied design, a planned development that is as good or better than one resulting from the traditional lot-by-lot development or development in a base zone district, with total net improvement to be gained by combinations and options of:
      (1) Placement, type and bulk of building structures;
      (2) Coordinated open space, recreation facilities, other public facilities (such as walkways);
      (3) Controlled circulation;
      (4) Conservation of natural features;
      (5) Decreased water and air pollution;
      (6) Aesthetic features;
      (7) Harmonious design; and
      (8) Similar elements.
   b. Reduce Impact to Public Infrastructure and Services. Avoid an overburden on the present or planned projected capacity of public utilities, services, and roads, as compared to one which would be required by lot-by-lot development of the underlying land use district.
   c. Compatible with Adjacent Uses. The perimeter of the project shall be compatible or designed to mitigate externalities with the land use of adjacent properties. Compatibility includes, but is not limited to, size, scale, intensity of land use, off-site impacts, mass, and architectural design.

d. Screening Required. Improvements on the site shall be sight-screened with adequate landscaping so as to provide a compatible visual effect as seen from the adjoining properties.

2. *Roads*.

a. Public Roads Required. All roads shall be public roads. The configuration and design of such facilities shall be consistent with Adams County Road Construction Standards. Private roads within the PUD may be approved by the County only if the following criteria are met:

(1) Physical limitations of the site preclude the possibility of future linkage with existing public roads or proposed public roads which are part of the County's adopted transportation plan;

(2) The proposed road design, pedestrian access, and layout represent a superior design which meets the objectives of the Adams County standards;

(3) A direct and tangible public benefit will accrue from the proposed street design; and

(4) The developer includes a maintenance agreement including, but not limited to snow removal and road repairs, which will be recorded against the property.

b. Connections to Off-Site Roads. Connections to existing off-site roads abutting the subject property shall be required where practicable, except through critical areas and/or their buffers.

3. *Pedestrian and Bicycle Amenities*.

a. Pedestrian and Bicycle Access to Site. Pedestrian and bicycle access onto the site shall be maximized in all proposed projects. This may be accommodated through the provision of on-site walkways, trails, paths or sidewalks, and bike lanes originating at the property boundary.

b. Internal Pedestrian and Bicycle Circulation. Internal pedestrian and bicycle circulation shall be facilitated through appropriately sealed walkways, paths, trails or sidewalks, and bike lanes. Special emphasis shall be placed on providing pedestrian and bicycle access to proposed recreational and/or open space areas and/or transit facilities.

4. *Parking*. All provisions for vehicle parking shall be in designated parking areas and shall meet the minimum parking criteria contained within the PUD.

5. *Amenity Space*.

a. Acceptable Amenity Space. No land may be accepted as amenity space within a PUD unless it meets the following requirements:

(1) The amenity space complies with the provisions of Div. 2-04, *Designated Amenity Space Types*;

(2) The location, size and character of the amenity space is suitable for the PUD; and

(3) The amenity space is for preservation of natural flora and fauna, amenity, social gathering space, or recreational purposes, and the uses authorized are appropriate to the scale and character of the PUD, considering its size, density, expected population, topography and the number and type of dwellings provided.

b. Improvement of Amenity Space. Common open space will be suitably improved for its intended use, except for common open space containing natural features worthy of preservation may be left unimproved. The buildings, structures, and improvements to be permitted in the common open space are those appropriate to the uses authorized for the common open space.

c. Use of Amenity Space. At least 25% of the minimum required open space shall be designated for active recreation purposes, as listed in Table 2-04-02-1, *Amenity Space Types*, and no more than 50% shall be so utilized, in order to preserve a reasonable proportion of natural areas or other passive space on the site. The purposes for which amenity space areas are proposed shall be documented.

d. Concentration of Amenity Space. Where practical, amenity space shall be concentrated in large usable areas.

e. Contiguity of Amenity Space. Where possible, amenity space shall connect to adjacent off-site amenity space areas and designated greenways.

f. Percentage of Amenity Space Required. A minimum of 30% amenity space shall be required in all PUDs or as determined by the Board of County Commissioners.

g. Prioritization of Amenity Space Types. The following list represents the relative desirability of different types of amenity space, and should be used as the basis for determining the optimum location for amenity space areas within a proposed PUD:

(1) Critical areas including riparian areas and floodplain;

(2) Pastures and farmland currently or traditionally used for agriculture;

(3) Trails and greenways;

(4) Significant stands of trees;

(5) Mature vegetation on ridgelines; and

(6) Former solid and/or hazardous waste disposal sites.

h. *Calculation of Open Space Area*. Refer to the definition of "amenity space."

i. *Ownership and Maintenance of Open Space*. Refer to Sec. 2-04-02, *Amenity Space Standards*.

C. **Transfer of Development Rights.**

1. *Termination of Program*. Beginning January 1, 2027, no new sending areas, receiving areas, transferable development rights, or transfers under the former transfer of development rights program shall be approved.

2. *Existing Development Rights*. Development rights lawfully created prior to January 1, 2027 remain valid and enforceable and may continue to be transferred, assigned, and utilized in accordance with the terms of the applicable Planned Unit Development approval, recorded conservation easement, development agreement, or other recorded instrument establishing those rights. The applicant bears the burden of establishing that a development right was lawfully created under the former transfer of development rights program and that the application complies with the standards in the original approval.

3. *Building Permits*. The County shall not issue a building permit relying on transferred development rights unless the applicant demonstrates that sufficient lawfully established development rights are attached to the receiving property.

# 2-08-16 TOD, Transit Oriented Development

**A. Applicability.** Properties within or partially within a one-half mile radius of RTD FasTracks stations located, as measured from a point roughly in the center of the platform or as may be specifically established by the Director of Community and Economic Development following completion of construction of the stations, may be rezoned to the TOD zone district upon approval of the rezoning application by the BOCC pursuant to Sec. 13-04-04. Except as otherwise expressly stated, once a property is rezoned to TOD, the TOD zone district regulations shall apply to all properties within the boundaries of the TOD zone district. Use specific standards contained in Chapter 3 shall apply unless otherwise modified by this section.

**B. General Site Design Standards.** The following general site design standards shall be met by all developments within the TOD zone district.

1. *Neighborhood Connectivity.* The following connectivity requirements shall apply in the TOD zone district.
    a. Circulation Plan Required.
        (1) TOD development plans shall include a district-wide circulation plan that addresses street connectivity, emergency and service vehicle access, parking movements, accommodation of loading operations, turning radii, traffic calming measures where future “cut-through” traffic is likely, and similar issues.
        (2) The Community and Economic Development Director may waive the requirement for a circulation plan on determining that a proposed development is expected to have no impact on circulation or proposes no change in existing circulation patterns. This provision shall not be construed to exempt development that includes additional parking, driveways, or substantial modifications to the existing pedestrian network.
    b. Streets and Vehicular Circulation.
        (1) Grid Street Pattern.
            i. Street and block patterns shall include a clear hierarchy of well-connected streets that distributes traffic over multiple streets and avoids traffic congestion on principal routes.
            ii. The arrangement of streets in a development shall provide for the alignment and continuation of existing or proposed streets into adjoining neighborhoods.
            iii. Within each development, the access and circulation system shall accommodate the safe, efficient, and convenient movement of vehicles, including 45' buses, bicycles, and pedestrians through the development, and provide ample opportunities for linking adjacent neighborhoods, properties, and land uses.
            iv. Local neighborhood street systems shall provide multiple direct connections to and between local destinations such as residential neighborhoods, parks, schools, and shopping.
        (2) Mixed-Use and Non-Residential Block Pattern.
            i. Blocks shall generally be square or rectangular but may vary in shape to protect natural features or respond to site constraints.

ii. To the maximum extent feasible, streets and access lanes shall be oriented to create block and lot configurations with their longest dimension along an east-west axis to facilitate the use of passive solar principles.

iii. Block length shall not exceed 600 feet except that blocks up to 800 feet in length are permitted if a mid-block pedestrian connection is provided. This requirement may be waived for industrial development as approved by the Community and Economic Development Director.

iv. Blocks shall be measured from curb to curb, regardless of whether the street is public or private.

v. New development and redevelopment shall establish a regular pattern of blocks to the extent feasible to avoid creating large "superblocks" that limit pedestrian, bicycle, and vehicular circulation.

vi. On sites that exceed the 600-foot block length or where block consolidation is proposed as part of redevelopment (by right-of-way abandonment), pedestrian, bicycle, and vehicular circulation access to surrounding neighborhoods shall be maintained to the maximum extent feasible.

2. *Landscaping.* The provisions of Div. 4-04, *Landscaping and Buffering*, apply to development within the TOD district except as provided otherwise in this section.

a. Buffering Applicability. The following bufferyard requirements shall be substituted for Sec. 4-04-03, *Bufferyards and Screening*, when applied in the TOD district.

**Table 2-08-16-1**

| **Building Type of Abutting Property** | **Building Type of Parcel Proposed For Development** | | | | |
|---|---|---|---|---|---|
| | Two-Family Dwelling, Townhouse Dwelling | Multi-family Dwelling, Multiplex Dwelling, Live Work Building | All Permitted Mixed-Use Building Types | All Permitted Commercial Building Types | All Permitted Industrial Building Types |
| Single-Family Detached | None | B | C | D | D |
| Two-family Dwelling, Townhouse Dwelling | None | None | C | D | D |
| Multi-family Dwelling, Multiplex Dwelling, Live Work Building | None | None | B | C | D |
| All Permitted Mixed-Use Building Types | C | B | None | A | D |

| | | | | | |
|---|---|---|---|---|---|
| All Permitted Commercial Building Types | D | C | A | None | D |
| All Permitted Industrial Building Types | D | D | D | D | None |
| Table Notes:<br>1. Bufferyard classification requirements shall be as defined in Sec. 4-04-03, *Bufferyards and Screening.* | | | | | |

3. *Parking.* Parking in the TOD zone district shall comply with the requirements of Div. 4-02, *Off-Street Parking, Loading, and Stacking,* except as specifically provided in this section.
    a. Applicability.
        (1) New Development. The requirements of this section shall apply to all new development where there is the construction of a new structure (excluding accessory structures) or establishment of a new land use.
        (2) Small Use Exception. Any individual non-residential use in a space that is 2,000 square feet or smaller shall be exempt from the minimum parking requirement of Table 2-07-16-2.
        (3) On-Street Parking. On-street parking located adjacent to the site on a public or private street may be used to meet up to 25% of the minimum off-street parking requirements.
    b. Required Parking. The following off-street parking standards apply in the TOD district. Where this table does not specify a parking requirement or a use type is not specified in the table, the standards of Sec. 4-02-01, *Parking Ratios*, apply.

| Table 2-08-16-2 Off-Street Parking | | |
|---|---|---|
| **Use Type** | **Minimum Parking (spaces per sq. ft. GFA unless otherwise specified)** | **Maximum Parking (spaces per sq. ft. GFA unless otherwise specified)** |
| **Residential** | | |
| All Residential[1] | 0.5 per unit | 1.5 per unit |
| **Recreational** | | |
| All Recreational | See Sec. 4-02-01 | |
| **Public, Civic, and Institutional** | | |
| All Public, Civic, and Institutional Uses | See Sec. 4-02-01 | |
| **Commercial** | | |
| Office | 1 per 200 | 1 per 300 |
| Commercial sales and services | 1 per 400 | 1 per 500 |
| Restaurant | 1 per 4 persons maximum occupancy capacity of customer service areas | |
| **Industrial** | **Required Number of Spaces (per sq. ft.)** | |
| Accessory office or administrative area | 1 per 500 | |

| | | |
|---|---|---|
| Accessory indoor sales area | 1 per 400 | |
| Indoor storage, distribution, warehousing, assembly, vehicular service, or manufacturing area | 1-3,000 sq. ft. of floor area | 1 per 400 |
| | 3,001 – 5,000 sq. ft. | 1 per 500 |
| | 5,001 – 10,000 sq. ft. | 1 per 750 |
| | 10,001 or more sq. ft. | 1 per 1,250 |
| [1.] Notwithstanding any other provision of these standards and regulations to the contrary, per C.R.S. § 29-36-103, no minimum off-road parking requirement applies within an Applicable Transit Service Area to a multi-family residential development, adaptive re-use for residential purposes, or adaptive re-use mixed use that includes at least 50% of use for residential purposes. Nothing herein limits the ability of the County, pursuant to C.R.S. § 29-36-104(1), to impose or enforce a minimum off-road parking requirement within an Applicable Transit Service Area in connection with a housing development project that is intended to contain twenty units or more or contain regulated affordable housing by requiring no more than one off-road parking space per dwelling unit in the housing development.<br><br>NOTE: The total number of required spaces for all uses is cumulative based on the variety of different functions present in a single use. | | |

c. Maximum Parking Spaces Allowed.

(1) Applicability. For any use with an identified maximum parking standard, off-street vehicle parking spaces shall not be provided in an amount that is more than that standard, unless mitigation is provided in the form of additional landscaping and pervious pavement construction or on-site stormwater mitigation pursuant to Sec. 2-08-16(B)(3)(c)(5), *Design Requirements for Excess Parking*, below as approved by the Community and Economic Development Director.

(2) Establishing Maximum Parking Requirements. Maximum parking standards for the TOD district are established in Table 2-08-16-2, *Off-Street Parking*. Where Table 2-08-16-2 does not establish a maximum parking amount or where Sec. 4-02-01 is used to calculate required parking, the maximum amount of parking shall be established at 100% of the minimum required parking; *i.e.*, the minimum required shall also be the maximum permitted.

(3) Maximum Parking Calculation Exceptions. For the purpose of calculating parking requirements, the following types of parking spaces shall not count against the maximum parking requirement:

i. ADA parking,
ii. Vanpool and carpool parking,
iii. Alternative fuel vehicle parking,
iv. On-street parking adjacent to the lot or lots on which the parking located, and
v. Structured parking, underground parking, and parking within, above, or beneath the building(s) it serves.

Unless otherwise stated above, the maximum number of spaces that may be credited towards this maximum parking calculation exception shall not exceed 20% of the maximum parking requirement.

(4) Maximum Parking Waiver.

i. Parking Demand Study. Requests to exceed the maximum parking requirement shall be accompanied by a parking demand study demonstrating how the maximum number of parking spaces specified in Table 2-08-16-2 is insufficient for the proposed development.

ii. Review Criteria. A waiver to the maximum parking requirement may be allowed by the Community and Economic Development Director in situations that meet the following criteria:

a. The proposed development has unique or unusual characteristics such as high sales volume per floor area or low turnover, that create a parking demand that exceeds the maximum ratio and that typically does not apply to comparable uses;

b. The parking demand cannot be accommodated by on-street parking, shared parking with nearby uses, or by increasing the supply of spaces that are exempt from the maximum ratio;

c. The request is the minimum necessary variation from the standards to accommodate the proposed development; or

d. If application of the maximum parking standard would result in fewer than six parking spaces, the development shall be allowed six parking spaces.

iii. Appeal. The Community and Economic Development Director's determination on a maximum parking waiver application may be appealed to the Board of Adjustment.

(5) Design Requirements for Excess Parking. Parking that is provided in excess of the maximum parking requirement shall be required to include increased internal landscaping and incorporate pervious pavement or stormwater mitigation as described below.

i. Pervious Surfaces or On-Site Stormwater Mitigation. Where parking spaces in excess of the maximum specified in Table 2-08-16-2 are constructed, an area equal to the total area required for the number of spaces that exceed the maximum parking requirement shall be constructed of pervious surfaces or designed for on-site stormwater mitigation through low impact development techniques as approved by the Community and Economic Development Director. For example, if 500 square feet of additional space is provided for new parking, 500 square feet of pervious pavement or on-site stormwater mitigation shall be included in the total area of the parking lot.

ii. Additional Trees and Landscaping. Applicants that request parking that exceeds the number of spaces required by Table 2-08-16-2 shall provide additional parking lot trees and landscaping either in the parking lot or across the entire development site as follows:

a. Trees:

1. Additional trees not otherwise required by these regulations shall be required to be planted or preserved on-site when parking for any use or mix of uses is provided in an amount that is greater than the maximum amount permitted.
2. The number of additional trees to be planted or preserved on-site is equal to one tree per two excess parking spaces provided.

b. Landscaping:
   1. As required by Table 2-08-16-3, *Additional Landscaping Requirement for Overparking*, additional landscaping shall be provided and distributed throughout the site. The additional landscaping shall be integrated with the parking lot and/or site design. For example, where 500 sq. ft. of surface area are added to a parking lot, 15 extra sq. ft. of landscaping area would be added to the landscaping required by Sec. 4-04-04, *Off-Street Parking Landscaping*.

**Table 2-08-16-3 Additional Landscaping Requirement for Overparking**

| Amount of excess parking requested over maximum | Additional Landscaping |
|---|---|
| 101-108% | 3% of parking area |
| 109-116% | 5% of parking area |
| 117-125% | 10% of parking area |

   2. Where the provision of additional landscaping is restricted for infill and redevelopment projects due to site constraints, the applicant may provide sidewalk amenities or streetscape features as determined by the Community and Economic Development Director. Acceptable amenities shall have a value equal to or greater than the price of the additional landscaping features required in Table 2-07-16-3, *Additional Landscaping Requirement for Overparking*, and may include:
      a. Sidewalk planters between the parking area and building and/or parking area and the street;
      b. Public art including but not limited to sculptures, fountains, clocks, or murals; or
      c. Decorative fencing (such as wrought iron) around the perimeter of the

parking area provided with seasonal plantings.

d. Adjustments and Alternatives. The minimum parking requirements listed in Table 2-08-16-2, *Off-Street Parking*, may be adjusted as follows:

(1) Sharing of Parking Spaces.

i. Where two land uses listed in separate use categories in Table 2-08-16-2, *Off-Street Parking*, share a parking lot, parking lots, or structure, the total off-site parking required for those uses may be reduced by the factors shown in Table 2-07-16-4, *Shared Parking*. Total off-street parking required shall be the sum of the two parking requirements for the two uses divided by the factors in Table 2-08-16-4, *Shared Parking*. For example, where a development includes both (a) institutional and (b) retail sales uses, the amount of parking required is the sum of the parking required for the two uses divided by 1.3.

**Table 2-08-16-4 Shared Parking**

Add the two parking requirements from Table 2-07-16-2 and divide by these factors.

| Property Use | Multi-family | Public, Civic, or Institutional | Restaurants, Recreation, or Hotel | Retail Sales | Office or Commercial Services |
|---|---|---|---|---|---|
| Multi-family | - | 1.1 | 1.1 | 1.2 | 1.3 |
| Public, Civic, or Institutional | 1.1 | - | 1.2 | 1.3 | 1.3 |
| Restaurants, Recreation, or Hotel | 1.1 | 1.2 | - | 1.3 | 1.7 |
| Retail Sales | 1.2 | 1.3 | 1.3 | - | 1.2 |
| Office or Commercial Services | 1.3 | 1.5 | 1.7 | 1.2 | - |

ii. Shared parking shall be documented through a shared parking agreement approved by the county.

(2) Reduced Need Populations.

i. The required minimum number of off-street parking spaces may be reduced by 33% for any group living use or multi-family use in which occupancy of at least 80% of the units is restricted for use by those 60 years of age or older.

ii. The required minimum number of off-street parking spaces may be reduced by 50% for any group living use or multi-family use in which occupancy of more than 80% of the units is restricted for use by those meeting the definition of “handicapped” individuals under the federal Fair Housing Act Amendments.

e. Bicycle Parking.

(1) Required Number of Spaces. Indoor or outdoor bicycle parking shall be provided as follows:

**Table 2-08-16-5 Bicycle Parking**

| Use | Bicycle Parking Spaces[1] |
|---|---|

| | |
|---|---|
| Multi-family | 2, or 1 per 20 units |
| Group home | 1 per 4 bedrooms |
| Office | 2, or 1 per 40,000 sq. ft. (net area) |
| Commercial sales and services | 2, or 1 per 5,000 sq. ft. (net area) |
| Restaurants | 2, or 1 per 20 persons maximum occupancy capacity of customer service areas |
| Public, Civic, and Institutional Uses (non-utility) | 2, or 1 per 10,000 sq. ft. (net area) |
| Schools | 2 per classroom |
| Recreational | 2, or 1 per 5,000 sq. ft. (net area) |
| Table Notes:<br>1. Whichever measurement results in the higher number of spaces. | |

(2) Design and Location.

i. Bicycle parking facilities shall include a rack or storage facility (e.g., locker) that enables bicycles to be secured. Where racks are used, they shall meet the following standards:

a. The bicycle frame and one wheel can be locked to the rack with a high-security, U-shaped shackle lock if both wheels are left on the bicycle;

b. A bicycle six feet long can be securely held with its frame supported so that the bicycle cannot be pushed or fall in a manner that will damage the wheels or components; and

c. The rack must be securely anchored.

ii. Bicycle racks and storage facilities shall be accessible without moving another bicycle.

iii. Bicycle racks and storage facilities shall be located in convenient, visible, well-lit areas with easy access and near main entrances of all commercial, residential, and institutional buildings. Such locations shall be clearly noted with signage.

iv. The racks and storage facilities shall be located so they do not interfere with pedestrian traffic and shall be protected from potential damage by motor vehicles.

v. Bicycle parking shall not be within any required landscape area nor interfere with any pedestrian pathway.

**D. Multi-family Development Design Standards.** The standards in this subsection apply to all multi-family development within the TOD zone district.

*1. Site Layout and Building Orientation.*

a. Building Orientation.

(1) To the maximum extent practicable, buildings shall be oriented or arranged in a manner to enclose common open spaces such as gardens, courtyards, recreation, or play areas, that shall contain a minimum of three of these features:

i. Seasonal planting areas;

ii. Trees;

iii. Pedestrian-scaled lighting;

iv. Gazebos or other decorative shelters;

v. Seating;
vi. Play structures for children; or
vii. Natural features or areas, unless the county determines that for preservation reasons the buildings should avoid the feature or area.

b. Entrance Orientation.
(1) Primary entrances and façades shall not be oriented towards parking lots, garages, or carports.
(2) All multi-family buildings shall comply with at least two of the following requirements:
i. At least one main building entry faces an adjacent public street;
ii. A building entrance faces a courtyard or common open space that has a direct and visible connection to an adjacent public street;
iii. A building entry is connected to a public sidewalk by a system of interior walkways; or
iv. The pedestrian entries to the site from the public right-of-way are emphasized with enhanced landscaping, special paving, gateways, arbors, or similar features.
(3) All ground-floor units with frontage along the primary street shall have an entrance that faces the street. Multi-family buildings located with multiple street frontages shall provide entrances to the building along each local street frontage.
i. Exterior entrances from a public sidewalk or common open space are permitted for dwelling units on the ground floor.
ii. Exterior entrances shall be raised from the finished ground-floor level of the sidewalk a minimum of two feet.
(4) Dwelling units above the ground floor shall have interior unit entrances, except that exterior stairs are permitted for access to upper-floor units only if they are oriented towards a central plaza not visible from any street.

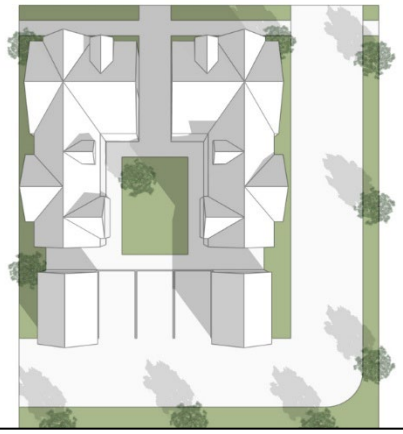

Fig. 2-08-16-2: Courtyard Orientation

Fig. 2-08-16-3: Perimeter Street

Fig. 2-08-16-4: Ground-floor unit entrances

c. Private Common Space.
   (1) In addition to the public open space required in Table 2.07.03.D-1, developments with at least four units shall provide 400 square feet of private common open space for each multifamily dwelling unit. This space may be provided as an individual patio or deck with a minimum dimension of five feet.
   (2) In developments with at least twelve units, a minimum of 40% of the required private common space shall be usable for recreation, including uses such as swimming pools, fitness facility, sport courts, playgrounds with equipment, and/or community gardening.

2. *Building Design.* All buildings within the TOD Zone District shall conform to Div. 2-03 *Exterior Building Design Standards*.
3. *Parking Location and Layout.*
   a. Location and Layout.
      (1) To the maximum extent feasible, garage entries, carports, parking areas, and parking structures shall be internalized in building groupings or oriented away from street frontage.
      (2) Parking areas and freestanding parking structures (detached garages or carports) shall not occupy more than 30% of each perimeter public street frontage of a multi-family development.
      (3) To the maximum extent practicable, freestanding parking structures that are visible from perimeter public streets shall be sited so that the narrow end of the parking structure is perpendicular to the perimeter street.
   b. Carports and Detached Garages
      (1) Carports and common garages shall be limited to 60 feet in length.
      (2) Detached garages and carports shall incorporate compatible materials, scale, colors, architectural details, and roof slopes similar to those of the primary multi-family buildings.
      (3) Rear walls of detached garages over 40 feet in length that back onto the perimeter street shall be articulated or punctuated through the use of window openings or other similar techniques.

Fig. 2-08-16-9: Multi-family parking located behind principal structure

**E. Mixed-Use/Non-Residential Design Standards.**

1. *Applicability.* The design standards in this section apply to all mixed-use, office, and commercial structures. Industrial development in the TOD district shall be subject to the following subsections of this section in addition to the provisions of Chapter 4:
    a. Sec. 2-08-16(D)(4)(b), Parking Location;
    b. Sec. 2-08-16(D)(4)(c), Parking Lot Screening;
    c. Sec. 2-08-16(D)(5), Building Design; and
    d. Sec. 2-08-16(D)(7), Residential Compatibility Standards.
2. *Site Layout and Building Organization.*
    a. Amenity Type Required. All mixed-use, commercial, and office development within the TOD zone district must provide an amenity from the Common Open Spaces or Civic Spaces category from Table 2-03-02-1, Amenity Space Types. This amenity will be counted towards the total amenity space required for the development.
    b. Building Orientation.
        (1) Multi-Building Developments.
            i. Buildings shall be organized to promote a compact pattern of development, pedestrian-friendly spaces, streetscapes, areas of naturalized landscaping, and to screen parking areas.
            ii. Buildings shall be arranged and grouped so that their primary orientation complements one another and adjacent, existing development by:
                a. Framing the corner of an adjacent street intersection or entry point to the development;
                b. Framing and enclosing a pedestrian and/or vehicle road or access corridor within or adjacent to the development site;
                c. Framing and enclosing on at least three sides parking areas, public spaces, or other site amenities;
                d. Framing and/or enclosing outdoor dining or gathering spaces for pedestrians between buildings; or
                e. Framing one or more areas of natural vegetation.

Fig. 2-08-16-11: Buildings arranged to create pedestrian-friendly spaces

c. Weather Protection for Pedestrian Areas.
   (1) Building Design.
      i. Buildings shall be designed so that entries, steps, balconies, and pedestrian walkways or sidewalks are protected from precipitation shedding off roofs.
      ii. Sheltering roofs or building projections for protection from rain, wind, snow, and ice shall be provided in areas of pedestrian activity around public/institutional, commercial, and mixed-use buildings, including sheltered entranceways at major entrances and pedestrian-oriented façades along public sidewalks or walkways.
      iii. Building shall avoid roof designs, canopy structures, or other design features that would allow accumulated snow, ice, or rain or to fall or slide onto sidewalks or walkways. Roofs shall be designed to protect doorways, exterior stairs, balconies, garage entrances, bicycle parking, and pedestrian sidewalks and walkways from snow and ice. Where sloping rooflines incline toward such areas, protective features such as arcades, loggias, and dormers shall be used to protect pedestrians from falling snow. Such devices need not be continuous if foundation planning beds are located to set the walkway away from the building façades.
   (2) Snow Storage. Snow storage areas shall be separated from and shall not overlap or encroach upon pedestrian walkways or sidewalks.
   (3) Sidewalk Design.
      i. Pedestrian walkways shall be clearly defined through the use of consistent pavers and signage.
      ii. Pedestrian walkways shall be designed to minimize potential conflicts with snow management operations and ensure pedestrian safety by:
         a. Limiting grade changes where possible; and
         b. Using ramps instead of stairs where a change in grade is necessary.

*3. Streetscape Design and Character.*

a. Public Sidewalks Required. In order to create an environment that is supportive of transit and pedestrian mobility, public sidewalks shall be provided along both sides of all streets in the TOD district. Such sidewalks shall be at least 12 feet in width and no more than 16 feet in width, unless otherwise approved as part of the design review process. The 12-foot minimum requirement shall apply regardless of the available right-of-way. Where required, the sidewalk shall extend onto private property to fulfill the 12-foot minimum requirement, with a sidewalk easement provided.
b. Delineation of Sidewalk Area. Sidewalks shall be organized into two distinct areas: a street tree/furniture area located adjacent to the curb, and a clear area.

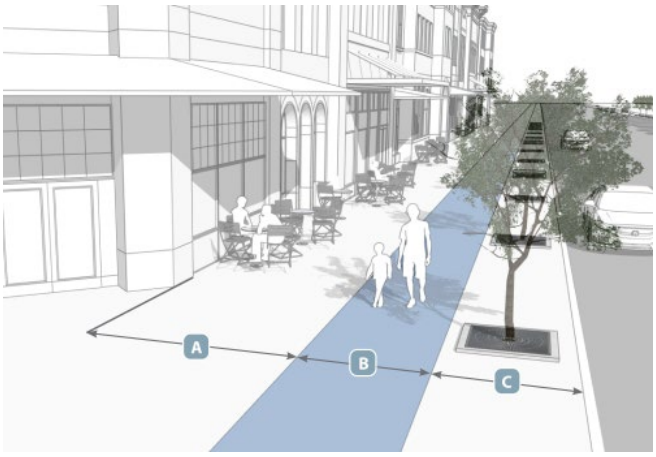

Fig. 2-08-16-12: Delineation of Sidewalk Area

(1) Street Tree/Furniture Area. The street tree/furniture area shall have a minimum width of six feet (from face-of-curb) and shall be continuous and located adjacent to the curb. The area shall be planted with street trees at an average spacing of 20 to 30 feet on center, based on the mature canopy width of the tree species selected. The area also is intended for the placement of street furniture including seating, street lights, waste receptacles, fire hydrants, traffic signs, newspaper vending boxes, bus shelters, bicycle racks, public utility equipment such as electric transformers and water meters, and similar elements designed to county specifications and located in a manner that does not obstruct pedestrian access or motorist visibility. Maintenance of this area shall be the responsibility of the adjacent property owner or a management entity appointed by the adjacent property owner.
(2) Clear Area. The clear area shall be a minimum width of six feet, shall be hardscaped, and shall be located adjacent to the street tree/furniture area. The clear area shall be unobstructed by any permanent or nonpermanent element for a minimum width of six feet and a minimum height of eight feet. Additional sidewalk width located between the clear area and the building may be used for outdoor dining or seating areas.
(3) Supplemental Zone. A supplemental zone may be provided at the option of the applicant between the street-facing façade or a side-facing facade and the required clear area, to provide additional areas for outdoor

dining, porches, terraces, landscape and water features, and plazas. A supplemental zone, if provided, may be a maximum of 20 feet deep and may extend up to 30% of the linear frontage of the development. The supplemental zone shall not provide any parking or vehicle circulation areas.

b. Building Placement. At least 70% of the building facade facing a public street shall be brought up to the clear area if provided. The county may reduce this to 50% façade placement at the sidewalk clear area where public amenities are provided as approved by the Community and Economic Development Director, including:
   (1) Public plazas or seating areas;
   (2) Tree wells and urban landscaping such as shrubs, live groundcover, planters, and hardscape (e.g., decorative fencing, arbors, patterned paving);
   (3) Street furnishings, including but not limited to waste receptacles, bicycle racks, drinking fountains, or shelters for persons using public transit.

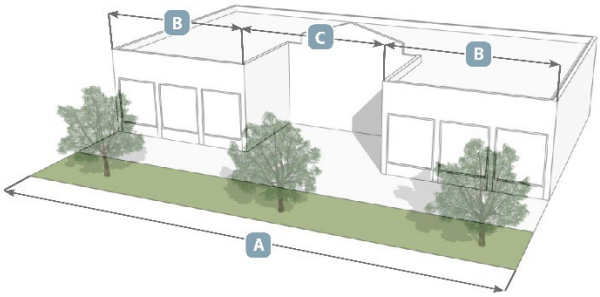

Fig. 2-08-16-13: Building set to sidewalk clear area

c. Sidewalk Entries.
   (1) Spacing. Sidewalk entries shall be provided to all buildings and individual units that front on the sidewalk.
   (2) Sidewalk Entry Hierarchy. Entrances into residential buildings in mixed-use areas are encouraged to follow a hierarchy of sizes and functions as follows:
      i. Carriage way: A centrally located twelve-foot wide entrance at sidewalk level for visual and direct access to a private courtyard.
      ii. Secondary entry: A six-foot wide entrance with ornamental entrance gate and defined by a stoop with low cheek walls and planters at the sidewalk. Mailboxes, bike racks, and trash receptacles should be grouped around these secondary entries.
      iii. Other entries: Home office and retail storefront entries which are either at grade or stooped shall be sized to accommodate specific requirements of the individual space.

Fig. 2-08-16-14: Secondary entry

d. Utilities. Transformers, switchgear, and related utility service equipment shall not be located above-ground in pedestrian access easements. Building service panels are to be located on the inside of all buildings.
e. Paving. Paving is intended to highlight or accentuate special areas along the ground plane while at the same time complementing the design of adjacent building and streetscape elements.
f. Ground-Floor Uses.
    (1) Intent. The incorporation of commercial uses such as retail shops and restaurants at the street level is strongly desired within the TOD district to promote a more active environment for pedestrians and support residential and office uses located within the same building (on upper floors) or nearby.

Fig. 2-08-16-15: Active street-level uses and outdoor gathering spaces

    (2) Standards.
        i. Location. Commercial uses shall be concentrated adjacent to transit station areas, major public spaces, and in other areas where a high level of pedestrian activity and visibility is desirable. If a limited portion of a structure's ground level will be devoted to commercial space, such space shall be located along those facades adjacent to or most visible from transit corridors, primary street frontages, or major pedestrian walkways.

ii. Design and Use of Commercial Space. Although the ground-floor commercial spaces may be used for residential units/office use, they should be designed for easy conversion to retail/commercial uses and shall be constructed to commercial standards. Where provided, ground-floor area for nonresidential uses shall be constructed to nonresidential construction standards to a depth from the front wall of a minimum of 30 feet. Leasing offices, fitness centers, and related accessory uses in residential developments may count toward meeting this requirement.

g. Residential Uses. Residential uses, where included, shall be incorporated within a mixed-use development to be visually and/or physically integrated with non-residential uses. This shall be achieved by ensuring that residential uses meet at least two of the following:
   (1) Residential uses are vertically located above street-level commercial uses;
   (2) Residential uses are horizontally integrated into site development to provide a transition between the highest intensity uses within the center or development and the adjacent neighborhood; and
   (3) A pedestrian circulation system (i.e., sidewalks, crosswalks, trails, etc.) is provided that reduces conflict between pedestrian and vehicular movements and increases pedestrian activity between residential and nonresidential uses.

*4*. *Parking Design Standards.* The purpose of parking area requirements is to ensure that the parking areas themselves are not the dominant feature of the TOD development.

a. Allowable Parking. On-street parking shall not be designated per individual business or occupancy but may count toward the minimum parking requirements for the entire structure along the adjacent frontage.

b. Parking Location. Off-street parking is prohibited between the principal street and the corresponding street-facing facade line

c. Parking Lot Screening. All surface parking lots adjacent to a public street shall be screened using one of the following methods below:
   (1) An informal hedge at least three feet in height at maturity consisting of a double row of shrubs planted three feet on-center in a triangular pattern; or
   (2) Berming of the grade to at least 2 1/2 feet in height above the finish grade of the parking lot, and with slopes no greater than 2:1. Slopes shall be covered with shrubs spaced a maximum of three feet on center. Trees and flowering plants may be included in the berm plantings where the Community and Economic Development Director finds that long-term maintenance will be provided.

d. Parking Structure Design. The off-street parking required by mixed-use and non-residential development may be located in a parking structure. Such structure shall be subject to the following standards:
   (1) Design.
      i. Parking structures shall be constructed of materials of similar quality and shall be compatible in appearance with adjacent

buildings and shall contain lighting sufficient for security as approved by the county.

ii. Ground floor facades of parking structures not occupied by active public uses shall be articulated through the use of three or more of the following architectural features.

a. Windows or window-shaped openings with decorative mesh or similar features as approved by the Community and Economic Development Director;

1. Masonry columns;
2. Decorative wall insets or projections;
3. Awnings;
4. Changes in color or texture of materials;
5. Approved public art;

b. Integrated landscape planters; or

c. Other similar features approved by the Community and Economic Development Director.

(2) Entry Design. Vehicle entries to off-street parking structures shall be integrated into the placement and design of adjacent buildings or oriented away from the primary street frontage. At a minimum, parking structures shall have user vehicles access from a location that minimizes conflicts with pedestrian circulation.

(3) Wrapping of Parking Structure. Where feasible, the ground floor of parking structures in mixed-use or non-residential districts shall be wrapped with active public uses along at least 60% of the ground-floor street frontage. Parking structures with ground floors that are not wrapped with active public uses on the sides facing a public street or open to public view shall not:

i. Abut street intersections or public/civic use areas,

ii. Be adjacent to public squares, or

iii. Occupy sites that are the terminus of a street vista.

Fig. 2-08-16-16: Parking structure wrapped with active uses

5. *Building Design.*

a. Four-Sided Design.

(1) All sides of a building shall be architecturally finished with equal levels of materials and detailing. Blank walls void of architectural details or other variation are prohibited.

(2) Exceptions from the above standard may be granted for those areas of the building envelope that the applicant can demonstrate are not visible from adjacent development and public spaces.

(3) Corporate or franchise architecture is discouraged in favor of architecturally compatible designs. The Community and Economic Development Director may require photographic examples of the more minimized corporate architecture in the designs and completed structure by the same company in other communities.

b. Consistent Architectural Theme.

(1) The architectural design within a multi-building development of structures (including freestanding outparcel structures) shall be organized around a consistent architectural theme in terms of the character, materials, texture, color, and scale of buildings. Themed restaurants, retail chains, and other franchise-style structures shall adjust their standard architectural model to be consistent with a development's architectural character.

(2) All buildings in a single development, whether developed at a single time or in phases, shall share at least four architectural features in order to create continuity within the overall development. These features include, but are not limited to, the following:

i. Overhangs,
ii. Canopies or porticos,
iii. Recesses/projections,
iv. Arcades,
v. Raised corniced parapets over the entrance,
vi. Peaked roof forms,
vii. Arches,
viii. Outdoor patios,
ix. Tower elements (at strategic locations),
x. Display windows,
xi. Integral planters that incorporate landscaped areas or seating areas, and
xii. Public art/sculptures.

Fig. 2-08-16-17: Franchise design consistent with surrounding

c. Building Materials and Colors.

(1) Prohibited Materials. The following materials are prohibited as primary cladding or roofing materials:
    i. Aluminum siding or cladding,
    ii. Plastic or vinyl siding,
    iii. Exposed aggregate, and
    iv. Wood shingles.
(2) Façade Colors.
    i. Colors of paint, stains, and other finishes or materials shall complement each other.
    ii. Generally, no more than four colors per building are permitted.
    iii. Fluorescent colors are prohibited.
    iv. Primary colors are prohibited.
    v. The use of stark white is discouraged.
(3) Transparency and Glazing.
    i. At least 25% of all walls facing a public street shall contain windows or doorways.
    ii. Glazing shall be effectively clear and shall not exceed 40% reflectance. Divided-light windows are encouraged. Materials that create noticeable glare or which restrict the ability of the public to view the inside of a structure from the outside are generally prohibited but may be allowed in limited locations in structures intended for financial or other uses with documentable safety concerns.
    iii. Energy conserving window films and coatings are permissible within these standards.

d. Gateways.
(1) Buildings located at entrances to a development demarcate a gateway that will create an overall identity, set the tone for the development, and mark arrival or entry.
(2) At major entry points of a development with three or more buildings, buildings shall be organized along the street and at the intersection to create a gateway.
(3) Architectural features shall be incorporated into the facades of buildings at major entry points to help emphasize arrival or entry points into the development. These features may include, but are not limited to:
    i. Eaves,
    ii. Planters,
    iii. Mounted signs,
    iv. Pilasters,
    v. Tower elements,
    vi. Water features, or
    vii. Arcades.

6. *Building Mass and Form*.
a. Relationship to Surrounding Development.
(1) New developments that two stories or taller than adjacent existing development shall provide a development transition using an appropriate combination of the following techniques designed to

achieve height and mass compatibility with the lower-scaled adjacent development:

(2) Wrapping the ground floor with a building element or integrated architectural feature (e.g., pedestrian arcade) that is the same height as the adjacent structure; or

(3) Graduating building height and mass in the form of building step-backs or other techniques so that new structures have a comparable scale with existing structures; or

(4) Orienting porches, balconies, and other outdoor living spaces away from the shared property line to protect the privacy of adjacent residents where applicable.

b. Entrance and Pedestrian Areas.

(1) Primary entries and pedestrian frontages shall be clearly visible from the street and accentuated from the overall building facade by:

(2) Differentiated roof, awning, or portico;

(3) Covered walkways or arcades;

(4) Projecting or recessed entries from the surrounding building facade;

(5) Detailed doors and doorways with transoms, sidelights, trim details, and/or framing; and

(6) Windows within doorways equivalent in size to 50% of door surface area.

(7) Secondary entrances shall have minor architectural detailing that adds visual interest to that portion of the façade.

c. Roof Materials.

(1) Asphalt shingles, industry-approved synthetic shingles, standing seam metal or tile roofs are allowed.

(2) Wood shingles are prohibited. Corrugated metal, tar paper, and brightly-colored asphalt shingles may be permitted by the Community and Economic Development Director where they will not be visible from a roadway, public park, or residential district or use.

d. Awnings, Canopies, Arcades, and Overhangs. Structural awnings are encouraged at the ground level to enhance the articulation of the building and provide shade.

(1) The material of awnings and canopies shall complement the building.

(2) Awnings shall not be internally illuminated.

(3) Canopies shall not exceed 40 linear feet without a break.

(4) Awnings shall not extend more than five feet over the sidewalk, unless otherwise approved by the Community and Economic Development Director, up to a maximum of 10 feet, and are in keeping with the architectural style of the building.

(5) Canopies shall respect the placement of street trees and lighting and shall not interfere with them.

(6) All large canopies that require structural columns for support shall have a minimum six-foot masonry (or other approved material) finish measured from the finished grade. Materials used on columns and canopies shall be complementary to the building.

*7. Residential Compatibility Standards.*

a. Applicability. The residential compatibility standards in this subsection apply when nonresidential or mixed-use development is proposed adjacent to lots used by or zoned for detached single-family structures in a residential district.
b. Use Limitations. Where these compatibility standards apply, the following uses or features shall be prohibited as principal or accessory uses:
    (1) Public address/loudspeaker systems;
    (2) Outdoor storage; and
    (3) Uses providing delivery services via large tractor trailers (not including package delivery services).
c. Off-Street Parking Location.
    (1) Off-street parking shall be established in one or more of the locations listed below. The locations are listed in priority order; the applicant shall select the highest feasible location from this list, and shall demonstrate why that application was selected over other alternative locations.
    (2) Adjacent to off-street parking lots serving nonresidential uses on abutting lots;
    (3) Adjacent to lot lines abutting nonresidential development;
    (4) Adjacent to lot lines abutting mixed-use development;
    (5) Behind the building;
    (6) In front of the building; or
    (7) Adjacent to lot lines abutting residential uses.
    (8) In cases where an off-street parking lot serving a nonresidential use is located on an abutting lot, connection between the two parking areas via a cross-accessway with a minimum width of 12 feet and a maximum width of 24 feet is strongly encouraged. A cross-access easement shall be recorded.

Fig. 2-08-16-20: Gradual decrease in building height and mass towards adjacent residential uses

d. Relationship to Surrounding Uses.
    (1) Multi-building developments shall be configured to locate the tallest and largest structures within the core of the site and provide a gradual

decrease in building height and mass towards adjacent residential land uses.

(2) Horizontally integrated mixed-use developments shall locate nonresidential uses away from lots in adjacent residential areas.

(3) Medium to high density housing shall be incorporated to the maximum extent feasible both within and around the development to facilitate connections between residential and non-residential uses.

(4) Nonresidential structures taller or larger than adjacent residential uses shall be broken up into modules or wings with the smaller or shorter portions of the structure located adjacent to residential uses.

b. Façade Configuration.

(1) Service functions like refuse collection, incidental storage, and similar functions shall be integrated into the architecture of the building unless an alternate location places these functions farther from adjacent residential uses.

(2) Windows shall be arranged to avoid direct lines-of-sight into abutting residential uses.

(3) Multi-story structures with balconies, patios, or other public gathering spaces more than 24 feet above grade shall orient these features to avoid direct views into lots in low- and medium-density residential districts.

c. Landscaping/Screening.

(1) Screening shall not interfere with public sidewalks, vehicular cross-accessways, or improved pedestrian connections.

(2) Any parking designated for trucks, recreational vehicles and other large vehicles shall be placed in a location which is not adjacent to either any street or to any residentially-zoned property.

d. Operation.

(1) Nonresidential uses with outdoor components (e.g., outdoor dining, performance venues) located adjacent to lots in a residential district shall curtail outdoor activities by 10:00 pm.

(2) Loading or unloading activities shall take place only between the hours of 7:00 am and 11:00 pm.

(3) Alternate hours of activities may be approved through the conditional use permit process.

e. Sustainable Development Practices. To the maximum extent practicable, new buildings are encouraged to incorporate one or more of the following features:

(1) Opportunities for the integration of renewable energy features in the design of buildings or sites, such as: solar, wind, geothermal, biomass, or low-impact hydro sources;

(2) Energy-efficient materials, including recycled materials that meet the requirements of these regulations;

(3) Materials that are produced from renewable resources;

(4) Low-Impact Development (LID) stormwater management features;

(5) A green roof, such as a vegetated roof, or a cool roof;

(6) Materials and design meeting the U.S. Green Building Council's LEED-NC certification requirements; or

(7) A greywater recycling system.

Fig. 2-08-16-21: LID stormwater management feature

# CHAPTER 3 SPECIFIC USE STANDARDS

**Contents:**

Div. 3-01 General Provisions
Div. 3-02 Use Categories
Div. 3-03 Standards that Apply to all Uses
Div. 3-04 Agricultural Use Standards
Div. 3-05 Residential Use Standards
Div. 3-06 Public, Civic and Institutional Use Standards
Div. 3-07 Commercial Use Standards
Div. 3-08 Recreational Use Standards
Div. 3-09 Industrial Use Standards
Div. 3-10 Marijuana Use Standards
Div. 3-11 Natural Medicine Use Standards
Div. 3-12 Wireless Communication Facilities Standards
Div. 3-13 Accessory Uses and Structures
Div. 3-14 Temporary Uses and Structures
Div. 3-15 Operational Standards

## Div. 3-01 General Provisions

### 3-01-01 General Provisions

A. **Purpose.** Use categories are established to provide consistent review, permitting, design requirements, and development standards among uses that have similar physical characteristics. Land uses that are subject to this DSR are classified into Use Categories in the tables that follow.

B. **Uses Included.** All uses listed in Div. 2-06, Principal Use Table are included in the Use Categories tables that follow. Additional uses, which are not in the Principal Use Table but that have the same characteristics as other uses in their category and could be proposed in the future, are also included.

C. **Uses Not Included.** The uses not listed in this Section are not necessarily excluded. Sec. 1-03-02, *Interpretations*, empowers the Director of Community and Economic Development to consider the nature and potential impacts of any new land use proposed for development in the County and to assign it to a Use Category and decide which zone districts such a use will be permitted by right, permitted with conditions, or prohibited.

D. **Use Standards.** The Director further has the discretion to create development standards and use-specific standards that will be required of any such use.

E. **Use Categories**. Use categories shall be defined or otherwise interpreted per the following**.**

1. *Basis for Classifications.* Land use categories classify activities and uses based on physical characteristics that include the type and amount of activity, the volume of customers or residents, how goods or services are sold or delivered, and site conditions. Div. 3-02, *Use Categories,* as established and in Div. 2-06, *Principal Use Tables*, provide a systematic basis for assigning present and future land uses into appropriate zone districts. The Director may consult the most recent edition of the Standard Industrial Classification Manual published by the Executive Office of the President, Office of Management and Budget, or any other sources to help determine whether an unidentified use is substantially similar to an identified permitted or conditional use.
2. *Principal Uses.* Principal uses are assigned to the category that most closely describes their physical nature and function. The "Characteristics" subsection in each table describes the common attributes of each principal use.
3. *Developments with Multiple Principal Uses.*
   a. When a development with multiple principal uses fall into one use category, the entire development is assigned to that use category. For example, for a development that contains a department store and a pharmacy, both uses would be classified as a Commercial Use, and both would be grouped in the Retail Sales sub-category because both of the development's principal uses are in that category.
   b. When the principal uses of a development fall within multiple use categories, each principal use is classified in its applicable category. For example, a development that contains an assembly operation and outdoor storage would be classified as both Heavy (or Light) Industrial, Manufacturing and Processing and Outdoor Storage. Each principal use is subject to all regulations applicable to that use. When standards conflict, the more restrictive requirement shall apply.
4. *Accessory Uses.* The most common accessory uses associated with each principal Use Category are included in each Use Category table in this Division. As with principal uses, the Director has the discretion to determine if an unlisted accessory use is similar in physical nature and function to a listed accessory use to be permitted in a zoning district. In addition, unless otherwise stated, accessory uses are subject to the same regulations as the principal use. Common accessory uses are listed as examples in the use category descriptions.

F. **General Use Standards.** This Chapter includes general use standards that apply to all uses in each category. These standards apply to all uses. Additionally, these regulations do not abrogate these land uses from other standards set forth in this DSR.

# Div. 3-02 Use Categories

## 3-02-01 Agricultural Use Category

A. **Agriculture**.

| Table 3-02-01-1, *Agriculture Use Category* | |
|---|---|
| **Characteristics: Uses primarily related to the raising of animals and crops that do not exceed the threshold for Concentrated or Intensive Animal Feeding Operations, and the secondary enterprises associated with agricultural production.** | |
| Principal Uses | Accessory Uses |
| ▪ Agricultural Business and Farming Operations<br>▪ Agricultural Support Businesses and Services<br>▪ Animal Farm<br>▪ Animal Feeding Operation (AFO) and Concentrated Animal Feeding Operation (CAFO)<br>▪ Aquaculture Facility<br>▪ Auction Yard, with Livestock<br>▪ Biosolids Application<br>▪ Chicken Keeping<br>▪ Cattle Feedlot, Stockyard, and the Commercial Sale of Livestock<br>▪ Crop Farming including Floriculture, Horticulture, Pasturage, Sod, Row and Field Crops, Viticulture or Orchard<br>▪ Dairy Products Manufacturing, Grown on Premises<br>▪ Doggie Day Care Center<br>▪ Equestrian Arena, Commercial<br>▪ Equestrian Arena, Private<br>▪ Farm Machinery Sales and Service<br>▪ Firewood, Commercial Storage and Sales<br>▪ Fish Hatchery<br>▪ Food Manufacturing, Exclusively Grown on Premises<br>▪ Forestry and Silviculture<br>▪ Grain Elevator<br>▪ Grain Mill<br>▪ Greenhouse/Nursery/Tree Production (with Outdoor Storage)<br>▪ Kennel, Commercial<br>▪ Livestock and Poultry Keeping<br>▪ Plant Nurseries and Greenhouses<br>▪ Riding Stables<br>▪ Rodeo Grounds<br>▪ Timbering and Logging<br>▪ Veterinary Clinic or Hospital<br>▪ Wineries, Processing Fruits Exclusively Grown on Premises<br>▪ **Other uses with similar land use characteristics of the Agriculture use category.** | ▪ Agricultural Animal Keeping, Non-Commercial<br>▪ Agritourism<br>▪ Agrivoltaics<br>▪ Biosolids Application<br>▪ Communication Tower, Non-Commercial<br>▪ Farm Employee Housing<br>▪ Greenhouse (commercial or noncommercial)<br>▪ Horse and Livestock Pen<br>▪ Minor Utilities<br>▪ Office<br>▪ Parking and Storage of Operable Farm Vehicles and Machinery<br>▪ Slaughtering, Processing and Packaging of Animals Raised On-Site<br>▪ Solar Energy System, Accessory<br>▪ Stable<br>▪ Vending or Produce Stand<br>▪ Wind Powered Generators |

## 3-02-02 Residential Use Categories

A. **Household Living**.

| Table 3-02-02-1, *Residential Use Category* | |
|---|---|
| **Characteristics: Residential uses are characterized by one or more persons, who may or may not be related by blood or marriage, who reside together in a single dwelling unit. The length of residency of the occupants may be indefinite in the case of privately owned dwelling unit or on a month-to-month or longer basis in the case of units for rent or lease.** | |
| Principal Uses | Accessory Uses |
| ▪ Group Home, FHAA Large<br>▪ Group Home, FHAA Small<br>▪ Live-Work Building<br>▪ Manufactured Home Dwelling<br>▪ Manufactured Home Park<br>▪ Mobile Home Park (MH legacy district use)<br>▪ Modular Home<br>▪ Multi-Family Dwelling<br>▪ Multiplex Dwelling<br>▪ Single-Family Dwelling, Detached<br>▪ Tiny Home Development<br>▪ Townhouse Dwelling<br>▪ Two-Family Dwelling<br>▪ Zero Lot Line Dwelling<br>▪ **Other uses with similar land use characteristics of the Household Living use category.** | ▪ Accessory Dwelling Unit<br>▪ Animal Keeping<br>▪ Class Instruction<br>▪ Community Garden<br>▪ Day Care Home<br>▪ Greenhouse<br>▪ Home Occupation<br>▪ Kennel<br>▪ Minor Utility<br>▪ Short-Term Rental (see Table 3-02-04-2 for Vacation Rental)<br>▪ Solar Energy System, Accessory<br>▪ Storage and Parking of Vehicles<br>▪ Swimming Pool |

# 3-02-03 Public, Civic, and Institutional Use Categories

A. **Community Service**.

| Table 3-02-03-1, *Community Service Use Category* | |
|---|---|
| **Characteristics: Uses of a public, nonprofit, or charitable nature providing social activities, training or counseling to the general public on a regular basis, without a residential component.** | |
| Principal Uses | Accessory Uses |
| ▪ Animal Rehabilitation Center (large or small animals)<br>▪ Aquarium<br>▪ Branch Library<br>▪ Convention Center<br>▪ Event Center<br>▪ Funeral Home/Mortuary<br>▪ Funeral Home/Mortuary (including Crematorium)<br>▪ Lodge or Club<br>▪ Museum<br>▪ Neighborhood, Community, or Recreation Center<br>▪ Philanthropic Institution<br>▪ Place of Public Assembly<br>▪ Senior Center<br>▪ Social Service Organization<br>▪ Youth Organization or Youth Center (i.e. Boy Scouts, Boys & Girls Club)<br>▪ **Other uses meeting the characteristics of the Community Services Use Category** | ▪ Assembly Hall<br>▪ Classrooms<br>▪ Communication Tower, Non-Commercial<br>▪ Community Garden<br>▪ Day Care<br>▪ Donation Bin<br>▪ Electric Vehicle Charging Station (EVCS)<br>▪ Food Preparation and Dining Facility<br>▪ Greenhouse (noncommercial)<br>▪ Library<br>▪ Minor Utilities<br>▪ Mobile Food Vendor<br>▪ Office<br>▪ Nursery School or Pre-school<br>▪ Picnic Areas, Parks, and Playgrounds<br>▪ Recreation Facility<br>▪ Retail Sales Related to the Principal Use<br>▪ Safe Parking Site<br>▪ Solar Panel Array, Small<br>▪ Swimming Pool<br>▪ Wind Turbine, Small |

B. **Day Care.**

| Table 3-02-03-2, *Day Care Use Category* | |
|---|---|
| **Characteristics: Uses providing care, protection, and supervision for children or adults on a regular basis away from their primary residence. Care is typically provided to a given individual for fewer than 18 hours each day, although the facility may be open 24 hours each day.** | |
| Principal Uses | Accessory Uses |
| ▪ Adult Day Care Center<br>▪ Day Care Center<br>▪ Home Day Care<br>▪ **Other uses meeting the characteristics of the Day Care Use Category** | ▪ Community Garden<br>▪ Electric Vehicle Charging Station (EVCS)<br>▪ Food Preparation and Dining Facility<br>▪ Greenhouse (noncommercial)<br>▪ Minor Utilities<br>▪ Office<br>▪ Private Telecommunication or Transmission Tower<br>▪ Recreation Facility<br>▪ Safe Parking Site<br>▪ Solar Panel Array, Small<br>▪ Swimming Pool<br>▪ Wind Turbine, Small |

C. **Educational Facilities.**

| Table 3-02-03-3, *Educational Facilities Use Category* | |
|---|---|
| **Characteristics: Public and private schools at the elementary, middle, or high school level that provide basic academic education. Also includes colleges and other institutions of higher learning that offer courses of general or specialized study leading to a degree usually in a campus setting.** | |
| Principal Uses | Accessory Uses |
| ▪ College<br>▪ Nursing or Medical School not associated with a Hospital<br>▪ Schools, Primary and Secondary, Public or Private<br>▪ Trade School<br>▪ University<br>▪ **Other uses meeting the characteristics of the Educational Facilities Use Category** | ▪ Community Garden<br>▪ Dining Facility<br>▪ Donation Bin<br>▪ Dining Facility<br>▪ Electric Vehicle Charging Station (EVCS)<br>▪ Garden<br>▪ Greenhouse (noncommercial)<br>▪ Horse and Livestock Pen<br>▪ Kitchen or Food Preparation Area<br>▪ Minor Utilities<br>▪ Mobile Food Vendor<br>▪ Office<br>▪ Private Telecommunication or Transmission Tower<br>▪ Recreation Facility<br>▪ Retail Sales Related to the Principal Use<br>▪ Safe Parking Site<br>▪ Solar Panel Array, Small<br>▪ Swimming Pool<br>▪ Wind Turbine, Small |

D. **Government Facilities**

| Table 3-02-03-4, *Government Facilities Use Category* | |
|---|---|
| **Characteristics: Offices, storage, maintenance, and other facilities for the operation of local, state, or federal government.** | |
| Principal Uses | Accessory Uses |
| ▪ Government Administration Office<br>▪ Social Service Organization<br>▪ Parking Lot, or Maintenance Area<br>▪ Emergency Service Building and Garage (e.g., Police or Fire Station)<br>▪ Parking Lot, Garage, or Maintenance Area for City, County, State or Federal Facilities<br>▪ Post Office<br>▪ **Other uses meeting the characteristics of the Government Facilities Use Category** | ▪ Associated Helicopter Landing Facility<br>▪ Community Garden<br>▪ Day Care for Children of Employees<br>▪ Donation Bin<br>▪ Dormitory<br>▪ Electric Vehicle Charging Station (EVCS)<br>▪ Greenhouse (noncommercial)<br>▪ Medical Clinic for Employees or Residents<br>▪ Meeting Space<br>▪ Minor Utilities<br>▪ Mobile Food Vendor<br>▪ Office<br>▪ Fleet Maintenance<br>▪ Food Preparation and Dining Facility<br>▪ Fueling Facility<br>▪ Recreation Facility<br>▪ Safe Parking Site<br>▪ Solar Panel Array, Small<br>▪ Wind Turbine, Small |

E. **Medical Facilities.**

| Table 3-02-03-5, *Medical Facilities Use Category* | |
|---|---|
| **Characteristics: Uses providing medical or surgical care to patients. Some uses may offer overnight care.** | |
| Principal Uses | Accessory Uses |
| ▪ Acupuncture Clinic<br>▪ Blood or Blood Plasma Center<br>▪ Chiropractor<br>▪ Hospital<br>▪ Medical or Dental Office or Clinic<br>▪ Medical or Dental Laboratory<br>▪ Medical Marijuana Center<br>▪ Treatment Center<br>▪ **Other uses meeting the characteristics of the Medical Facilities Use Category** | ▪ Associated Helicopter Landing Facility<br>▪ Associated Office and Storage<br>▪ Associated Retail Sales Related to the Principal Use<br>▪ Classrooms<br>▪ Community Garden<br>▪ Day Care for Children of Employees or Patients<br>▪ Dormitory<br>▪ Electric Vehicle Charging Station (EVCS)<br>▪ Fleet Maintenance<br>▪ Food Preparation and Dining Facility<br>▪ Garden<br>▪ Greenhouse (noncommercial)<br>▪ Minor Utilities<br>▪ Mobile Food Vendor<br>▪ Place Of Worship<br>▪ Pharmacy<br>▪ Private Telecommunication or Transmission Tower<br>▪ Recreation Facility<br>▪ Safe Parking Site<br>▪ Solar Panel Array, Small<br>▪ Swimming Pool<br>▪ Wind Turbine, Small |

F. **Parks and Open Areas.**

| Table 3-02-03-6, *Parks and Open Areas Use Category* | |
|---|---|
| **Characteristics: Uses focusing on natural areas consisting mostly of vegetation, passive or active outdoor recreation areas, or community gardens, and having few structures.** | |
| Principal Uses | Accessory Uses |
| ▪ Campground<br>▪ Cemetery, Columbarium, Mausoleum, or Memorial Park<br>▪ Dog Park, Public<br>▪ Hiking Area<br>▪ Nature Area or Nature Preserve<br>▪ Nature Preserve<br>▪ Park<br>▪ Playfield<br>▪ Playground<br>▪ Picnic Area<br>▪ Recreational Trail<br>▪ Trail<br>▪ Wildlife Sanctuary<br>▪ **Other uses meeting the characteristics of the Parks and Open Areas Use Category** | ▪ Boat Launch<br>▪ Caretaker's Quarters<br>▪ Community Garden<br>▪ Concession<br>▪ Dog Park<br>▪ Dining Area<br>▪ Electric Vehicle Charging Station (EVCS)<br>▪ Flea Market<br>▪ Garden<br>▪ Greenhouse (noncommercial)<br>▪ Horse and Livestock Pen<br>▪ Minor Utilities<br>▪ Mobile Food Vendor<br>▪ Office<br>▪ Outdoor Activity such as Swimming Pool or Tennis or Pickleball Courts<br>▪ Private Telecommunication or Transmission Tower<br>▪ Recreation Facility<br>▪ Retail Sales Related to the Principal Use<br>▪ Safe Parking Site<br>▪ Solar Panel Array, Small<br>▪ Swimming Pool<br>▪ Wind Turbine, Small |

G. **Passenger Terminals.**

| Table 3-02-03-7, *Passenger Terminals Use Category* | |
|---|---|
| **Characteristics: Uses providing facilities for the takeoff and landing of airplanes and helicopters, and terminals for taxi, rail, or bus service.** | |
| Principal Uses | Accessory Uses |
| ▪ Airports, Landing Strips, and Heliports<br>▪ Bus Garage, including Equipment Maintenance<br>▪ Bus Terminal<br>▪ Bus Garage and Equipment Maintenance<br>▪ Local and Interurban Passenger Transit<br>▪ Multimodal Transportation Facility<br>▪ Railroad Terminal (Passenger and Freight)<br>▪ Railroad Yard (on Private Property)<br>▪ Rideshare, Taxi, Limousine, or Bus Pickup and Dropoff<br>▪ Transportation Terminal<br>▪ **Other uses meeting the characteristics of the Passenger Terminals Use Category** | ▪ Associated Office and Storage<br>▪ Associated Retail Sales Area Related to the Principal Use<br>▪ Concession<br>▪ Electric Vehicle Charging Station (EVCS)<br>▪ Fleet Maintenance<br>▪ Freight Handling Area<br>▪ Fueling Facility<br>▪ Minor Utilities<br>▪ Mobile Food Vendor<br>▪ Private Telecommunication or Transmission Tower<br>▪ Safe Parking Site<br>▪ Solar Panel Array, Small<br>▪ Wind Turbine, Small |

H. **Places of Worship.**

| Table 3-02-03-8, *Places of Worship Use Category* | |
|---|---|
| **Characteristics: Uses of a public, nonprofit, or charitable nature providing worship to the general public on a regular basis.** | |
| Principal Uses | Accessory Uses |
| ▪ Church, Mosque, Synagogue, or Temple<br>▪ **Other uses meeting the characteristics of the Place of Worship Use Category** | ▪ Associated Office and Storage<br>▪ Classrooms<br>▪ Community Garden<br>▪ Day Care Center<br>▪ Donation Bin<br>▪ Electric Vehicle Charging Facilities (EVCS)<br>▪ Greenhouse (noncommercial)<br>▪ Library<br>▪ Minor Utilities<br>▪ Mobile Food Vendor<br>▪ Office<br>▪ Private Telecommunication or Transmission Tower<br>▪ Recreation Facility<br>▪ Residences For Clergy<br>▪ Safe Parking Site<br>▪ Solar Panel Array, Small<br>▪ Swimming Pool<br>▪ Wind Turbine, Small |

I. **Social Service Establishments.**

| Table 3-02-03-9, *Social Service Establishments Use Category* | |
|---|---|
| **Characteristics: Uses that primarily provide treatment of those with psychiatric, alcohol, or drug problems; transient housing related to social service programs; and housing for individuals legally confined.** | |
| Principal Uses | Accessory Uses |
| ▪ Group Residential Facility, Large<br>▪ Group Residential Facility, Small<br>▪ Halfway House<br>▪ Institutional Residential Facility<br>▪ Jail<br>▪ Penal Institution<br>▪ Prison<br>▪ Sheltered Care Home<br>▪ Soup Kitchen<br>▪ Tiny Home Village<br>▪ Treatment Center<br>▪ **Other uses meeting the characteristics of the Social Service Establishments Use Category** | ▪ Classrooms<br>▪ Day Care Center<br>▪ Donation Bin<br>▪ Electric Vehicle Charging Station (EVCS)<br>▪ Greenhouse (noncommercial)<br>▪ Horse and Livestock Pen<br>▪ Library<br>▪ Minor Utilities<br>▪ Private Telecommunication or Transmission Tower<br>▪ Recreation Facility<br>▪ Safe Parking Site<br>▪ Solar Panel Array, Small<br>▪ Swimming Pool<br>▪ Wind Turbine, Small |

J. **Utilities (Major and Minor).**

| Table 3-02-03-10, *Utilities Use Category* | |
|---|---|
| **Characteristics:**<br>***Minor:*** **Public or private infrastructure serving a limited area with no on-site personnel.**<br>***Major:*** **Public or private infrastructure serving the general community, that may or may not be maintained or regulated by a public or municipal entity and possibly having on-site personnel.** | |
| Principal Uses | Accessory Uses |
| **Minor Utilities:**<br>▪ Antenna Arrays (Satellite dishes)<br>▪ Cell Antenna<br>▪ Commercial Mobile Radio Service<br>▪ Lift Station or Sewage Pressure Control Stations<br>▪ Small Wind Energy Conversion System (Windmill)<br>▪ Solar Energy System, Small-Scale<br>▪ Stormwater Retention or Detention Facility<br>▪ Telephone Exchange<br>▪ Water Pressure Control Station<br>▪ Public or Municipally Owned Utility<br>▪ Solar Panel Array, Small<br>▪ Water or Wastewater Pump Station<br>**Major Utilities:**<br>▪ Electric Substation<br>▪ Electrical Generation Plant<br>▪ Gas Generation Plant<br>▪ Gas Regulating or Compression Station<br>▪ Large-Scale Energy Project<br>▪ Microwave Communication Facility<br>▪ Public Utility Storage Building or Yard<br>▪ Solar Energy System, Medium-Scale<br>▪ Solar Energy System, Large-Scale<br>▪ Sewage Treatment Plant<br>▪ Telecommunications Tower<br>▪ Television or Radio Transmission Tower<br>▪ Utility Production or Processing Facilities<br>▪ Utility Substation or Structure<br>▪ Wastewater Treatment Plant<br>▪ Water Purification Plant<br>▪ Water Storage<br>▪ Wireless Communication Facility<br>▪ **Other uses meeting the characteristics of the Utilities Use Category** | ▪ Community Garden<br>▪ Data Center<br>▪ Electric Vehicle Charging Station (EVCS)<br>▪ Fleet Maintenance Yard or Facility<br>▪ Minor Utilities<br>▪ Office<br>▪ Private Telecommunication or Transmission Tower<br>▪ Safe Parking Site<br>▪ Solar Panel Array, Small<br>▪ Wind Turbine, Small |

# 3-02-04 Commercial Use Categories

A. **Office**.

| Table 3-02-04-1, *Office Use Category* | |
|---|---|
| **Characteristics: Uses conducted in an office setting and generally focusing on business, professional, or financial services.** | |
| Principal Uses | Accessory Uses |
| ▪ Accounting, Auditing, Tax and Bookkeeping Service<br>▪ Appraisal Service<br>▪ Architectural and Planning Service<br>▪ Bank or Financial Institution<br>▪ Bail Bond Office<br>▪ Business Association<br>▪ Business Park<br>▪ Business Services<br>▪ Adjustment and Collections Service or Agency<br>▪ Commodities Brokers and Services<br>▪ Computer Service<br>▪ Consumer and Mercantile Credit Reporting Service<br>▪ Detective Service<br>▪ Educational and Scientific Research Office<br>▪ Employment Service<br>▪ Engineering and Management Service<br>▪ Insurance Agent, Carrier, or Broker<br>▪ Law Firms<br>▪ Legal Services<br>▪ Office Space (general/unspecified)<br>▪ Protective and Security Service<br>▪ Radio Studio<br>▪ Real Estate Brokerage, Agents, Brokers, and Management<br>▪ Sales<br>▪ Social Services<br>▪ Television Studio<br>▪ Travel Agency and Ticket Sales<br>▪ **Other uses meeting the characteristics of the Office Use Category** | ▪ Automated Teller Machines<br>▪ Communications Tower, Non-Commercial<br>▪ Day Care for Children of Employees<br>▪ Donation Bin<br>▪ Drive-through Facility<br>▪ Electric Vehicle Charging Stations (EVCS)<br>▪ Emergency Shelter<br>▪ Fleet Parking<br>▪ Food Preparation and Dining Facility<br>▪ Guard Dogs<br>▪ Medical Clinic for Employees<br>▪ Minor Utilities<br>▪ Mobile Food Vendor<br>▪ Recreation Facility for Employees<br>▪ Private Telecommunication or Transmission Tower<br>▪ Safe Parking Site<br>▪ Solar Panel Array, Small<br>▪ Wind Turbine, Small |

B. **Overnight Accommodations**.

| Table 3-02-04-2, *Overnight Accommodations Use Category* | |
|---|---|
| **Characteristics: Bedroom and bathroom units arranged for short-term stays of less than 30 days for rent, lease or compensation (direct or indirect).** | |
| Principal Uses | Accessory Uses |
| ▪ Bed and Breakfast Establishment<br>▪ Campground, Commercial<br>▪ Camp or Campsite<br>▪ Hotel or Motel<br>▪ Lodging, Commercial<br>▪ Recreational Vehicle Park<br>▪ Resort<br>▪ Safe Parking Site<br>▪ Trailer Park<br>▪ Vacation Rental (see Table 3-02-02-1 for Short-Term Rental)<br>▪ **Other uses meeting the characteristics of the Overnight Accommodations Use Category** | ▪ Communications Tower, Non-Commercial<br>▪ Electric Vehicle Charging Station (EVCS)<br>▪ Fleet Parking<br>▪ Guard Dogs<br>▪ Horse and Livestock Pen<br>▪ Meeting Space<br>▪ Minor Utilities<br>▪ Office<br>▪ Private Telecommunication or Transmission Tower<br>▪ Recreational Facility<br>▪ Restaurant<br>▪ Safe Parking Site<br>▪ Solar Panel Array, Small<br>▪ Swimming Pool<br>▪ Wind Turbine, Small |

C. **Parking, Commercial**.

| Table 3-02-04-3, *Commercial Parking Use Category* | |
|---|---|
| **Characteristics: Facilities that provide parking not accessory to a principal use, for which a fee may or may not be charged.** | |
| Principal Uses | Accessory Uses |
| ▪ Automobile Parking Lot or Structure (Commercial)<br>▪ Truck Parking Lot<br>▪ **Other uses meeting the characteristics of the Commercial Parking Use Category** | ▪ Communications Tower, Non-Commercial<br>▪ Donation Bin<br>▪ Electric Vehicle Charging Station (EVCS)<br>▪ Fleet Parking<br>▪ Guard Dogs<br>▪ Minor Utilities<br>▪ Office<br>▪ Private Telecommunication or Transmission Tower<br>▪ Safe Parking Site<br>▪ Solar Panel Array, Small<br>▪ Wind Turbine, Small |

D. **Restaurants**.

| Table 3-02-04-4, *Restaurants Use Category* | |
|---|---|
| **Characteristics: Establishments that prepare and sell food and beverages for on-premises or off-premises consumption.** | |
| Principal Uses | Accessory Uses |
| ▪ Bakery, Retail<br>▪ Bar or Cocktail Lounge<br>▪ Brewpub<br>▪ Candy, Ice Cream, or Yogurt Shop<br>▪ Catering Establishment, Small Scale<br>▪ Coffee Shop<br>▪ Microbrewery, Microwinery, or Microdistillery<br>▪ Restaurant<br>▪ Restaurant, Fast Food<br>▪ Restaurant, Delivery Only<br>▪ Restaurant, with Drive-Through<br>▪ Tasting Room<br>▪ **Other uses meeting the characteristics of the Restaurant Use Category** | ▪ Associated Office and Storage<br>▪ Communications Tower, Non-Commercial<br>▪ Drive-through Facility<br>▪ Electric Vehicle Charging Station (EVCS)<br>▪ Fleet Parking<br>▪ Guard Dogs<br>▪ Greenhouse (noncommercial)<br>▪ Minor Utilities<br>▪ Outdoor Dining Area<br>▪ Private Telecommunication or Transmission Tower<br>▪ Recreational Facility<br>▪ Safe Parking Site<br>▪ Solar Panel Array, Small<br>▪ Wind Turbine, Small |

E. **Retail Repair, Sales, and Service**.

| Table 3-02-04-5, *Retail Repair, Sales, and Service Use Category* | |
|---|---|
| **Characteristics: Companies or individuals involved in the sale, lease, or rental of new or used products, or providing personal services or repair services to the general public.** | |
| Principal Uses | Accessory Uses |
| Repair-Oriented | ▪ Associated Office and Storage<br>▪ Communications Tower, Non-Commercial<br>▪ Concession<br>▪ Caretaker's Quarters<br>▪ Day Care for Children of Employees<br>▪ Donation Bin<br>▪ Fleet Parking<br>▪ Food Preparation and Dining Area<br>▪ Greenhouse (noncommercial)<br>▪ Guard Dogs<br>▪ Minor Utilities<br>▪ Outdoor Display |
| Store offering repair of:<br>▪ Apparel<br>▪ Appliances<br>▪ Bicycles<br>▪ Canvas Products<br>▪ Electrical Appliances<br>▪ Guns, Ammunition, and Accessories<br>▪ Furniture Repair Services<br>▪ Locks and Key<br>▪ Office Equipment<br>▪ Shoes<br>▪ Radio, Computer, Mobile Device, and Televisions<br>▪ Small Electronics<br>▪ Watch, Clock and Jewelry | |
| Sales-Oriented | |

Stores selling, leasing, or renting consumer, home, and business goods including, but not limited to:

- Age-Restricted Retail (including but not limited to smoke shops, vape shops, and liquor stores)
- Antiques
- Apparel and Accessories
- Appliances (household)
- Art Supplies
- Bait Store and Live Bait Sales
- Bakery Products (on-premises sales)
- Bicycle
- Book and Stationery
- Building Supplies
- Cabinets
- Cameras and Photographic Supplies
- Clothing and Apparel Accessories
- Collectables
- Computers
- Convenience Store
- Department Stores
- Drive-In / Drive-Through Facilities
- Drug Store/Pharmacy
- Electrical and Electronic Supplies
- Farm and Gardening Supplies (not including heavy equipment)
- Fabric
- Firewood Sales, Storage, and Splitting
- Fireworks
- Flea Market
- Floor Coverings
- Florist
- Fruits and Vegetables
- Furniture and Home Furnishings
- General Merchandise
- Gifts and Novelties
- Greenhouses and Plant Nurseries
- Grocery Store or Specialty Foods
- Guns, Ammunition, and Accessories
- Hardware
- Hobby and Craft Supplies
- Home Improvement Supplies
- Household Products
- Jewelry
- Luggage
- Manufactured Housing Dealership

- Private Telecommunication or Transmission Tower
- Safe Parking Site
- Solar Panel Array, Small
- Wind Turbine, Small

| Table 3-02-04-5, *Retail Repair, Sales, and Service Use Category* |
|---|
| **Characteristics: Companies or individuals involved in the sale, lease, or rental of new or used products, or providing personal services or repair services to the general public.** |
| ▪ Meats and/or Fish<br>▪ Medical Supplies<br>▪ Miscellaneous Retail Goods<br>▪ Music Instruments, Supplies and/or Records<br>▪ Newspapers and Magazines<br>▪ Office Equipment and Business Machines<br>▪ Pawn Shop<br>▪ Pets and Pet Supplies<br>▪ Pharmacy<br>▪ Plants<br>▪ Postal Substation<br>▪ Radios and Televisions<br>▪ Secondhand Merchandise (includes Flea Market and Thrift Store)<br>▪ Shoes<br>▪ Shopping Centers and Malls<br>▪ Sporting Goods and Athletic Equipment<br>▪ Toys<br>▪ Vehicle Parts and Accessories |

| **Characteristics: Companies or individuals involved in the sale, lease, or rental of new or used products, or providing personal services or repair services to the general public.** |
| ▪ **Other uses meeting the characteristics of the Retail Repair, Sales, and Service Use Category** |

F. **Vehicle Sales, Rental, Service, and Repair**.

| Table 3-02-04-6, Vehicle Sales, Rental, Service, and Repair Use Category | |
|---|---|
| **Characteristics: Direct sales of and service to passenger vehicles, light and medium trucks, and other consumer motor vehicles such as motorcycles, boats, and recreational vehicles. Many services are provided while the customer waits or are completed while the customer waits or within 24 hours.** | |
| Principal Uses | Accessory Uses |
| ▪ Automobile and Small Truck (1½ ton or less) Repair, Painting, Body Work and Servicing<br>▪ Automobile and Truck Rental or Leasing<br>▪ Automobile Dealership<br>▪ Automobile or Bus Repair (includes Body Work, Paint, Tire Retreading, and Upholstery Repair)<br>▪ Automobile Repair and Servicing (includes Battery Sales and Installation, Detailing, Tire Sales and Mounting, and similar; Does not include Body Work, Paint, Tire Retreading, or Upholstery Repair)<br>▪ Automotive Services (except wrecking or towing storage yards)<br>▪ Automobile Towing and Storage Yard<br>▪ Boat Sales, Rental, or Leasing Facility<br>▪ Car Wash<br>▪ Convenience Store with Fuel Station and Minor Repair Service<br>▪ Electric Vehicle Charging Station (EVCS)<br>▪ Fuel Sales<br>▪ Manufactured Home or Portable Building Sales or Rental<br>▪ Motorcycle Sales and Service<br>▪ Motorcycles, RVs, Boats, and Light and Medium Trucks Sales, Rental, and Leasing<br>▪ RVs, Camping and/or Travel Trailers Sales or Rental<br>▪ Truck, Trailer, and Horse Trailer Sales and Rental<br>▪ Truck Stop | ▪ Associated Office and Storage<br>▪ Car Wash<br>▪ Communications Tower, Non-Commercial<br>▪ Concession<br>▪ Donation Bin<br>▪ Electric Vehicle Charging Station (EVCS)<br>▪ Fleet Parking<br>▪ Food Preparation and Dining Area<br>▪ Fueling Facility<br>▪ Guard Dogs<br>▪ Minor Utilities<br>▪ Outdoor Display<br>▪ Outdoor Storage<br>▪ Private Telecommunication or Transmission Tower<br>▪ Safe Parking Site<br>▪ Sale Of Auto Parts<br>▪ Solar Panel Array, Small<br>▪ Towing without Salvage Yard<br>▪ Vehicle Storage<br>▪ Wind Turbine, Small |
| ▪ **Other uses meeting the characteristics of the Vehicle Sales and Service Use Category** | |

# 3-02-05 Recreational Use Categories

A. **Recreation, Indoor**.

| Table 3-02-05-1, *Indoor Recreation Use Category* | |
|---|---|
| **Characteristics: Generally commercial uses, varying in size, providing daily or regularly scheduled recreation-oriented activities in an indoor setting.** | |
| Principal Uses | Accessory Uses |
| ▪ Amusement Center, Pool Arcade, or Gaming Arcade Throwing Lounge<br>▪ Bar, Nightclub, Tavern, or Lounge (with on-premises alcohol consumption)<br>▪ Bingo Hall<br>▪ Bowling Alley<br>▪ Convention Center<br>▪ Country Club<br>▪ Dance Hall or Club<br>▪ Game Court, Indoor Racquet (Handball, Racquetball, Tennis, Pickleball)<br>▪ Gun Club without Outdoor Range<br>▪ Gymnasium<br>▪ Health Club or Physical Fitness Services<br>▪ Movie Theater<br>▪ Pool Hall or Arcade<br>▪ Pistol and Shooting Range<br>▪ Recreation Center<br>▪ Rock Climbing Gym<br>▪ Sexually Oriented Business<br>▪ Skating Rink, Ice or Roller<br>▪ Swimming Pool, Public<br>▪ Tennis or Racquetball Facility<br>▪ Trampoline Park<br>▪ **Other uses meeting the characteristics of the Indoor Recreation Use Category** | ▪ Concession<br>▪ Donation Bin<br>▪ Electric Vehicle Charging Station (EVCS)<br>▪ Minor Utilities<br>▪ Mobile Food Vendor<br>▪ Office<br>▪ Private Telecommunication or Transmission Tower<br>▪ Retail Sales Related to the Principal Use<br>▪ Solar Panel Array, Small<br>▪ Swimming Pool<br>▪ Wind Turbine, Small |

B. **Recreation, Outdoor**.

| Table 3-02-05-2 *Outdoor Recreation Use Category* | |
|---|---|
| **Characteristics: Generally commercial uses, varying in size, providing daily or regularly scheduled recreation-oriented activities in an outdoor setting.** | |
| Principal Uses | Accessory Uses |

- Amphitheater
- Amusement Park
- Aquarium
- Arboretum
- Auto Racing
- Archery, Gun, or Pistol Shooting Range
- Botanical Garden
- Country Club
- Dog Racing
- Drive-In Theater
- Equestrian Arena, Commercial
- Fairgrounds
- Go-Cart Establishment
- Golf Course/Driving Range
- Gun Club with Outdoor Range
- Hiking Area
- Horse Racing
- Miniature Golf Course
- Movie Theater
- Music Arena
- Natural Area
- Outdoor Activity (includes Batting Cage, Gun Club with Outdoor Range, Swimming Pool, Tennis or Pickleball Courts, or Riding Academy
- Paintball Facility
- Park
- Picnic Area
- Playground
- Playfield
- Shooting Range
- Race Track, Animal
- Race Track, Vehicle
- Racing Facility (Animals or Vehicles)
- Riding Academy
- Stadium
- Swimming Pool, Public
- Tennis, Pickleball, and other Courts
- Theme Park
- Trails
- Truck Racing
- Water Park
- Zoo
- **Other uses meeting the characteristics of the Outdoor Recreation Use Category**

- Boat Launch
- Classrooms
- Concession
- Donation Bin
- Electric Vehicle Charging Station (EVCS)
- Horse or Livestock Pen
- Flea Market
- Food Preparation and Dining Area
- Minor Utilities
- Mobile Food Vendor
- Office
- Private Telecommunication or Transmission Tower
- Retail Sales Related to the Principal Use
- Solar Panel Array, Small
- Swimming Pool
- Wind Turbine, Small

# 3-02-06 Industrial Use Categories

A. **Heavy Industrial.**

**Table 3-02-06-1, *Heavy Industrial Use Category***

**Characteristics: Uses engaged in the manufacturing, assembly or processing of chemicals, animal products and metals, the activities of which are likely to have characteristics that discourage adjacency to residential uses. Factory production and industrial yards are located here. Sales to the general public are rare.**

| Principal Uses | Accessory Uses |
|---|---|
| **Manufacture, assembly, or processing of:** | ▪ Caretaker's Quarters |
| ▪ Aggregate Mining and Extraction Uses | ▪ Day Care for Children of Employees |
| ▪ Asbestos Products Manufacturing | ▪ Electronic Vehicle Charging Station (EVCS) |
| ▪ Asphalt and Concrete Production Facilities | ▪ Data Center |
| ▪ Automobile Manufacturing | ▪ Fleet Maintenance |
| ▪ Automobile Salvage Yard | ▪ Fleet Parking |
| ▪ Automobile Towing with Salvage | ▪ Food Preparation and Dining Facility |
| ▪ Beverage and Tobacco Products | ▪ Fueling Facility |
| ▪ Boiler, Tank, and Shipping Container Manufacturing | ▪ Guard Dogs |
| ▪ Bulk Grain Transfer | ▪ Medical Clinic for Employees |
| ▪ Bulk Storage of Explosive or Hazardous Materials | ▪ Meeting Space |
| ▪ Cement, Cinder Block, Concrete, Lime or Plaster Manufacturing | ▪ Minor Utilities |
| ▪ Chemicals, Petroleum, and Explosive Manufacturing (except Pharmaceuticals) | ▪ Mobile Food Vendor |
| ▪ Coke Oven | ▪ Office |
| ▪ Commercial or Industrial Machinery Repair | ▪ Outdoor Storage |
| ▪ Concrete or Asphalt Batch Plant | ▪ Private Telecommunication or Transmission Tower |
| ▪ Electronics and Electrical Equipment | ▪ Recreation Facility |
| ▪ Feed Mill | ▪ Retail Sales Related to the Principal Use |
| ▪ Fertilizer Manufacturing and Storage | ▪ Semi-Trailer Parking |
| ▪ Food Products | ▪ Solar Panel Array, Small |
| ▪ Glass or Glass Products | ▪ Warehouse |
| ▪ Grain Elevator | ▪ Wind Turbine, Small |
| ▪ Hemp Manufacturing and Extraction | |
| ▪ Home Demolition and Wrecking | |
| ▪ Machine Shop | |
| ▪ Metal Smelting, Processing, and Products (Ferrous and Nonferrous) | |
| ▪ Oil and Gas Facility | |
| ▪ Paper, Pulp, or Paperboard Mills | |
| ▪ Petroleum and Coal Products | |
| ▪ Pharmaceuticals | |
| ▪ Primary Metals and Fabricated Metal Products | |
| ▪ Railroad Yard or Repair Shop | |
| ▪ Slaughtering, Packaging or Processing of Animals | |
| ▪ Soap, Cleaning Compounds, and Toilet Preparation | |
| ▪ Sugar and Beet Sugar Refining | |
| ▪ Textiles | |
| ▪ Transportation Equipment | |
| ▪ Welding Repair | |
| ▪ Wool Scouring and Pulling | |

| Table 3-02-06-1, *Heavy Industrial Use Category* | |
|---|---|
| **Characteristics: Uses engaged in the manufacturing, assembly or processing of chemicals, animal products and metals, the activities of which are likely to have characteristics that discourage adjacency to residential uses. Factory production and industrial yards are located here. Sales to the general public are rare.** | |
| Principal Uses | Accessory Uses |
| ▪ **Other uses meeting the characteristics of the Heavy Industrial Use Category** | |

B. **Light Industrial.**

| Table 3-02-06-2, *Light Industrial Use Category* | |
|---|---|
| **Characteristics: Uses engaged in the light manufacturing, assembly, or processing of industrial, business, or consumer goods, usually from basic finished inputs such as metal, stone, glass, plastic, or rubber. Contractors and building maintenance services and similar uses perform services off-site. Few customers, especially the general public, come to the site.** | |
| Principal Uses | Accessory Uses |
| **Light manufacturing and assembly of:**<br>▪ Apparel and Other Finished Products<br>▪ Appliances<br>▪ Bottling and Canning of Soft Drinks and Water<br>▪ Communication Equipment<br>▪ Dry Cleaning Plants<br>▪ Drug Supplies and Sundries<br>▪ Electric and Electronic Equipment (Includes Electronic Distribution and Electrical Industrial)<br>▪ Engineering, Science, and Research Equipment<br>▪ Fabricated Metal, Sheet Metal Shops, Metal Products Manufacturing<br>▪ Food Products for Wholesale Distribution<br>▪ Furniture and Fixtures<br>▪ Heavy Construction Contractors<br>▪ Hemp Manufacturing and Extraction<br>▪ Home Decor and Furnishings<br>▪ Lighting and Wiring Equipment<br>▪ Lumber, Building Materials, Paper, and Wood Products<br>▪ Motion Picture Production and Allied Services<br>▪ Moving Companies<br>▪ Medical, Optical, Musical Instruments, Sporting Goods, and other Instruments and Related Products<br>▪ Monuments and Grave Markers<br>▪ Off-Premises Advertising Devices<br>▪ Paper Products (except Mills)<br>▪ Personal Electronics<br>▪ Photographic Processing and Services<br>▪ Plumbing, Heating, and Air Conditioning Contractors<br>▪ Printing and Support Activities<br>▪ Research, Development, and Testing<br>▪ Sign Manufacturing, Repair, and Maintenance<br>▪ Space Research and Technology<br>▪ Special Trade Contractors<br>▪ Toys<br>▪ Wholesale Trade (durable and nondurable)<br>**Building Trade and D**evelopment **Contractors who perform services off-site, but store equipment and materials on-site including:** | ▪ Associated Office and Storage<br>▪ Associated Showroom<br>▪ Caretaker's Quarters<br>▪ Day Care for Children of Employees<br>▪ Electronic Vehicle Charging Station (EVCS)<br>▪ Fleet Maintenance<br>▪ Fleet Parking<br>▪ Food Preparation and Dining Facility<br>▪ Fueling Facility<br>▪ Guard Dogs<br>▪ Medical Clinic for Employees<br>▪ Meeting Space<br>▪ Minor Utilities<br>▪ Mobile Food Vendor<br>▪ Office<br>▪ Outdoor Storage<br>▪ Private Telecommunication or Transmission Tower<br>▪ Recreation Facility<br>▪ Retail Sales Related to the Principal Use<br>▪ Semi-Trailer Parking<br>▪ Solar Panel Array, Small<br>▪ Warehouse<br>▪ Wind Turbine, Small |

| Table 3-02-06-2, *Light Industrial Use Category* | |
|---|---|
| **Characteristics: Uses engaged in the light manufacturing, assembly, or processing of industrial, business, or consumer goods, usually from basic finished inputs such as metal, stone, glass, plastic, or rubber. Contractors and building maintenance services and similar uses perform services off-site. Few customers, especially the general public, come to the site.** | |
| Principal Uses | Accessory Uses |
| ▪ General Contractor with Storage Yard<br>▪ Carpenter and Wood Flooring Services<br>▪ Electrical Contractors<br>▪ Grading and Excavation Contractors<br>▪ Heating, Ventilating, and Air Conditioning Services<br>▪ Heavy Construction Contractors<br>▪ Landscaping Services<br>▪ Moving Companies<br>▪ Painting and Paperhanging Contractors<br>▪ Plumbing Contractors<br>▪ Roofing and Sheet Metal Services<br>▪ Woodworking Including Cabinet Makers and Furniture Manufacturing | |
| **Other Light Industrial Uses:** | |
| ▪ Artisan/Handcrafted Manufacturing<br>▪ Boat Building and Repairing<br>▪ Bus Equipment Maintenance, Repair, and Storage<br>▪ Brewery, Winery, or Distillery<br>▪ Catering Establishment, Large Scale<br>▪ Crematorium<br>▪ Electric Motor Repair<br>▪ Engravers<br>▪ Exterminator, Maintenance Yard, or Facility<br>▪ Food Processing<br>▪ Industrial and Manufacturing Product Sales and Supply<br>▪ Janitorial and Building Maintenance Service<br>▪ Laundry, Dry-Cleaning, and Carpet Cleaning Plants<br>▪ Lithography<br>▪ Logistics Center (Heavy)<br>▪ Logistics Center (Light)<br>▪ Motion Picture Production and Allied Services<br>▪ Publishing and Printing (Newspaper, Periodicals)<br>▪ Repair of Scientific or Professional Instruments<br>▪ Research, Testing, and Development Laboratory<br>▪ Smoking or Processing of Meat Products<br>▪ Welding, Tool Repair, or Machine Shop<br>▪ **Other uses meeting the characteristics of the Light Industrial Use Category** | |

C. **Warehousing and Storage.**

| **Table 3-02-06-3, *Warehousing and Storage Use Category*** | |
|---|---|
| **Characteristics: Uses involved in the storage or movement of goods for themselves or other firms. Goods are generally delivered to other firms or the final consumer with little on-site sales activity to customers.** | |
| Principal Uses | Accessory Uses |
| ▪ Above-Ground Storage Tank<br>▪ Auction House, without Livestock<br>▪ Bulk Grain Transfer Facility<br>▪ Bulk Storage of Non-Hazardous Freight or Goods<br>▪ Bus Garage or Storage<br>▪ Cold Storage<br>▪ Data Center<br>▪ Express Freight Transportation<br>▪ Food Packing and Distribution<br>▪ Freight Hauling Service<br>▪ Fuel, Oil, Gasoline, or Petroleum Products, Bulk Storage and Sale<br>▪ General Warehousing<br>▪ Hazardous Materials Shipping<br>▪ Landscape Storage Yard<br>▪ Logistics Center<br>▪ Mini Storage (includes Self Storage)<br>▪ Motor Freight Garaging and Equipment Maintenance<br>▪ Moving and Storage (Household Goods)<br>▪ Outdoor Storage (as a Principal Use)<br>▪ Parcel Delivery Station<br>▪ Railroad Switching and Marshalling Yard<br>▪ Recreational Vehicle and Boat Storage<br>▪ Self-Service Storage<br>▪ Special Warehousing and Storage<br>▪ Trucking and General Warehousing<br>▪ Vehicles Carrying Flammable, Explosive, Hazardous, or High Toxic Materials<br>▪ **Other uses meeting the characteristics of the Warehousing Use Category** | ▪ Associated Office and Storage<br>▪ Caretaker's Quarters<br>▪ Day Care for Children of Employees<br>▪ Fleet Maintenance<br>▪ Fleet Parking<br>▪ Food Preparation and Dining Facility<br>▪ Fueling Facility<br>▪ Guard Dogs<br>▪ Medical Clinic for Employees<br>▪ Meeting Space<br>▪ Minor Utilities<br>▪ Mobile Food Vendor<br>▪ Outdoor Storage<br>▪ Private Telecommunication or Transmission Tower<br>▪ Recreation Facility<br>▪ Semi-Trailer Parking<br>▪ Solar Panel Array, Small<br>▪ Wind Turbine, Small |

D. **Waste-Related.**

| Table 3-02-06-4, *Waste-Related Use Category* | |
|---|---|
| **Characteristics: Uses characterized by receiving solid or liquid wastes from others for transfer to another location and uses that collect sanitary wastes or that manufacture or produce goods or energy from the composting of organic material.** | |
| Principal Uses | Accessory Uses |

# Div. 3-03 Standards that Apply to all Uses

## 3-03-01 Construction Trailers

A. **Building and Electrical Permit Required**. Construction trailers intended to be in operation shall obtain Building and Electrical Permits from the Community and Economic Development Department.

B. **Minimum Lot Area**. No construction trailer shall be located on a parcel of land less than 1,000 square feet in size.

C. **Location**. The construction trailer shall be located within or adjacent to the development project the trailer is associated with and is only permitted for the duration of the project.

D. **Period of Operation**.

1. *Expiration.* A construction trailer shall expire one year from the date of approval, unless renewed.
2. *Renewals.* Renewals of construction trailers may only be issued for a maximum of one year at a time.
3. *Removal.* A construction trailer shall be removed no later than 30 days after completion of construction or issuance of a Certificate of Occupancy, whichever occurs first.

E. **No Accommodations in Trailer**. The construction trailer shall contain no sleeping or cooking accommodations.

F. **Other Setbacks**. The setbacks for the zone district shall apply.

G. **Water and Sanitation**. All construction trailers shall have adequate water and sanitation approved by Adams County Health Department, which may include bottled water and/or portable toilet facilities.

H. **Signage**. All signs associated with Construction and/or Sales Office Trailers shall be consistent with Div. 4-05, *Signs*.

# 3-03-02 Electric Vehicle Charging Stations (EVCS)

A. **As an Accessory Use.** EV-Ready parking spaces are permitted as an accessory use in all zone districts.

B. **As a Principal Use.** EVCS shall be permitted as a principal use in the zone districts indicated in Table 2-06-02.A, *Agricultural and Residential Districts Principal Use Table* and Table 2-06-02.B, *Nonresidential and Mixed Use Districts Principal Use Table*. Refer to Sec. 3-07-11 for principal use EVCS use standards.

C. **EV Charging Station/EV-Ready Spaces Required.** See Sec. 4-02-12, *Electric Vehicle Charging Stations/Spaces Required.*

D. **Signage.** All EV charging stations may include signage identifying spaces as restricted parking for EV charging. If time limits or vehicle removal provisions are to be enforced, regulatory signage including parking restrictions shall be installed immediately adjacent to, and visible from, the EV Charging Station. Such signs shall not count towards the aggregate sign area or the maximum number of signs per parcel per Div. 4-05, *Signs*.

E. **Screening Required.** Above-ground electrical equipment supporting the operation of a principal electric vehicle charging station, such as electrical transformers, shall be screened according to the minimum standards in Div. 4-04, *Landscaping and Buffering*.

F. **Setbacks.** Above-ground electrical equipment supporting the operation of all EV-ready parking spaces shall be setback at least 10' from all property lines, or the width of the bufferyard as required in Table 4-04-03-2, whichever is greater.

# 3-03-03 Portable Storage Containers

Portable, movable, or temporary metal, wood, and plastic storage containers larger than 120 square feet intended for outdoor storage are only permitted where Outdoor Storage is permitted. Storage containers smaller than 120 square feet are permitted, provided that their outdoor placement does not exceed a duration of 10 days in one calendar year on any one property.

# 3-03-04 Trash and Recycling Containers

A. **No Dumping**. No junk, materials, or trash shall be disposed of on any property or public right-of-way except in an authorized landfill or other approved waste or waste recovery facility.

B. **No Storage of Waste Outdoors**. No waste, recyclable materials, junk, firewood piles, or inoperable equipment shall be stored outdoors except as otherwise authorized by these standards and regulations.

C. **Trash Containers.** Any waste storage, including trash, recyclables, and scrap shall be stored in closed containers when possible and enclosed by a sight-obscuring fence that is a minimum six-foot-high and made of wood or masonry material.

D. **Time Limit on Trash and Recycling Containers**. Trash and recycling containers shall be located within the front yard of any dwelling for no more than 24 consecutive hours. All trash and recyclable containers shall be covered or kept in an enclosure surrounded by a fence, six feet in height. The requirements of this section do not apply in the A-3 Zone District.

E. **Trash Containers for Construction Purposes**. Containers for construction waste may be permitted in the front, rear, and side yards of a residential dwelling for no more than a 14-day

period. All construction waste containers shall be covered when not in use. Containers shall not be located within the public right-of-way.

F. **Permanent Structures**. A waste and recycling container may become a permanent structure if it is placed on a permanent foundation and receives a Building Permit.

# Div. 3-04 Agricultural Use Standards

## 3-04-01 General Agricultural Use Standards

A. **Purpose.** The purpose of the following general use standards for agricultural uses is to address elements of planning, design, operation, and maintenance to be applied to all agricultural development in Adams County. Any use-specific standards contained in this DSR shall also be applied. Where a use-specific standard conflicts with a general standard, the use-specific standard shall apply.

B. **Applicability.** The standards of this subsection apply to all agricultural land uses in all zone districts.

C. **Fencing, Walls, and Screening.**

1. *Maximum Height.* The maximum height of fencing, walls, and screening shall be 96 inches, which may include four strands of barbed wire forming the top 18 inches. All fences, walls, and retaining walls more than 42 inches in height require a Building Permit
2. *Fencing Material*. Fencing consisting of only barbed wire is not permitted. Other permitted fencing materials include steel, woven wire, high-tensile smooth wire, split-rail, post-and-rail, board fencing, welded wire, or pipe fencing. The use of sheet metal, corrugated metal panels, scrap materials, repurposed building components, plastic netting, or similar non-fencing materials is prohibited.
3. *Transparency Requirement for Non-Screen Fencing.* To qualify as non-screen fencing, a fence must be constructed so that a minimum of 50% of its surface area is open and unobstructed, allowing visibility through the fence. This requirement ensures that non-screen fencing maintains visual permeability and does not function as a solid visual barrier.
4. *Retaining Wall.* Any retaining wall over four feet in height shall require preparation by a professional engineer as a condition for a Building Permit, except when waived by the Director of Community and Economic Development.
5. *Maintenance.* All fences shall be maintained in a structurally safe and acceptable condition.
   a. Painted and metal fences shall be kept free of chipped or faded paint, rust, or corrosion.
   b. Fences made of slats, bricks, stones, wire, posts or other fence material or equipment shall not have broken or missing materials or missing sections.
   c. Fences shall remain upright and not leaning or falling down.
   d. Vegetation growing on or supported by a fence shall be maintained in a healthy condition and shall be regularly pruned and trimmed so as to prevent the deterioration, collapse, or other structural failure of the fence.
6. *Driveway Entrance Archways.* Driveway entrance archways are permitted. Any portion of the archway that extends over the driveway must provide a vertical clearance of at least 13.5 feet. The maximum height of the archway shall not exceed 16 feet.

D. **Agricultural Zone Districts.** In addition to the other standards contained in this Section, the following fence standards shall apply to subdivided agriculturally zoned lands:

1. *Maximum Fence Height.* The maximum fence height between the front setback line and a front property line is 54 inches.
2. *Fencing in the Front Setback.* All fencing between the front setback line and front property line greater than 42 inches shall not be screen fencing and shall adhere to sight distance requirements.
3. *External Boundary Electric Fence.* An external boundary electric fence shall require a Conditional Use Permit.
4. *Traffic View Obstruction*. Traffic view obstruction, as outlined in these standards and regulations, is prohibited.

E. **Fence Maintenance and Condition.** All fencing, including screening, perimeter, and decorative fencing, shall always be maintained and kept in good condition. Condition of fences shall be evaluated through a review of:

a. *Structural Integrity.* Structural integrity and being functionally sound under the Adams County Building Codes; and

b. *Condition.* Substantially the same condition as originally permitted or constructed.

F. **Trash Enclosure Screening.** Trash enclosure screening shall consist of a minimum six-foot-high screen fence.

G. **Masonry Wall.** All walls specified to be masonry fencing shall be constructed out of a brick or stone material which does not permit the contents within the fenced area to be seen from the outside.

H. **Noise Barrier Fencing.** Where existing and proposed arterial roads or state highways traverse or are adjacent to areas of proposed residential or commercial development the Director of Community and Economic Development may require noise barrier fencing be installed by the developer. Such fencing shall meet the minimum standards of the Colorado Department of Transportation and these standards and regulations.

I. **Right-of-Way Maintenance**. The property owner of land abutting a public right-of-way is responsible for the construction and ongoing maintenance of all improvements within the right-of-way abutting their property, including but not limited to the curb, gutter, sidewalk, parkway strip, and snow removal to maintain pedestrian access. The property owner is also responsible for maintaining the area between the property line and the edge of the adjacent roadway, including vegetation management, debris removal, and upkeep of any landscaping or hardscape improvements.

J. **Oil and Gas Well Waiver.** Where a new home is constructed within 300 feet of an existing oil or gas well, the property owner shall submit a signed waiver acknowledging the existence of the facility.

# 3-04-02 Agricultural Support Businesses and Services

A. **Animal Feeding Operation (AFO) and Concentrated Animal Feeding Operation (CAFO).** The standards of this Subsection apply to AFOs and CAFOs as a principal use on a property. Standards for AFOs and CAFOs that are an accessory use are in Sec. 3-13-03.G, *Agricultural Animal Keeping, Non-Commercial AFOs and CAFOs.*

1. *Minimum Parcel Area*. Ten acres.

2. *Location*. All such operations shall be located at least 100 feet away from any on-property occupied residential structure and 200 feet from any right-of-way.
3. *Setback from Residential Properties*. No new livestock or poultry confinement operation shall be permitted within one mile of the lot line of a residential use except one which occurs in association with the livestock confinement operation and unless the applicant obtains a waiver in writing from the residential property owner(s) within one mile and the applicant records a disclosure document against the residential property.
4. *Animal Care*. All animals shall be cared for in a humane and sanitary manner as approved by the Colorado Department of Agriculture and the State Veterinarian's Office.
5. *Grazing*. Grazing lands shall be maintained in accordance with standards and specifications outlined by the United States Department of Agriculture and the local Soil Conservation Service.
6. *Conformance with "Confined Animal Feeding Operations Control Regulations."*. All Operations shall comply with the "Confined Animal Feeding Operations Control Regulations" specified by the Colorado Department of Public Health and Environment.
7. *Environmental and/or Chemical and Scientific Controls*. Environmental and/or chemical and scientific controls shall be provided as approved by Adams County Health Department.
8. *Manure Handling*. Manure shall be handled and disposed of in a sanitary method, approved by Adams County Health Department.
9. *Drainage Facilities*. Drainage facilities or improvements, as approved by the Adams County Health Department, shall be constructed to protect any adjacent rivers, streams, or other bodies of water.
10. *Scraping, Grading, and Cleaning*. Adequate means of scraping, grading and cleaning shall always be provided as approved by the Adams County Health Department.
11. *Tabulation of Agricultural Animal Units*. The maximum number of allowable agricultural animals is as follows. The maximum number of allowable agricultural animals does not apply to young animals below weaning age, or six months of age, whichever is less.
    a. Agricultural properties smaller than 10 acres: four (4) agricultural animal units per acre are allowed.
    b. Agricultural properties larger than 10 acres: The number of agricultural animals shall not be regulated.
    c. Agricultural animal count
        1. Two (2) goats shall count as one (1) agricultural animal unit.
        2. Two (2) beehives shall count as one agricultural animal unit.
        3. Four (4) small poultry (40 pounds or less) shall count as one agricultural animal unit.
12. *Combination of Animals*. Any combination of allowed animals may be kept, but at no time shall the maximum number of any specific type of animal be exceeded, nor shall the total maximum number of livestock be exceeded.
13. *Animals Not Categorized*. If an animal is not listed or does not clearly fall into one of the listed animal categories, the Director of Community and Economic Development shall determine the number permitted.

B. **Auction Yard, with Livestock.**

1. *Minimum Parcel Area*. One acre.

2. *Location*. All auction yards shall be located at least 50 feet away from any on-property occupied residential structure, 50 feet from any right-of-way and 500 feet from any off-property occupied residential structure.
3. *Sale of Livestock*. Livestock sale rings are permitted. However, all livestock sale rings and yards shall be located no less than 1,000 feet from any occupied residential structure.
4. *Animal Care*. All animals shall be cared for in a humane and sanitary manner as approved by the Colorado Department of Agriculture and the State Veterinarian's Office.
5. *Manure Handling*. Manure shall be handled and disposed of in a sanitary method, approved by Adams County Health Department.

C. **Equestrian Arena, Commercial**.

1. *Minimum Lot Size*. 35 acres.
2. *Location*. The arena and related structures shall be located at least 120 feet from any road right-of-way line.
3. *Setback from Residential Properties*. No commercial equestrian arena shall be permitted within one mile of the lot line of a residentially zoned or used property unless the applicant obtains a waiver in writing from the residential property owner(s) within one mile and the applicant records a disclosure document against the residential property. If the applicant cannot obtain a waiver but has made every reasonable effort to obtain a signed waiver, the applicant may apply for a Variance in accordance with Sec. 3-07-03. The applicant shall submit proof in the form of copies of certified mail sent to the residents affected.
4. *Development and Operating Plan*. A development and operating plan shall be submitted and approved with the Conditional Use Permit application. This plan shall include:
   a. A Site Plan drawn to scale depicting activity areas, improvements, access, driveways, parking areas, and sanitary facilities;
   b. A description of facilities for animals involved in activities on site.
   c. The methods proposed to control dust, erosion, odor, noise, glare, waste disposal (manure, trash, etc.), and congestion;
   d. A traffic control plan approved by Adams County;
   e. The hours of operation;
   f. Fees, admission, and other compensation paid or charged during activities;
   g. The projected number of people on the property during activities;
   h. A description of any items for sale during activities (liquor and other beverages, food, souvenirs, etc.); and
   i. Additional information as required by the Director of Community and Economic Development.

D. **Equestrian Arena, Personal**.

1. *Accessory Status*. The arena shall be accessory and incidental to the ranch, farm, or home site on which it is located.
2. *Number of Guests Permitted*. The use of the arena is limited to the household and invited guests of the farmer, rancher, or home occupant but shall not exceed 20 people in addition to the inhabitants of the farm/ranch/home on the property.
3. *Conditional Use Permit Required*. A Conditional Use Permit shall be required if one or more of the following occurs:

a. More than twenty people in addition to the inhabitants of the property attend activities (and therefore, by definition, categorized as a commercial equestrian arena).

b. Monetary or other compensation is collected or exchanged for admittance or participation.

c. Food is bought or sold on the premises.

d. Alcohol is bought or sold on the premises.

e. Livestock is brought to the site from a provider for the purpose of hosting a rodeo.

4. *No Commercial Activities*. No commercial competition or commercial entertainment, user fees, dues or other compensation are permitted.

5. *No Offensive Impacts*. The arena shall be operated in such a manner so that there is no adverse impact on surrounding properties relating to dust, erosion, odor, noise, glare, off-site illumination (more than one foot candle of illumination measured at the property line), waste disposal, traffic, or parking congestion. Neither a nuisance nor noxious activity shall be conducted on the property, which is caused by the use of the property as a personal equestrian arena.

E. **Farm Machinery Sales and Service.**

1. *Maximum Lot Coverage*. The maximum lot coverage allowed is 80%.

2. *Display Area Setback*. The display area shall be set back a minimum of 15 feet from the road right-of-way and ten feet from all other property lines.

3. *Indoor Activities*. All repair, parts storage, and work activities shall take place within a completely enclosed structure or screen yard enclosed by a six-foot-high solid screen fence or wall.

4. *Storage of Vehicles*. All storage of vehicles awaiting repair shall be within the enclosed structure or within a compound yard enclosed by a six-foot-high solid screen fence or wall, except for driveway openings.

F. **Fertilizer Manufacturing and Storage.** See Sec. 3-09-05(E), *Heavy Industrial, Fertilizer Manufacturing and Storage.*

G. **Fish Hatcheries**.

1. *Minimum Parcel Area*. Five acres.

2. *Outdoor Activities Prohibited*. All equipment, materials and uses shall be performed or carried out entirely within an enclosed building, except for fish hatching ponds.

H. **Livestock and Poultry Keeping**.

1. *Drinking Facilities*. Adequate overflow drainage on drinking facilities shall be provided to prevent the saturation of soil on adjacent property.

2. *New Shed Location*. Any new shed, shelter, pen, or enclosure for livestock shall not be closer than 100 feet to any off-property residence or place of business and shall be setback 25 feet from the side lot line and 50 feet from the front lot line.

3. *Rodent Control*. All sheds or other shelter for livestock shall be kept reasonably free of rodents and insects and shall be kept in good repair.

4. *Drainage*. Adequate drainage facilities or improvements shall be constructed to protect any adjacent rivers, streams, or other bodies of water from pollution.

5. *Parcels Under Five Acres in Size*. On parcels less than five acres in size, all livestock shall be kept within a fenced area.

6. *Colorado Confined Animal Feeding Regulations*. Adherence to the Colorado Confined Animal Feeding Regulations, promulgated by the Colorado Department of Public Health and Environment, Water Quality Control Commission shall be required.
7. *Manure Removal*. All manure shall be removed periodically or incorporated into the soil on a regular basis such that the manure does not draw flies, or other insects, or cause obnoxious odors.
8. *Feed Leftovers*. Spillage and leftovers from livestock feedings must be removed or so disposed of as to prevent fly, bird, or rodent propagation, or creation of odors.
9. *Number of Animals Permitted*.
    a. Properties Greater than 35 Acres. The keeping of non-commercial livestock and poultry is not regulated, unless the number of animals classify the use as a Livestock Confinement Operation.
    b. Properties Less than 35 Acres. The keeping of non-commercial livestock and poultry is allowed in accordance with Sec. 3-13-02.B, *Animal Keeping*. The maximum number of allowable livestock per lot does not apply to young animals below weaning age, or six months of age, whichever is less.

I. **Plant Nurseries and Greenhouses.**

1. *General.* A nursery shall consist of living materials grown and/or kept on site.
2. *Site Requirements.*
    a. Up to 10% of a nursery's living nursery area shall be allowed for hardscape materials.
    b. The living nursery area is calculated by the placement of living landscaping (trees, shrubs, flowers, etc.) which is no more than ten feet from one another, or as determined by the Director of Community and Economic Development through a Site Plan review. Hardscape includes but is not limited to the storage of rock, soil, mulch, and other non-living landscape materials, and equipment.
3. *Vehicles.*
    a. All commercial vehicles and/or equipment in excess of 10,000 pounds gross vehicle weight and/or hardscape used for the nursery business shall be screened from any adjoining residentially zoned or used property with an eight-foot solid screen fence.
    b. In all Agricultural Zone Districts, no more than two commercial vehicles and/or equipment in excess of 10,000 pounds gross vehicle weight used for the nursery business shall be allowed per acre with a maximum of five unless otherwise permitted through a Conditional Use Permit.
    c. In all Commercial Zone Districts, vehicle maintenance and storage areas shall be screened from any adjoining residentially zoned per Sec. 4-04-03, *Bufferyards and Screening.*
    d. Display and Storage. Merchandise, landscaping materials, and equipment shall be displayed or stored within an enclosed building or in an area of the property that has been fenced or landscaped to conceal the area from any public right-of-way. Neither storage nor display shall occur within 25 feet of public right-of-way or occupy required off-street parking spaces.

# Div. 3-05 Residential Use Standards

# 3-05-01 General Residential Use Standards

A. **General Provisions.** The purpose of these general residential use standards is to address elements of planning, design, operation, and maintenance that shall be applied to all residential development in Adams County. Additional use-specific standards, contained in Sections that follow, shall also apply to specific housing types and residential neighborhood types. Where a use specific performance standard conflicts with a general performance standard, the use specific standard shall apply.

B. **Applicability.** The standards of this subsection apply to all residential land uses in all zone districts.

C. **Development Standards**. All residential uses shall be subject to the requirements of Chapter 4, *General Development Standards*, including:

D. **Project Compatibility.**

1. *Architectural Character.* New developments in or adjacent to existing developed areas shall be compatible with the established architectural character of such areas by using a complementary design. Compatibility shall be achieved through techniques such as the repetition of roof lines, the use of similar proportions in structure mass and outdoor spaces, similar relationships to the road, similar window, and door patterns, and /or the use of building materials which have color shades and textures similar to those existing in the immediate area of the proposed development. Brick and stone masonry shall be considered compatible with wood framing and other materials.

2. *Structure Size, Height, Bulk, Mass, and Scale.* New structures shall either be similar in size and height, or if larger, be articulated and subdivided into massing proportional to the mass and scale of other structures in the immediate vicinity.

3. S*tructure Orientation*. To the maximum extent feasible, primary facades and entries within 100 feet of a front property line shall face the adjacent roadway. Main entrances shall face a connecting walkway with a direct pedestrian connection to the road without requiring pedestrians to walk through parking lots or cross driveways.

4. *Exception for Passive Architectural Design.* An except to the structural orientation standard shall be granted for projects that incorporate passive design elements to promote energy efficiency and minimize the environmental impact of buildings. Such elements include building orientations intended to maximize solar gains during winter and minimize them in the summer and placement of windows and doors to maximize natural light and ventilation.

5. *Building Materials.*

   a. *General.* Building materials shall either be similar to the materials already being used in the neighborhood or, if dissimilar materials are being proposed, other characteristics such as scale and proportions, form, architectural detailing, color and texture, shall be utilized to ensure enough similarity exists for the structure to be compatible, despite the differences in materials.

   b. *Glare.* Building materials shall not create excessive glare. If highly reflective building materials are proposed, such as aluminum, unpainted metal or reflective glass, the potential for glare from such materials will be evaluated to determine whether or not the glare would create a significant adverse impact on the adjacent property owners,

neighborhood or community in terms of vehicular safety, outdoor activities and enjoyment of views. If so, such materials shall not be permitted.

c. *Windows.* Mirror glass with a reflectivity or opacity of greater than 60% is prohibited. Windows shall be individually defined with detail elements such as frames, sills, and lintels, and placed to visually establish and define the structure stories and establish human scale and proportion.

6. *Land Use Transition*. When land uses with significantly different visual character are proposed adjacent to each other and where gradual transitions are not possible or not in the best interest of the community, the proposed structure shall, to the maximum extent feasible, achieve compatibility through compliance with the standards set forth regarding scale, form, materials, and colors and adoption of operational standards including limits on hours of operation, lighting, placement of noise-generating activities, and similar restrictions.

E. **Fencing, Walls, and Screening**.

1. *Maximum Height*. Seventy-two inches, except when a residential use is adjacent to existing or proposed arterial roads, state highways, or railroads. Fences bordering such roads may be uniformly built higher with approval from the Director of Community and Economic Development. All fences, walls, and retaining walls more than 42 inches in height require a Building Permit.
2. *Fencing Material*. Permitted fencing materials include wood; ornamental metal such as wrought iron, steel, or aluminum designed and manufactured for fencing; vinyl or composite fencing materials manufactured for residential fencing applications; masonry or stone walls; and similar commercially manufactured fencing materials. The use of sheet metal, corrugated metal panels, scrap materials, repurposed building components, plastic netting, or similar non-fencing materials is prohibited.
3. *Retaining Walls*. Any retaining wall over four feet in height shall require preparation by a professional engineer as a condition for a Building Permit, except where waived by the Director of Community and Economic Development. As determined by the Director of Community and Economic Development, any retaining wall over 36 inches in height may require a guard rail up to five feet in height and placed at the top of grade.
4. *Fences on Corner Lots*. On corner lots, fences up to 72 inches in height may be permitted up to the minimum side-corner setback.
5. *Prohibited Fences*. No fence over 72 inches in height shall be permitted between the front setback line and a front property line.
6. *Fencing in the Front Setback*. All fencing between the front setback line and front property line greater than 42 inches shall not be screen fencing and shall adhere to sight distance requirements.
7. *Barbed Wire and Electric Fences*. Barbed wire and electric fences are prohibited as an external boundary fence. Horse enclosures, where permitted, may be constructed of barbed wire or electric fence, but shall be setback from the property line a minimum of five feet.
8. *Traffic View Obstruction*. Traffic view obstruction as outlined in this DSR is prohibited.
9. *Fence Bottom*. The bottom of the fence shall be no more than six inches above grade at any point.

10. *Transparency Requirement for Non-Screen Fencing.* To qualify as non-screen fencing, a fence must be constructed so that a minimum of 50% of its surface area is open and unobstructed, allowing visibility through the fence. This requirement ensures that non-screen fencing maintains visual permeability and does not function as a solid visual barrier.
11. *Masonry Wall*. All walls specified to be masonry fencing shall be constructed out of a brick or stone material that does not permit the contents within the fenced area to be seen from the outside.
12. *Noise Barrier Fencing*. Where existing and proposed arterial roads or state highways traverse, or are adjacent to areas of proposed residential development, the Director of Community and Economic Development may require noise barrier fencing be installed by the developer. Such fencing shall meet the minimum standards of the Colorado Department of Transportation and these standards and regulations.
13. *Right-of-Way Maintenance.* The property owner of land abutting a public right-of-way is responsible for the construction and ongoing maintenance of all improvements within the right-of-way abutting their property, including but not limited to the curb, gutter, sidewalk, parkway strip, and snow removal to maintain pedestrian access. The property owner is also responsible for maintaining the area between the property line and the edge of the adjacent roadway, including vegetation management, debris removal, and upkeep of any landscaping or hardscape improvements.
14. *Oil and Gas Well Waiver*. Where a new home is constructed within 300 feet of an existing oil or gas well, the property owner shall submit a signed waiver acknowledging the existence of the facility.

F. **Oil and Gas Well Waiver.** Where a new home is constructed 300 feet of an existing oil or gas well, the property owner shall submit a signed waiver acknowledging the existence of the facility.

G. **Waste Management.** There shall be no discharge of any liquid or solid waste material(s) into the ground or waterway except as authorized by approved permit and in accordance with these regulations and standards, and the regulations of the Adams County Health Department and Colorado Department of Public Health and Environment.

# 3-05-02 Accessory Dwelling Units (ADUs)

See Sec. 3-13-02.A, *Accessory Dwelling Units (ADUs).*

# 3-05-03 Dwelling, Single-Family (Detached)

A. **General.** The standards in this section apply to single-family detached dwelling units in all zone districts except where noted.

B. **Additional Dwelling Permitted in the A-3 Zone District.** In the A-3 zone district, two single-family detached dwellings are permitted on the same lot. The dwellings must be clustered and shall be no further apart than 300 feet from building exterior to building exterior.

C. **Front Width of Dwelling Unit**. The minimum width of the road or street-facing frontage of a single-family detached dwelling unit shall be 25 feet.

D. **Housing Model Variety.** A residential development of 100 or more single-family detached dwelling units shall have at least 4 different types of housing models. A development of between

three and 100 single-family detached dwelling units shall have at least 3 different types of housing models.

E. **Distinguishing Characteristics of Housing Models.** Each housing model shall have at least three characteristics which clearly distinguish it from the other housing models, including different floor plans, exterior materials, roof lines, garage placement, placement of the footprint on the lot, and/or building face.

F. **Garage Doors**. In a single-family detached development of three or more dwelling units, garage doors facing a primary street shall have a maximum of width of 50% of the ground floor, road-facing linear building frontage and shall be set back a minimum of five feet from the front building line.

G. **Use-Specific Landscaping Required.** (See Sec. 4-04-06(B)).

## 3-05-04 Dwelling, Townhouse

A. **Structures.** Townhouse structures shall be organized on the site in a clustered, efficient manner. There shall be a continuity of design in structure groupings. In larger projects, the unit type shall vary between groupings. Structures should be grouped in such a way to provide visual interest.

B. **Use-Specific Landscaping Required.** (See Sec. 4-04-06(B)).

## 3-05-05 Dwelling, Two-Family

A. **Maximum Lot Coverage.**

1. *Principal Structure.* 70%.
2. *Accessory Structures.* 25%.
3. *Structures Combined.* 80%.

B. **Housing Model Variety.** Any development with 100 or more two-family dwellings shall have at least four types of housing models. Any development of between three and 100 two-family dwellings shall have at least three types of housing models.

C. **Distinguishing Characteristics of Housing Models.** Each housing model shall have at least three characteristics which clearly distinguish it from the other housing models, including different floor plans, exterior materials, roof lines, garage placement, placement of the footprint on the lot or the building face.

D. **Use-Specific Landscaping Required.** (See Sec. 4-04-06(B)).

## 3-05-06 Dwelling, Multi-Family

A. **Amenity Space and Pedestrian Inclusion.** Required amenity space shall include pedestrian pavement and plazas and be incorporated into any parking lot island greater than 400 square feet in size.

B. **Storage.** Each dwelling shall have a minimum of 32 square feet of functional, enclosed area for the storage of residents' personal belongings. The storage area may be contained within the principal building or an accessory building but must be easily accessible from outdoors; the storage space shall have a minimum height of eight feet.

C. **Bicycle Parking.** Bicycle parking shall be provided for all multi-family development. Bicycle parking areas shall be located near structure entries but shall not encroach into pedestrian walkways.

D. **Structure Siting.** Structures shall be organized on the site in a clustered, efficient manner. There shall be a continuity of design in structure groupings. In larger projects, the unit type shall vary between groupings. Structures should be grouped in such a way to provide visual interest.

E. **Use-Specific Landscaping Required.** (See Sec. 4-04-06(B)).

# 3-05-07 Manufactured Home Park

A. **Purpose.** The purpose of this Section is to enact use-specific standards to permitted manufactured home parks that will ensure they provide a desirable and affordable residential housing option for residents and that, as neighborhoods, they are reasonably compatible with existing and potential development of the properties in the vicinity.

B. **Applicability.** These use and design standards in this Section apply to a planned unit manufactured home park on a condominium lot sale basis or lot rental or lease basis so the park remains in single ownership to comply with the conditions of development. Standards for individual manufactured homes located on their own lot outside a manufactured home park, are contained in Sec. 3-05-07.

C. **Establishment.** Manufactured home parks may be allowed in most residential zone districts by Conditional Use Permit after a public hearing and examination of the development plans and the location thereof. A manufactured home park will only be allowed after finding it complies with the development standards of this Section and the zone district in which it may be located, will not be unduly detrimental to surrounding properties, and will be reasonably compatible with the development or potential development of adjoining land.

D. **Other Vehicles.** Camping or recreational vehicles and/or trailers shall not be permitted for use as a dwelling in a manufactured home park. They may be permitted within areas of the park designed to meet the recreational vehicle park and campground standards, as permitted by this Section and subject to Conditional Use Permit approval.

E. **Location and Site Standards.**

1. Sites intended for manufactured home park development shall be selected on the basis that that they can be developed in accordance with this code. For example, sites should have adequate road access and utility services, including acceptable water and sewer services, and should provide the usual residential amenities of a Planned Unit Development.
2. A park must have a minimum area of 10 acres and be located where ample road access and utility services are available.
3. A manufactured home park shall have a minimum of 100 feet of frontage on a public road.
4. At least 20% of the gross site area must be in open space or recreational areas available for use by all residents. Parking, driving and setback areas and small areas less than 5,000 square feet in area do not count in the required open space.
5. The density may not exceed 5.75 manufactured homes per gross acre nor shall the overall density exceed the density permitted within the zone district in which the park will be located.

F. **Setbacks.** All manufactured homes, and extensions thereof, accessory structures and other buildings must be set back:

1. Twenty feet from the boundary of the park;
2. Twenty feet from a public way;
3. Ten feet from a private interior drive, walking or parking area; and
4. Sixteen feet from any other manufactured home.

G. **Signage.** One freestanding sign may be erected along each major approach to the park so long as such sign is:

1. Fifteen square feet or fewer in area;
2. Eight feet or less in height;
3. Setback from the road at least 18 feet; and
4. If illuminated, is low-intensity and not flashing or animated.

H. **Roads.** Public roads to be dedicated must comply with the County's current specifications and standards. Private roads must paved to the following widths:

1. Thirty-six feet for entrances and all drives with guest parking on both sides;
2. Twenty-nine feet for two-way drives with parking on one side;
3. Twenty-two feet for two-way drives with no parking; and
4. Eleven feet for one-way drives with no parking.

I. **Parking and Access.**

1. Paved off-road parking must be provided at the ratio of two spaces per manufactured home. At least one space shall be at the manufactured home space. The second space may be in a common parking area so long as each space is within 200 feet of the manufactured home space to which it relates. No space shall be located closer than eight feet from any road. One guest parking space shall be provided for each eight manufactured homes in a common parking area.
2. A manufactured home park shall have two separated and direct connections to public roads and shall be designed to allow free movement of traffic on such adjacent roads. Access to a manufactured home development shall not be through a residential area to reach a collector route.
3. A manufactured home site shall not have direct frontage on a public road outside of the manufactured home park boundaries.

J. **Pedestrian Circulation.** There must be a paved system of walkways, which gives safe and convenient access to every manufactured home and all common facilities.

K. **Screening.** All manufactured home parks shall be screened from any adjacent non-manufactured home park or public road with a masonry wall, adequate plantings, or solid material fence of six feet in height.

L. **Maps Required.**

1. Maps showing location of all parking spaces, buildable areas, and accessory commercial buildings and common buildings, and for all common open areas, shall be included with and made a part of the Conditional Use Permit approval.
2. The area for buildings, structures, manufactured homes, and accessory buildings shall be shown on a map for each site and hereafter called buildable areas. The maximum length and width of any manufactured home shall be shown on the map for each buildable area.

3. No manufactured home or accessory building may be located in any area in excess of the buildable area indicated on the map.

M. **Pad Sites.** Each manufactured home space shall comply with the following:

1. The limits of each manufactured home space shall be marked on the ground by suitable means. Location space limits on the ground shall be the same as shown on the required map. The manufactured home space shall be improved to provide adequate support for the placement and tie-down of the manufactured home.
2. Each manufactured home space shall be provided with an outdoor living and service area. Such area shall be improved as necessary to assure reasonable privacy and comfort. The minimum area shall not be less than 300 square feet with at least one dimension of 15 feet. This area shall not be a part of the buildable area. The minimum area within each manufactured home space shall be 4,000 square feet and the minimum space width shall be 40 feet.
3. Each manufactured home must be securely installed upon a stand and must be skirted to conceal the undercarriage.
4. At least one-third of the manufactured home spaces in the park must be graded and served with utilities and roads before any units may be located on the site and every unit must be connected with the water and sewer systems before occupancy.

N. **Solid Waste.** Solid waste collection stands shall be provided for all waste containers. Such stands shall be so designed as to prevent containers from being tipped and minimize spillage and container deterioration and to facilitate cleaning of the area. Solid waste collection stands shall be screened adequately from view.

O. **Storage.** Storage areas shall be provided for the storage of boats, campers, utility trailers and extra vehicles at the following ratio: 300 square feet for each four manufactured home spaces. Each storage area shall be enclosed with a chain link or comparable fence six feet in height and shall be screened from exterior view.

P. **Recreational Vehicle Parking.** A properly designed manufactured home park, located on a major highway or primary or secondary arterial County Road, may be designed to use a maximum of 10% of the manufactured home park site to accommodate travel trailers or similar recreational vehicles in accordance with standards in Sec. 3-07-07, *Commercial Campgrounds.*

Q. **Utilities and Water.**

1. The park must be supplied by central water for domestic use and for fire protection satisfactory to the applicable fire district.
2. The park and each manufactured home must be connected to the central sanitary sewer system or some other system approved by the Director of Community and Economic Development and Adams County Health Department. On-site wastewater treatment systems are prohibited from serving manufactured home parks.
3. There must be a storm sewer system and drainage plan compliant with the standards in Chapter 10, Storm Drainage Design and Stormwater Quality Control Regulations.
4. Utilities (distribution lines within subdivisions) must be underground. High voltage transmission lines are not required to be placed underground.

R. **Permitted Uses.** The following are allowed in a manufactured home park:

1. Manufactured homes, either on individual owned plots of ground, on a condominium basis, or on leased lots;

2. Accessory buildings, such as laundry, grounds maintenance shop, recreation, restroom, and swimming pool; and
3. Those uses permitted in the C-1 zone, not including service stations intended to serve park residents and invited guests, so long as the aggregate floor area of such uses does not exceed the ratio of 10 square feet for every manufactured home. All commercial uses shall be approved within the Conditional Use Permit.

S. **Platting.** A manufactured home park may be platted in accordance with the requirements for plats as provided for in the subdivision standards and regulations, remaining subject to the terms of the Conditional Use Permit. Any manufactured home development involving a subdivision of land into separately owned parcels or lots must be platted as provided in the subdivision standards and regulations. A manufactured home subdivision is subject to all of the requirements of the zone district in which it is located. Lots may be platted within a manufactured home park. All platted lots shall meet the following minimum dimensional requirements:

1. The minimum lot area is 7,000 square feet; and
2. The minimum lot width is 65 feet.

T. **Certification.** All manufactured housing shall be certified pursuant to the "National Manufactured Housing Construction and Safety Standards Act of 1974", 42 U. S. C. § 5401 *et seq*., as amended. Certification shall be demonstrated by a HUD label affixed to the home with a 3letter identifier (identifying the inspection agency), and 6 digit HUD number. In the alternative the Director of Community and Economic Development Department may approve the equivalent data sheet for the home provided it is identical to the requirements for the State of Colorado or Adams County.

U. **Use-Specific Landscaping Required.** (See Sec. 4-04-06(B)).

# 3-05-08 Mobile Home Dwelling or Park

A. **Legacy District Use.** A mobile home dwelling or mobile home park is only permitted in the MH, Mobile Home, legacy zone district. As a legacy district, no applicant may rezone a property to MH after the effective date of this DSR.

B. **No New Mobile Home Parks.** No new mobile home parks shall be permitted, except in the MH Zone District. Existing mobile home parks may be expanded and modified subject to a Conditional Use Permit, where permitted, and in accordance with these standards and regulations.

C. **Conditional Use Permit Required**. A Conditional Use Permit shall be required for all expansions or modifications to existing mobile home parks.

D. **Minimum Mobile Home Size**. The minimum unit size of any new or replacement mobile home shall be 600 square feet.

E. **Other Standards**. Mobile home parks shall meet all dimensional and use requirements contained in Appendix A, *Legacy Districts*. Appendix A is incorporated herein by reference and made a part hereof. Variations may be permitted as part of the Conditional Use Permit approval where the requirement would unreasonably restrict the improvement of the mobile home park. The standards shall only be applicable to those areas of a park being modified.

# Div. 3-06 Public, Civic and Institutional Use Standards

## 3-06-01 General Public, Civic, and Institutional Use Standards

A. **Purpose**. The purpose of the following general use standards is to address elements of planning, design, operation, and maintenance that shall be applied to all institutional development in Adams County. Any use-specific standards contained in this DSR shall also be applied. Where a use-specific standard conflicts with a general use standard, the use-specific standard shall apply.

B. **Applicability.** The standards of this subsection apply to all public, civic, and institutional land uses in all zone districts.

C. **Project Compatibility**.

1. *Purpose*. The purpose of this Section is to ensure the physical and operational characteristics of proposed structures and uses are compatible when considered within the context of the surrounding area.
2. *Architectural Character*. New developments in or adjacent to existing developed areas shall be compatible with the established architectural character of such areas by using a complementary design. Compatibility shall be achieved through techniques such as the repetition of roof lines, the use of similar proportions in structure mass and outdoor spaces, similar relationships to the road, similar window and door patterns, and/or the use of building materials with color shades and textures similar to those existing in the immediate area of the proposed development. Brick and stone masonry shall be considered compatible with wood framing and other materials.
3. *Structure Size, Height, Bulk, Mass, Scale*. New structures shall either be similar in size and height, or if larger, be articulated and subdivided into massing proportional to the mass and scale of other structures in the immediate vicinity.
4. *Structure Orientation*. To the maximum extent feasible, primary facades and entries shall face the adjacent road, except where the applicant proves that a differing orientation will improve solar or wind access. Main entrances shall face a connecting walkway with a direct pedestrian connection to the road without requiring pedestrians to walk through parking lots or cross driveways.
5. *Building Materials*.
   a. *General*. Building materials shall either be similar to the materials already being used in the immediate area or, if dissimilar materials are being proposed, other characteristics such as scale and proportions, form, architectural detailing, color and texture, shall be utilized to ensure enough similarity exists for the structure to be compatible, despite the differences in materials.
   b. *Glare*. Building materials shall not create excessive glare. If highly reflective building materials are proposed, such as aluminum, unpainted metal or reflective glass, the potential for glare from such materials will be evaluated to determine whether or not the glare would create a significant adverse impact on the adjacent property owners, neighborhood or community in terms of vehicular safety, outdoor activities and enjoyment of views. If so, such materials shall not be permitted.
   c. *Windows*. Mirror glass with a reflectivity or opacity of greater than 60% is prohibited. Clear glass shall be used for institutional front windows or doors. Windows shall be

individually defined with detail elements such as frames, sills, and lintels, and placed to visually establish and define the structure stories and establish human scale and proportion.

6. *Land Use Transition*. When land uses with significantly different visual character are proposed adjacent to each other and where gradual transitions are not possible or not in the best interest of the community, the proposed structure shall, to the maximum extent feasible, achieve compatibility through compliance with the standards set forth in this Section regarding scale, form, materials, and colors and adoption of operational standards including limits on hours of operation, lighting, placement of noise-generating activities and similar restrictions.
7. *Operational/Physical Compatibility Standards*. The following conditions may be imposed upon the approval of development applications to ensure new development will be compatible with existing neighborhoods and uses, including, but not limited to, restrictions on:
   a. Hours of operations and deliveries;
   b. Location of activities generating potential adverse impacts on adjacent uses such as noise and glare;
   c. Placement of trash receptacles;
   d. Location and screening of loading and delivery zones;
   e. Light intensity and hours of full illumination; and
   f. Placement and illumination of outdoor vending machines.

D. **Fencing, Walls, and Screening**.

1. *Maximum Height*. The maximum height of fencing, walls, or screening shall be 96 inches, which shall include no more than four strands of barbed wire forming the top 18 inches or less of the fence, placed at a 45 degree angle.
2. *Fencing Material*. Permitted fencing materials include wood; ornamental metal such as wrought iron, steel, or aluminum designed and manufactured for fencing; vinyl or composite fencing materials manufactured for residential fencing applications; masonry or stone walls; and similar commercially manufactured fencing materials. The use of woven wire, high-tensile smooth wire, split-rail, post-and-rail, board fencing, welded wire, pipe fencing, sheet metal, corrugated metal panels, scrap materials, repurposed building components, plastic netting, or similar non-fencing materials is prohibited.
3. *Fence Bottom*. The bottom of the fence shall be no more than six inches above grade at any point.
4. *Electric and Barbed Wire Fencing Prohibited*. Electric fencing and fencing consisting only of barbed wire are prohibited as an external boundary fence.
5. *Trash Enclosure Screening*. Trash enclosures shall be screened by an opaque fence with a maximum height of six feet.
6. *Masonry Wall*. All walls specified to be masonry shall be solid and constructed out of a brick or stone material. The wall shall not permit the contents within the wall to be seen from the outside.
7. *Noise Barrier Fencing*. Where existing and proposed arterial roads or state highways traverse, or are adjacent to areas of proposed commercial development, the Director of Community and Economic Development may require noise barrier fencing be installed by

the developer. Such fencing shall meet the minimum standards of the Colorado Department of Transportation and this DSR.

8. *Retaining Walls*. Any retaining wall over four feet in height shall require plans prepared by a professional engineer as a condition for a Building Permit except where waived by the Director of Community and Economic Development. As determined by the Director of Community and Economic Development, any retaining wall over 36 inches in height may require a guard rail up to five feet in height and placed at the top of grade.
9. *Traffic View Obstruction*. Traffic view obstruction as outlined in these standards and regulations by any fence, wall or screen is prohibited.
10. *Right-of-Way Maintenance*. The property owner of land abutting a public right-of-way is responsible for construction and ongoing maintenance of all improvements within the right-of-way abutting their property, including but not limited to the curb, gutter, sidewalk, parkway strip, and snow removal to maintain pedestrian access. The property owner is also responsible for maintaining the area between the property line and the edge of the adjacent roadway, including vegetation management, debris removal, and upkeep of any landscaping or hardscape improvements.

E. **Decommissioning and Financial Assurance for Large-Scale Energy Projects.**

1. *Decommissioning Plan.* Any Large-Scale Energy Project, solar energy system, or BESS which is no longer producing energy or has been abandoned shall be removed, not including a temporary cease in production for maintenance or force majeure. A decommissioning plan shall be submitted with the Site Plan or Conditional Use application and shall include:
   a. The trigger for decommissioning (*e.g.*, project not producing power for 6 consecutive months);
   b. A description of the removal methods, removal process, and site restoration measures;
   c. Provides for proper disposal or recycling of materials;
   d. An estimate of the total cost of decommissioning, prepared by a qualified third party, which cost estimate shall be updated by a qualified third party at least once every 5 years; and
   e. A proposed timeline for decommissioning.
2. *Financial Assurance.* For all Large-Scale Energy Projects, prior to issuance of a Building Permit, the owner or operator shall provide a performance guarantee or financial assurance, in a form acceptable to Adams County, to ensure completion of decommissioning in accordance with the approved decommissioning plan. Acceptable forms may include a surety bond, irrevocable letter of credit, escrow account, or other mechanism approved by the County. The financial assurance shall:
   a. Be in an amount equal to or greater than the estimated cost of decommissioning;
   b. Be adjusted every five years to account for inflation or changes in removal costs; and
   c. Remain in effect for the life of the facility.
3. *Decommissioning Requirements.* Decommissioning shall consist of:
   a. Physical removal of all energy systems, structures, and equipment from the site.
   b. Disposal of all solid and/or hazardous waste in accordance with local, state, and federal waste disposal regulations.

c. For ground-mounted energy systems, stabilization, or re-vegetation of the site as necessary to minimize erosion. Adams County may allow the owner or operator to leave landscaping or designated below-grade foundation in order to minimize erosion and disruption to vegetation.

d. The owner or operator shall physically remove the installation within 150 days after the date of discontinued operations.

e. The owner or operator shall notify the Adams County Community and Economic Development Department by certified mail within 30 calendar days of the proposed date of discontinued operations and plans for removal.

## 3-06-02 Battery Energy Storage System (BESS)

A. **Separation**. Battery Energy Storage Systems (BESS) facilities shall be located a minimum of 200 feet from all residential uses or structures and a minimum of 100 feet from all other off-site uses or structures.

B. **Buffering and Screening.**

1. *Screening Required.* The project site shall be screened using an Option 2, Type B bufferyard in accordance with Sec. 4-04-03, *Bufferyards and Screening*, adjacent to any nonresidential districts and an Option 2, Type C bufferyard adjacent to any residential or agricultural districts.

2. *Screening Wall.* The project site shall be screened by a masonry wall, a minimum of 6 feet tall.

C. **NFPA 855.** Construction must meet NFPA 855 standards and all other applicable codes.

## 3-06-03 Cemetery or Crematorium

A. **Cemetery**.

1. *Minimum Lot Area.* The minimum lot area is 10 acres for a cemetery except for pet cemeteries, where the minimum lot area is three acres.

2. *Height Limits*. Grave markers, tombstones, monuments, and memorials shall not exceed 10 feet in height. Buildings, including mausolea, columbaria, and crypts, shall not exceed 35 feet in height.

3. *Screening*. The property must be screened from all adjacent properties by a sight-obscuring fence, hedge, or wall. All common property lines with an adjacent residential use or zone district shall be screened with landscaping meeting the requirements of a Type B Bufferyard in Sec. 4-04-03, *Bufferyards and Screening*.

B. **Crematorium**.

1. *Setback*. All structures used in conjunction with a crematorium shall be setback a minimum of 25 feet from all property lines unless required to be greater by the zone district.

2. *Air Permit*. The applicant shall provide the County an approved air permit from the Colorado Department of Public Health and Environment prior to commencing operations.

3. *Enclosed Operations*. All cremation equipment and related operations shall be conducted entirely within a fully enclosed building.

4. *Nuisance Prohibited*. A crematorium shall be operated so as not to create detectable smoke, odor, ash, or particulate matter beyond the property line, except as authorized by applicable state or federal permits.

# 3-06-04 Day Care Center

A. **Licensing**. Day Care Centers must be properly licensed by the State of Colorado.

B. **Drop-Off/Pick-Up Areas:** Day care centers must provide adequate drop-off and pick-up areas. The required area shall be based on the maximum number of individuals cared for at a single time. Specifically, there shall be 250 square feet of signed, off-road, drop-off/pick-up area for every eight individuals. All drop-off/pick-up areas shall be approved by the Director of Community and Economic Development.

C. **Outdoor Recreation Facilities.** Where outdoor recreation facilities are provided, a six-foot-high, sight-obscuring fence must be maintained around the recreation area, which shall be located in the rear half of the site.

D. **Residential Appearance.** Existing residential structures in residential zone districts shall not be modified in appearance other than as a result of routine maintenance.

E. **New Construction in Residential Area.** Any new construction allowed in a residential zone district for the operation of a day care center shall substantially resemble a conventional single-family detached dwelling. For the purposes of this Section, a day care center substantially resembles a conventional single-family detached dwelling if it has a pitched roof, a maximum of two off-street parking spaces in the front, and no freestanding signs.

# 3-06-05 Government Facilities

A. **General**. All public service facilities shall meet the following standards:

1. *Outdoor Storage.* Materials may be stored outdoors, provided the storage area does not occupy more than 25% of the structure area and is screened in accordance with Sec. 3-09-08, *Outdoor Storage.*
2. *Trash Enclosures*. Any trash enclosure located outside shall be screened from public view in accordance with Sec. 3-06-01.C.5, *Garbage Area Screening*.

B. **Fire Stations**. The minimum parcel area for a fire station shall be one-half acre.

C. **Police Stations and Post Offices.** The minimum parcel area for a police station or post office shall be one acre.

D. **Utility Substations**.

1. *Transmission Lines*. Transmission line rights-of-way shall be exempt from bufferyard requirements.
2. *Screening*. Transformers, electric substations, and outdoor storage yards shall be screened with screen fencing a minimum of six feet high and landscaping meeting the requirements of a Type C Bufferyard, as provided in Sec. 4-04-03, *Bufferyards and Screening.*
3. *Setbacks*. Public utility stations or structures in residential areas shall maintain minimum setbacks in accordance with the National Electric Safety Code (NESC) for electrical lines or the U.S. Department of Transportation (USDOT) for gas lines, be fenced, and either be screened from view or assume a residential appearance.

# 3-06-06 Halfway House

A. **Licensing.** Halfway houses must be properly licensed by the State of Colorado.

B. **Location.** No halfway house shall be located within 500 feet of any other halfway house. Halfway houses shall be located within one mile of an RTD bus or rail stop. The method of measurement shall be from property line a point roughly in the center of the bus or rail stop. Setbacks shall be established as of the date of application.

C. **Outdoor Storage.** Accessory outdoor storage is prohibited. All facilities for storage of supplies shall be located within a building.

D. **Trash Enclosures.** Any garbage storage area located outside shall be screened from public view in accordance with Sec. 3-06-01(C)(5), *Trash Enclosure Screening*.

E. **Drop-Off/Pick-Up Areas.** All halfway houses shall provide an off-road drop-off/pick-up area for patrons or clients. The area shall be provided at a rate of one space per eight individuals. The spaces shall be signed as loading areas and at least 10 by 24 feet in area. All drop-off/pick-up areas shall be approved by the Director of Community and Economic Development.

F. **Setbacks.** Halfway Houses shall be set back a minimum of 1,500 feet from schools (pre-K through grade 12), residentially zoned property, residentially used property, and state licensed daycare homes and daycare centers in existence as of the date of application (based on information provided to the County by the State of Colorado). The method of measurement shall be from property line to property line. Setbacks shall be established as of the date of application.

G. **Waiver from Residential Setback.** No halfway house shall be located within 1,500 feet of a residentially zoned or used property unless the applicant obtains a waiver in writing from the residential property owner(s) within 1,500 feet and the applicant records a disclosure document against the property. If the applicant cannot obtain a signed waiver, the applicant may not proceed with a Conditional Use Permit for the subject property.

H. **Number of Occupants.** The number of occupants within the halfway house shall conform to all standards within the applicable state of Colorado rules and regulations, the applicable fire code, and the applicable building codes that are in use by Adams County. In the event of a conflict between any state and county standard, the stricter standard shall apply.

I. **Alcohol and Substance Abuse Management Plan.** All halfway houses shall submit an alcohol and substance abuse management plan to the County.

J. **Legal NonConforming Halfway Houses.** Existing and legally permitted halfway houses that do not meet one or more of the standards within this section may continue to operate in accordance with the regulations for the duration of the Conditional Use Permit. Existing and legally permitted halfway houses may apply for a Major or Minor Amendment to the Conditional Use Permit without conformance to these standards and regulations. In the event that a Conditional Use Permit for an existing halfway house expires and/or is revoked, conformance with all standards within these standards and regulations shall be required and the use shall no longer be considered legal nonconforming.

# 3-06-07 Institutional Residential Facility

A. **Location.** No institutional residential facility shall be located within 500 feet of any other institutional residential facility.

B. **New Construction in Residential Area.** Any new construction allowed in a residential zone district for the operation of an institutional residential facility shall be comparable in height, bulk, and orientation on a lot to residential uses immediately abutting or across the street from the proposed facility.

C. **Density.** Residential suites and assisted living units shall be constructed at the same density as the density in the applicable zone district. If the institutional residential facility has on-site common use dining, recreation, health care, or a convalescent center, the density for any associated multi-family units shall not exceed two times the allowed multi-family base density for the zone district.

D. **Screened Parking.** Off-road parking for the guests shall be screened with landscaping meeting the requirements of a Type C Bufferyard (See Sec. 4-04-03, *Bufferyards and Screening*).

E. **Outdoor Storage.** Accessory outdoor storage is prohibited. All facilities for storage of supplies shall be located within a building.

F. **Trash Enclosures.** Any garbage storage area located outside shall be screened from public view in accordance with Sec. 4-04-03, *Bufferyards and Screening.*

G. **Drop-Off/Pick-Up Areas.** All institutional residential uses shall provide an off-road drop-off/pick-up area for patrons or clients. The area shall be provided at a rate of one space per eight individuals. The spaces shall be signed as loading areas and at least 10 feet by 24 feet in area. All drop-off/pick-up areas shall be approved by the Director of Community and Economic Development.

## 3-06-08 Places of Worship

A. **Vehicular Access.** When located in a residential district or on a lot contiguous to a residential district or use, a place of worship shall have its principal vehicular entrance and exit on an arterial or collector street, or local street within 100 feet of the local street's intersection with an arterial or collector road.

B. **Belfries and Steeples Exempt from Height Limitations**. Belfries or steeples shall be exempt from any height requirements.

C. **Parcels Less Than 35 Acres.** In the A-3 Zone District, parcels of less than 35 acres in area shall require Conditional Use Permit approval.

D. **Day Care Center.** Day Care Centers are permitted accessory to Places of Worship and must meet the standards of Sec. 3-06-04, *Day Care Center.*

## 3-06-09 Railroad Yards on Private Property

A. **Minimum Site Area**. Five acres.

B. **Location**. All railroad yards on private property shall be located at least one mile from a residentially zoned or used property unless the applicant obtains a waiver in writing from the residential property owner(s) within one mile and the applicant records a disclosure document against the residential property. If the applicant cannot obtain a signed waiver but has made every reasonable effort to receive a signature, the applicant may apply for a Variance in accordance with Sec. 13-07-03, *Variance*. The applicant shall submit proof in the form of copies of certified mail sent to the residents affected.

C. **Access**. All railroad yards shall have arterial road or highway access.

# 3-06-10 Schools, K-12, Public or Private

A. **Minimum Lot Size**. One thousand square feet per student at maximum occupancy, or three acres, whichever is less.

B. **Setbacks**. Five feet for every foot of height of the structure, up to a maximum setback of 75 feet.

C. **Access**. Ingress and egress to and from the site shall be from or onto a collector or arterial road.

D. **Drop-Off/Pick-Up Areas**. All schools must provide adequate drop-off and pick-up areas. All drop-off/pick-up areas shall be approved by the Director of Community and Economic Development.

E. **Outdoor Recreation Facilities**. A six-foot high fence shall surround the outside recreation facilities of the school.

# 3-06-11 Solar Energy System

A. **Site Plan.** Site Plan review is required for a solar energy system, prior to Building Permit approval. Site Plan documents shall include:

1. Property lines and physical features, including roads, for the project site;
2. Proposed changes to the landscape of the site, grading, vegetation clearing and planting, exterior lighting, screening vegetation or structures;
3. Blueprints or drawings of the solar energy system showing the proposed layout of the system, the distance between the proposed solar collector and all property lines, and the tallest finished height of the solar collector;
4. Name, address, and contact information for proposed system installer; and
5. Name, address, phone number and signature of the project proponent, as well as all co-proponents or property owners, if any.

B. **Lot Coverage.** The area covered by ground-mounted solar energy systems, where the ground beneath is permeable or pervious, shall not be included in calculations for lot coverage for purposes of zoning.

C. **Location.** All solar panels, battery storage, substations, and equipment (excluding fencing, poles, buried cables, and wires necessary to connect to facilities of the electric utility) shall meet the minimum setbacks for the applicable zone district. Additional setbacks may be required to mitigate noise and visual impacts, or to provide for designated road or utility corridors, as identified through the review process.

D. **Maximum Height.** The height shall be measured from the highest grade below each solar panel. Ground-mounted solar energy systems shall not exceed 20 feet in height.

E. **Signage.** Clearly visible warning signs shall be placed on the fence, barrier, or facility perimeter to inform individuals of potential voltage hazards.

F. **Security.** All solar panels and equipment (excluding poles and wires necessary to connect to facilities of the electric utility) shall be enclosed by a fence at least six feet high. Wildlife-friendly fence options are encouraged.

G. **Landscape Requirements.** Ground-mounted solar energy systems shall be evaluated on a site-specific basis and landscaping may be required. Native grasses and wildflower mixes are encouraged.

H. **Fire Code.** The solar energy system shall conform to all requirements of the currently adopted fire code. Landscape requirements per this section are in addition to any fire break requirements of the adopted fire code.

I. **Grading, Vegetation Preservation, and Minimizing Site Disturbance**. Soil disturbance for solar energy system installation shall be minimized. Grading for solar energy systems shall be avoided to the extent practical, with existing land contours used to design the layout of the solar panels. Grading should be strictly limited on a solar energy system site, though allowed for transformer pads, access roads, and grid connection infrastructure.

J. **Vegetation Management Plan.** A site-specific vegetation and weed management plan shall be required for all Medium and Large Energy Facilities. The plan shall describe methods for controlling invasive species, managing fuel loads, and maintaining vegetation in compliance with County weed regulations. Techniques may include mowing, grazing, treatment, native plantings, and/or other approved methods.

K. **Lighting.** If lighting is provided at the site, lighting shall be shielded and downcast such that the light does not spill onto the adjacent parcel. Motion sensor control is preferred.

L. **Stormwater/Erosion Mitigation Plans**. For ground mounted systems, regardless of size, applicant must provide plan(s) showing what measures or best management practices will be used to prevent and/or contain erosion under the drip line of the solar panels.

M. **Wildlife Corridors.** For Medium and Large Energy Systems, wildlife corridors shall be maintained within natural drainages by leaving those areas open and free of obstruction. Consultation with CPW should occure to determine if additional wildlife corridors, outside of these natural drainages, are appropriate for wildlife movement.

N. **Decommissioning and Financial Assurance.** A Decommissioning Plan and financial assurance in accordance with Sec. 3-06-01.D, *Decommissioning and Financial Assurance for Large-Scale Energy Projects,* shall be required.

## 3-06-12 Tiny Home Village

A. **Purpose.** The purpose of a Tiny Home Village is to grant flexibility in building form and site design requirements for providers of housing for people who are experiencing homelessness or are at risk of becoming homeless or to provide for transitional housing options within the County.

B. **Operations Plan Required.** An operations plan that includes, but is not limited to, services provided and security measures, is required at the time of application. The Board of County Commissioners, in making their decision on a Conditional Use Permit for a Tiny Home Village, may take into consideration the security measures, the location of the Tiny Home Village to bus stops/light rail stations, and services, and the proposed services provided to the residents.

C. **Site Design Requirements.**

1. *Minimum Lot Size.* The minimum lot size to develop a Tiny Home Village shall be one-half acre.
2. *Minimum Number of Tiny Homes.* No development shall be approved with less than 10 homes.
3. *Required Bufferyard.* All Tiny Home Villages shall be screened from any adjacent use or public road with a Type B Bufferyard in accordance with Sec. 4-04-03, *Bufferyards and Screening.*

4. *Additional Setbacks.* Tiny homes must meet the setbacks outlined in the underlying zone district. In zone districts with a side or rear setback less than 10 feet, the setback shall be 10 feet from any side or rear property line.
5. *Fencing.* Maximum height of internal fencing shall be 42 inches.
6. *Signage.* Signs shall be allowed in conformance with Div. 4-05, *Signs*, and must be reviewed at the time of Conditional Use Permit approval.

D. **Common Facilities**. All Tiny Home Villages must provide a common area that contains shower and restroom facilities, kitchen areas, and laundry facilities. The common area must be available for use to the residents of the village at all times. Shower and restrooms shall be provided in accordance with the Building Codes, as adopted by the County. There must be a paved system of walkways, which gives safe and convenient access to every tiny home and all common facilities. If shower and restroom facilities, kitchen areas, and laundry facilities are provided within each unit, the common area requirement can be waived by the Board of County Commissioners.

E. **Unit Design Requirements.**

1. *Tiny Home Size.*
   a. The minimum home size for a tiny home shall be 100 square feet.
   b. The maximum home size for a tiny home shall be 400 square feet, excluding any lofts.
2. *Minimum Ceiling Height.* The minimum ceiling height for a tiny home shall be six feet- eight inches.
3. *Open Space.* Open space of at least 200 square feet per unit required; 60 square feet may be private, and the remainder must be provided as common open space.
4. *Minimum Spacing Between Homes.* The minimum distance between tiny homes shall be 10 feet. The site layout must be approved by the Board of County Commissioners through the Conditional Use Permit.5.
5. *Construction.* All construction, including mechanical heating and cooling systems, shall conform to the International Residential Code (IRC), as adopted by Adams County. Heating and cooling equipment must be listed and labeled.
6. *Building Materials.* Tiny homes can be constructed from any material providing that the construction meets the minimum IRC Standards, as adopted by Adams County at the time of application.
7. *Foundation.* All tiny homes must be placed on a foundation that meets the following definition. "Foundation: Part of a structural system designed in accordance with the County's Building Codes that supports and anchors the superstructure of a building and transmits its loads directly to the earth."
8. *Emergency Escape and Rescue Opening.* All tiny homes must have an emergency escape and rescue opening and shall meet the requirements of the IRC as adopted by Adams County.

F. **Trash and Recycling Collection and Disposal.**

1. The owner or responsible agent shall provide a trash and recycling collection and disposal plan that addresses the following:
   a. The number of trash bins or capacity relative to the maximum permitted number of residents in the development;

b. The number of recycling collection bins or capacity relative to the maximum permitted number of residents in the development.

c. The means by which the trash and recycling collection bins and enclosure will be kept safe from wildlife; and

d. A schedule for snow removal and the location for snow storage in and around the trash and recycling collection bins and enclosure.

2. The proposed trash and recycling collection and disposal plan shall be reviewed and approved by the County during the Conditional Use Permit review.

G. **Screening.** Trash and recycling collection and disposal areas shall be screened by a six-foot-high minimum screen fence made of wood or masonry material. Fencing materials shall be cleaned and maintained at all times to present an orderly appearance. Trash disposal areas shall be located a minimum of 20 feet of any public sidewalk.

H. **Setback.** Trash and recycling collection areas shall be located a minimum of 20 feet from any public sidewalk.

I. **Animals.** A maximum of one cat or one dog is allowed per tiny home.

J. **Outdoor Storage**. On-site storage facilities that serve the entire Tiny Home Village are allowed, if approved by the Board of County Commissioners through the Conditional Use Permit application.

**Figure 3-06-12-1, *Tiny Home Village***

## 3-06-13 Utility Substations and Related Uses

A. **Transmission Lines.** Transmission line rights-of-way shall be exempt from bufferyard requirements.

B. **Screening.** Transformers, electric substations, and outdoor storage yards shall be screened with screen fencing a minimum of six feet high and landscaping meeting the requirements of a Type C Bufferyard (See Sec. 4-04-03, *Bufferyards and Screening*).

C. **Setbacks.** Public utility stations or structures in residential areas shall maintain minimum setbacks in accordance with the National Electric Safety Code (NESC) for electrical lines or the U.S. Department of Transportation (USDOT) for gas lines, be fenced, and either be screened from view or assume a residential appearance.

## 3-06-14 Utility Structures, Utility Towers and Security Fencing

A. **Height Exceptions for Certain Structures.**

1. Notwithstanding any other provision of this DSR to the contrary, the maximum building or structure height established for a zone district shall not apply to the following structures, provided that the structure complies with all applicable setback, safety, screening, lighting, airport height regulations, and other standards of this DSR: Meteorological evaluation towers (MET towers), utility poles, transmission and distribution structures, substations, water tanks, and other structures necessary for the provision of electric, telecommunications, water, wastewater, or other public utility services, whether publicly or privately owned.
2. The height of a utility structure shall be limited to the minimum height reasonably necessary to perform its intended function, taking into consideration applicable engineering, operational, safety, reliability, and service requirements, as determined by the Director of Community and Economic Development.
3. A utility tower or other freestanding utility structure exceeding the maximum height otherwise permitted in the applicable zone district shall be set back from property lines and public rights-of-way by at least 50% of its total height in non-residential zone districts and by at least 100% of its total height in residential zone districts, unless a greater setback is required by another provision of this DSR or applicable law. For purposes of this subsection (3), a residential zone district means the RE, R-1-C, R-2, R-3 and R-4 zone districts, and a non-residential zone district means all other non-overlay zone districts.
4. The applicant shall demonstrate that the proposed location and design of the structure comply with applicable structural, electrical, fire, and safety requirements. Where reasonably necessary to protect adjoining property or public areas, the Director of Community and Economic Development may require a setback or other safety measure sufficient to accommodate a demonstrated fall zone.
5. An exception from a zone district height limitation under this Section shall not exempt a structure from applicable building code, fire code, setback, safety, screening, lighting, landscaping, sight distance, noise, and other standards of this DSR.
6. Nothing in this Section shall be construed to authorize a use or structure prohibited by federal or state law or to supersede applicable federal, state, or local safety and airport height requirements.

B. **Security Fencing for Infrastructure Facilities.**

1. Notwithstanding the maximum fence height otherwise applicable in a zone district, a fence enclosing a utility facility, communication facility, energy facility, or other infrastructure facility may be up to eight (8) feet in height when the additional height is reasonably necessary to deter unauthorized access as determined by the Director of Community and Economic Development, unless a greater height is specifically approved by the Director based upon documented security requirements. The fence shall not obstruct required sight distance or visibility at an intersection, driveway, or access point, and it shall comply with applicable fire code and access requirements.
2. Where a security fence is visible from a public right-of-way or residential property, the Director of Community and Economic Development may require landscaping meeting the requirements of a Type C Bufferyard (See Sec. 4-04-03, *Bufferyards and Screening*), a masonry wall, opaque fencing, or another screening treatment where reasonably necessary to mitigate visual impacts.

# Div. 3-07 Commercial Use Standards

## 3-07-01 General Commercial Use Standards

A. **Purpose**. The purpose of the following general use standards is to address elements of planning, design, operation, and maintenance that shall be applied to all commercial development in Adams County. Any use-specific standards contained in this DSR shall also be applied. Where a use-specific standard conflicts with a general use standard, the use-specific standard shall apply.

B. **Applicability.** The standards of this subsection apply to all commercial land uses in all zone districts.

C. **Project Compatibility**.

1. *Purpose*. The purpose of this Section is to ensure the physical and operational characteristics of proposed structures and uses are compatible when considered within the context of the surrounding area.
2. *Architectural Character*. New developments in or adjacent to existing developed areas shall be compatible with the established architectural character of such areas by using a complementary design. Compatibility shall be achieved through techniques such as the repetition of roof lines, the use of similar proportions in structure mass and outdoor spaces, similar relationships to the road, similar window and door patterns, and/or the use of building materials with color shades and textures similar to those existing in the immediate area of the proposed development. Brick and stone masonry shall be considered compatible with wood framing and other materials.
3. *Structure Size, Height, Bulk, Mass, Scale*. New structures shall either be similar in size and height, or if larger, be articulated and subdivided into massing proportional to the mass and scale of other structures in the immediate vicinity.
4. *Structure Orientation*. To the maximum extent feasible, primary facades and entries shall face the adjacent road, except where the applicant proves that a differing orientation will improve solar or wind access. Main entrances shall face a connecting walkway with a direct pedestrian connection to the road without requiring pedestrians to walk through parking lots or cross driveways.
5. *Building Materials*.
   a. General. Building materials shall either be similar to the materials already being used in the immediate area or, if dissimilar materials are being proposed, other characteristics such as scale and proportions, form, architectural detailing, color and texture, shall be utilized to ensure enough similarity exists for the structure to be compatible, despite the differences in materials.
   b. Glare. Building materials shall not create excessive glare. If highly reflective building materials are proposed, such as aluminum, unpainted metal or reflective glass, the potential for glare from such materials will be evaluated to determine whether or not the glare would create a significant adverse impact on the adjacent property owners, neighborhood or community in terms of vehicular safety, outdoor activities and enjoyment of views. If so, such materials shall not be permitted.
   c. Windows. Mirror glass with a reflectivity or opacity of greater than 60% is prohibited. Clear glass shall be used for institutional front windows or doors. Windows shall be

individually defined with detail elements such as frames, sills, and lintels, and placed to visually establish and define the structure stories and establish human scale and proportion.

6. *Land Use Transition*. When land uses with significantly different visual character are proposed adjacent to each other and where gradual transitions are not possible or not in the best interest of the community, the proposed structure shall, to the maximum extent feasible, achieve compatibility through compliance with the standards set forth in this Section regarding scale, form, materials, and colors and adoption of operational standards including limits on hours of operation, lighting, placement of noise-generating activities and similar restrictions.
7. *Operational/Physical Compatibility Standards*. The following conditions may be imposed upon the approval of development applications to ensure new development will be compatible with existing neighborhoods and uses, including, but not limited to, restrictions on:
   a. Hours of operations and deliveries;
   b. Location of activities generating potential adverse impacts on adjacent uses such as noise and glare;
   c. Placement of trash receptacles;
   d. Location and screening of loading and delivery zones;
   e. Light intensity and hours of full illumination; and
   f. Placement and illumination of outdoor vending machines.
8. *Smoke and Odor Control*. Smoke and odor shall be controlled by filter, scrubbers, fans, or other means.

D. **Fencing, Walls, and Screening**.

1. *Maximum Height*. The maximum height of fencing, walls, or screening shall be 96 inches, which shall include no more than four strands of barbed wire forming the top 18 inches or less of the fence, placed at a 45 degree angle.
2. *Fencing Material*. Permitted fencing materials include wood; ornamental metal such as wrought iron, steel, or aluminum designed and manufactured for fencing; vinyl or composite fencing materials manufactured for residential fencing applications; masonry or stone walls; and similar commercially manufactured fencing materials. The use of woven wire, high-tensile smooth wire, split-rail, post-and-rail, board fencing, welded wire, pipe fencing, sheet metal, corrugated metal panels, scrap materials, repurposed building components, plastic netting, or similar non-fencing materials is prohibited.
3. *Fence Bottom*. The bottom of the fence shall be no more than six inches above grade at any point.
4. *Fences Prohibited in Landscaped Area*. No fence shall be permitted within any required landscaped area.
5. *Electric and Barbed Wire Fencing Prohibited*. Electric fencing and fencing consisting only of barbed wire are prohibited as an external boundary fence.
6. *Relationship to Structure Design*. Fencing shall relate to the principal architectural features of the building in design, location, and the way in which it connects to the building.
7. *Long Runs of Fencing Discouraged*. Long runs of fencing parallel to public roads are discouraged. Where long runs cannot be avoided, the horizontal alignment of the fences

shall be varied to create visual variety and to provide planting pockets between the fence and the road. In addition, periodic breaks in fences should be considered to facilitate pedestrian, bicycle, and transit use.

8. *Screen Fencing*. Screen fencing is required to conceal outside storage from all adjacent road right-of-way and lesser intensity uses. Screening is not required between storage yards provided neither yard is visible from an adjacent road right-of-way. This section does not affect required landscaping along street frontages or buffering requirements contained in these regulations. In all practicable cases, the screen fencing addressed below shall be behind the required landscaping. The following criteria shall be followed in determining what form of screening is appropriate to accomplish visual buffering of outside storage yards in the County.
    a. *Chain link fencing.* Chain link fencing is not permitted as screen fencing.
    b. *Wood fencing.* The property owner shall conceal all outside storage with an eight-foot solid wood fence or masonry wall.
    c. *Fencing Alternative.* If the property is not feasibly screened by a fence from an adjacent road due to topography, the property owner shall install fast-growing trees (preferably a mix of coniferous and deciduous) appropriately space to ensure complete screening at maturity.
    d. *Fencing Condition.* All fencing shall be maintained and kept in good condition at all times. Condition of fences shall be evaluated through a review of:
        a. Structural integrity and being functionally sound under the County's Building Codes; and
        b. Substantially the same condition as originally permitted or constructed.
9. *Garbage Area Screening*. Garbage area screening shall consist of a six-foot-high minimum screen fence made of wood or masonry material. Fencing materials must be clean and maintained at all times to present an orderly appearance. No garbage storage area shall be located within 20 feet of a public sidewalk.
10. *Masonry Wall*. All walls specified to be masonry shall be solid and constructed out of a brick or stone material. The wall shall not permit the contents within the wall to be seen from the outside.
11. *Noise Barrier Fencing*. Where existing and proposed arterial roads or state highways traverse, or are adjacent to areas of proposed commercial development, the Director of Community and Economic Development may require noise barrier fencing be installed by the developer. Such fencing shall meet the minimum standards of the Colorado Department of Transportation and this DSR.
12. *Retaining Walls*. Any retaining wall over four feet in height shall require plans prepared by a professional engineer as a condition for a Building Permit except where waived by the Director of Community and Economic Development. As determined by the Director of Community and Economic Development, any retaining wall over 36 inches in height may require a guard rail up to five feet in height and placed at the top of grade.
13. *Traffic View Obstruction*. Traffic view obstruction as outlined in these standards and regulations by any fence, wall or screen is prohibited.
14. *Right-of-Way Maintenance*. The property owner of land abutting a public right-of-way is responsible for the construction and ongoing maintenance of all improvements within the right-of-way abutting their property, including but not limited to the curb, gutter, sidewalk,

parkway strip, and snow removal to maintain pedestrian access. The property owner is also responsible for maintaining the area between the property line and the edge of the adjacent roadway, including vegetation management, debris removal, and upkeep of any landscaping or hardscape improvements.

E. **Standards Applicable to all Retail Uses.**

1. *Entrances.* The building elevation of principal structures shall have at least one road-oriented entrance.
2. *Outdoor Storage.* Accessory outdoor storage is prohibited, except temporary display of items for sale provided the display does not interfere with traffic or limit parking. Otherwise, all facilities for storage of supplies shall be located within a building.
3. *Garbage Storage.* Garbage area screening shall consist of a six-foot-high minimum screen fence made of wood or masonry material. Fencing materials must be clean and maintained at all times to present an orderly appearance. No garbage storage area shall be located within 20 feet of a public sidewalk.

## 3-07-02 Airports, Landing Strips, and Heliports

A. **Private Airport Minimum Parcel Area**. Private airport minimum parcel area shall be 35 acres.

B. **Private Heliports Minimum Parcel Area**. Private heliport minimum parcel area shall be two acres.

C. **Access**. All airports, landing strips and heliports shall access collector or arterial roads or highways.

D. **Verification from the FAA**. A private airport or heliport must submit verification from the Federal Aviation Administration documenting the site does not present a hazard to air navigation.

E. **Approach Zone Restrictions**. Compliance with FAA Requirements:

F. **Approach Zone**. Any proposed runway or landing strip shall be situated so that any structures, high voltage power lines, towers, chimneys, and natural obstructions within the approach zones, comply with regulations for height restrictions in airport approach zones of the FAA, Division of Aeronautics, or a municipal or other airport authority qualified by law to establish hazard zoning regulations.

G. **Landing Strip Setbacks**. There shall be sufficient distance between the end of each usable landing strip and the airport boundary to satisfy the requirements of the FAA. If necessary, air rights or easements shall be acquired from the owners of abutting properties in which approach zones fall.

H. **Residential Areas**. No planned approach areas shall be permitted over existing residential areas.

I. **Setbacks**. All airport or heliport related structures shall be set back at least 100 feet from any property line.

J. **Indoor Repair**. All repair of aircraft and machinery shall be done inside hangars.

## 3-07-03 Animal Hospital

A. **Minimum Space Requirements**.

1. *Dogs.* Each dog shall be provided a minimum space equal to the following equation:
   a. Width of Kennel = Length of dog from nose to base of tail + two feet.
   b. Length of Kennel = Width of Kennel + two feet.
   c. Height of Kennel = Head height of dog standing on all four legs + one foot.
2. *Cats.* Each adult cat shall be provided a minimum of six cubic feet of area. Adult female cats with kittens below three months of age shall be provided with a minimum of 8 cubic feet of area.

B. **Noise Reduction.** With the exception of outdoor dog runs and animal exercise areas, the use shall be conducted within a fully enclosed building that is designed with noise-resistant materials. Where facilities are not sound-proofed, a partially or fully enclosed structure or fenced open area (runs, pens, etc.) shall be used to confine any animals and shall be setback 150 feet from any property line.

C. **Waste Disposal**. All animal and food wastes shall be handled and disposed of in a sanitary manner as approved by Adams County Health Department. Animal wastes shall be removed from the site daily or as otherwise necessary to avoid the spread of objectionable odors, insects, pests, and objectionable surface drainage.

D. **Pest Control**. Environmental and/or chemical and scientific controls shall be provided for pest control.

E. **Drainage**. Adequate drainage facilities or improvements shall be constructed to protect any adjacent rivers, streams, or other bodies of water from pollution.

F. **Care of Animals**. All dogs and/or cats shall be cared for in a humane and sanitary manner as approved by Adams County Humane Society and Adams County Animal Management.

## 3-07-04 Automobile Dealership

A. **Maximum Lot Coverage**. The maximum lot coverage by parking, vehicle areas, and buildings is 70%.

B. **Access**. Automobile dealerships shall be located on properties with direct access to a collector or arterial road or highway.

C. **Display Area Setback**. The display area shall be set back a minimum of 50 feet from the road right-of-way and 15 feet from all other property lines.

D. **Minimum Parcel Area**. One-half acre.

E. **Noise Control**. No loudspeaker or music shall be audible from adjacent properties.

## 3-07-05 Auto and Truck Rental or Leasing

A. **Maximum Lot Coverage**. The maximum lot coverage by parking, vehicle areas, storage, and buildings is 70 percent.

B. **Access**. Automobile rental businesses shall be located on properties with direct access to a collector or arterial street or highway.

C. **Car Storage Area Setback**. The car storage area shall be set back a minimum of 50 feet from the road right-of-way and 15 feet from all other property lines.

D. **Minimum Parcel Area**. Two acres.

E. **Noise Control**. No loudspeaker or music shall be audible from adjacent properties.

## 3-07-06 Automobile or Bus Repair Painting and Body Work

A. **Outdoor Activities Prohibited**. All repair and work activities shall take place within a completely enclosed structure.

B. **Storage of Vehicles**. All storage of vehicles awaiting repair shall be within the enclosed structure or within a compound yard enclosed by a six-foot high solid fence or wall.

C. **Spray Booth.** All spray painting and spray coating work shall be done inside a spray booth that complies with applicable building code requirements and is maintained to prevent nuisance odors and off-site impacts.

D. **Exhaust Fumes and Odor Control**. Exhaust and odor shall be controlled and treated by filter, scrubbers, fans, or other means.

E. **Noise Control**. No loudspeaker or music shall be audible from adjacent properties.

## 3-07-07 Bars and Cocktail Lounges

A. **Liquor License Required**. A Liquor License is required from the Adams County Liquor and Marijuana Licensing Authority Board prior to operation pursuant to state law.

## 3-07-08 Bed and Breakfast Establishment

A. **Resident-Occupied.** A Bed and Breakfast shall be operated by the resident property owner or a designated appointee at all times.

B. **Maximum Number of Lodging Rooms**. The maximum number of lodging rooms in a bed and breakfast establishment shall be five (5) rooms.

C. **Location.** The establishment shall be located within a dwelling abutting a designated arterial or collector road, or within a dwelling designated in a historical site.

D. **Signage.** Signage shall meet the requirements of Sec. 4-05 except in a residential or agricultural zone district where a single sign, which may be lighted but not flashing, shall be permitted within ten (10) feet of the front lot line. The sign shall not exceed ten (10) square feet in area and shall not block sight distance triangles. The sign shall not exceed five (5) feet in height.

E. **Screened Parking.** Off-road parking for the guest rooms shall be screened with landscaping meeting the requirements of a Type C Bufferyard of Sec. 4-04-03.

F. **Outdoor Storage.** Accessory outdoor storage is prohibited.

G. **Garbage Storage.** Garbage area screening shall consist of a six (6) foot high minimum screen fence made of wood or masonry material. Fencing materials should be cleaned and maintained must be clean and maintained at all times to present an orderly appearance. No garbage storage area shall be located within twenty (20) feet of a public sidewalk.

## 3-07-09 Campground, Commercial

A. **Minimum Parcel Area**. One acre.

B. **Maximum Density**. A maximum density of 15 campsites per acre is permitted.

C. **Duration of Stay at Campground.** Visitors to a commercial campground shall stay for a maximum of 60 days.

D. **Access**.

1. *Drives*. Commercial campgrounds shall be located on properties with direct access to an arterial road or highway. No direct access from a public road to an individual campsite shall be permitted. Internal drives must be improved to the extent and in the manner acceptable to the Director of Community and Economic Development. Minimum paving widths for internal drives are:
   a. 36 feet for entrances and all drives with guest parking on both sides;
   b. 29 feet for two-way drives with parking on one side;
   c. 22 feet for two-way drives with no parking; and
   d. 11 feet for one-way drives with no parking.
2. *Paving Waiver*. When in the opinion of the Director Community and Economic Development, paving is not required for a tent campground, paving may be waived. However, all internal drives shall be constructed of at least an approved all-weather surface approved by the Director of Community and Economic Development and the applicable fire district. In no case shall paving be waived in a recreational vehicle campground.

E. **Common Recreation Area**. Each campground shall have a common recreation area. 100 square feet of common recreation area shall be provided per campsite.

F. **Use-Specific Landscaping Required**. (See Sec. 4-04-06(C)).

G. **Tent Campgrounds**.

1. *Minimum Area*. Each tent campsite shall be a minimum of 500 square feet. A 10 foot separation shall be maintained between tent campsites.
2. *Parking*. One parking space, nine feet by 20 feet, shall be located on each site. No guest parking shall be required for a tent site. Parking spaces shall be provided with an all-weather surface approved by the Director of Community and Economic Development. Paving may be required where in the opinion of the Director of Community and Economic Development it is needed to control dust or water quality.

H. **Travel Trailer and Recreational Vehicle Campground.** All travel trailer and recreational vehicle campgrounds shall meet the following standards:

1. *Zoning*. Travel trailer and recreational vehicle campgrounds shall be located in permitted zone districts on property having direct access to an arterial road or highway.
2. *Minimum Area*. A travel trailer park shall consist of a minimum of one acre for the parking of travel trailers for human occupancy only.
3. *Paving of Spaces and Drives*. All recreational vehicle and guest parking spaces and drives shall be paved with asphalt or concrete to the specifications contained in these standards and regulations.
4. *Tent Sites*. Freestanding tent sites may be permitted provided not more than 15% of a travel trailer and recreational vehicle campground shall be used for tent sites.
5. *Area per Unit*. Each unit or site shall be improved with a minimum paved parking space for the travel trailer or recreational vehicle with a minimum area of 10 feet by 25 feet in

addition to the access driveway. Each recreational vehicle space shall be a minimum of 25 feet in width and 45 feet in depth.

6. *Vehicle Parking*. One paved parking space, nine feet by 20 feet, shall be located on each site. Guest parking, one space for each 10 trailer sites, shall be provided off the interior drives.
7. *Utilities*. All public utilities shall be placed underground.

I. **Permitted Accessory Uses**. Recreational facilities, laundry buildings, service retail stores, manager's office and storage buildings, sanitary facilities, and fences, constructed in accordance with all the provisions of these standards and regulations and all other applicable County regulations may be permitted as accessory uses.

J. **Manager Housing**. One manufactured home or single-family detached dwelling may be located in the campground for occupancy of the manager/operator.

K. **Garbage Collection**. At least one garbage pick-up area shall be provided. The garbage pick-up area shall be screened from view in accordance with the Fencing and Screen Fencing in Sec. 3-09-01 of these standards and regulations.

## 3-07-10 Drive-In and Drive-Thru Facilities

A. **General**. The following provisions apply to drive-in and drive-through facilities.

1. *Buffering and Landscaping*.
   i. Ordering stations, menu boards, and speakers facing or abutting residentially zoned or used property shall be buffered as established in Sec. 4-04-03, *Bufferyards and Screening*.
   ii. Planting requirements for the drive-up window and access lanes shall be the same as those required for parking area landscaping in accordance with Sec. 4-04-04, *Off-Street Parking Landscaping*.
2. *Stacking*. Refer to the stacking requirements in Sec. 4-02-14, *Stacking Requirements*.
3. *Hours of Operation*. Drive-in and drive-thru establishments within 250 feet of any residentially zoned or used property shall be open for business no earlier than 6:30 a.m. and close no later than 12:00 a.m.

B. **Drive-In Facilities.**

1. *Access*. The facility shall take access from an arterial or collector street.
2. *Setback*. The drive-in facility shall not be located within the front setback.
3. *Location*. A drive-in facility shall not be located between the building and the street. Drive-in lanes shall be separate from the circulation lanes needed for access and parking.
4. *Accessories*. Trash receptacles, ordering speakers, and other accessories of the drive-in facilities shall be oriented away from abutting residentially zoned or used property. Drive-in lanes shall be separate from the circulation lanes needed for access and parking.
5. *Paving*. Where a drive-in lane crosses a pedestrian walkway, the walkway shall be clearly identifiable through the use of elevation changes, a different paving material, texture change, or other similar method. Striping does not fulfill this requirement.

C. **Drive-Thru Facilities.**

1. *Limited Number of Establishments*. The use shall not contribute to a disproportionate number of drive-thru establishments in the area or contribute to a land use mix inconsistent with the specific purpose of the zone district in which it is proposed.
2. *Hours of Operation*. Drive-thru establishments within 250 feet of any residentially zoned or used property shall be open for business no earlier than 6:30 a.m. and close no later than 12:00 a.m.
3. *Drive-Thru Window Approval*. The Director of Community and Economic Development shall determine pedestrian safety, the welfare of the adjacent neighborhood, and maintenance of traffic circulation have been adequately addressed before approving the drive-thru window.
4. *Drive-Thru Lanes*. Drive-thru lanes shall be separate from the circulation lanes needed for access and parking. 90 feet of stacking space behind a single order and pick-up window is required. If more than one order and pick-up window is provided, the required 90-foot distance may be divided between the order and pick-up lanes.

## 3-07-11 Electric Vehicle Charging Stations

A. **Access.** All EVCS shall front collector or arterial roads or highways unless the sites are part of a shopping center.
B. **Setbacks.** Above-ground electrical equipment supporting the operation of a principal EVCS shall be setback at least 10’ from all property lines, or the width of the bufferyard as required in Table 4-04-03-2, whichever is greater.
C. **Canopy Shelter Required.** All electric vehicle charging use areas shall have an overhead shelter. The shelters shall adhere to the same setbacks as in paragraph B of this Section and shall ensure weather protection for the electric vehicle and user of the electric vehicle charging equipment.
E. **Screening Required.** Above-ground electrical equipment supporting the operation of an electric vehicle charging station, such as electrical transformers, shall be screened according to the minimum standards in Sec. 4-04-03, *Bufferyards and Screening.*
F. **Landscaping.** In addition to all other required landscaping, boundary landscaping is required for a minimum depth of 10 feet along all property lines abutting roads, except for the area required for road openings. Permanent irrigation facilities shall be provided for all landscaped areas.
G. **Storage**. All products and merchandise shall be stored indoors except for vending machines and tire display.
H. **Garbage Storage**. Garbage area screening shall consist of a six-foot high minimum screen fence made of wood or masonry material. Fencing materials must be clean and maintained at all times to present an orderly appearance. No garbage storage area shall be located within 20 feet of a public sidewalk.
I. **Restrooms**. Two restrooms shall be provided to the general public. All restrooms with exterior entrances shall be located to the side or the rear of the building.

## 3-07-12 Firewood Sales, Storage, and Splitting

A. **Minimum Lot Size**. 5,000 square feet.
B. **Display of Firewood**. Firewood shall be stacked and displayed for sale in an organized fashion.

C. **Setbacks**. The area where firewood is cut and split must be set back 25 feet from any property line.

D. **Sawdust and Debris Control**. Sawdust, woodchips, and any other debris shall be kept from blowing on to adjacent properties.

## 3-07-13 Flea Markets

A. **Minimum Lot Size**. One-half acre.

B. **Location**. Flea markets shall be located on vacant parcels or parking lots.

C. **Period of Operation**. Flea markets shall be permitted to operate on Saturdays and Sundays during the months of May through August. Additional hours may be permitted by Conditional Use Permit.

## 3-07-14 Food Truck Park

A. **General.**
   1. *Outdoor Storage.* Accessory outdoor storage is prohibited. All facilities for storage of supplies shall be located within a building.
   2. *Garbage Storage*. Garbage area screening shall consist of a six foot high minimum screen fence made of wood or masonry material. Fencing materials must be clean and maintained at all times to present an orderly appearance. No garbage storage area shall be located within 20 feet of a public sidewalk.
   3. *Smoke and Odor Control.* Smoke and odor shall be controlled by kitchen exhaust fans, or other means.
   4. Operations are prohibited on undeveloped lots and lots with unpaved surfaces. All mobile food vendors must operate on a parking surface of gravel, crushed asphalt, concrete, or poured asphalt. In the case of gravel or crushed asphalt, accessible pedestrian routes shall be maintained to provide clear, firm, and stable ADA-compliant paths.

B. **Permit required.** A Conditional Use Permit may be issued for a food truck park by the Board of County Commissioners if all the criteria of approval for a Conditional Use Permit are met.
   1. A site plan must be submitted as part of this process demonstrating the following:
      i. Property boundaries
      ii. Number and location of the proposed food trucks
      iii. Pedestrian circulation plan and waiting areas
      iv. Outdoor seating areas
      v. Restroom facilities – must be ADA compliant
      vi. Dumpster / trash location
      vii. Access points for the site
      viii. Grease trap – If applicable
      ix. Parking and Vehicle Circulation Plan
      x. Photometric Plan

C. **Performance Standards.** The following performance standards apply to a food truck park:
   1. *Hours of operation.* Hours of operation shall be limited from 7:00 A.M. to 11:00 PM.
   2. *Mobile food vendor requirements.*

i. All participating mobile food vendors on site must have and maintain all the required permits and inspections valid to be able to operate on the site, including health department and fire department approval.

*ii. Setbacks.*

1. Each food truck must maintain 10 feet of distance from all neighboring food trucks and buildings.
2. Must adhere to the respective setbacks from zoning district or a minimum of 15 feet whichever is greater.

iii. Must be a minimum of 20 feet from any access point.

a. Mobile food vendor activities shall not impede traffic movement within the site.

2. Operations must be located at least 50 feet from residential zone districts.

iv. Power supply must be provided from a permanent source on site; no power generators shall be permitted.

## 3-07-15 Fuel Sales

A. **Access**. All service stations shall front collector or arterial roads or highways unless the sites are part of a shopping center.

B. **Pump Setbacks**. Pump islands shall be located a minimum of 50 feet from residentially zoned or used property lines and a minimum of 40 feet from other exterior property lines. Pump island canopies may project to within 30 feet of property lines. Islands shall not interfere with any sight distance triangle.

C. **Underground Storage Tank (UST) Setbacks.** UST vent pipes must be located a minimum of 50 feet from residentially zoned or used property lines and a minimum of 40 feet from other exterior property lines.

D. **Screening**. Service stations shall be separated from abutting residential properties by a six-foot high masonry wall and a bufferyard as required in Sec. 4-04-03, *Bufferyards and Screening.*

E. **Landscaping**. In addition to all other required landscaping, boundary landscaping is required for a minimum depth of 10 feet along all property lines abutting roads, except for the area required for road openings. Permanent irrigation facilities shall be provided for all landscaped areas.

F. **Indoor Activities**. The following activities are permitted indoors: the changing of engine oil and filters; the lubrication of motor vehicle chassis; the cleaning of component parts; brake adjustment and replacement; mechanical or hand washing and detailing; front-end alignment; the sale or installation of batteries and minor automotive accessories; the sale mounting and repair of tires; the testing, adjustment and replacement of parts, the servicing of air conditioners; the servicing of air pollution control devices; the sale of soft drinks, candy, ice and similar items.

G. **Outdoor Activities**. The following uses are permitted outdoors: The dispensing of motor fuel, oil, air, and water from pump islands; any testing or servicing of automobiles that necessitates a running engine; tire display; trash areas enclosed by walls; public telephones in a well-lighted location, visible from the road; the sale of soft drinks, candy, ice, and similar items via vending machines.

H. **Painting and Body Work Prohibited**. Painting or other body work shall be prohibited at all service stations unless approved by Conditional Use Permit.

I. **Storage**. All products and merchandise shall be stored indoors except for vending machines and tire display.

J. **Garbage Storage**. Garbage area screening shall consist of a six-foot high minimum screen fence made of wood or masonry material. Fencing materials must be clean and maintained at all times to present an orderly appearance. No garbage storage area shall be located within 20 feet of a public sidewalk.

K. **Restrooms**. Two restrooms shall be provided to the general public during all hours of operation. All restrooms with exterior entrances shall be located to the side or the rear of the building.

L. **Separation Between Fuel Sales Uses.** No new fuel sales use shall be located within 1,000 feet of another existing or approved fuel sales use. An adminstrative waiver may be considered for this standard if there are significant impediments between the subject fuel sale uses, such as a federal highway.

M. **Separation Between Residential Uses.** No new fuel sale uses shall be located within 1,000 feet of existing residential uses.

N. **Electric Vehicle Charging Infrastructure.** All new or substantially redeveloped fuel sales uses shall provide electric vehicle (EV) charging infrastructure as follows:

1. *Minimum Number of Chargers.* At least two Level 2 EV charging stations shall be installed and made available for public use on-site.
2. *Proximity to highways.* All fueling stations within ½ mile of a highway entrance or exit shall install one Level 3 EV charging station for every four fueling pumps.
3. *Location and Design.*
   a. Chargers shall be located in visible, accessible areas near the principal building entrance or canopy area.
   b. Chargers must be ADA-accessible per applicable codes.
   c. Wayfinding and signage shall be provided to identify EV charging availability.

## 3-07-16 Golf Course and Driving Range

A. **Driving Range Location**. Driving ranges shall be located so adjoining properties are not adversely affected by the activity due to noise, glare, traffic, or other factors.

B. **Outdoor Storage**. Accessory outdoor storage is prohibited. All facilities for storage of supplies shall be located within a building.

## 3-07-17 Hotel or Motel

A. **Access**. The parcel shall be accessed by a collector or arterial road or highway.

B. **Entrances**. The building elevation of the principal structure shall have at least one road-oriented entrance.

C. **Outdoor Storage**. Accessory outdoor storage is prohibited. All facilities for storage of supplies shall be located within a building.

D. **Garbage Storage**. Garbage area screening shall consist of a six-foot high minimum screen fence made of wood or masonry material. Fencing materials must be clean and maintained at all times to present an orderly appearance. No garbage storage area shall be located within 20 feet of a public sidewalk.

E. **Accessory Uses**. Any accessory commercial activities such as restaurants and any outdoor recreational activities such as swimming pools shall not be located along the side of the property adjacent to a residential zone or use.

## 3-07-18 Kennel, Commercial

A. **Compliance with State Requirements.** All commercial kennels must meet the state standards stipulated under the Private Animal Care Facilities Act.

B. **Minimum Space Requirements**.

1. *Dogs*. Each dog shall be provided a minimum space equal to the following equation:
   a. Width of Kennel = Length of dog from nose to base of tail + 2 feet.
   b. Length of Kennel = Width of Kennel + 2 feet.
   c. Height of Kennel = Head height of dog standing on all four legs + 1 foot.
2. *Cats*. Each adult cat shall be provided a minimum of six cubic feet of area. Adult female cats with kittens below three months of age shall be provided with a minimum of eight cubic feet of area.

C. **Waste Disposal**. All animal and food wastes shall be handled and disposed of in a sanitary manner as approved by Adams County Health Department.

D. **Pest Control**. Environmental and/or chemical and scientific controls shall be provided for pest control.

E. **Drainage**. Adequate drainage facilities or improvements shall be constructed to protect any adjacent rivers, streams, or other bodies of water from pollution.

F. **Washroom**. A washroom consisting of a basin or sink and a lavatory shall be provided to maintain the cleanliness among animal caretakers.

G. **Mixing of Dogs and Cats**. Dogs and cats shall not be housed in the same primary enclosure.

H. **Care of Animals**. All dogs and/or cats shall be cared for in a humane and sanitary manner as approved by Adams County Animal Management and Adams County Health Department.

I. **Operator License Required**. All breeding and boarding kennel operators shall be licensed by the Colorado Department of Agriculture.

J. **Permanent Resident on Property Required**. A person responsible for the commercial kennel, whether the owner of the facility or an employee, shall reside permanently on the subject property. If a responsible party is not available on site, the name and phone number of a responsible party shall be posted on the front of the kennel, on the front door of the caretaker's quarters, and in an area visible to any person initially entering the premises. Any dwelling unit constructed to house the owner or employee shall meet the applicable zone district requirements.

## 3-07-19 Manufactured Housing Dealership

A. **Minimum Parcel Size**. Five acres.

B. **Maximum Lot Coverage**. The maximum lot coverage by parking, vehicle areas and structures is seventy 70%.

C. **Access**. This use shall be located on properties with direct access to a collector or arterial road or highway.

D. **Display Area Setback**. The display area shall be set back a minimum of 50 feet from the road right-of-way and 25 feet from all other property lines.

E. **Noise Control**. No loudspeaker or music shall be audible from adjacent properties.

F. **Structure Spacing**. All structures shall be separated by a minimum of 10 feet.

## 3-07-20 Massage Facility

A. **Massage Facility Licensing Ordinance**. In addition to the standards below, a massage facility shall comply with Ordinance No. 18, *Massage Facility Licensing Ordinance*.

B. **Time Limitation**. Conditional Use Permits for Massage Facilities may only be issued for a maximum of five years. Renewals shall be considered a Major Amendment and require approval by the Board of County Commissioners. Applications for renewals shall be made not less than 90 days and not more than 120 days prior to the date of expiration.

C. **Location**. In determining compatibility with the surrounding area, the Board of County Commissioners may consider locating Massage Facilities meeting the following geographic criteria:

1. Adjacent to arterial roads as shown in Appendix C, *Roadway Cross-Sections and Roadway Functional Classifications*;
2. Adjacent to medical offices or other health-related businesses; and
3. In commercial/business areas visible to the traveling public.

D. **Denial of a Conditional Use Permit**. Applicant/operator shall not be eligible for a Conditional Use Permit within one year of a denial by the Board of County Commissioners for the same location.

E. **Failure to Comply with Requirements**. May necessitate a show cause hearing before the Board of County Commissioners where the action taken on the Conditional Use Permit may include, but is not limited to, suspension or revocation.

## 3-07-21 Office

A. **Access**. Entrances to the site shall be minimized and placed in such a way as to maximize safety, maximize efficient traffic circulation, and minimize the impact on any surrounding residential neighborhood.

B. **Entrances**. The building elevation of the principal structure shall have at least one road-oriented entrance.

C. **Outdoor Storage**. Accessory outdoor storage is prohibited. All facilities for storage of supplies shall be located within a building.

D. **Garbage Storage**. Garbage area screening shall consist of a six-foot-high minimum screen fence made of wood or masonry material. Fencing materials must be clean and maintained at all times to present an orderly appearance. No garbage storage area shall be located within 20 feet of a public sidewalk.

E. **Outdoor Activities Prohibited**. All uses shall be performed or carried out entirely within an enclosed building.

## 3-07-22 Pawn Shops

A. **Outdoor Activities Prohibited**. All activities shall be performed or carried out entirely within an enclosed building.

B. **Outdoor Display Prohibited**. The display of items outdoors is prohibited.

C. **Screened Loading Areas**. Loading areas shall be screened in accordance with the Sec. 4-02-13, *Loading Requirements*.

## 3-07-23 Plant Nurseries and Greenhouses

A. **Living Nursery Area**. A nursery shall consist of living materials grown and/or kept on site.

B. **Landscaping.** A nursery shall be allowed to contain up to 10% of the approved living nursery area for hardscape materials. The living area is calculated by the placement of living landscaping (trees, shrubs, flowers, etc.) which is no more than ten feet from one another, or as determined by the Director of Community and Economic Development through a Site Plan review. Hardscape includes but is not limited to the storage of rock, soil, mulch, and other non-living landscape materials, and equipment.

C. **Vehicle Maintenance**. Any repair or servicing of vehicles or equipment used in the operation of the business shall occur within an enclosed building. Repair and servicing shall be limited to normal maintenance and shall not include body repair or modification.

D. **Vehicle Storage**. In all agricultural zone districts, no more than two commercial vehicles and/or equipment in excess of 7,000 pounds gross vehicle weight used for the nursery business shall be allowed per acre with a maximum of five unless otherwise permitted through a Conditional Use Permit.

E. **Screening**. All vehicle maintenance and storage areas shall be screened from any adjoining residentially zoned per Sec. 4-04-03, *Bufferyards and Screening.*

F. **Display and Storage**. Merchandise, landscaping materials, and equipment shall be displayed or stored within an enclosed building or in an area of the property that has been fenced or landscaped to conceal the area from any public right-of-way. Neither storage nor display shall occur within 25 feet of public right-of-way or occupy required off-street parking spaces.

## 3-07-24 Restaurant

A. **All Zone Districts**.

1. *Outdoor Storag*e. Accessory outdoor storage is prohibited. All facilities for storage of supplies shall be located within a building.
2. *Garbage Storage.* Garbage area screening shall consist of a six-foot-high minimum screen fence made of wood or masonry material. Fencing materials must be clean and maintained at all times to present an orderly appearance. No garbage storage area shall be located within 20 feet of a public sidewalk.
3. *Smoke and Odor Control.* Smoke and odor shall be controlled by kitchen exhaust fans, or other means.

B. **R-3 and R-4**. The following standards shall apply in the R-3 and R-4 zone district.

1. *Floor Area*. The maximum gross floor area of all buildings on a site shall be 5,000 square feet.

2. *Bufferyard*. A Type A zone district boundary buffer in accordance with Sec. 4-04-03, *Bufferyards and Screening*, shall be established along any side of the property adjacent to a residential use regardless of the zone district of the residential use.
3. *Signs*. The only permitted freestanding sign type shall be a monument sign, in accordance with the standards in Sec. 4-05-01, Signs.

# 3-07-25 Retail Uses

A. **Entrances**. The building elevation of principal structures shall have at least one road-oriented entrance.

B. **Outdoor Storage**. Accessory outdoor storage is prohibited, except temporary display of items for sale provided the display does not interfere with traffic or limit parking. Otherwise, all facilities for storage of supplies shall be located within a building.

C. **Garbage Storage**. Garbage area screening shall consist of a six-foot-high minimum screen fence made of wood or masonry material. Fencing materials must be clean and maintained at all times to present an orderly appearance. No garbage storage area shall be located within 20 feet of a public sidewalk.

# 3-07-26 Sexually Oriented Business

A. **Location**

1. *Land Use Setbacks*. A sexually oriented business shall not be permitted within 1,500 feet of:
   (1) Any Place of Worship;
   (2) Any Educational Facility;
   (3) The boundary of any residential district;
   (4) A dwelling unit (single or multiple);
   (5) A public park adjacent to any residential district; or
   (6) Another sexually oriented business.
2. *Multiple Business.* More than one sexually oriented business shall not be permitted within the same building or structure.

B. **Exclusions**. The provisions of this Section regulating nude model studios do not apply to:

1. *Public Higher Education*. A college, junior college, or university supported entirely or partly by taxation.
2. *Private Higher Education*. A private college or university that maintains and operates educational programs in which credits are transferable to a college, junior college, or university supported entirely or partly by taxation; or
3. *Businesses*. A business located in a structure:
   a. *No Sign*. That has no sign visible from the exterior of the structure and no other advertising that indicates a nude person is available for viewing;
   b. *Advanced Enrollment*. Where, in order to participate in a class a student must enroll at least three days in advance of the class; and
   c. *One Model*. Where no more than one nude model is on the premises at any one time.

## 3-07-27 Truck Stop

A. **Minimum Site Area.** Five acres.

B. **Access.** All truck stops shall have arterial road or highway access.

C. **Pump Setbacks.** Pump islands may be located a minimum of 100 feet from all exterior property lines, and pump island canopies may project to within 50 feet of property lines.

D. **Underground Storage Tank (UST) Setbacks.** UST vent pipes must be located a minimum of 50 feet from residentially zoned or used property lines and a minimum of 40 feet from other exterior property lines.

E. **Setbacks.** Truck stops shall be separated from residential uses or residentially zoned properties by 500 feet. The separation distance shall be measured from the lot line.

F. **Indoor Activities.** The following activities are permitted indoors: the changing of engine oil and filters; the lubrication of motor vehicle chassis; the cleaning of component parts; brake adjustment and replacement; mechanical or hand washing and detailing; front-end alignment; the sale or installation of batteries and minor automotive accessories; the sale or mounting and repair of tires; the testing, adjustment and replacement of parts, the servicing of air conditioners; the servicing of air pollution control devices; the sale of soft drinks, candy, ice and similar items.

G. **Outdoor Activities.** The following activities are permitted outdoors: the dispensing of motor fuel, oil, air, and water from pump islands; any testing or servicing of automobiles which necessitates a running engine; tire display; trash areas enclosed by walls; public telephones in a well-lighted location, visible from the road; the sale of soft drinks, candy, ice, and similar items via vending machines.

H. **Painting and Body Work Prohibited.** Painting or other body work shall be prohibited at all truck stops in agricultural zone districts.

I. **Storage.** All products and merchandise shall be stored indoors except for vending machines and tire display.

## 3-07-28 Truck, Trailer, and Horse Trailer Sales and Rental

A. **Maximum Lot Coverage**. The maximum lot coverage by parking areas, vehicle areas, and buildings is 80%

B. **Display Area Setback**. The display area shall be set back a minimum of 15 feet from the road right-of-way and 10 feet from all other property lines.

C. **Noise Control**. No loudspeaker or music shall be audible from adjacent properties.

# Div. 3-08 Recreational Use Standards

## 3-08-01 General Recreational Use Standards

A. **Purpose**. The purpose of the following general use standards is to address elements of planning, design, operation and maintenance to be applied to all recreational development in Adams County. Any use-specific standards contained in this DSR shall also be applied. Where a use-specific standard conflicts with a general use standard, the use-specific standard shall apply.

B. **Applicability.** The standards of this subsection apply to all recreational land uses in all zone districts.

C. **Project Compatibility**.

1. *Purpose*. The purpose of this Section is to ensure the physical and operational characteristics of proposed structures and uses are compatible when considered within the context of the surrounding area. While it is important that structures are compatible with other development in the area, it is most important that development support the parks and open space goals of the zone district in which the use is located. For this reason, there are no specific architectural standards that are required for recreational uses.

2. *Architectural Character*. New developments in or adjacent to existing developed areas shall be compatible with the established architectural character of such areas by using a complementary design. Compatibility shall be achieved through techniques such as the repetition of roof lines, the use of similar proportions in structure mass and outdoor spaces, similar relationships to the road, similar window and door patterns, and/or the use of building materials with color shades and textures similar to those existing in the immediate area of the proposed development. Brick and stone masonry shall be considered compatible with wood framing and other materials.

3. *Structure Size, Height, Bulk, Mass, Scale*. New structures shall either be similar in size and height, or if larger, be articulated and subdivided into massing proportional to the mass and scale of other structures in the immediate vicinity.

4. *Structure Orientation*. Placement of structures shall be based on operational needs for the spaces, as well as natural features that should be highlighted or retained. To the maximum extent feasible, primary facades and entries shall face the adjacent road, except where the applicant proves that a differing orientation will improve solar or wind access. Main entrances shall face a connecting walkway with a direct pedestrian connection to the road without requiring pedestrians to walk through parking lots or cross driveways. Any restroom facilities should be screened, to the extent practicable, from surrounding properties. Entrances to restroom facilities should be fully visible from public areas on the property.

5. *Building Materials*.

   a. General. Building materials shall either be similar to the materials already being used in the immediate area or, if dissimilar materials are being proposed, other characteristics such as scale and proportions, form, architectural detailing, color and texture, shall be utilized to ensure enough similarity exists for the structure to be compatible, despite the differences in materials.

   b. Glare. Building materials shall not create excessive glare. If highly reflective building materials are proposed, such as aluminum, unpainted metal or reflective glass, the potential for glare from such materials will be evaluated to determine whether or not the glare would create a significant adverse impact on the adjacent property owners, neighborhood or community in terms of vehicular safety, outdoor activities and enjoyment of views. If so, such materials shall not be permitted.

   c. Windows. Mirror glass with a reflectivity or opacity of greater than 60% is prohibited. Clear glass shall be used for institutional front windows or doors. Windows shall be individually defined with detail elements such as frames, sills, and lintels, and placed to visually establish and define the structure stories and establish human scale and proportion.

6. *Land Use Transition*. When land uses with significantly different visual character are proposed adjacent to each other and where gradual transitions are not possible or not in the best interest of the community, the proposed structure shall, to the maximum extent feasible, achieve compatibility through compliance with the standards set forth in this Section regarding scale, form, materials, and colors and adoption of operational standards including limits on hours of operation, lighting, placement of noise-generating activities and similar restrictions.
7. *Operational/Physical Compatibility Standards*. The following conditions may be imposed upon the approval of development applications to ensure new development will be compatible with existing neighborhoods and uses, including, but not limited to, restrictions on:
   a. Hours of operations and deliveries;
   b. Location of activities generating potential adverse impacts on adjacent uses such as noise and glare;
   c. Placement of trash receptacles;
   d. Location and screening of loading and delivery zones;
   e. Light intensity and hours of full illumination; and
   f. Placement and illumination of outdoor vending machines.

D. **Fencing, Walls, and Screening**.

1. *Maximum Height*.
   a. In the Neighborhood Park (NP) Zone, fences shall be limited to no more than 72 inches; within the Regional Park (RP) and Natural Areas (NA) Zone Districts, fences shall be limited to 96 inches. All fences more than 42 inches in height require a Building Permit. Permitted exceptions to these maximum heights include:
      (1) When a recreational use is adjacent to existing or proposed arterial roads or state highway. Fences bordering such roads may be uniformly built higher with approval from the Director of Community and Economic Development.
      (2) Safety fences required for recreational uses, such as tennis courts, are permitted to be built higher with approval from the Director of Community and Economic Development.
      (3) Fences associated with public outdoor pools, as outlined in 3-08-04.C, *Swimming Pools, Public*.
   b. Low and transparent fences that have at least sixteen (16) inches between the ground and the bottom wire are encouraged to provide open views for parks and open spaces and to support wildlife crossings.
2. *Fencing Material*.
   a. Fencing for recreation uses consisting of only barbed wire is prohibited. Other permitted fencing materials include wood; ornamental metal such as wrought iron, steel, or aluminum designed and manufactured for fencing; vinyl or composite fencing materials manufactured for residential fencing applications; masonry or stone walls; and similar commercially manufactured fencing materials. The use of sheet metal, corrugated metal panels, scrap materials, repurposed building components, plastic netting, or similar non-fencing materials is prohibited.
   b. Barbed wire fencing is allowed by right in the Natural Areas (NA) Zone District.

3. *Retaining Wall*. Any retaining wall over four feet in height shall require preparation by a professional engineer as a condition for a Building Permit, except where waived by the Director of Community and Economic Development. As determined by the Director of Community and Economic Development any retaining wall over 36 inches in height may require a guard rail up to five feet in height and placed at the top of grade.
4. *Traffic View Obstruction*. Traffic view obstruction, as outlined in these standards and regulations, is prohibited.
5. *Garbage Area Screening*. Garbage area screening shall consist of a six-foot-high minimum screen fence made of wood or masonry material. Fencing materials must be clean and maintained at all times to present an orderly appearance. No garbage storage area shall be located within 20 feet of a public sidewalk.
6. *Outdoor Storage.* Accessory outdoor storage is prohibited. All facilities for storage of supplies shall be located within a building.
7. *Screened Parking.* Off-street parking for the guests shall be screened with landscaping meeting the requirements of a Type C Bufferyard (see Sec. 4-04-03, *Bufferyards and Screening*). Property owners who develop near existing parks shall maintain landscape character of the existing park use.
8. *Masonry Wall*. All walls specified to be masonry shall be solid and constructed out of a brick or stone material. The wall shall not permit the contents within the wall to be seen from the outside.
9. *Noise Barrier Fencing*. Where existing and proposed arterial roads or state highways traverse, or are adjacent to areas of proposed commercial development, the Director of Community and Economic Development may require noise barrier fencing be installed by the developer. Such fencing shall meet the minimum standards of the Colorado Department of Transportation and this DSR.

D. **Lighting**. Public and quasi-public recreational facilities such as baseball, softball, soccer, or football fields are exempt from lighting height restrictions and glare limitations onto adjacent properties provided the lights are only used while the field is in use. Reasonable Hours of Operation limitations may be placed on any recreational use by the Director of Community and Economic Development.

## 3-08-02 Indoor Recreation

A. **General**.

1. *Setback from School Properties*. No amusement shall be permitted within 500 feet of the lot line of a public or private school serving students in the 12th grade or under.
2. *Outdoor Activities Prohibited*. All activities shall be performed or carried out entirely within an enclosed building.
3. *Full-Time Management*. The owner of the premises shall maintain a full-time adult manager responsible for the premises during all hours of operation.
4. *Nuisance Violation*. Any place of indoor commercial recreation/entertainment which becomes the location of frequent or repeated violations of County regulations or public disturbance, shall be declared to be a nuisance, and may be cited for a nuisance violation under this section.

B. **Amusement Center, Video Arcade, or Pool Arcade**.

1. *Location*. No amusement center shall be established within 500 feet of a public or private school serving students in the 12th grade or under.
2. *Hours of Operation*. An amusement center shall not be open to the public before 11:00 a.m. or after 11:00 p.m.
3. *Security*. The owner shall maintain one full-time security guard for every 20 coin-operated amusement devices.

C. **Bowling Alley.**

1. *Minimum Parcel Area*. One acre.
2. *Security*. The owner shall maintain one full-time security guard for every 10,000 square feet of bowling alley.

D. **Event Centers, Music Arenas, Movie Theaters.**

1. *Minimum Parcel Area*. One-half acre
2. *Security.* The owner shall maintain one full-time security guard for every 10,000 square feet of event center or movie theater.

E. **Indoor Skating Rinks (Ice or Roller)**.

1. *Minimum Parcel Area*. One acre.
2. *Security*. The owner shall maintain one full-time security guard for every 10,000 square feet of roller skating rink.

## 3-08-03 Outdoor Public Recreation

A. **Animal- or Botanical-Related, Outdoor**.

1. *Setbacks*. Animal related shall be set back at least 100 feet from abutting residential and commercial zone districts and uses.
2. *Minimum lot area*. the following animal related outdoor uses require a minimum lot area for site function:
   a. Aquarium: Ten acres.
   b. Botanical: Ten acres.
   c. Wildlife Preserve: 50 acres.
   d. Zoo: 20 acres.
3. *Fencing*. Fencing height and location for animal related outdoor public use shall be governed by requirements of the Building Codes, as adopted by Adams County.
4. *No offensive impacts*. There shall be no offensive noise, vibration, smoke, dust, odors, heat or glare noticeable at or beyond the property line.

B. **Picnic Areas, Parks, and Playgrounds**.

1. *Setbacks*. Picnic areas, parks, and playgrounds shall be setback 20 feet from all abutting residentially or commercially zoned properties unless designed as an accessory use to an adjacent use.
2. *Hours of Operation*. Outdoor activities shall not begin before 7:00 a.m. and shall conclude by 9:00 p.m. when abutting residentially zoned or used property. Special events, with a temporary use approval, may be approved for alternate hours.
3. *Lighting*. Lighting for all facilities shall be turned off by 9:15 p.m., or as otherwise approved through a temporary use review.

C. **Swimming Pools, Public**.

1. *Setbacks*. Swimming pools shall be set back 50 feet from abutting residential and commercial zone districts and uses.
2. *Certified Lifeguard*. At least one certified lifeguard shall be on duty during all hours of operation.
3. *Fencing*. Fencing height and location for public swimming pools shall be governed by requirements of the Building Codes, as adopted by Adams County.

## 3-08-04 Outdoor Recreation

A. **General**.

1. *Access*. All outdoor commercial recreation shall have collector or arterial road or highway access. No direct access points through a residential road or along a collector serving only residential areas shall be allowed.
2. *Full-Time Management*. The owner of the premises shall maintain a full-time adult manager responsible for the premises during all hours of operation.
3. *Nuisance Violation*. Any outdoor commercial recreation which becomes the location of frequent or repeated violations of County regulations or public disturbance shall be declared to be a nuisance.
4. *Noise Control*. No central outdoor loudspeakers shall be permitted.

B. **Amusement Parks and Go-Kart Establishments**.

1. *Minimum Lot Area*. Five acres.
2. *Hours of Operation*. The amusement park shall limit its hours of operation to 9:00 AM to 10:00 PM.
3. *Setback from Residential Properties*. No amusement shall be permitted within one mile of the lot line of a residentially zoned or used property unless the applicant obtains a waiver in writing from the residential property owner(s) within one mile and the applicant records a disclosure document against the residential property. If the applicant cannot obtain a signed waiver but has made every reasonable effort to obtain a signed waiver, the applicant may apply for a Variance from the Board of Adjustment. The applicant shall submit Proof in the form of copies of certified mail sent to the residents affected.
4. *Security*. The owner shall maintain one full-time security guard for every 10,000 square feet of amusement.

C. **Animal- or Botanical-Related, Outdoor Establishment.**

1. *Setbacks*. Animal related establishments shall be set back at least 100 feet from abutting residential and commercial zone districts and uses.
2. *Minimum lot area*. the following animal related outdoor uses require a minimum lot area for site function:
   a. Aquarium: Ten acres.
   b. Botanical: Ten acres.
   c. Wildlife Preserve: 50 acres.
   d. Zoo: 20 acres.

3. *Fencing*. Fencing height and location for animal related outdoor public use shall be governed by requirements of the Building Codes, as adopted by Adams County.
4. *No offensive impacts*. There shall be no offensive noise, vibration, smoke, dust, odors, heat or glare noticeable at or beyond the property line.

D. **Drive-In Theater.**

1. *Minimum Parcel Size*. one acre
2. *Maximum Screen Size*. 1,500 square feet
3. *Projection Screen Visibility*. The projection screen shall not be visible from any public road within 1,500 feet.
4. *Accessory Uses*. Accessory uses such as snack bars associated with the theater shall be designed for use by patrons of the drive-in theater only.
5. *Screening*. Vehicle parking areas shall be screened so lights will not shine onto adjacent property.
6. *Vehicle Stacking Lanes*. 300-foot vehicle stacking lanes shall be provided outside the theater entrance.
7. *Dust Control*. If the vehicle parking area is not paved, the theater owner shall spray the lot to control dust from blowing onto adjacent properties.
8. *Property for Daytime Uses*. The use of the theater property for daytime uses, including but not limited to, flea markets, vending stands, and fireworks stands, shall require a Temporary Use Permit.

E. **Gun, Archery, or Pistol Shooting Range**.

1. *Minimum Parcel Area*. two acres
2. *Setback from Residential Properties*. No shooting range shall be located within one mile of a residentially zoned or used property unless the applicant obtains a waiver in writing from the residential property owner(s) within one mile and the applicant records a disclosure document against the residential property. If the applicant cannot obtain a waiver but has made every reasonable effort to obtain a signed waiver, the applicant may apply for a Variance in accordance with Sec. 13-07-03. The applicant shall submit proof in the form of copies of certified mail sent to the residents affected.
3. *Fencing*. The entire range shall be enclosed by a fence a minimum of six feet high.
4. *Warning Signs*. Warning signs that read “Warning: Shooting Range” shall be posted around the perimeter at a minimum distance of every 100 feet on the fence.
5. *Bufferyard*. Two Type D Bufferyards (see Sec. 4-04-03, *Bufferyards and Screening*) shall encircle the perimeter of the gun range to provide a natural noise barrier. A 10-foot berm shall be incorporated into the bufferyard around the site.
6. *Line of Fire*. Line of fire shall be as close to horizontal as possible, but never below horizontal.
7. *Certified Instructor*. The shooting range shall be supervised by a range officer or a National Rifle Association certified instructor.

F. **Ice Skating Rinks**. The minimum parcel area shall be one acre.

G. **Miniature Golf Courses**. The minimum parcel area shall be one acre.

H. **Picnic Areas, Parks, and Playgrounds**.

1. *Setbacks*. Picnic areas, parks, and playgrounds shall be setback 20 feet from all abutting residentially or commercially zoned properties unless designed as an accessory use to an adjacent use.
2. *Hours of Operation*. Outdoor activities shall not begin before 7:00 a.m. and shall conclude by 9:00 p.m. when abutting residentially zoned or used property. Special events, with a temporary use approval, may be approved for alternate hours.
3. *Lighting*. Lighting for all facilities shall be turned off by 9:15 p.m., or as otherwise approved through a temporary use review.

I. **Racing Facilities (Auto, Truck, Dog, and Horse)**.

1. *General*.
   a. *Minimum Parcel Area*. 40 acres
   b. *Setback from Residential Properties*. No racing facility shall be permitted within one mile of the lot line of a residentially zoned or used property. If the applicant cannot obtain a waiver but the applicant has made every reasonable effort to obtain a signed waiver, the applicant may apply for a Variance in accordance with 13-07-03. The applicant shall submit proof in the form of copies of certified mail sent to the residents affected.
   c. *Nuisance Violation*. Any racing facility which becomes the location of frequent or repeated violations of County regulations or public disturbance, shall be declared to be a nuisance, and may be cited for a nuisance violation under this Section.
2. *Automobile and Truck Racing*.
   a. *Location*. All automobile and truck racing facilities shall be located at least one mile from any residentially zoned or used property. If night racing is proposed and the track will be lighted, the automobile and truck racing facility shall be located at least two miles from any residentially zoned or used property with the signed waiver provisions of paragraph c above, *Setback from Residential Properties*, in effect.
   b. *Screening*. All racing facilities shall be enclosed by an eight-foot-high minimum screen fence or wall.
3. *Dog and Horse Racing*.
   a. *Location*. All dog racing facilities shall be located at least one mile from any residentially zoned or used property with the signed waiver provisions of paragraph c above, *Setback from Residential Properties*, in effect.
   b. *Screening*. All racing facilities shall be enclosed by a six-foot high minimum screen fence or wall.
   c. *Dog Kennels*. If kennels are provided on the premises, the kennels shall meet all requirements for a commercial kennel as established in these standards and regulations.

J. **Swimming Pool, Public**.

1. *Setbacks*. Swimming pools shall be set back 50 feet from abutting residential and commercial zone districts and uses.
2. *Certified Lifeguard*. At least one certified lifeguard shall be on duty during all hours of operation.
3. *Fencing*. Fencing height and location for public swimming pools shall be governed by requirements of the Building Codes, as adopted by Adams County.

K. **Water Park.**

1. *Minimum Parcel Area*. Two acres.
2. *Certified Lifeguard*. One certified lifeguard shall be on duty during all hours of operation.

# Div. 3-09 Industrial Use Standards

## 3-09-01 General Industrial Use Standards

A. **General**. The purpose of the following general use standards is to address elements of planning, design, operation and maintenance to be applied to all industrial development in Adams County. Any use-specific standards contained in this DSR shall also be applied. Where a use-specific standard conflicts with a general use standard, the use-specific standard shall apply.

B. **Applicability.** The standards of this subsection apply to all industrial land uses in all zone districts.

C. **Waste and Recycling Containers.** All waste and recycling containers are subject to the requirements of Sec. 3-03-04, *Trash and Recycling Containers.*

D. **Waste Storage.** No waste storage area shall be located within 20 feet of a public sidewalk. All waste storage, including trash, recyclables, and scrap shall be stored in closed containers when possible and enclosed by a sight-obscuring fence that is a minimum six-foot-high and made of wood or masonry material.

E. **Fencing.** The standards of this subsection apply to fencing around the perimeter or in the interior of industrial land uses. Additional requirements for fencing and screening of outdoor storage in industrial districts are in Sec. 3-09-08, *Outdoor Storage.*

1. *Maximum Height*. The maximum height of a fence shall be 96 inches, which may include no more than four strands of barbed wire forming the top 18 inches or less of the fence, placed at a 45-degree angle.
2. *Fencing Materials*. Fencing consisting of only barbed wire is not permitted. Other permitted fencing materials include steel, woven wire, high-tensile smooth wire, split-rail, post-and-rail, board fencing, welded wire, or pipe fencing. The use of sheet metal, corrugated metal panels, scrap materials, repurposed building components, plastic netting, or similar non-fencing materials is prohibited.
3. *Barbed Wire Fencing Prohibited*. Electric fencing and fencing consisting only of barbed wire are prohibited as an external boundary fence.
4. *Relationship to Structure Design*. Fencing shall relate to the principal architectural features of the building in design, location, and the way in which it connects to the building.
5. *Long Runs of Fencing Discouraged*. Long runs of fencing parallel to public roads are discouraged. Where long runs cannot be avoided, the horizontal alignment of the fences shall be varied to create visual variety and to provide planting beds between the fence and the road. In addition, periodic breaks in fences should be considered to facilitate pedestrian, bicycle, and transit use.
6. *Maintenance.* Fencing materials must be cleaned and maintained to present an orderly appearance at all times.

F. **Screen Fencing**. Screen fencing is required to conceal outside storage from all adjacent road right-of-way and lesser intensity uses. Screening is not required between storage yards provided

neither yard is visible from an adjacent road right-of-way. This section does not affect required landscaping along street frontages or buffering requirements contained in these regulations. In all practicable cases, the screen fencing addressed below shall be behind the required landscaping. The following criteria shall be followed in determining what form of screening is appropriate to accomplish visual buffering of outside storage yards in the County.

1. *Chain Link Fencing.* Chain link fencing is not permitted as screen fencing.
2. *Wood Fencing.* The property owner shall conceal all outside storage with an eight-foot solid wood fence or masonry wall.
3. *Fencing Alternative.* If it is not possible to be screened by a fence from an adjacent road due to topography, the property owner shall install fast growing trees (preferably a mix of coniferous and deciduous) appropriately spaced to ensure complete screening at maturity.
4. *Fencing Condition.* All fencing shall be maintained and kept in good condition at all times. Condition of fences shall be evaluated through a review of:
    a. Structural integrity and being functionally sound under the County's Building Codes; and substantially the same condition as originally permitted or constructed.

G. **Fencing Exception.** If the property is not feasibly screened by a fence from an adjacent road due to topography, the property owner shall install a mix of coniferous and deciduous fast-growing trees selected from Appendix B, *Plant List*, that are appropriately spaced to ensure complete screening at maturity. Appendix B is incorporated herein by reference and made a part hereof.

H. **Garbage Area Screening.** Garbage area screening shall consist of a six-foot-high minimum screen fence made of wood or masonry material. Fencing materials must be clean and maintained at all times to present an orderly appearance. No garbage storage area shall be located within 20 feet of a public sidewalk.

I. **Retaining Walls.** Any retaining wall over four feet in height shall require plans prepared by a professional engineer as a condition for a Building Permit except if waived by the Director of Community and Economic Development. As determined by the Director of Community and Economic Development, any retaining wall over 36 inches in height may require a guard rail up to five feet in height and placed at the top of grade.

J. **Traffic View Obstruction.** Traffic view obstruction as outlined in these standards and regulations, by any fence, wall, or screen, is prohibited.

K. **Sidewalk Right-of-Way Maintenance.** The property owner of land abutting a public right-of-way is responsible for the construction and ongoing maintenance of all improvements within the right-of-way abutting their property, including but not limited to the curb, gutter, sidewalk, parkway strip, and snow removal to maintain pedestrian access. The property owner is also responsible for maintaining the area between the property line and the edge of the adjacent roadway, including vegetation management, debris removal, and upkeep of any landscaping or hardscape improvements.

L. **Operational/Physical Compatibility Standards**. The following conditions may be imposed upon the approval of development applications when industrial uses are proposed adjacent to residentially zoned or used property to ensure new development will be compatible with existing neighborhoods and uses, including, but not limited to, restrictions on:

1. Hours of operations and deliveries;
2. Location of activities generating potential adverse impacts on adjacent uses such as noise, air emissions, light pollution, and glare;

3. Placement of waste receptacles including solid waste, recyclables, and scrap;
4. Location and screening of loading and delivery zones;
5. Light intensity and hours of full illumination per the requirements of Div. 4-06, *Outdoor Lighting*; and
6. Placement and illumination of outdoor vending machines.

M. **Liquids Management and Spill Control.** Petroleum based and other potentially environmentally hazardous liquids shall be stored in robust containers that are compatible with the liquid material. Potential release to the environment shall be mitigated utilizing best management practices, including but not limited to; secondary containment, leak detection systems, and double-walled containers. Written standard procedures for controlling and responding to liquid chemical and/or petroleum spills shall be maintained and implemented in cases where a formal Spill Prevention, Control, and Countermeasure Plan is not required by federal, state, or local regulation.

## 3-09-02 Automobile Towing and Storage Yard

A. **Minimum Lot Size**. One acre.

B. **Storage of Vehicles**. All storage of vehicles shall be within the enclosed structure or within a compound yard enclosed by a six-foot high solid fence or wall. Fencing shall be made of wood or masonry materials. Split rail fences are prohibited.

C. **Vehicle Classification**. Not including operable commercial towing vehicles associated with the business's operation, all vehicles stored on the property shall be less than 10,000 lbs. (gross vehicle weight).

D. **Surface Material**. All vehicles shall be stored on a hard-surfaced material.

E. **Duration**. No vehicle shall be stored for more than 90 days.

F. **Emergency Access**. Vehicles shall be arranged in a neat and orderly manner so that emergency vehicles, such as fire trucks and ambulances, may be able to access within 100 feet of any portion of the property. In addition to this requirement, all auto towing and storage yard operations shall comply to the requirements of the local fire district.

G. **Liquids Management and Spill Control.** Waste liquids shall be stored in leak-proof, closed containers that are compatible with the liquid material so as to prevent container failure. All spills and accidental releases shall be cleaned immediately. A clearly labeled spill response kit must be available onsite at all times and personnel trained in its location and use.

## 3-09-03 Data Center

Notwithstanding any other provision of this DSR to the contrary, these Data Center general use standards apply effective November 17, 2026.

A. **Minimum Site Area.** 100 acres.

B. **Site Plan Required**. The site plan for a Data Center shall include the following:
   a. A complete list of all equipment to be installed onsite with maximum heights of such equipment.
   b. A complete equipment inventory that includes all permanent or temporary equipment and the height and use of such equipment.
   c. A site plan diagram depicting all equipment and layout.

d. The distance of the data center(s) and all associate equipment siting relative to: the principal use, existing residences or platted residential lots, residential uses, high occupancy building units, school or future school facilities, state licensed daycares, environmentally sensitive areas, and designated parks and open spaces.
e. Identify access points and any internal drive aisles.
f. The amount of parking that may be required. Any full or part-time occupied structures shall require additional site plan review.

C. **Emergency Preparedness and Response**. Data Centers shall not cause unreasonable risks of emergency situations such as explosions, fires, gas, oil or water pipeline leaks, ruptures, hydrogen sulfide or other toxic gas or fluid emissions, and hazardous material vehicle accidents or spills.

g. Emergency Preparedness Plan. Each applicant is required to implement an emergency preparedness plan for each Data Center. The plan shall be referred to the Office of Emergency Management (OEM), and the applicable fire district, filed with the County and updated as conditions change (responsible field personnel change, ownership changes, etc.). The emergency preparedness plan shall consist of information that is required by the Director of Community & Economic Development. These items may include a fire district will serve letter, 24-hour emergency numbers, and information regarding site access and information.

D. **State Agency Approvals**. Applicant shall provide proof of state agency approvals, where applicable.

E. **Building Permit Required**. A building permit may be required depending on the facility.

F. **Setbacks.** For data centers within 2,000 feet of a residentially used or zoned property line, requirements to minimize or avoid impacts include the following:

i. Neighborhood meeting: A neighborhood meeting that complies with Sec. 13-01-03 is required.
ii. Air quality: General air quality protection measures and site-specific air quality protection measures that comply with Sec. 3-09-07(H).
iii. Noise: The application shall control noise levels in accordance with Sec. 3-09-07(G).
iv. Visual Mitigation: Landscaping and screening requirements may also be applied to address any potential impacts to nearby residential uses.

G. **Provision of Utilities.** Applicant shall provide proof of adequate power, water, and sewer services and demonstrate that the use will not have negative impacts on the surrounding community's level of service.

## 3-09-04 Fleet Parking

A. **Minimum site size***:* One (1) acre.

B. **Vehicular Access:** All fleet uses shall have the principal vehicular entrance and exit on a State Highway, arterial, collector, or industrial local road.

C. **Surface material:** All vehicles shall be stored on a hard-surfaced material, concrete or asphalt, or another suitable surface as approved by the Director of Community and Economic Development.

D. **Emergency Access:** Vehicles shall be arranged in a neat and orderly manner so that emergency vehicles may be able to access within one hundred (100) feet of any portion of the property. Additionally, all operations shall comply with the requirements of the local fire district.

E. **Setbacks:** All fleet uses shall be set back from the property line a minimum of thirty (30) feet from any adjacent properties that are not zoned as Industrial.

F. **Screening:** All vehicles associated with the fleet use shall be screened from adjacent properties and the public right-of-way with an eight-foot in height screen fence.

G. **Other standards.** All vehicles parked as part of a fleet use shall be registered, insured, and operable.

# 3-09-05 Heavy Industrial

A. **General Standards for all Heavy Industrial Uses.**

1. *Outdoor Storage*. Materials may be stored outdoors, provided the storage area is consistent with the zone district allowances provided in Sec. 3-09-08, *Outdoor Storage.* All outdoor storage shall be screened in accordance with Sec. 3-09-01.B, *Fencing, Wall, and Screening,* and the height of stored materials shall not exceed the height of the required screening fence or wall, except where a Conditional Use Permit authorizes a greater height.
2. *Air Pollutant Emissions and Odor Control*. Emissions of air pollutants, including particulate matter or dust, and odor shall be mitigated to the extent feasible through the use of appropriate control technologies and best management practices.
3. *Hours of Operation.* The hours of operation shall be from 7:00 a.m. to 7:00 p.m. for this use category when within two-hundred feet of a residentially used property.
4. *Spill Control and Response.* Written standard procedures for controlling and responding to liquid chemical and/or petroleum spills shall be maintained and implemented.

B. **Aggregate Mining and Extraction Uses.**

1. *Compliance with Colorado Department of Natural Resources.* Requirements contained in this section shall not exempt the owner or operator of an extractive industry from compliance with the requirements of Colorado Division of Reclamation, Mining, and Safety (DRMS). Prior to the approval of a Conditional Use Permit by the Board of County Commissioners, a reclamation contract shall be signed and approved by the owner or operator and the Colorado Department of Natural Resources.
2. *Site Size.* The site of an extractive industry shall be of sufficient size and dimensions to accommodate the proposed operations.
3. *Blasting Hours.* Operations utilizing explosive devices shall be restricted to Monday through Friday between the hours of 8:00 a.m. and 5:00 p.m.
4. *Stagnant Water.* Pockets and stagnant pools of water resulting from surface drainage shall either be:
   a. Sprayed to eliminate breeding places for mosquitoes and other insects using methods and chemicals approved by the Colorado Department of Agriculture;
   b. Drained to prevent the creation of such breeding places; or

c. Backfilled with approval from appropriate authorities.

5. *Plan for Development of the Site.* A plan for the Mining Phase and the Reclamation Phase shall be approved by the Director of Community and Economic Development.

6. *Recreational Prospecting in Creeks and Rivers.* In-stream recreational prospecting using non-motorized equipment is not regulated by the County. It is incumbent upon the operator of a non-motorized in stream recreational prospecting site to notify and gain permission of the property owner. The use of motorized equipment for such an operation is considered mining. Any operation using motorized equipment is prohibited.

7. *Operation and Rehabilitation Standards for all Mining Operations.* Mining and necessary accessory uses shall be subject to the restrictions contained the DRMS issued permit. In addition, all mineral extraction operations shall comply with the following restrictions.

   a. Mining Permit Required. All mining operations shall have an approved permit issued by DRMS and Adams County prior to beginning mineral extraction.

   b. Excavation Setback from Adjacent Property. No excavation or deposit of overburden within 25 feet of the boundary of adjacent property, easement, irrigation ditch or right-of-way is permitted unless written agreement of the owner(s) of such property, easement, irrigation ditch, or right-of-way is obtained by the mining operation.

   c. Excavation Setback from Nearby Residence. No excavation within 125 feet of any existing residence is permitted unless written agreement of the owners and occupants of such residence are obtained.

   d. Rock Crushers Setback from Nearby Residence. No excavation involving the use of rock crushers or other similar equipment shall take place within 250 feet of a residence.

   e. Rock Crushers Setback from Public Lands, Parks, Open Space, and Facilities District. Rock crusher or other similar equipment shall be located no closer than 250 feet from the parcel boundary of public land and facilities.

   f. Hauling Roads. Hauling roads within the premises shall be maintained in a reasonably dust free condition.

   g. Hours of Operation. Mineral excavation, crushing, hauling, loading, sorting or similar operation shall only occur between the hours of 6:00 a.m. to 10:00 p.m. Shorter hours of operation may be imposed in urbanized areas, as part of conditional use approval.

   h. Two Feet of Water Bearing Strata. All sand and gravel shall be excavated in such a manner as to have an average of two feet of undisturbed sand and gravel to provide a water bearing strata, unless the reclamation plan provides for a permanent lake or a landfill.

   i. Cut Slopes. In no event shall a slope of less than 2:1 be left for dry pits, or a slope of 3:1 to a depth of 10 feet and 2:1 thereafter for a wet pit when operations are completed, except as provided herein.

   j. Hauling Route. The operator shall submit a route plan to the Director of Community and Economic Development and receive permission to use for haulage any public right-of-way not designated for such haulage by reason of load limit, dust, right-of-way or pavement width or other relevant factors. The Director of Community and Economic Development may place reasonable restrictions on such right-of-way use.

   k. Excavation Pit Floor. The floor of excavation pits whether wet or dry shall be left in a reasonably smooth condition.

l. Inert Fill Material. Any imported inert fill material must meet the definition of inert fill material for landfilling as outlined in these regulations.

m. Flooding and Drainage. The operator shall not excavate, store overburden, or excavate materials or dike in such a manner as to increase any drainage or flooding on property not owned by the operator or damage to public facilities.

n. Fencing. Prior to starting excavation, the operator shall fence gravel pit operations with a "V" mesh or chain link fence to a height of 72 inches topped with three strands of barbed wire canted to a 45 degree angle outward. Where the operation is adjacent to subdivided and/or developed commercial, residential, or industrial property (except GI) a solid screen fence will be erected to prevent the visibility of the mining operation if deemed necessary by the Community and Economic Development Department. The operator may fence the entire area immediately, or fence only areas of excavation; however, no fence shall be removed until rehabilitation has been completed.

o. Noise. All operations shall conform to noise, vibration, and other standards in Chapter 3, *Specific Use Standards*.

p. Reclamation of Spent Areas Near Existing Development. Where the operation is adjacent to subdivided property and/or to developed commercial, residential or industrial (except GI), once mining has been completed, said site is not to be used as an area to stockpile sand and gravel resources and/or overburden material. The mining operator shall reclaim the area as soon as possible after mining has been completed to prevent soil erosion and nuisance conditions. In all cases, final reclamation shall occur no later than five years after mining has been completed.

q. Air Emissions. All air emissions shall conform to standards established by the Colorado Department of Public Health and Environment.

r. Water Quality. All water uses and discharges shall conform to standards established by the State Water Quality Control Commission and the water laws of the State of Colorado.

s. Slope Stabilization. All slopes shall be stabilized and land remaining in the natural water level must be revegetated in a manner compatible with the surrounding area, and subject to the approval of the Adams County Community and Economic Development Department.

t. Revegetation. The revegetation plan must meet the standards of the Colorado State University Extension Agency. After revegetation of an area, the area must be maintained for a period of three years or until all vegetation is firmly established in the reclaimed area.

u. Reclamation Time Frame. A time limit for reclamation will be placed on each project. This time limit will be dependent upon the type of reclamation effort. The Director of Community and Economic Development shall be notified if the project submits a Notice of Temporary Cessation to DRMS, and upon transfer of the DRMS minerals permit. The Director shall be notified within two weeks of the completion of final mining activity.

v. Annual Reclamation Report. An annual report shall be submitted to the Community and Economic Development Department to ascertain whether the approved reclamation plan is progressing satisfactorily. This report shall be the same report as is submitted to the Mined Land Reclamation Board.

w. Extraction/Excavation within the Floodplain Overlay District. Mining or grading/hauling/excavating operations shall comply with the requirements specified in Sec. 2-08-12.H.

x. Relationship to Design Requirements and Performance Standards. All design requirements and performance standards for specific uses contained in Chapter 3 of these standards and regulations shall apply in a Mineral Conservation Overlay District unless inconsistent with a provision contained in Section 2-08-13, in which case the specific standard or requirement contained in Section 2-08-13 shall apply.

C. **[Reserved]**

D. **Asphalt and Concrete Production Facility.**

1. *Use Permission.* All permanent asphalt and concrete production facilities must obtain a Conditional Use Permit or approval via a Planned Unit Development.
2. *Minimum Parcel Area.* No cement or asphalt mixing plants shall be located on a parcel of land less than one-half (1/2) acre in size.
3. *Air Pollutant Emissions and Odor Control*. Emissions of air pollutants, including particulate matter or dust, and odor shall be mitigated to the extent feasible through the use of appropriate control technologies and best management practices. Emissions of particulate matter, or fugitive dust, shall not visibly impact adjoining properties.

E. **Automobile Manufacturing.**

1. *Minimum Parcel Area*. Three acres.
2. *Outdoor Activities Prohibited*. All equipment, materials and uses shall be performed or carried out entirely within an enclosed building.
3. *Security Fence*. The use shall be totally enclosed by a security fence or wall at least eight feet high.

F. **Cement, Cinder Block, Concrete, Lime or Plaster Manufacturing Facility**.

1. *Outdoor Activities*. Manufacturing shall be performed or carried out entirely within an enclosed building. no more than 10% of an accessory outdoor storage area may be used for assembly of products. Any outdoor assembly area must be screened in accordance with Sec. 4-05, *Fencing, Walls, and Screening*. When this use is located in an Industrial-2 or Industrial-3 zone district, the manufacturing does not need to be performed or carried out entirely within an enclosed building.
2. *Waste Storage.* Any waste, including trash, recyclables, and scrap storage area shall be enclosed by a sight-obscuring fence made of wood or masonry material. Waste areas in industrial zone districts shall be screened from view from all property lines and adjacent rights-of-way in accordance with Sec. 4-04-03, *Bufferyards and Screening.*
3. *Air Pollutant Emissions and Odor Control*. ~~Smoke~~ Emissions of air pollutants, including particulate matter or dust, and odor shall be mitigated to the extent feasible through the use of appropriate control technologies and best management practices.
4. *Lighting*. Lighting shall be shielded and downcast such that the light does not spill onto adjacent parcel(s) or rights-of-way.
5. *Hours of Operation*. When abutting residentially zoned or used property, hours of operation shall be restricted to 7:00 a.m. to 7:00 p.m.

6. *Conditional Use Permit Required in the I-1 Zone District*. A conditional use permit is required for any cement, cinder block, concrete, lime, or plaster manufacturing facility in the I-1 zone district.

G. **Chemical, Petroleum and Explosive Manufacturing (except Pharmaceuticals).**

1. *Minimum Parcel Area*. Three acres.
2. *Fire District Review*. All plans shall be reviewed by the applicable fire district prior to approval in order to determine existing services provide adequate protection for citizens.
3. *Risk Management Plan Required.* When applicable per federal regulation, the facility's Risk Management Plan including, Tier 2 report(s) and all supporting documentation shall be reviewed by the Director or their designee, and the County's Office of Emergency Management prior to approval to ensure adequate risk assessment, consequence analysis, and appropriate controls are specified and implemented.
4. *Outdoor Activities Prohibited*. All equipment, materials and uses shall be performed or carried out entirely within an enclosed building.
5. *Fireproof Building Required.* The use shall be totally enclosed by a fireproof building.
6. *Prohibited Accessory Uses*. Service stations, dwellings, or research laboratories are not considered accessory uses involved in the manufacture and storage of chemicals, petroleum products, or explosives.

H. **Fertilizer Manufacturing and Storage.**

1. Establishments engaged in the manufacturing, mixing, processing, distribution, or storage of fertilizers shall comply with the requirements of 8 CCR 1206-1, Water Quality Control Concerning Agricultural Chemicals and Ground Water. Additional guidance is available from the CWU Extension, *Best Management Practices for Pesticide and Fertilizer Storage and Handling*.
2. *Chemical Control Plan.* Such a plan, including all material safety data sheets, storage requirements, waste management procedures, spill containment and control protocols, and an employee training program shall be reviewed by the County and applicable fire district prior to approval.

I. **[Reserved]**

J. **Paper, Pulp, or Paperboard Mills**.

1. *Chemical Control Plan.* Such a plan, including all material safety data sheets, storage requirements, waste management procedures, spill containment and control protocols, and an employee training program shall be reviewed by the County and applicable fire district prior to approval.
2. *Minimum Parcel Area*. Two acres.
3. *Outdoor Activities Prohibited.* All equipment, materials and uses shall be performed or carried out entirely within an enclosed building.
4. *Emissions and Combustible Dust Control.* Emissions and/or dust collection and control systems shall be reviewed by the County and applicable fire district.

K. **Auto Salvage Yards.**

1. *Screening*. The salvage operations and yards shall be enclosed by a screen fence at least eight feet high, measured from the lowest point of grade. The fence shall be maintained in good condition. No stored materials shall be visible from ground level immediately outside the fence.

2. *Stored Materials*. The applicant shall demonstrate the stored materials will not pose a danger to surrounding properties or residents, due to noise, runoff, animal or insect populations or other factors.
3. *Additional Conditions*. The Director of Community and Economic Development may add additional conditions in order to protect the general welfare of citizens.
4. *Liquids Management and Spill Control.* Waste liquids shall be stored in leak-proof, closed containers that are compatible with the liquid material so as to prevent container failure. All spills and accidental releases shall be cleaned immediately. A clearly-labeled spill response kit must be available onsite at all times and personnel trained in its location and use.
5. *Indoor Activities.* The changing/removal of engine oil and filters; cleaning of component parts; removal of anti-freeze, gasoline/diesel fuel, and hydraulic fluids shall be performed indoors or managed in such a way that release to the environment is minimized to the greatest extent possible.
6. *Vector Control. Waste tires shall be stored appropriately to prevent collection of stagnant water and regularly monitored during the summer months for mosquitoes.*

# 3-09-06 Light Industrial

A. **General Standards for All Light Industrial Uses**.

1. *Access*. Entrances to the site should be minimized and placed in such a way as to maximize safety, maximize efficient traffic circulation, and minimize the impact on any surrounding residential neighborhood.
2. *Outdoor Storage*. Materials may be stored outdoors, provided the storage area is consistent with the zone district allowances. All outdoor storage shall be screened in accordance with 3-09-08, *Outdoor Storage.*
3. *Outdoor Activities Prohibited*. All uses, excluding permitted outdoor storage, shall be performed or carried out entirely within an enclosed building.
4. *Waste*. All wastes generated shall be managed in accordance with the appropriate state solid and or hazardous waste management regulations.
5. *Air pollutant Emissions and Odor Control*. Emissions of air pollutants and odor shall be mitigated to the extent feasible through the use of appropriate controls and best management practices and shall comply with all applicable regulations of the Air Quality Control Commission (AQCC).

B. **Auction Houses, Without Livestock**.

1. *Minimum Parcel Area*. One acre.
2. *Setback from Residential Properties*. All auction houses shall be located at least 50 feet away from any on-property residence, 50 feet from any right-of-way and 200 feet from any off-property residence.

C. **Dry Cleaning Plants**.

1. *Minimum Parcel Area*. One acre.
2. *Fire District Review*. All plans shall be reviewed by the applicable fire district prior to approval in order to determine the existing services provide adequate protection for citizens.

3. *Outdoor Activities Prohibited.* All equipment, materials and uses shall be performed or carried out entirely within an enclosed building.

D. **Electronic, Fabric, Furniture, and Medical Supply Production**.

1. Minimum Parcel Area. One acre.
2. *Outdoor Activities Prohibited*. All equipment, materials and uses shall be performed or carried out entirely within an enclosed building.
3. *Smoke and Odor Control*. Smoke and odor shall be controlled by filter, scrubbers, fans, or other means.

E. **Food Product Processing and Manufacturing**.

1. *Minimum Parcel Area*. One acre.
2. *Fire District Review*. All plans shall be reviewed by the applicable fire district prior to approval in order to determine the existing services provide adequate protection for citizens.
3. *Outdoor Activities Prohibited*. All equipment, materials and uses shall be performed or carried out entirely within an enclosed building.

F. **Landscape Storage Yard**.

1. *Outdoor Storage*. Outdoor storage of rock, soil, mulch, and other non-living landscaping materials, and equipment, is permitted. Equipment and material storage areas must be screened from view from adjacent parcels and road right-of-way by an eight-foot-high minimum screen fence. Only products, materials, and equipment owned and operated by the landscape business may be stored on the site.
2. *Classification*. Any nursery that contains 10% or more of the approved living nursery area for hardscape materials shall be classified as a Landscape Storage Yard. Hardscape includes but is not limited to the storage of rock, soil, mulch, and other non-living landscape materials and equipment.
3. *Commercial Vehicles*.
   a. All commercial vehicles and/or equipment in excess of 10,000 pounds gross vehicle weight and/or hardscape used for the landscape storage yard business shall be screened from any adjoining residentially zoned or used property with an eight-foot solid screen fence in accordance with the approved landscape plan.
   b. In all Agricultural Zone Districts, no more than two commercial vehicles and/or equipment in excess of 10,000 pounds gross vehicle weight used for the landscape storage yard business shall be allowed per acre with a maximum of five unless otherwise permitted through a Conditional Use Permit.

G. **Recreational Vehicle and Boat Storage Facility**.

1. *Minimum Lot Size*. Two acres.
2. *Fencing*. All storage of vehicles and boats shall be within an enclosed structure or within a compound yard enclosed by an eight-foot-high solid fence or wall, except for driveway openings. Fencing shall be made of wood or masonry materials. No fencing shall be allowed within a required landscape bufferyard.
3. *Surface Material*. All vehicles shall be stored on a hard-surfaced material.
4. *Emergency Access*. Vehicles shall be arranged in a neat and orderly manner so that emergency vehicles, such as fire trucks and ambulances, may be able to access within 100

feet of any portion of the property. In addition to this requirement, all operations shall comply to the requirements of the local fire district.

5. *Wastewater Dumping Station*: All facilities designated for recreational vehicle storage shall be required to include a wastewater dumping station. These facilities are required to be permitted by the Adams County Health Department. Wastewater Dumping Station shall be located a minimum of 100 feet from any property line.

H. **Research, Development, and Testing**.

1. *Minimum Parcel Area*. One acre.
2. *Fire District Review*. All plans shall be reviewed by the applicable fire district prior to approval in order to determine existing services provide adequate protection for citizens.
3. *Smoke and Odor Control*. Smoke and odor shall be controlled by filter, scrubbers, fans, or other means.

# 3-09-07 Oil and Gas Facilities

A. **Purpose**. This Section is enacted to protect and promote the health, safety, values, convenience, order, prosperity, and general welfare of the current and future residents of the County. It is the County's intent by enacting this Section to regulate the development of oil and gas resources within the unincorporated area of the County while avoiding, minimizing, or mitigating potential land use conflicts between such development and existing, as well as planned, land uses. It is recognized that under state law the surface and mineral estates are separate and distinct interests in land and that one may be severed from the other. Owners of subsurface mineral interests have certain legal rights and privileges, including the right to use that part of the surface estate reasonably required to extract and develop their subsurface mineral interests from a consenting surface owner, subject to compliance with the provisions of this Section and any other applicable statutory and regulatory requirements. Similarly, owners of the surface estate have certain legal rights and privileges, including the right to have the mineral estate developed in a reasonable manner and to have adverse impacts upon their property, associated with the development of the mineral estate, avoided, or mitigated through compliance with this Section. For any definition not listed in this Section, the definitions listed in Chapter 16 of this DSR and the Colorado Energy and Carbon Management (ECMC) regulations shall govern. If the term is not found in this DSR or ECMC's definitions, the term shall have its common meaning along with the spirit and intent of these Regulations and may be subject to interpretation by the Director of Community and Economic Development.

B. **General Provisions.**

1. *Access.* Oil and Gas Facility (OGF) installation shall be located to provide convenient, safe, and protective access, shall accommodate the traffic and equipment related to the oil and gas operations and emergency vehicles, and shall conform to ECMC rules and these Standards. Oil and gas operations shall avoid, minimize, and mitigate impacts to the physical infrastructure of the County transportation system.
2. *Signage.* A sign with the 24-hour, 7-days per week contact information shall be placed close to the intersection of the access road and the right of way so that it is legible from the public right of way. Signage shall conform to ECMC regulations for signage and posting.
3. *Building Permit Required.* For all new or substantially modified wells, a Building Permit is required for the installation of permanent electrical, pumps, tank batteries, and all other

above-ground structures as well as any other applicable permits including, but not limited to, culvert permits, oversized-load permits, and Floodplain Use Permit.

4. *Setbacks.* OGFs shall be at least 2,000 feet from any existing residences or platted residential lots, schools or future school facilities, state licensed daycares, and high occupancy building units, and environmentally sensitive areas OGFs shall be at least 1,000 feet from groundwater under the direct influence of surface water (GUDI) wells and Type III Aquifer wells as defined by Colorado Water Quality Control Commission and ECMC rules. OGFs shall not be sited within High-Priority Habitats without applicable waivers or conditions granted or approved by Colorado Parks and Wildlife (CPW).
   a. Setback Measurements. Setbacks shall be measured from the edge of the OGF, not including the access road.
      1. Setbacks from existing residences, platted residential lots, schools, or future school facilities, state licensed daycares and high occupancy building units shall be measured from the property line to the OGF.
      2. Setbacks from ESAs shall be from the ordinary highwater mark, edge of hydric soil or hydrophytic vegetation, park or open space, or other defined feature boundary, as applicable, to the OGF
   b. Administrative Waivers from Setback Requirements for Existing Residences or Platted Residential Lots. An Administrative Waiver may be obtained from the setback requirements if the operator receives a written waiver or consent from each primary resident and property owner located within the setback. Staff will evaluate the granting of an Administrative Waiver from these setback requirements based on the following criteria:
      1. The number of affected residents within the setback;
      2. Location of the facility;
      3. Size of the facility;
      4. Compatibility of the facility with surrounding land uses; and
      5. Conformance with the Adams County Comprehensive Plan.
   c. Administrative Waiver from Setback Requirements for Environmentally Sensitive Areas (ESA). An Administrative Waiver may be obtained from the setback requirements for an ESA in the following instances:
      1. For OGFs between 1,000 feet and 2,000 feet from an ESA. The Operator shall submit a Resources Review that satisfies the requirements of Div. 9-02. The operator may be required to implement any of the mitigation measures from Sec. 3-09-07(B)(d) based on the size, location, and nature of the facility.
      2. For OGFs between 500 feet and 1,000 feet and hydraulically upgradient of, at a significantly lower topographic elevation or relief of, or otherwise physically isolated, as determined by the Director of Community and Economic Development, from an ESA the Operator shall submit a Resources Review that satisfies the requirements of Div. 9-02 and may be required to implement any of the mitigation measures set forth in Sec. 3-09-07(B)(d) based on the size, location, and nature of the facility. The Operator shall implement the following within 750 feet of an ESA:
         a. Operator shall not site or operate new staging, refueling, chemical storage, produced liquid storage, or drilling pits;

b. Operator shall install tertiary containment, such as a compacted earthen berm around all production equipment and liquid storage tanks; and

c. Operator shall install containment structures to be sufficiently sized to contain at least 200% of the volume of the largest single tank or storage vessel within the containment.

3. Staff will evaluate the granting of an Administrative Waiver based on the following criteria:

a. Whether the Operator has obtained applicable waivers, letters of concurrence, or similar, from CDPHE, CPW, a water district or authority, where applicable, or as a result of consultation with and recommendations from the relevant state or federal agencies, based on the nature of the ESA(s);

b. Location of the facility;

c. Scale and size of the ESA(s) subject to the Administrative Waiver;

d. Compatibility of the facility with surrounding land uses;

e. Conformance with the Adams County Comprehensive Plan; and

f. The level of best management practices, facility design considerations, and control measures being proposed at the oil and gas facility.

4. Nothing in this setback section shall be interpreted as modifying any specific requirements established by a relevant state or federal agencies.

d. Mitigation Measures. In approving an Administrative Waiver for an ESA the County may require the Operator to implement any of the following measures depending on the size, location, and nature of the facility:

1. Additional stormwater controls or spill prevention and response mechanisms;

2. Siting of equipment or wellheads on the OFG further away from environmentally sensitive areas;

3. Enhanced Secondary or tertiary containment around equipment or liquid storage containers;

4. The use of tankless or tank-like systems;

5. Connection of the OGF to crude oil, natural gas, and/or produced water pipelines; and

6. Implementation of avoidance, mitigation, or compensatory mitigation mechanisms as recommended by CPW.

e. Setback Waiver Limits. No Administrative Waivers will be issued from setback requirements for school facilities, future school facilities, state licensed daycares, proposed OGFs in classified disproportionately impacted communities as defined in C.R.S § 24-4-109, GUDI or Type III Aquifer, classified public water supply segments, surface water intakes, designated outside activity areas, or parks and open spaces.

f. Alternative Compliance. For OGFs that do not meet the above setback requirements. A waiver may be granted by the Board of County Commissioners that complies with the requirements of Sec. 13-02-05, *Oil and Gas Facility Permit*.

5. *Fees and Permits*. All applicable County fees adopted by the County, including postage fees and inspection fees, must be paid at time of application and prior to issuance of a Building Permit, including for all applicable permits required by this DSR.
6. *Oil and Gas Road Impact Fees*.
   a. Operators shall pay oil and gas road impact fees for all proposed oil and gas wells and pads in accordance with the oil and gas road impact fee schedule adopted by the Board of County Commissioners. This fee shall be paid at the time of issuance of an Oil and Gas Facilities Permit or before the issuance of a Notice to Proceed. Oil and gas road impact fees shall be administered by the Impact Fee Administrator in a similar manner to non-oil and gas road impact fees (*see generally* Secs. 4-07-05 and 4-07-06). Any person or entity required to pay the oil and gas road impact fee may elect to submit an independent study and fee calculation to demonstrate that the nature, timing, or location of the proposed oil and gas development is likely to generate impacts costing less to mitigate than the amount of the fee that would be generated by the use of the fee schedule. Any independent fee study for oil and gas development shall generally follow the methodology established in the Adams County Oil & Gas Traffic Impact Study.
      1. The preparation of the independent fee calculation study shall be the sole responsibility of the electing party.
      2. Any person or entity who requests to perform an independent fee calculation study shall pay an application fee for administrative review. An administrative decision related to the independent study may be appealed to the Board of County Commissioners. The appeal shall be filed within 14 days of the Impact Fee Administrator's decision and shall follow the appeal process established for OGF Permit Waivers.
7. *Safety Standards*.
   a. Operator shall implement a safety management plan and maintain a safety management system applicable to all covered processes. Upstream facilities consisting of a standard, repeatable design may be covered with a single safety management plan. The safety management system shall provide for employees and systems to oversee implementation and periodic revision of the plan. The plan shall include the following elements and describe the manner in which each of the following elements will be applied to the covered processes.
      (1) Process safety information. Compilation of written process safety information needed to conduct process hazard analysis. Process safety information shall include information pertaining to hazards of substances and chemicals used by the process, information pertaining to the technology of the process, information pertaining to the equipment used in the process, and information pertaining to the hazards of the substances or chemicals in the process. Documentation that equipment used in the process complies with recognized and generally accepted good engineering practices;
      (2) Operating procedures. Written operating procedures that provide clear instructions for safely conducting activities involved in each covered process consistent with the process safety information, and at least annual review of operating procedures to ensure they reflect current operating practices;

(3) Employee participation. Plan for ensuring employee participation in conduct and development of process hazards analysis and access to process hazards analysis;

(4) Training. Written procedures detailing initial and refresher employee training requirements and documentation of employee training;

(5) Mechanical integrity. Written procedures designed to maintain the on-going integrity of process equipment, ensure employees involved in maintenance are properly trained to ensure the ongoing integrity of process equipment, ensure that process equipment is tested and inspected in accordance with manufacturer specifications, correct deficiencies in equipment in a safe and timely manner, and ensure that new equipment is installed or constructed properly;

(6) Management of change. Written procedures to manage changes to covered processes, technologies, equipment, and procedures;

(7) Pre-startup reviews. Written procedures regarding pre-startup safety reviews;

(8) Compliance audits. Written procedures requiring an audit every five years to verify compliance with the procedures and practices developed under the safety management plan, and procedures requiring correction of any deficiencies identified in audit; operator will make results of audit available to inspector upon request;

(9) Incident investigation. Written procedures requiring investigations of all near-misses and incidents, including root cause analysis of all incidents resulting in fatalities or serious environmental harm, establishing a system to promptly address and resolve the incident, and requiring that all employees and contractors whose job tasks are relevant to the investigation of the near miss or incident review the investigation report.

(10) Hot work. The facility shall ensure that all hot work complies with local and state fire prevention and protection requirements.

(11) Contractors. Written procedures describing how operator screens, oversees, shares process safety and emergency response and preparedness information with contractors;

(12) Process hazard analysis. Process hazard analysis for each covered process;

(13) Incident history. List of all reportable safety events as defined by the ECMC rules and regulations that have occurred at the operator's facilities within the last five years, along with any investigation reports, root cause analysis and operational or process changes that resulted from the investigation of the accident;

(14) Safety culture assessment. Written procedures requiring operator periodically review safety culture, and at a minimum conduct such review after each major accident; and

(15) Inherently safer systems analysis. Require analysis at least every five years, whenever a change is proposed at the facility that could result in an incident, after an incident if recommended by the investigation report or root cause analysis, and during the design of new processes, equipment, or facilities.

(16) Operator shall make available the safety management plan to Adams County at the County’s request. Adams County may retain outside consultants to review safety management plan and may request modifications to safety management

plan based on its review. Operator shall reimburse County for any costs associated with retaining outside consultants.

b. Automatic safety protective systems and surface safety valves. Operator is required to install automated safety system prior to commencement of production. Automated safety system shall include the installation, monitoring and remote control of a surface safety valve or a wellhead master control valve and shall be able to remotely shut in wells on demand. Surface safety valve or a wellhead master control valve shall be equipped to operate remotely via the automated safety protective system. Operator shall test the automated safety system quarterly to ensure functionality and provide results of testing to County within 14 days of such testing.

c. Incident and accident reporting.

(1) Incidents. As soon as practicable, but no more than three days of any reportable safety event or emergency situation as defined by the ECMC, Operator shall submit a report to the County including the following, to the extent available:

(A) Fuel source, location, proximity to residences and other occupied buildings, cause, duration, intensity, volume, specifics, and degree of damage to properties, if any beyond the facility, injuries to persons, emergency response, impacts, if any, to public health, safety, welfare, the environment or wildlife resources, and remedial and preventative measures to be taken within a specified amount of time.

(B) If public health, safety, welfare, the environment, or wildlife resources are threatened, the Operator responsible for the operation causing the threat shall immediately notify the County's Local Government Designee ("LGD") electronically and orally.

(2) County may require Operator to conduct root cause analysis of any incidents or Grade 1 gas leaks, as defined by the ECMC.

(3) Operator shall keep a daily incident log that shall be made available to Adams County upon request. Any spill or release that is reportable to the ECMC shall be simultaneously reported to the County's LGD and applicable fire district.

(4) The Operator shall notify the County's LGD within 24 hours of discovery all spills of one barrel or more that leaves the facility or released outside of berms or secondary containment, all spills of any material or volume on permeable ground at the facility that has a reportable spill quantity under any law, all spills or releases required to be reported by ECMC regulations, and copies of any self-reporting submissions that operator provides to the ECMC.

(5) Notification of the surface owner or the surface owner's tenant, and the water rights holder if applicable, of spills and releases in conformance with ECMC Rules.

(6) The Operator may be required to obtain additional permits from the County, such as an inert fill or access permits, for site remediation as defined in Chapter 4 of the Adams County DSO.

d. Worker training and records.

(1) Workers at an OGF shall have nationally recognized certifications for the work they are performing. This includes, but is not limited to, Hazard Communications

Training, Hazardous Waste Operations Certifications, heavy equipment operator training, and welding certifications per API 1104 and/or ASME Section 9.

(2) All workers at an OGF shall have completed a nationally recognized occupational safety and health training program.

(3) Upon request from the County, the Operator shall supply the County written procedures detailing employee training requirements and training records.

8. *Spill Prevention and Containment*. Oil and gas operations shall be in compliance with ECMC safety and spill and release requirements.

a. Requirements to minimize and prevent liquid spills and releases include the following:

(1) Berms or other secondary containment devices around crude oil, condensate, and produced water storage tanks enclosing an area sufficient to contain and provide secondary containment for 150% of the largest single tank.

(2) Berms or other secondary containment devices shall be sufficiently impervious to contain any spilled or released material.

(3) Inspection of all berms and containment devices at regular intervals, but not less than monthly. Berms shall be inspected within 48 hours of a precipitation event of one inch or more, and Operator shall make necessary repairs as soon as possible, but not more than 72 hours after the event.

(4) Maintain all berms and containment devices to ensure they are in good condition.

(5) A prohibition on the storage or use of ignition sources inside the secondary containment area unless the containment area encloses a fired pressure vessel.

(6) Construction of containment berms using steel rings, designed and installed to prevent leakage and resist degradation from erosion or routine operation.

(7) Construction of secondary containment areas with a synthetic or engineered liner that contains all primary containment vessels and flowlines and is mechanically connected to the steel ring to prevent leakage.

(8) For locations within 500 feet and upgradient of a surface water body, surface water intake, or classified water supply segment, tertiary containment, such as an earthen berm, around oil and gas facilities. Alternatively, the County may require Operator to install retention ponds for stormwater management.

(9) Discharge valves shall be secured, inaccessible to the public and located within the secondary containment area. Open-ended discharge valves shall be placed within the interior of the tank secondary containment.

9. *Anchoring*. Anchoring is required within floodplain or geological hazard areas, as needed to resist flotation, collapse, lateral movement, sinking, or subsidence, and in compliance with Federal Emergency Management Agency (FEMA). All guy line anchors left buried for future use shall be identified by a marker of bright color not less than four feet in height and not greater than one foot east of the guy line anchor.

10. *Chemical Handling and Requirements*.

a. The owner or operator of any installation that is required to prepare or have available a safety data sheet for a hazardous chemical under the Occupational Safety and Health Act of 1970, 29 U.S.C. § 651 et seq., and regulations promulgated under that Act, shall submit both a safety data sheet (SDS) for each such chemical and an annual

emergency and hazardous chemical inventory form to the Local Emergency Planning Commission (LEPC) and the local fire district. A comprehensive and universal listing of all hazardous chemicals stored, handled, and/or used on site must be maintained in an inventory list and must be made available to the County upon request.

b. Drilling and completion chemicals shall be removed at most 60 days after completion.

c. Operator shall provide to the County a copy of the chemical disclosure registry form provided to the ECMC pursuant to the ECMC's "Hydraulic Fracturing Chemical Disclosure" rule prior to conducting hydraulic fracturing.

d. The following toxic, including orally toxic chemicals shall not be added to the hydraulic fracturing fluid:

(1) Benzene
(2) Lead
(3) Mercury
(4) Arsenic
(5) Cadmium
(6) Chromium
(7) Ethylbenzene
(8) Xylene
(9) 1,3,5-trimethylbenzene
(10) 1,4-dioxane
(11) 1-butanol
(12) 2-butoxyethanol
(13) N,N-dimethylformamide
(14) 2-ethylhexanol
(15) 2-mercaptoethanol
(16) Benzene, 1, 1'-oxybis-,tetrapropylene derivatives, sulfonated, sodium salts
(17) Butyl glycidyl ether
(18) Polysorbate 80
(19) Quaternary ammonium compounds, dicoco alkyldimethyl, chlorides
(20) Bis hexamethylene triamine penta methylene phosphonic acid
(21) Diethylenetriamine penta
(22) FD&C blue no 1.
(23) Tetrakis (triethanolaminato) zirconimum (IV) (TTZ)
(24) Emergency Preparedness and Response.

C. **Emergency Preparedness and Response.**

1. *General*. Oil and gas operations shall not cause unreasonable risks of emergency situations such as explosions, fires, gas, oil or water pipeline leaks, ruptures, hydrogen sulfide or other toxic gas or fluid emissions, and hazardous material vehicle accidents or spills.

2. *Emergency preparedness plan*. Each Applicant with an operation in the County is required to implement an emergency preparedness plan for each specific oil and gas facility. The plan shall be referred to the Office of Emergency Management (OEM), and the applicable

fire district, filed with the County and updated on an annual basis or as conditions change (responsible field personnel change, ownership changes, etc.). The emergency preparedness plan shall consist of at least the following information:

a. Name, address, and phone number, including 24-hour emergency numbers for at least two persons located in or near Adams County who are responsible for emergency field operations.

b. An as-built facilities map in a format suitable for input into the County's GIS system depicting the locations and type of above and below ground facilities including sizes, and depths below grade of all, on location, oil and gas gathering and transmission lines and associated equipment, isolation valves, surface operations and their functions, as well as transportation routes to and from exploration and development sites, for emergency response and management purposes. The information concerning pipelines and isolation valves shall be held confidentially by the County's OEM and shall only be disclosed in the event of an emergency. The County shall deny the right of inspection of the as-built facilities maps to the public pursuant to C.R.S. § 24-72-204.

c. Detailed information addressing each potential emergency that may be associated with the operation. This may include any or all the following: explosions, fires, gas, oil or water pipeline leaks or ruptures, hydrogen sulfide or other toxic gas emissions, or hazardous material vehicle accidents or spills. For each potential emergency, threshold / trigger levels shall be pre-identified that govern when an emergency state is declared by the Applicant.

d. The plan shall include a provision that any spill outside of the containment area or which has the potential to leave the facility or to threaten a water body shall be reported to the emergency dispatch and the Director immediately.

e. Detailed information identifying site access, evacuation routes as determined by first responders, impact zones for each emergency scenario identifying impacted facilities, and buildings and health care facilities anticipated to be used.

f. Project-specific emergency preparedness plans are required for any project that involves drilling or penetrating through known zones of hydrogen sulfide gas.

g. The plan shall include a provision that obligates the Applicant to reimburse the appropriate emergency response service providers for costs incurred in connection with any emergency.

h. Detailed information that the Applicant has adequate personnel, supplies, and funding to implement the emergency response plan immediately at all times during construction and operations. Supplies can include adsorption boom, granulated materials, and coordination of foam supplies with the local first responders.

i. The plan shall include provisions that obligate the Applicant to keep onsite and make immediately available to any emergency responders the identification and corresponding Safety Data Sheets (SDS) of all products used, stored, or transported to the site. The SDS sheets shall be provided immediately upon request to the Director, a public safety officer, or a health professional. In cases of spills or other emergency events, the plan shall include provisions establishing a notification process to emergency responders of potential products they may encounter, including the products used in the hydraulic fracturing fluids.

j. The plan shall establish a process for informing surrounding neighbors and schools identified as being within the emergency impact zone of applicable emergency response plan and procedures.

D. **Recycle, Reuse, and Disposal of Fluids.**

1. Operator shall recycle drilling, completion, flowback and produced fluids unless technically infeasible.
2. Exploration & Production (E&P) Waste may be temporarily stored in tanks while awaiting transportation to licensed disposal or recycling sites.
3. Produced Water must be transported by pipelines unless economically or technically infeasible.

E. **Stormwater Controls.**

1. Oil and gas operations shall be in compliance with ECMC rules related to stormwater management regulations and Adams County Stormwater Quality Regulations as contained in the Adams County DSR and other applicable federal, state, and county requirements.
2. The Owner or Operator must provide a stormwater management plan that identifies possible pollutant sources that may contribute pollutants to stormwater, best management practices, sampling procedures (if required), and inspections that, when implemented, will reduce or eliminate any possible water quality impacts.

F. **Well Plugging, and Abandonment, Workover Operations, and Subsequent Operations.**

1. An Operator shall comply with all ECMC rules regarding well abandonment and reclamation, including, but not limited to, removal of all equipment from the location and restoring the surface of the land to its original state. Notice of well plugging and abandonment shall be submitted by the Operator to the Community and Economic Development Department at least seven days prior to the commencement of decommissioning or plugging operations. Notice shall include, at a minimum, the approved Form 6 from ECMC, the surveyed coordinates of the decommissioned well or facility, planned or proposed access route(s), planned duration of activities, planned hours of operation, and a list of equipment to be utilized at the site.
2. The Operator shall submit the ECMC required Notice of Intent to Abandon report to the County concurrently with the ECMC.
3. Concurrently with notice to the County, notice shall be sent by the Operator or contractor to all property owners and current residents within 2,000 feet, or further as determined by the Director of Community and Economic Development, of the OGF, well, or site being decommissioned or plugged and abandoned. Notice shall occur at least three (3) days prior to commencement of decommissioning or plugging operations.
4. Operators shall comply with ECMC requirements for offset well evaluation and submit such a report to the County, upon request.
5. *Marking of plugged and abandoned wells*. The Operator shall permanently mark by a brass plaque set in concrete, similar to a permanent benchmark to monument the plugged and abandoned well's existence and location. Such plaque shall contain all information required by the ECMC and the County.
6. The Operator shall submit any ECMC required Move In – Rig Up (MIRU) Notice for workover or maintenance operations to the County concurrently with the ECMC.

7. The Operator shall submit any ECMC required Move In – Rig Up (MIRU) Notice for workover maintenance operations to the County concurrently with the ECMC.
8. Concurrently with MIRU notice to the County, notice shall be sent by the Operator or contractor to all property owners and current residents within 2,000 feet or further as determined by the Director of Community and Economic Development, of the OGF, well, or site. Notice shall occur at least three (3) days prior to commencement of worker or maintenance operations involving a workover rig.
9. The Operator shall send notice to the County and to all property owners and current residents within 1 mile, or more as determined by the Director of the Community and Economic Development, of the OGF at least 14 days prior but not more than 60 days prior to the commencement of any Subsequent Operations.

G. **Noise.** The Operator shall control noise levels as follows:

1. Prior to operations the Operator shall obtain a baseline noise study that encompasses at least five days, one of those days being a weekend. The Operator may use the baseline noise study submitted with the Development Application to fulfill this requirement, if that noise study is completed within 12 months of any ground disturbing activities.
2. Beginning with construction and up to production, the County requires continuous noise monitoring for all oil and gas facilities located with one-half mile, or greater depending on the location, nature, and size of the facility, of the property line of any existing residences, schools, state licensed daycares or high occupancy building units. The County may require continuous noise monitoring be conducted by an approved third-party consultant based on the location, nature, and size of the facility.
3. The Operator shall conform to ECMC Regulations for noise level.
4. The Operator shall post 24-hour, 7 days per week contact information to deal with all noise complaints arising from Operator's oil and gas facility. Such posting shall be visible from the public rights-of-way.
5. For Oil and Gas Facilities located within 2,000 feet of a land use or zoning designation boundary the Operator shall be required to comply with the lower maximum permissible noise level as defined in ECMC regulations for noise of that corresponding land use or zone district.
    a. For locations within 2,000 feet of a land use or zoning designation boundary, noise must be attenuated to the maximum permissible noise levels for the corresponding land use or zone district, as specified in ECMC rules, at the land use designation boundary as determined by the Director of Community and Economic Development.
6. The Operator shall update the noise modeling study or noise impact analysis if the planned or actual equipment at the Oil and Gas Facility is expected to produce noise levels that will exceed those previously presented to the County or if the noise modeling study or noise impact analysis was completed more than 12 months prior to any ground-disturbing activities.
7. To ensure the Operator controls noise to the allowable levels set forth above, one or more of the following may be required based on the location, nature, and size of the facility:
    a. Acoustically insulated housing or cover enclosing the motor or engine.
    b. Noise management plan identifying hours of maximum noise emissions, type, frequency, and level of noise to be emitted, and proposed mitigation measures.
    c. Obtain all power from utility line power or renewable sources.

d. Utilize the most current equipment to minimize noise impact during drilling, completions, and all phases of operation including the use of "Quiet Fleet" noise mitigation measures for completions.

e. Sound walls around well drilling and completion activities to mitigate noise impacts.

f. Restrictions on the unloading of pipe or other tubular goods between 6:00 p.m. and 8:00 a.m.

g. Any abatement measures required by ECMC for high-density areas, if applicable.

h. The use of electric drill rigs.

i. Tier 4 or better diesel engines, diesel and natural gas co-fired Tier 2 or Tier 3 engines, natural gas fired spark ignition engines, or electric line power for hydraulic fracturing pumps.

j. Use of quiet design mufflers (also referred to as hospital grade or dual dissipative) or equivalent.

k. The use of liquefied natural gas dual fuel hydraulic fracturing pumps.

8. Professional Consultant(s) Required: The baseline noise study and noise modeling shall be prepared by one or more professionals deemed professionally qualified by the Community and Economic Development Department. Each professional shall be deemed qualified by the Department of Community and Economic Development based on education, professional certifications, experience in the field, and their understanding of the Adams County oil and gas regulations and ECMC rules pertaining to noise. The County shall maintain a list of qualified professional consultants. The applicant for an Oil and Gas Facility shall select one or more individuals from the County's list of qualified consultants to prepare the required baseline noise studies and noise modeling reports.

9. Professional qualifications for review and consideration may be submitted to the County by the sound professional, the applicant, or the Operator.

H. **Air Emissions.** Air contaminant emission sources shall comply with the permit and control provisions of the state air quality control program (C.R.S. § 25-7-101 *et seq*.) and the rules and regulations promulgated by the State Air Quality Control Commission. The Operator shall employ the following control measures and operating procedures to avoid or minimize all emissions into the atmosphere.

1. *Air Quality Action Days.* Operator shall respond to air quality action day advisories posted by the CDPHE for the front range area by implementing suggested air emission reduction measures as feasible. Emissions reduction measures shall be implemented for the duration of an air quality action day advisory and may include measures such as:

a. Minimize vehicle and engine idling.

b. Reduce truck traffic and worker traffic.

c. Delay vehicle refueling.

d. Suspend or delay use of fossil fuel powered ancillary equipment.

e. Postpone construction or maintenance activities, if feasible.

f. Postpone well maintenance and liquids unloading activities that would result in emission to the atmosphere.

2. Leak Detection and Repair (LDAR). Operator shall develop and maintain an LDAR program using modern leak detection technologies for equipment used at the facility that complies

with applicable Air Quality Control Commission (AQCC) Regulations and the following requirements:

a. Inspections must occur at least semi-annually; more frequent inspections may be required based on the nature, location, and size of the facility.

b. Any leaks discovered by Operator, including any verified leaks that are reported to Operator by a member of the public, shall be reported to the County no later than 24 hours after discovery. The Operator shall maintain a weekly log of all reported leaks and shall make that log available upon request from the County.

c. Operator shall repair leaks in accordance with AQCC Regulation 7 LDAR repair provisions such that repair of an identified leak is initiated no later than 5 working days from the date of discovery and completed within 30 days. If the leak presents an imminent hazard to persons or property, the Operator may not operate the affected component, equipment or pipeline segment until the Operator has corrected the problem and notified the County of the successful repair. In the event of leaks that do not pose an imminent hazard to persons or property, if more than 30 days repair time is needed after a leak is discovered, Operator shall contact the County and provide an explanation of why more time is required.

d. Plan shall include detailed recordkeeping of the inspections for leaking components.

e. At least once per year, the Operator shall notify the County five business days prior to an LDAR inspection of its facilities to provide the County the opportunity to observe the inspection.

3. Well Completions and Emissions Control.

a. Operators shall utilize EPA Reduced Emission Completions for oil wells and gas wells.

b. Operators shall utilize closed loop, pitless drilling, completions systems without permanent on-site storage tanks for containment and/or recycling of all drilling, completion, and flowback fluids. Any emissions must be routed to and controlled by a flare or combustor operated with at least a 98% destruction removal efficiency.

4. Combustion Devices.

a. For any flares or combustion devices used, manufacturer test or other data must be maintained and demonstrate that the device has a destruction removal efficiency of 98 percent for hydrocarbons.

b. To the extent used, all flares, thermal oxidizers, or combustion devices shall be designed and operated as follows:

1. The flare and or combustor shall be fired with natural gas.

2. The flare and or combustor shall be designed and operated in a manner that will ensure no visible emissions during normal operation. Visible emissions are defined as the observation of smoke for any period or periods of duration greater than or equal to one minute in any fifteen minute period during normal operation, pursuant to EPA Method 22. Visible emissions do not include radiant energy or water vapor.

3. The flare and or combustor shall always be operated with a flame present when emissions may be vented to it.

4. All combustion devices shall be equipped with an operating auto-igniter.

5. If using a pilot flame ignition system, the presence of a pilot flame shall be monitored using a thermocouple or other equivalent device to detect the presence of a flame. A pilot flame shall be maintained at all times in the flare's pilot light burner. A telemetry system shall be in place to monitor pilot flame and shall activate a visible and audible alarm in the case that the pilot goes out.
6. If using an electric arc ignition system, the arcing of the electric arc ignition system shall pulse continually, and a device shall be installed and used to continuously monitor the electric arc ignition system.

5. Well Liquids Unloading.
   a. Best management practices during liquids unloading activities are required including the installation of artificial lift, automated plunger lifts and at least 90% emissions reductions when utilizing combustion to control any venting.
   b. If manual unloading is permitted, Operator shall remain onsite.
6. General Air Quality Protection Measures.
   a. Operators should work to limit truck traffic to and from the site.
   b. Hydrocarbon emissions control of at least 98% or better for crude oil, condensate, and produced water tanks with uncontrolled actual emissions of Volatile Organic Compounds (VOCs) greater than two tons per year (TPY) VOCs.
   c. No venting other than if necessary for safety or during an emergency or as otherwise allowable in ECMC rules.
   d. Operators should consolidate product treatment and storage facilities within a facility.
   e. Operators should centralize compression equipment within a facility.
7. Site-Specific Air Quality Protection Measures. To eliminate or minimize air emissions, the County may require any or all of the following depending on the size, location and nature of the facility:
   a. An air monitoring plan that describes how the operator will conduct baseline monitoring within 500 feet of a proposed facility prior to construction and conduct monitoring during the drilling, completion, and production phases of development. The plan may include monitoring for all potential emissions, including but not limited to, methane, VOCs, Hazardous Air Pollutants (HAPs), Oxides of Nitrogen (NOx), Particulate Matter (PM), and Fine Particulate Matter (PM 2.5). Operator shall pay for the baseline and ongoing monitoring. Baseline and continuous monitoring shall be done by a consultant approved of by the County. Any continuous monitoring system shall be able to alert the operator of increases in monitored air pollutant concentrations.
   b. Implementation of tankless production techniques.
   c. The use of zero-emission dehydrators.
   d. Use of a pressure-suitable separator and vapor recovery unit (VRU) where applicable.
   e. Pipeline infrastructure for produced water, natural gas, crude oil, and condensate constructed and placed into service prior to the start of any fluid flow from any wellbore.
   f. The use of no-bleed continuous and intermittent pneumatic devices. This requirement can be met by replacing natural gas with electricity or instrument air or routing the discharge emissions to a closed loop-system or process.

g. Automated tank gauging.

h. Flaring shall be eliminated other than during emergencies or upset conditions; all flaring shall be reported to the county.

I. **Odors.**

1. Operator shall implement and maintain, an odor mitigation plan that demonstrates how the Operator will minimize odors from its operations and comply with Colorado Department of Public Health and Environment, Air Quality Control Commission, Regulation No. 2 Odor Emissions, 5 CCR 1001-4, Regulation No. 3, 5 CCR 1001-5, and Regulation No. 7, 5 CCR 1001-9 sections VII and VIII. The plan shall also provide a plan for timely responding to odor complaints from the community, and for identifying and implementing additional odor control measures to control odors emanating from the Oil and Gas Facility.
2. Operator shall notify the County's LGD no later than 24 hours after receiving odor complaint.
3. Operator shall prevent odors from oil and gas facilities from affecting the health and welfare of the public by proactively addressing and, to the fullest extent, resolving complaints filed by members of the community, in coordination with County staff.
4. In response to an odor-related complaint, the County may require the Operator to provide a complete description of all activities occurring at the Oil and Facility and measures or actions taken to reduce odors to the County's LGD within 24 hours upon request.
5. The Director of Community and Economic Development may require an Operator to collect and analyze a speciated air sample to measure for volatile organic compounds or hazardous air pollutants in response to an odor-related complaint. Speciated air sample collection shall be done utilizing a third-party vendor approved by the County.
6. To ensure compliance with the odor mitigation plan, the County may require the Operator to implement any of the following measures depending on the size, location, and nature of the facility:
   a. Adding an odorant that is not a masking agent or adding chillers to the mud systems.
   b. Using filtration systems or additives to minimize odors from drilling and fracturing fluids except that operator shall not mask odors by using masking fragrances.
   c. Enclose shale shaker to contain fumes from exposed mud, where safe and feasible.
   d. Wipe down drill pipe each time drilling operation "trips" out of hole.
   e. Increasing additive concentration during peak hours provided additive does not create a separate odor. Additive must be used per manufacturer's recommended level.
   f. Requiring the use of, at a minimum, low odor Category III drilling fluid.

J. **Dust.**

1. Operator shall minimize dust pollution associated with onsite activities and traffic.
2. No untreated produced water or other process fluids shall be used for dust suppression.
3. The Operator shall avoid creating dust or dust suppression activities within 300 feet of the ordinary high-water mark of any water body unless the dust suppressant is water.
4. Safety Data Sheets (SDS) for any chemical-based dust suppressant shall be submitted to the County prior to use.
5. To ensure the Operator controls dust, one or more of the following may be required based on the location, nature, and size of the facility:

a. Ceasing all earthwork activities when wind speeds equal or exceed 30 MPH at any time measured by onsite anemometer;

b. The use of reduced speed restrictions,

c. Approved dust suppression activities,

d. Ceasing ongoing truck traffic causing fugitive dust, until Operator has minimized dust to acceptable levels.

K. **Visual Aesthetics.**

1. All permanent equipment on an Oil and Gas Facility, regardless of construction date, which are observable from any public highway, road, or publicly maintained trail will be painted in uniform, non-contrasting, nonreflective color tones (similar to the Munsell Soil Color Coding System), and with colors matched to but slightly darker than the surrounding landscape. Fencing shall be required around all well site equipment, including, but not limited to, storage tanks, well heads, and meters if the well site is visible from a subdivision west of Imboden Road. Such fencing shall screen equipment, provide safety precautions, and be compatible with the surrounding environment. Should fencing apply to a well site, the design and construction of such fencing shall be approved by the Community and Economic Development Department prior to the construction of any site. If a chain link fence is required to achieve safety requirements set by the ECMC, then landscaping and other screening mechanisms shall be required that comply with this DSR and the Operator's safety requirements. Operator shall be responsible for obtaining consent by surface owner allowing any required fencing.

2. Required sound walls shall comply with a color scheme approved by the County, blending with natural background.

3. Operator shall be required to provide maintenance funding through bonding to ensure funds are available for upkeep of any planted vegetation throughout the duration of operations, including production. Weed control is required at the facility and along access roads until final reclamation and abandonment. All landscaping shall be in compliance with County requirements and in compliance with the safety requirements of the Operator. Existing vegetation shall be minimally impacted. Motorized equipment shall be restricted to the well sites and access roads to the well sites. Operator is responsible for obtaining consent by surface owner allowing landscaping as well as automatic irrigation for landscaping in urban mitigation areas and/or parks/recreation areas. All plant materials shall be kept in a healthy growing condition at all times.

4. *Site access and security*. Site shall be properly secured during all phases of operations, including, but not limited to, security fencing or barriers to prevent unauthorized access to site. Site shall be properly secured prior to the start of drilling.

L. **Lighting.** The Operator shall minimize light escaping the facility as follows:

1. All lighting shall be directed downward and inward and use fully shielding bulbs to prevent light emissions above a horizontal plane drawn from the bottom of the fixture.

2. Operator shall conform to ECMC Regulations for lighting standards.

3. Operator shall provide sufficient on-site lighting to ensure the safety of personnel on or near the site.

4. If the facility has a noise barrier (sound walls, etc.), the Operator shall install facility lighting beneath the noise barrier, except for drilling rig lights.

5. To ensure the Operator controls light escaping from the facility, one or more of the following may be required based on the location, nature, and size of the facility:
   a. The use of timers or motion sensor lighting;
   b. The use of full cut-off lighting; and
   c. The use of reduced light intensity colors and low-glare or no-glare lighting.

M. **Community Outreach.**

1. The Operator shall hold quarterly neighborhood meetings the first quarter following initial permit approval by the County, through the completion of all preproduction operations, or longer as determined by the Director of Community and Economic Development for all oil and gas facilities located within one mile of any existing residences, platted residential development, high occupancy building units, school facilities, or state licensed daycare centers. The Operator shall hold additional quarterly neighborhood meetings for each subsequent return to the Oil and Gas Facility for any drilling or completion operations if there have been no neighborhood meetings held for a period of six consecutive months or more. Notice for quarterly neighborhood meetings shall be sent by the Operator to all property owners, current residents, or school facility or childcare center administrators within one mile at a minimum, or greater, as determined by the Director of Community and Economic Development, of the facility. Notice for the quarterly neighborhood meetings shall occur at least 14 days prior to the meeting.
2. At the quarterly neighborhood meetings, the Operator shall provide an update on the status of any pending permits with the County, state or federal agencies associated with facility, an overview of all planned or ongoing operations at the Oil and Gas Facility and allow those in attendance to ask questions and provide input related to the facility.
3. The location, timing, and format of the quarterly neighborhood meetings must be approved in advance by the County.
4. The Operator shall provide a recording or summary of the neighborhood meeting, which includes, at a minimum, a list of attendees and their contact information, if provided, format of the meeting, an overview of comments or questions received, and the Operator's responses to the County within seven days of the meeting.
5. The County may require one or more of the following based on the location, nature, and size of the facility:
   a. The Operator to provide written and digital materials in languages other than English;
   b. The Operator to provide interpretation services at neighborhood meetings and;
   c. The Operator to hold additional neighborhood meetings to accommodate resident or property owner input.
6. The Operator shall provide notice to the County and all property owners, current residents, or school facility or childcare center administrators within one mile, or greater, as determined by the Director of the Community and Economic Development Department, of the facility at least 14 days prior but not more than 60 days prior, to the commencement of all facility construction, drilling, and completions operations.

N. **Cumulative Impacts.**

1. Operators shall evaluate and address the potential cumulative impacts from the Oil and Gas Facility, and all reasonably foreseeable development associated with other oil and gas activity and heavy industrial operations within one mile, at a minimum, of the Oil and Gas

Facility. Operators shall minimize, avoid, mitigate, and offset cumulative impacts from oil and gas operations to the extent technically feasible. This may be achieved through a suite of best management practices, engineering, or operations controls, and/or compensatory measures.

2. The evaluation and review of cumulative impacts may require the submission of quantitative and/or qualitative analysis and data for the following impact areas, at a minimum:
   a. Air Quality;
   b. Public Health and welfare, including nuisance-type impacts;
   c. Traffic;
   d. Water resources; and
   e. Wildlife, Ecosystems, and Soil.
3. The Operator shall follow all ECMC regulations and standards that address cumulative impacts related to noise, odor, dust, and light.
4. An Operator may submit substantially equivalent plans, data, or analyses as required in ECMC rules for addressing and evaluating cumulative impacts.

O. **Transportation and Traffic.**

1. General. Oil and gas operations shall minimize impacts to the physical infrastructure of the County transportation system.
2. Mud Tracking. Operator shall take all practical measures to prevent mud and dirt tracking onto public right of ways and shall remove tracked mud and dirt within a reasonable time not to exceed four hours.
3. Private Roads. The Operator shall construct (unless already constructed) and maintain an access road designed to meet County and fire district standards and support an imposed load of 75,000 pounds that will accommodate emergency response vehicles such as, but not limited to, law enforcement, emergency command vehicles (cars/SUVs), ambulances, hazardous materials response vehicles, water tenders, and fire apparatus during construction and operation of new tank batteries, new drilling activity and reworks or recompletions of existing wells, unless a local fire department or fire district agrees to a different or lesser standard or waived by the County. With respect to new roads to new tank batteries, the Operator agrees to construct access roads at least 20 feet wide (unless waived by the local fire district and the County's Public Works Department) with a Class 6 road base, or as approved by the local fire district, at least nine inches thick. Best efforts shall be made to improve inadequate access to existing tank battery sites identified by the fire district or County, based on service calls and demonstrated problems of accessing the site. Operator and County agree that spot inspections of access roads may be done by the County and/or appropriate emergency response agency, at such County or agency's sole risk and expense, to ensure that emergency access in accordance with this Section is maintained. Operator is required to maintain and repair any damaged roads within 10 business days of County notice. Operator shall assure that temporary access roads are reclaimed and reseeded with an appropriate native seed mixture within 60 days of discontinued use. Erosion shall be controlled in accordance with the Erosion and Sediment Control Plan while the roads are in use.

4. Public Roads. Operator shall utilize existing roads and access points where practical and apply for and obtain access permits for its oil and gas facilities from the County's Public Works Department.
    a. Requirements for the access permit may include the following:
        1. A location that provides a safe entrance and exit that accommodates the type and volume of traffic using the access and reduces impact to residents on local roadways;
        2. Haul route and traffic data;
        3. Pre and post inspection of roadways used by the Operator;
        4. Collateral or bond to ensure that road damage caused by the Operator is repaired;
        5. Dust control (material used for dust control must be pre-approved by the County);
        6. Road maintenance agreement during drilling phase; and
        7. Payment of all applicable fees.
    b. Operator shall exercise reasonable efforts to minimize heavy truck traffic on local roads within residential neighborhoods between the hours of 9:00 p.m. and 6:00 a.m.
    c. Operator shall work with and show written evidence that the applicable school district(s) has been consulted to minimize traffic conflicts with school buses when schools are in session.
    d. Operator shall obtain any legally valid and applicable oversize and/or overweight moving permit from the County's Public Works Department for all vehicles that exceed legal vehicle dimensions or weights as specified by the Colorado Department of Transportation and this DSR.
5. All applicable transportation fees shall be paid prior to issuance of a notice to proceed, including without limitation:
    a. Access permit fees;
    b. Oversize/overweight permit fees;
    c. Right of way construction permit fees; and
    d. Road impact fees.

P. **Water and Wildlife Protection.**

1. Water Bodies and Water Quality.
    a. *General*. Oil and gas operations shall not cause adverse impacts to surface or ground waters within Adams County. Operators shall comply with all Adams County rules, ECMC Regulations, and applicable water quality standards set by the Colorado Department of Public Health and Environment and Colorado Water Quality Control Commission.
    b. The owner or Operator shall provide the County with the information it provides to all applicable state agencies, ensuring compliance with all applicable water quality protection standards.
    c. The owner or Operator shall provide all water source test results to the County and maintain records of such results.

d. The owner or Operator shall make available to the County upon approval by the ECMC, its plans concerning downhole construction details and installation practices, including casing and cementing design selected to protect surface waters and source water aquifers from contamination.

e. Wastewater Injection Wells used for produced water disposal are prohibited in Adams County.

f. *Floodplain*. Any disturbance within a 100-year floodplain will be allowed if the Operator has obtained a Floodplain Use Permit from the County and has complied with all the County's legally adopted floodplain and engineering regulations. A "100-year floodplain" shall be, for purposes of this Section, a "Special Flood Hazard Area" as identified and mapped by the Federal Emergency Management Agency's National Flood Insurance Program and adopted by the County.

2. Water source sampling and testing. Using records of the Colorado Division of Water Resources, the applicant shall be required to identify and offer to sample all available sources of drinking water located within one-half mile of the proposed facility. All sampling must be conducted by third-party consultant approved of by the County. Sampling requirements include:

a. Initial baseline samples and subsequent monitoring samples.

b. Initial collection and testing of baseline samples from available water sources shall occur within twelve months prior to the commencement of drilling a well, or within twelve months prior to the re-stimulation of an existing well for which no samples were collected and tested during the previous twelve months.

c. Post-stimulation samples of available water sources shall be collected and tested pursuant to the following time frame:

1. One sample within six months after completion;
2. One sample between 12 and 18 months after completion;
3. One sample between 60 and 72 months after completion; and
4. For multi-well pads, collection shall occur annually during active drilling and completion.

d. Operator shall collect a sample from at least one up-gradient and two down-gradient drinking water sources within a one-half mile radius of the facility. If no such water sources are available, operator shall collect samples from additional water sources within a radius of up to one mile from the facility until samples from a total of at least one up-gradient and two down-gradient water sources are collected. Operators should give priority to the selection of water sources closest to the facility.

e. An Operator may rely on existing groundwater sampling data collected from any water source within the radii described above, provided the data was collected within the 12 months preceding the commencement of drilling the well in compliance with applicable ECMC sampling methods and practices, the data includes measurement of all of the constituents measured in Table 3-09-06-1, *Water Quality Analytes*, and there has been no significant oil and gas activity within a one-mile radius in the time period between the original sampling and the commencement of drilling the well.

f. The Operator shall make reasonable efforts to obtain the consent of the owner of the water source. If the Operator is unable to locate and obtain permission from the surface owner of the water source, the Operator shall advise the Director of

Community and Economic Development that the applicant could not obtain access to the water source from the surface owner.

g. Testing for the analytes listed in Table 3-09-06-1, *Water Quality Analytes*, and subsequent testing as necessary or appropriate.

h. Standard industry procedures in collecting samples, consistent with the ECMC model Sampling and Analysis Plan, shall be followed.

i. Reporting the location of the water source using a GPS with sub-meter resolution.

j. Field observations. Reporting on damaged or unsanitary well conditions, adjacent potential pollution sources, odor, water color, sediment, bubbles, and effervescence.

k. *Test Results*. Provide copies of all test results described above to the County, the ECMC, and the water source owners within three months after collecting the samples.

l. Subsequent Sampling. If sampling shows water contamination, additional measures may be required including the following:

1. If free gas or a dissolved methane concentration level greater than one milligram per liter (mg/l) is detected in a water source, determination of the gas type using gas compositional analysis and stable isotope analysis of the methane (carbon and hydrogen).

2. If the test results indicate thermogenic or a mixture of thermogenic and biogenic gas, an action plan to determine the source of the gas.

3. Immediate notification to the County, the ECMC, and the owner of the water source if the methane concentration increases by more than five mg/l between sampling periods, or increases to more than ten mg/l.

4. Immediate notification to the County, the ECMC and the owner of the water source if BTEX and/or TPH are detected as a result of testing. Such detections may result in required subsequent sampling for additional analytes.

5. Further water source sampling in response to complaints from water source owners.

6. Timely production and distribution of test results, well location, and analytical data in electronic deliverable format to the Director of Community and Economic Development, the ECMC, and the water source owners.

3. Wildlife Resources.

a. *General*. Operators shall avoid, minimize, and mitigate adverse impacts to wildlife resources. Wildlife Resources, as used in these regulations shall mean the ECMC definition.

b. Operators shall comply with all ECMC Regulations for wildlife impacts.

c. Operators shall actively engage Colorado Parks and Wildlife, where applicable, for the sake of avoiding, minimizing, and mitigating wildlife impacts.

d. Operators shall share all findings, recommendations, and reports resulting from any consultation with Colorado Parks and Wildlife with the County within seven days.

Q. **Flammable Material.** The area 25 feet around anything flammable shall be kept free of dry grass or weeds, conform to ECMC safety standards and applicable fire code. The operator's conceptual review application and application shall be reviewed by the serving fire district.

| Table 3-09-06-1, *Water Quality Analytes* | |
|---|---|
| Ph | Specific conductance |
| Total dissolved and suspended solids (TDS and TSS) | Alkalinity (total, bicarbonate, and carbondate as CACO3 |
| Major anions (bromide, chloride, flouride, sulfate, nitrate, and nitrate as N, and phosphorus) | Major cations (calcium, iron, magnesium, mangaese, potassium, and sodium) |
| Other elements (barium, boron, selenium, and strontium) | Naphthalene |
| Total petroleum hydrocarbons (TPH) as total volatile hydrocarbons (C10 to C36) | BTEX compounds (benzene, toluene, ethylbenzene, and xylenes) |
| Radium | |

1. *Removal of Debris*. All excess debris shall be removed during construction activities. Site shall remain free of debris and excess materials at all times during operations. Burning of debris and other materials is strictly prohibited at all times.
2. *Removal of Equipment*. No permanent storage of equipment. When no longer used, equipment shall be removed within 30 days unless a Temporary Use Permit for said storage is obtained from the County.
3. *Maintenance of Machinery*. Routine field maintenance of equipment involving hazardous materials within 300 feet of any water body is prohibited. All fueling shall occur over impervious material and shall not be done during storm events. Operator shall operate and maintain all equipment in accordance with manufacturer specifications. Regular maintenance checks are required for all equipment.
4. *Burning*. No open burning of trash, debris, or other flammable materials.
5. *Chains*. Traction chains shall be removed from heavy equipment on public streets.
6. *Off-Location Flow Lines and Crude Oil Transfer Lines*.
    a. Off-location flow lines and crude oil transfer lines regulated by the ECMC shall be sited to avoid areas containing existing or proposed residential, commercial, and industrial buildings; places of public assembly; surface water bodies; and designated open space.
    b. Without compromising pipeline integrity and safety, applicant shall share existing pipeline rights-of-way and consolidate new corridors for pipeline rights-of-way to minimize impact.
    c. Setbacks from residential, commercial, or industrial buildings, places of public assembly, the high-water mark of any surface water body and sensitive environmental features will be determined on a case-by-case basis in consideration of the size and type of pipeline proposed and features of the proposed site.
    d. Operator must conduct leak detection inspections or pressure testing in order to identify flowline leaks or integrity issues in accordance with ECMC Regulations.
    e. Operator must make available to County upon request all records required to be kept by ECMC
    f. Buried pipelines shall have a minimum of four feet cover.
7. *Temporary Surface Water Lines*.

a. Operator shall use temporary surface water lines, unless infeasible.

b. Operator shall not use County drainage culverts or ditches for laying and operation of temporary water lines.

c. Operator may use County Road Right-of-Way, for the laying and operation of temporary water lines on the surface and in accordance with Adams County Standards and Regulations only after the approval of all applicable County permits.

d. Operator will bury temporary water lines at existing driveway and gravel road crossings, if available, with County approval.

8. *Financial Assurance*.

a. Operators shall be required to maintain environmental liability insurance to cover gradual pollution events.

b. Operator shall be required to file and maintain financial assurance as determined on a site-specific basis prior to commencing operations, and thereafter during the active life of the facility, the operator shall post and maintain a performance bond or other approved financial instrument with Adams County. Should any corrective actions be required by the County in order to protect the health, safety, welfare, and the environment which result from failure of the operator to follow any regulations, standards, or conditions of approval, the performance bond shall be forfeited in an amount sufficient to defray the expense of said actions, including staff time expended by Adams County involved in such corrective actions.

9. *Mapping Information*. Operator shall agree to provide coordinates and/or exact location of well sites to the County's GIS Department within 48 hours of final completion of a well site in a format acceptable to the County. Any subsequent changes to a well site location shall also be provided to the County within 48 hours of such changes.

U. **Inspection and Enforcement**.

a. *Inspection*. In recognition of the potential impacts associated with oil and gas facilities, all wells and accessory equipment and structures may be examined by the inspectors of the County at reasonable times to determine compliance with applicable provisions of this Chapter, the International Fire Code, the International Building Code, and all other applicable standards in this DSR. The County reserves the right in its discretion to make spot inspections or to inspect without notice in the event of an issue potentially involving an immediate risk to public health, safety, welfare, the environment, or wildlife, or damage to the property of another. For the purpose of implementing and enforcing the provisions of this chapter, the inspector and other authorized personnel have the right to enter upon private property. The County may use the information collected on the inspections to enforce the requirements of this chapter. The County may also report this information to appropriate state and federal officials, including but not limited to information regarding alleged violations of state and federal rules. Operator shall make available to County, upon request, all records required to be maintained by these regulations or to show compliance with these regulations, and the rules and regulations promulgated by the ECMC and the CDPHE, including permits, Air Pollutant Emission Notices (APENs) and other documents required to be maintained by the ECMC, CDPHE and these regulations. The County shall charge a yearly inspection fee for all Oil and Gas Facilities in the County. Fees for Oil and Gas Facility inspections shall be assessed according to the County's adopted fee schedule.

b. *State Notification of Violations.* Adams County will cooperate fully with the State of Colorado by notifying the Oil and Gas Conservation Commission of any and all violations of the Colorado Laws and Regulations.

c. *Delinquent Taxes.* One condition of any oil and gas well Building Permit is that all taxes as provided by statute, shall be paid.

d. *Penalties and Fines.* The County has authority under C.R.S. § 29-20-104 to impose fines for leaks, spills, and emissions. Violations of this Section are capped at the amount specified in the State Air Pollution Control Act, C.R.S. § 25-7-128. A fine schedule for violations of this Section is on file in the Department of Community and Economic Development.

j. *County Violations*. In addition to the fines outlined above, the County has authority to cite violations under its control pursuant to Chapter 15.

k. *Legal Nonconforming*. Adams County recognizes that there are oil and gas operations that were legally established prior to the effective date of these regulations that may or may not conform to these regulations. These operations may continue, provided the facility is not substantially modified.

l. *Hearing, Enforcement, and Appeal Procedures for Air Quality Violations*.

(1) *Hearings.*

(A) Operators of OGFs may request a hearing in front of the BOCC to contest any alleged violations of the provisions contained in the Air Quality section of this DSR or to contest permitting decisions involving the provisions contained in the Air Quality section of this DSR. The BOCC shall grant request for a hearing within 15 days of receipt of such request.

(B) Hearing date will be set within 90 days.

(C) Notice will be printed in a newspaper of general circulation in the area where the OGF is located.

(D) Director of Community and Economic Development shall appear as a party in all hearings adjudicating decisions of the Community and Economic Development Department.

(E) The Director of Community and Economic Development shall have the same right to judicial review as other parties.

(F) All testimony shall be under oath or affirmation.

(G) A full and complete record of proceedings and testimony presented shall be taken and filed.

(H) Information related to secret processes or methods of manufacture or production must be kept confidential. The person seeking to keep information confidential has the burden of proof. Except as provided in the Clean Air Act, information claimed to be related to secret processes or methods of manufacture or production which is emissions data may not be withheld as confidential; except such information may be submitted under a claim of confidentiality and the County shall not disclose such information unless required under the Clean Air Act.

(I) Any person who is affected and not adequately represented shall have an opportunity to be a party upon prior application to and approval by the BOCC in

its discretion; such party shall have the right to be heard and cross-examine witnesses.

(J) The Board of County Commissioners shall make a decision within 30 days of completion of the hearing.

(K) Burden of proof is on Director of Community and Economic Development with respect to any hearings involving alleged violations.

(L) Where the Operator requests a hearing before the BOCC on a Permit involving provisions contained in the Air Quality section of this DSR, the permit applicant bears burden of proof with respect to justification therefor and information, data, and analysis supportive thereof or required with respect to the application.

(2) *Judicial Review.*

(A) Final orders or determinations of the Community and Economic Development Director or the BOCC are subject to judicial review

(B) Any party may move the court to remand the case to the Director of Community and Economic Development or the BOCC in the interests of justice for purpose of adducing additional evidence and findings; such party shall show reasonable grounds for failure to adduce such evidence previously.

(C) Any proceeding for judicial review shall be filed in the district court in which the OGF is located.

(3) *Injunctions.*

(A) If any person fails to comply with a final order of the Director of Community and Economic Development or the BOCC that is not subject to a pending administrative or judicial review, or in the event of a violation of an emission control regulation, or term or condition of a permit, the Director of Community and Economic Development or the BOCC may request the District Attorney for the district court in which the air pollution source is located to bring suit for an injunction

(B) In proceedings brought to enforce an order of the Director of Community and Economic Development or BOCC, a temporary restraining order or preliminary injunction, if sought, shall not issue if there is probable cause to believe granting such order or injunction will cause serious harm to the affected person or any other person and; (1) that the alleged violation or activity will not continue or be repeated; or (2) the granting of such temporary restraining order or preliminary injunction would be without sufficient corresponding public benefit.

(4) *Coordination with the Air Quality Control Commission.* Pursuant to C.R.S. § 25-7-128(4), upon the issuance of any enforcement order or granting of any permit, the County shall transmit to the AQCC a copy of the order or permit. Pursuant to C.R.S. § 25-7-128(6), the County shall confer and coordinate its activities regarding efforts to control or abate air pollution consistent with that provision.

U. **Residential Construction Standards.**

1. *Residential Construction Standards*. The Director of Community and Economic Development may impose any one or more of the following standards on a specific site basis as a condition of subdivision approval and/or Building Permits on platted or unplatted land:

a. The oil and gas well location shall include a 250 foot buffer in the form of an easement on the Final Plat. No structures may be constructed within the buffer area.

b. Access to the oil and gas well location shall be provided by a public street or recorded easement for private access.

c. The Final Plat shall include notice to prospective buyers of the location of the oil and gas well and associated easements.

d. All oil and gas well flow lines and/or easements shall be graphically depicted on the Final Plat.

e. All surface and subsurface agreements shall be noted on the Final Plat by the recorded book and page number.

f. Pursuant to Sec. 3-04-01, *General*, where a new home and/or other permanent structure with plumbing is constructed within 300 feet of an existing oil and gas well, the property owner shall submit a signed waiver acknowledging the existence of the facility.

2. *Plugged and Abandoned, and Former Oil and Gas Production Sites.* This Section is enacted to protect and promote the health, safety, morals, convenience, order, prosperity, or general welfare of the present and future residents of the County. These regulations are based upon the land use authority of the County.

a. Prior to submittal of a final plat or site-specific development plan, each plugged and abandoned well shall be located and surveyed. The plugged and abandoned well shall be permanently marked by a brass plaque set in concrete similar to a permanent benchmark to monument its existence and location. Such plaque shall contain all information required on a dry hole marker by the ECMC and the County.

b. As a condition of review of any final plat or site-specific development plan which contains a plugged and abandoned well or former oil and gas production site or is within 200 feet of such well or site, the owner shall submit a location diagram of the location of the well.

c. On every final plat or site-specific development plan which contains a plugged and abandoned well, there shall be dedicated a well maintenance and workover setback depicted on the plat, the dimensions of which shall be not less than 50 feet in width and 100 feet in length. No structures shall be located within this setback. The plugged and abandoned well shall be located in the center of the setback. There shall be public access for ingress and egress to the setback of a width of not less than 20 feet.

d. Every final plat and site-specific development plan which contains a plugged and abandoned well or a site-specific development that includes a property that is less than 200 feet from a plugged and abandon well, shall include the following notation: "The owner shall disclose to prospective purchasers of lots within a radius of 200 feet of the plugged and abandoned well of:

(1) The location of the plugged and abandoned well;

(2) The location of the maintenance and workover setback; and

(3) The purpose for the well maintenance and workover setback."

e. As a condition of Building Permit review, no dwelling shall be constructed within 50 feet of a plugged and abandoned well.

f. Prior to issuance of a grading permit within a development containing a known reserve pit site, the reserve pit site shall be tested for expansive soils. Reserve pits containing expansive soils in locations proposed for buildings shall be subject to the provisions of the Building Codes.

g. No utility lines shall be installed within ten feet of any plugged and abandoned well.

# 3-09-08 Outdoor Storage

A. **Districts Allowed.** Outdoor storage as a principal use shall be permitted in the following zone districts:

1. I-2, General Industrial; and
2. I-3: Heavy Industrial.

B. **Exemptions.** The following types of outdoor storage are accessory to a principal use and shall be considered accessory outdoor storage (Sec. 3-13-05.B).

1. *Commercial Vehicles.* Commercial vehicles or equipment related to a permitted business on the site.
2. *Truck Trailers.* Truck trailers that are attached to an operable truck tractor and directly related to the business on-site.
3. *Vehicles for Sale, Lease, or Under Repair.* Finished recreational vehicles, automobiles, portable buildings, boats, trailers, manufactured homes, and other similar vehicles or equipment sold or leased by a permitted use on the site and vehicles being repaired on site.

C. **Uses with Specific Standards (and So Not Regulated as Outdoor Storage).**

1. *Landscape Storage Yard.* Retail planting stock, landscape stone, and similar landscape materials, associated with a nursery or greenhouse are subject to the requirements of Sec. 3-09-06.F.
2. *Recreational Vehicle and Boat Storage.* Recreational vehicle storage and boat storage are subject to the requirements of Sec. 3-09-06(G).
3. *Fleet Parking.* The parking of fleet vehicles is subject to the requirements of Sec. 3-09-04.
4. *Scrap Processing/Shredding Yard.* A Scrap Processing and Shredding Yard is considered a Waste Related Use and is subject to the requirements of Sec. 3-09-09(E).
5. *Automobile and Towing Storage Yard.* Automobile and Towing Storage Yards are subject to the requirements of Sec. 3-09-02.

D. **General Requirements.**

1. *Orderly Condition.* All materials stored outdoors shall be arranged and maintained in an orderly condition with unobstructed access points and circulation lanes that are free of weeds, litter, and junk, including but not limited to inoperable vehicles or equipment, damaged pallets, empty and unusable fuel tanks, and any materials that are unrelated to the primary business being conducted on a site.
2. *Surface Material*. Depending on the materials stored on site, the Director of Community and Economic Development may require a hard surface material. This will be determined at time of Site Plan Review or Conditional Use Permit.
3. *Materials Stored.*

a. All outdoor storage shall consist of non-hazardous materials as determined by the Colorado Department of Public Health and Environment.

b. Goods stored outdoors shall be limited to those provided for sale, lease, processing, use, or repair, (including vehicles) by a principal use on the property. If a site is leased for use as outdoor storage, the materials being stored shall be directly related to the lessee's primary business.

4. *Location on a Site.*

a. Outdoor storage shall not be permitted between the front building line and the front lot line.

b. All outdoor storage areas shall be located to the side or rear of the principal structure. Where the area is to the side of the principal structure, it shall be setback a minimum of 15 feet from the front building line of the principal structure.

c. Where there is no building on the subject property, the outdoor storage yard shall be setback a minimum of 25 feet from any property line.

5. *Access and Circulation.*

a. Adequate access points and unobstructed travel lanes shall be incorporated in the design of the outdoor storage area and shall meet all the requirements of the local fire district.

b. All travel lanes within the outdoor storage area shall be counted toward the total use area of outdoor storage.

6. *Permitted Size of an Outdoor Storage Area.*

a. Outdoor storage that is less than 80% of the entire lot shall be considered a permitted use to be reviewed in accordance with the Site Plan Review procedures in Section 13-05-03 and shall meet the requirements of this Section.

b. Outdoor storage that exceeds 80% of the entire lot or 10 acres, whichever is less, shall be considered a principal use of the property and shall require a Conditional Use Permit

7. *Height.* All outdoor storage shall not exceed the height of the fence, unless specifically approved by the Board of County Commissioners by its own Conditional Use Permit. Materials may be stacked up to eight feet or equal the height of the screening fence, whichever is less. Large items over eight feet in height such as truck trailers or concrete pipes shall not require a Conditional Use Permit provided they are placed in a single layer and not stacked.

E. **Bufferyards, Screening, and Fencing.** Any industrial use in which outdoor storage is permitted as a principal or accessory use shall be required to provide bufferyards to conceal outside storage areas from view from public rights-of-way and lesser intensity land uses.

1. *Location.*

a. Bufferyards are required for the entire length of any side or rear property line where any permanent or temporary outdoor storage areas are visible from the property line, public street, or other public right of way.

b. Bufferyards are not required between abutting outdoor storage yards, provided neither yard is visible from abutting rights-of-way.

2. *Types Required.*

a. Street Bufferyard. The required street bufferyard shall depend upon the abutting street types or types, as provided in Sec. 4-04-03(H), *Bufferyards and Screening.*

b. Use Bufferyards. The required use bufferyard shall be determined by the adjacent zoning district type, as provided in Sec. 4-04-03(F), *Bufferyards and Screening.*

3. *Fencing in Bufferyards.* In addition to the requirements of Sec. 4-04-03:

a. Fencing and walls used as part of a bufferyard shall be installed behind the required landscaping.

b. *Design.* The property owner shall conceal all outside storage with an eight-foot solid wood fence or masonry wall. Chain link fencing as screen fencing is not permitted.

(1) The design of fences or walls in a street bufferyard are encouraged to include variations in height, different material combinations, offset angles, or other types of articulation to avoid visual monotony. Variations may be approved by the Director of the Community and Economic Development Department.

c. *Fencing Exception.* See Sec. 3-09-01(F).

d. *Maintenance.* All fencing shall always be maintained and kept in good condition. Condition of fences shall be evaluated through a review of:

(1) Structural integrity and being functionally sound under the County's Building Codes; and

(2) Substantially the same condition as originally permitted or constructed.

F. **Additional Screening.** The Director of Community and Economic Development shall have the discretion to require additional fencing, walls, or plant material within a required bufferyard depending on the topography and visibility of the site.

# 3-09-09 Waste-Related Use Standards

A. **General.**

1. *Outdoor Storage.*

a. Outdoor Waste may be stored outdoors, provided the storage area is consistent with the zone district allowances.

b. No waste storage area shall be located within 20 feet of a public sidewalk.

c. Stockpiles of materials may only be placed as specified in a design and operation plan.

2. *Screening and Fencing.* All outdoor storage shall be screened in accordance with Sec. 3-09-01(E), *Fencing* and Sec. 3-09-01(F), *Screen Fencing* of these standards and regulations.

3. *Removal of Waste from Right-of-Way.* Operators shall be required to remove all waste-related materials that are brought to the facility from along all public rights-of-way within one-half mile of the facility.

4. *Appearance.* All sites shall maintain a clean, neat, and orderly appearance. Stockpiles of materials may only be placed as specified in the design and operation plan. Litter, dust, and odors may not leave the boundaries of the site.

5. *Air Pollutant Emissions and Odor Control*. Emissions of air pollutants, including particulate matter or dust, and odor shall be mitigated to the extent feasible through the use of appropriate control technologies and best management practices.

6. *Traffic Control Plan. Provisions of an approved traffic control plan shall be followed by the operator.*
7. *Hours of Operation.* The hours of operation for all Waste-Related uses that are within 200 feet of a residentially used dwelling shall be from 7:00 a.m. to 7:00 p.m.
8. *Litter and Windblown Debris.* Litter shall be collected and controlled within the site perimeter and along the exterior perimeter fencing and public road right-of-way.

B. **Aggregate Material Recycling Facilities.**

1. *Nuisance Control Plan*. Provisions of the nuisance control plan shall be followed. The nuisance control plan shall detail the operational, design, and administrative measures that will be implemented to eliminate or mitigate odor, dust, litter, noise, and lighting impacts to surrounding properties.
2. *Fugitive Dust and Debris*. Blowing particulate matter and debris shall be mitigated using appropriate control technologies and best management practices. Such control measures must always be functioning to ensure onsite visible emissions do not exceed limits specified within the State-issued air permit for the source.
3. *Wind Monitoring*. Wind speeds shall be monitored at all times during active operations using an anemometer or other weather monitoring systems capable of providing site-specific, real-time data on wind speeds. Material movement and crushing operations must cease anytime sustained wind speed exceeds 20 miles per hour and/or wind gusts exceed 30 miles per hour.
4. *Recordkeeping*. All operators shall maintain records showing amounts of stockpiled materials both processed and unprocessed that are consistent with the amounts allowed in the Permit. In addition, records containing customer lists and records showing amounts of recycled material shipped off site shall be maintained. Records of unacceptable loads or materials pulled from operations for disposal off-site shall also be maintained.
5. *Performance Bond*. Prior to commencing operations, and thereafter during the active life of the facility, and for one year after closure, the operator shall post and maintain a performance bond or other approved financial instrument with Adams County. The amount of the bond shall be calculated to include removal, tipping fees, and transportation costs. Should any corrective actions be required by the County in order to protect the health, safety, and general welfare which result from failure of the operator to follow any regulations, standards, or conditions of approval, the performance bond shall be forfeited in an amount sufficient to defray the expense of said actions, including staff time expended by Adams County involved in such corrective actions.

C. **Commercial Composting Operations (Class I and Class II Only).**

1. *Performance Bond.* Prior to commencing operations, and thereafter during the active life of a Waste-Related facility, the operator shall post and maintain a performance bond or other approved financial instrument with Adams County. Said bond shall be sufficient to ensure compliance with operating conditions of the Permit, the amount of which shall be established by the Board of County Commissioners. Should any corrective actions be required by the County in order to protect the health, safety, and general welfare which result from failure of the operator to follow any regulations, standards, or conditions of approval, the performance bond shall be forfeited in an amount sufficient to defray the expense of said actions, including staff time expended by Adams County involved in such corrective actions.

2. *Environmental Bond.* Prior to commencing operations, and thereafter during the active life of the facility, and for five years after closure, the operator shall post a bond sufficient to ensure compliance with the closure plan, and to effect remedial measures if environmental damage is found to be taking place.
3. *Nuisance Control.* The measures and best practices employed to eliminate or mitigate odor, dust, litter, noise, and lighting impacts to surrounding properties as described in the approved plan shall be followed at all times.
4. *Odor Control.* Feedstock and active piles shall at all times be managed in accordance with the approved odor control protocols such that monitoring, tracking, response actions, and recordkeeping effectively prevent odors from impacting adjacent properties.
5. *Vehicle Parking.* Transfer vehicles may not be parked on public streets.
6. *Vector Controls.* All sites shall maintain vector controls as prescribed by the approved plan.
7. *CDPHE Regulations.* Colorado Department of Public Health and Environment Regulations 6 CCR 1007-2, Section 14 are hereby incorporated in this DSR.
8. *Facility Classification.* A Class III facility as designated by CDPHE requires a Certificate of Designation for siting and operation of such facility.
9. *Quarterly Reports*. All complaints received by the applicant concerning odors or impacts to offsite wells attributable to the composting operation, and the resolution of those complaints shall be submitted to the Environmental Programs Division (EPD) of the Community and Economic Development Department within fifteen (15) calendar days following the end of each quarter.
10. *Annual Reports*. A copy of the Composting Facility Annual Reporting Form submitted to the Colorado Department of Public Health and Environment shall be submitted to the EPD with the first quarterly report of each year.

D. **Infectious Waste Disposal Site and/or Processing Facilities.**

1. *Radiation Monitoring Program*. The operator shall operate a radiation monitoring program in accordance with an approved plan.
2. *General Monitoring Program*. The general monitoring program, approved by the County for each infectious waste disposal and/or processing facility, shall be adhered to.
3. *Temperature Operating Charts*. Temperature operating charts from an infectious waste disposal and/or processing facility shall be retained for two years for review by the Director of Community and Economic Development. The County may require additional monitoring if a facility has problems maintaining a temperature or other operational standard.
4. *Truck Washing*. All trucks shall be washed at least once a week with a detergent and disinfectant to minimize nuisance conditions, unless spills or leaks are detected which must be disinfected immediately. All wash water shall be properly controlled to prevent runoff.
5. *Waste Incineration*. Infectious waste incineration facilities shall be permitted to burn infectious waste only. Incineration of wastepaper, contraband, or other materials is not permitted unless specifically approved as part of the waste stream.
6. *State Requirements.* Such sites and facilities are further subject to 6 CCR 1007-2 Parts 1, 2 and 3 (as applicable) for infectious waste management.

E. **Solid and/or Hazardous Waste Disposal Sites and/or Facilities.**

1. *General Operating and Performance Standards*. The following General Operating and Performance Standards are applicable to all Solid Waste Disposal Sites and/or Facilities:

a. *Compliance with Colorado Solid Waste Act*. Operators shall comply with the Colorado Solid Waste Act (C.R.S. § 30-20-100 *et seq*.), and all regulations promulgated pursuant to said Act by the Colorado Department of Public Health and Environment.

b. *Compliance with State Standards and Regulations*. Operators shall comply with all adopted State and Federal regulations, whether such regulations are adopted prior to, or after, approval of a Certificate of Designation under these standards and regulations.

2. *Liability Insurance Required*. All solid waste disposal site and/or facility operators shall maintain adequate liability insurance in the amount of one million dollars and submit evidence of such insurance upon request from the Director of Community and Economic Development.

3. *User Service Charges Required*. All solid waste disposal site and/or facility operators shall collect service charges from users for the purpose of solid waste management in the County. Such charges shall be collected pursuant to the Board of County Commissioners Resolution of August 28, 1985, as amended.

4. *Uncovered Loads*. All uncovered loads shall be charged double the normal disposal rate.

5. *Odor Control*. At no time shall a waste disposal site or facility emit odors that are detectable off-site. Best practices and operational controls detailed in the approved plan shall be implemented to eliminate such conditions.

6. *Erosion Control*. At no time shall a waste disposal site or processing facility allow soil loss or erosion beyond that provided for in the erosion control measures approved in the engineering design and operations plan.

7. *Storage of Untreated or Unprocessed Waste*. Storage of authorized untreated or unprocessed waste shall not exceed the time limit described in the approved operations plan, conditions of approval required with the Certificate of Designation, or otherwise required by the Colorado Department of Public Health and Environment.

8. *Blowing Debris Control.* Wind screens shall be maintained around the area of active waste placement operations at all times, regardless of wind speed.

9. *Wind Monitoring.* Anemometers or other weather monitoring systems capable of providing site-specific, real-time data on wind speeds shall be installed at the landfill facility. Waste conveyance and placement activities must cease when sustained wind speed exceeds 20 miles per hour and/or wind gusts exceed 30 miles per hour.

10. *Waste Minimization Program*. All operators shall conduct a waste minimization program both with the community and with generators, providing public information and assistance for waste reduction, recycling, and reuse programs. Information that is provided to the public regarding waste minimization and access to recycling shall also be provided to the Director of Community & Economic Development.

11. *Certification of Special Structures and Equipment*. Special structures not addressed in these standards and regulations, and processing equipment which has the potential to create external environmental impacts (through air emissions, groundwater impacts, etc.), shall be certified by a registered professional engineer or other qualified expert, as determined by the Director of Community and Economic Development, as to proper installation and construction in accordance with the approved design and operations plan prior to start of operations.

12. *Quarterly Reports*. Operators shall submit quarterly reports no later than 30 calendar days following the end of the calendar quarter to the Director of Community and Economic Development, Adams County Health Department, and the Colorado Department of Public Health and Environment, summarizing:
    a. *Results of Monitoring Data*. The results of air and water monitoring data, monitoring of landfill gas, and other environmental monitoring data, as applicable, prepared by a qualified independent firm or other qualified professionals, including in-house certified staff and laboratories acceptable to the Director of Community and Economic Development.
    b. *Received Waste Figures*. Daily average and cumulative figures for the quantity and types of waste received. The cumulative figure shall be related to a percentage completion figure for the current phase of operation or approved operating capacity.
    c. *Gross Quarterly Revenues.* Gross quarterly revenues for calculation of the County's Solid Waste Management Fee.
    d. *Operational Data*. Records of wind speed measurements and high-wind shutdown periods, and received public complaints and resolutions.
13. *Annual Reports.* Operators shall submit annual reports to the Director of Community and Economic Development. The annual reports shall summarize the following information.
    a. *Waste Types and Volumes*. The waste types and volumes handled throughout the year and documentation of used airspace for the active cell
    b. *Operation Completion*. The percentage of operation completion to date, including remaining airspace based on landfill design specifications.
    c. *Reclamation Activities*. A summary of final cover activities to date.
    d. *Operational Plans for Following Year*. A description of operational plans for the following year, including estimated construction schedules for expected cell construction or cap and cover events.
14. *Quality Assurance (QA) Program Required.* All operators shall fund an independent quality assurance (QA) program to ensure construction of synthetic or clay liners for cells meet required specifications in the approved design and operations plan. The QA program shall be performed by a qualified professional, approved by the Director of Community and Economic Development, representing the County. The expense shall be charged to the operator.
15. *Radiation Monitoring Program.* The landfill operator shall operate a radiation monitoring program in accordance with an approved plan.
16. *Quantity of Paper Permitted.* The quantity of paper permitted in a demolition and construction debris landfill is limited and is established by the Board of County Commissioners for each landfill. This standard shall be followed during operations.

F. **Solid and/or Hazardous Waste Transfer Stations.**

1. *Environmental Bond*. Prior to commencing operations, and thereafter during the active life of the facility, and for five years after closure, the operator shall post a bond sufficient to ensure compliance with the closure plan, and to effect remedial measures if environmental damage is found to be taking place.
2. *Vehicle Parking*. Transfer vehicles may not be parked on public streets.
3. *Vector Controls*. All sites shall maintain vector controls as prescribed by the approved plan.

4. *Nuisance Controls*. The measures and best practices employed to eliminate or mitigate odor, dust, litter, noise, and lighting impacts to surrounding properties as described in the approved plan shall be followed at all times.
5. *Blowing Debris.* Wind speeds shall be monitored at all times the site is active using an anemometer or other weather monitoring systems capable of providing site-specific, real-time data on wind speeds. Outdoor operations involving waste handling shall cease when sustained wind speed exceeds 20 miles per hour and/or wind gusts exceed 30 miles per hour.
6. *Storage of Solid or Hazardous Waste*. All wastes not transferred within 24 hours shall be stored in closed containers or in totally enclosed buildings. In no case may waste be stored longer than seven days.

G. **Incinerators.**

1. *Monitoring Program.* The specific monitoring program approved by the County for on-site soils and air monitoring shall be followed.
2. *Waste Minimization and Management Program.* The waste minimization program approved by the County shall be followed.
3. *Ash Transportation.* All incinerator ash will be stored and transported in a manner minimizing the release of fugitive dust or particulate matter.
4. *Pollution Control Device Residue Collection.* Any residue generated by the approved air pollution control device(s) shall be collected and disposed of in accordance with the approved Waste Management Plan.
5. *Incinerator Operation.* The incinerator shall be operated in accordance with the approved design and operations plan.
6. *Radioactivity Monitoring.* The operator shall operate a low-level radioactivity monitoring program in accordance with an approved plan.

H. **Inert Landfill Operations**

1. *Materials Acceptance Plan:* Operators shall develop and implement a Materials Acceptance Plan detailing procedures for certifying incoming loads as inert, including material acceptance, load inspection, and load rejection procedures for all waste material brough to the fill site. Loads containing trash, organic material, metal material, and other waste material not meeting the definition of inert fill for landfilling shall be rejected and documentation of hauler, source, and haul date shall be kept onsite for at least one-year. A visual inspection screening shall be made where loads are offloaded and incidental amounts of materials not meeting the definition of inert material shall be removed. All materials removed from the waste stream shall be disposed of at an approved waste disposal facility and records kept of such disposal.
2. *Fencing:* An eight (8) foot solid screen fence or security fence, with additional screening material, as approved by the Director of Community and Economic Development, shall enclose all outside storage.
3. *Traffic Control Plan:* Provisions of the traffic control plan shall be followed.
4. *Nuisance Control Plan:* Provisions of the nuisance control plan shall be followed. The nuisance control plan shall detail the operational, design, and administrative measures that will be implemented to eliminate or mitigate odor, dust, tracking mud/dirt offsite, litter, noise, and lighting impacts to surrounding properties.
5. *Appearance:* All sites shall maintain a clean, neat, and orderly appearance. Stockpiles of materials may only be placed as specified in the design and operation plan.

I. **Recycling Facilities, Including Scrap Tire**

1. *Fencing:* An eight (8) foot solid screen fence or security fence, with additional screening material, as approved by the Director of Community and Economic Development, shall enclose all outside storage.
2. *Traffic Control Plan:* Provisions of the traffic control plan shall be followed.
3. *Nuisance Control Plan:* Provisions of the nuisance control plan shall be followed. The nuisance control plan shall detail the operational, design, and administrative measures that will be implemented to eliminate or mitigate odor, dust, litter, noise, and lighting impacts to surrounding properties.
4. *Appearance:* All sites shall maintain a clean, neat, and orderly appearance. Stockpiles of materials may only be placed as specified in the design and operation plan.
5. *Recordkeeping:* All operators shall maintain records showing amounts of stockpiled materials both processed and unprocessed that are consistent with the amounts allowed in the Permit. In addition, records containing customer lists and records showing amounts of recycled material shipped off site shall be maintained. Records of unacceptable loads or materials pulled from operations for disposal off-site shall also be maintained.
6. *Performance Bond:* Prior to commencing operations, and thereafter during the active life of the facility, and for one (1) year after closure, the operator shall post and maintain a performance bond or other approved financial instrument with Adams County. The amount of the bond shall be calculated to include removal, tipping fees, and transportation costs. For tire recycling facilities, the amount of said bond shall be $3.00 per tire including unprocessed and processed tire amounts allowed in the Permit and the amount necessary to remove materials from recycling facilities for disposal at an appropriate disposal facility. Should any corrective actions be required by the County in order to protect the health, safety, and general welfare which result from failure of the operator to follow any regulations, standards, or conditions of approval, the performance bond shall be forfeited in an amount sufficient to defray the expense of said actions, including staff time expended by Adams County involved in such corrective actions.
7. *Removal of Trash from Right-of-Way:* Operators shall remove trash, or other waste material, of the type, which is brought to the facility, along public rights-of-way within one-half (1/2) mile of the facility.

# Div. 3-10 Marijuana Use Standards

## 3-10-01 General Marijuana Use Standards

A. **Purpose**. The purpose of the following general use standards is to address elements of planning, design, operation, and maintenance to be applied to all marijuana businesses in Adams County. Any use-specific standards contained in this DSR shall also be applied. Where a use-specific standard conflicts with a general use standard, the use-specific standard shall apply.

B. **Commercial General Use Standards Reference**. The provisions of Sec. 3-07-01, *General Use Standards*, shall apply to marijuana uses, in addition to the standards of this Division.

C. **Licensing**. Prior to the operation of any marijuana business, a license must be obtained from the state of Colorado, and a local license must be obtained from Adams County, as applicable. Uses established pursuant to this Section shall at all times be in complete compliance with the terms and conditions of its marijuana businesses license.

D. **Use Standards for All Marijuana Businesses**.

1. *Home Occupation*. No marijuana business shall be allowed as a home occupation use.
2. *Residential Use or Zone*. No marijuana business shall be located in a residentially zoned or used building, or in a movable or mobile structure.
3. *Floor Area*. Where a retail marijuana store and a retail marijuana cultivation facility are located on the same site in a commercial zone district, the cultivation facility shall be no more than twice the size of the store in gross floor area.
4. *Surroundings*. All marijuana businesses shall develop properties in harmony with the surrounding area and shall enhance design elements of buildings and properties accordingly.
5. *County Inspections*. Inspections of marijuana businesses may occur at any time with or without notice.
6. *Nuisances*. Best industrial practices to mitigate odor, noise, lights, vapors, fumes, and dust, such as scrubbers and filters, shall be utilized and functioning at all times.
7. *State Constitution and C.R.S*.
   a. These standards and regulations recognize the protections afforded by Article XVIII, Section 14 of the Colorado Constitution, and desires to affirm the ability of patients and primary caregivers to otherwise be afforded the protections of Article XVIII, Section 14 of the Colorado Constitution and C.R.S. § 25-1.5-106.
   b. These standards and regulations shall in no way limit application and enforcement of any statutes of the state of Colorado.
8. *Measurement*. All distances shall be measured from property line to property line.

## 3-10-02 Medical Marijuana Store

A. **1,000-Foot Separation**. No Medical Marijuana Store shall be located within 1,000 feet of any existing public or private elementary, middle, junior high or high school, state-licensed daycare homes and daycare centers in existence as of the date of application (based on information provided to the County by the State of Colorado), playground, and public housing facility.

B. **100-Foot Separation**. No Medical Marijuana Store shall be located within 100 feet of any existing place of worship, youth center, public swimming pool, video arcade, alcohol or drug rehabilitation facility, group home for the developmentally disabled, halfway house or correctional facility.

C. **50-Foot Separation**. No Medical Marijuana Store shall be located within 50 feet of any residentially zoned or used property.

D. **750-Foot Separation**. No Medical Marijuana Store shall be located within 750 feet of any other Medical Marijuana Center or Retail Marijuana Store.

## 3-10-03 Retail Marijuana Store

A. **1,000-Foot Separation**. No Retail Marijuana Store shall be located within 1,000 feet of any existing public or private elementary, middle, junior high or high school, state-licensed daycare homes and daycare centers in existence as of the date of application (based on information provided to the County by the State of Colorado), playground, and public housing facility.

B. **100-Foot Separation**. No Retail Marijuana Store shall be located within 100 feet of any existing place of worship, youth center, public swimming pool, video arcade, alcohol or drug rehabilitation facility, group home, halfway house or correctional facility.

C. **50-Foot Separation**. No Retail Marijuana Store shall be located within 50 feet of any residentially zoned or used property.

D. **750-Foot Separation**. No Retail Marijuana Store shall be located within 750 feet of any other Retail Marijuana Center or Medical Marijuana Store.

## 3-10-04 Medical Marijuana Manufacturing Facility

A. **1,000-Foot Separation**. No Medical Marijuana Product Manufacturing Facility shall be located within 1,000 feet of any existing public or private elementary, middle, junior high or high school, state-licensed daycare homes and daycare centers in existence as of the date of application (based on information provided to the County by the State of Colorado), playground, park, and public housing facility.

B. **100-Foot Separation**. No Medical Marijuana Product Manufacturing Facility shall be located within 100 feet of any existing place of worship, youth center, public swimming pool, video arcade, alcohol or drug rehabilitation facility, group home, halfway house or correctional facility.

C. **50-Foot Separation**. No Medical Marijuana Product Manufacturing Facility shall be located within 50 feet of any residentially zoned or used property.

## 3-10-05 Retail Marijuana Product Manufacturing Facility

A. **1,000-Foot Separation**. No Retail Marijuana Product Manufacturing Facility shall be located within 1,000 feet of any existing public or private elementary, middle, junior high or high school, state-licensed daycare homes and daycare centers in existence as of the date of application (based information provided to the County by the State of Colorado), playground, park, and public housing facility.

B. **100-Foot Separation**. No Retail Marijuana Product Manufacturing Facility shall be located within 100 feet of any existing place of worship, youth center, public swimming pool, video arcade, alcohol or drug rehabilitation facility, group home, halfway house or correctional facility.

C. **50-Foot Separation**. No Retail Marijuana Product Manufacturing Facility shall be located within 50 feet of any residentially zoned or used property.

## 3-10-06 Medical Marijuana Cultivation Facility

A. **Permitted Zone District**. Medical Marijuana Cultivation Facilities are permitted in the General Commercial and Heavy Commercial zone districts for dual operations, the I-1, I-2, and I-3 zone districts for stand-alone operations, and the A-3 zone district on parcels of at least 35 acres in size for indoor stand-alone operations west of Imboden Road from the northern border of Adams County south to the intersection of Imboden Road and E. 56th Avenue; then south of E.

56th Avenue between Imboden Road and Pass-Me-By Road; then west of Pass-Me-By Road from E. 56th Avenue to the southern border of Adams County.

B. **Location**.

1. *1,000-Foot Separation.* No Medical Marijuana Cultivation Facility shall be located within 1,000 feet of any existing public or private elementary, middle, junior high or high school, state-licensed daycare homes and daycare centers in existence as of the date of application (based on information provided to the County by the State of Colorado), playground, park, and public housing facility.
2. *100-Foot Separation.* No Medical Marijuana Cultivation Facility shall be located within 100 feet of any existing place of worship, youth center, public swimming pool, video arcade, alcohol or drug rehabilitation facility, group home, halfway house or correctional facility.
3. *50-Foot Separation.* No Medical Marijuana Cultivation Facility shall be located within 50 feet of any residentially zoned or used property.

## 3-10-07 Retail Marijuana Cultivation Facility

1. **Permitted Zone District**. Retail Marijuana Cultivation Facilities are permitted in the General Commercial and Heavy Commercial zone districts for dual operations, the I-1, I-2, and I-3 zone districts for stand-alone operations, and the A-3 zone district on parcels of at least 35 acres in size for indoor stand-alone operations west of Imboden Road from the northern border of Adams County south to the intersection of Imboden Road and E. 56th Avenue; then south of E. 56th Avenue between Imboden Road and Pass-Me-By Road; then west of Pass-Me-By Road from E. 56th Avenue to the southern border of Adams County.
2. **Location**.
   a. *1,000-Foot Separation.* No Retail Marijuana Cultivation Facility shall be located within 1,000 feet of any existing public or private elementary, middle, junior high or high school, state-licensed daycare homes and daycare centers in existence as of the date of application (based on information provided to the County by the State of Colorado), playground, park, and public housing facility.
   b. *100-Foot Separation.* No Retail Marijuana Cultivation Facility shall be located within 100 feet of any existing place of worship, youth center, public swimming pool, video arcade, alcohol or drug rehabilitation facility, group home, halfway house or correctional facility.
   c. *50-Foot Separation.* No Retail Marijuana Cultivation Facility shall be located within 50 feet of any residentially zoned or used property.

## 3-10-08 Marijuana Testing Facility

A. **1,000-Foot Separation**. No Retail Marijuana Testing Facility shall be located within 1,000 feet of any existing public or private elementary, middle, junior high, or high school, state-licensed daycare homes and daycare centers in existence as of the date of application (based on information provided to the County by the State of Colorado), playground, park, and public housing facility.

B. **100-Foot Separation**. No Retail Marijuana Testing Facility shall be located within 100 feet of any existing place of worship, youth center, public swimming pool, video arcade, alcohol or drug rehabilitation facility, group home, halfway house or correctional facility.

C. **50-Foot Separation**. No Retail Marijuana Testing Facility shall be located within 50 feet of any residentially zoned or used property.

# 3-10-09 Marijuana Hospitality Business

A. **Location**.

1. *1,000-Foot Separation*. No Marijuana Hospitality Business shall be located within 1,000 feet of any existing public or private elementary, middle junior high or high school, state licensed daycare home and daycare centers in existence as of the date of application (based on information provided to the County by the State of Colorado), playground, or public housing facility.
2. *100-Foot Separation*. No Marijuana Hospitality Business shall be located within 100 feet of any existing house of worship, youth center, public swimming pool, video arcade, alcohol or drug rehabilitation facility, group home, halfway house, or correctional facility.
3. *50-Foot Separation*. No Marijuana Hospitality Business shall be located within 50 feet of any residentially zoned or used property.
4. *500-Foot Separation*. No Marijuana Hospitality Business allowing for outdoor consumption shall be located within 500 feet of any residentially zoned or used property.
5. *Five-Mile Separation*. No Marijuana Hospitality Business shall be located within five miles of any other Marijuana Hospitality Business or Retail Marijuana Hospitality and Sales Business.

B. **Mobile Premises**. A Marijuana Hospitality Business with a Mobile Premises shall designate and maintain a fixed place of business in unincorporated Adams County this is separate from the Mobile Premises.

C. **Accessory Use**. A Marijuana Hospitality Business may be allowed as an accessory use to any established Commercial Uses, as defined in Chapter 16, in any zone district where a Marijuana Hospitality Business is still required, even if operating as an accessory use. The accessory use must comply with all requirements of Div. 3-13, *Accessory Uses and Structures,* as well as this Section.

D. **Outdoor Consumption**. If any outdoor consumption area is permitted as part of the Marijuana Hospitality Business, it shall be no greater in size than 50% of the indoor consumption area. The outdoor consumption area shall be concealed by an eight-foot solid screen fence or other effective screening material, as approved by the Director of Community and Economic Development.

# 3-10-10 Marijuana Hospitality and Sales Business

A. **Location**.

1. *1,000-Foot Separation*. No Marijuana Hospitality Business shall be located within 1,000 feet of any existing public or private elementary, middle junior high or high school, state licensed daycare home and daycare centers in existence as of the date of application (based on information provided to the County by the State of Colorado), playground, or public housing facility.
2. *100-Foot Separation*. No Marijuana Hospitality Business shall be located within 100 feet of any existing house of worship, youth center, public swimming pool, video arcade, alcohol

or drug rehabilitation facility, group home for the developmentally disabled, halfway house, or correctional facility.

3. *50-Foot Separation*. No Marijuana Hospitality Business shall be located within 50 feet of any residentially zoned or used property.
4. *500-Foot Separation*. No Marijuana Hospitality Business allowing for outdoor consumption shall be located within 500 feet of any residentially zoned or used property.
5. *Five-Mile Separation*. No Marijuana Hospitality Business shall be located within five miles of any other Marijuana Hospitality Business or Retail Marijuana Hospitality and Sales Business.

B. **Indoor Consumption**. The consumption area within a Retail Marijuana Hospitality and Sales Business shall not exceed 50% of the total floor area of the retail establishment, but in no case more than 1,500 square feet.

C. **Outdoor Consumption**. If any outdoor consumption area is permitted as part of the Retail Marijuana Hospitality and Sales Business, it shall be no greater in size than 50% of the indoor consumption area. The outdoor consumption area shall be concealed by an eight-foot solid screen fence or other effective screening material, as approved by the Director of Community and Economic Development.

# Div. 3-11 Natural Medicine Use Standards

## 3-11-01 General Natural Medicine Use Standards

A. **Purpose**. The purpose of the following general use standards is to address elements of planning, design, operation, and maintenance to be applied to all natural medicine businesses and noncommercial cultivation in Adams County. Any use-specific standards contained in this DSR shall also be applied. Where a use-specific standard conflicts with a general use standard, the use-specific standard shall apply.

B. **Noncommercial Cultivation.** The noncommercial cultivation of natural medicine shall be permitted as an accessory use to any residential use.

   a. *Location.* Noncommercial cultivation shall only take place indoors, not visible or accessible to the general public, in an area enclosed and locked.
   b. *Size.* Noncommercial cultivation shall take place in an area no larger than twelve feet by twelve feet.
   c. *Nuisance control.* Noncommercial cultivation shall not cause odors, smoke, heat, glare, or light that is detectable beyond the property line of the property upon which the use is being conducted.

C. **Commercial General Use Standards Reference**. The provisions of Sec. 3-07-01, *General Use Standards*, shall apply to natural medicine business uses, in addition to the standards of this Division. For natural medicine products manufacturing facilities, natural medicine cultivation facilities, and natural medicine testing facilities, the provisions of Sec. 3-09-06, *Light Industrial,* standards shall also apply.

D. **Licensing**. Prior to the operation of any natural medicine business, a license must be obtained from the state of Colorado. Uses established pursuant to this Section shall at all times be in complete compliance with the terms and conditions of its natural medicine businesses license.

E. **Use Standards for All Natural Medicine Businesses**.

1. *Compliance with State regulations.* All Natural Medicine Businesses shall operate in compliance with all applicable state regulations and licensing requirements.
2. *Home Occupation*. No natural medicine business shall be allowed as a home occupation use. This does not prohibit facilitators from administering services at a person's residence in compliance with state regulations.
3. *Residential Use or Zone*. No natural medicine business shall be located in a residentially zoned or used building, or in a movable or mobile structure.
4. *Location*
   a. *Zone Districts.* Natural medicine businesses are permitted according to Table 2-06-02.B, *Nonresidential and Mixed-Use Districts Use Table*.
   b. *Co-location.* Natural medicine businesses may co-locate where allowed by the zone district.
5. *Surroundings*. All natural medicine businesses shall develop properties in harmony with the surrounding area and shall enhance design elements of buildings and properties accordingly.
6. *County Inspections*. Inspections of natural medicine businesses may occur at any time with or without notice.
7. *Nuisances*. Best industrial practices to mitigate odor, noise, lights, vapors, fumes, and dust, such as scrubbers and filters, shall be utilized and functioning at all times. The natural medicine business shall not create odors, noise, light or other nuisances that are detectable beyond the property line of the property upon which the use is being conducted.
8. *Separation*. All natural medicine businesses shall be located at least 1,000 feet away from any public or private elementary, middle, junior high school, preschool, state-licensed daycare homes and daycare centers in existence as of the date of application (based on information provided to the County by the State of Colorado).
9. *Measurement*. All distances shall be measured from property line to property line.

# Div. 3-12 Wireless Communication Facilities Standards

## 3-12-01 Wireless Communication Facility (WCF) (formerly known as CMRS) Sites

A. **Design Standards for all Wireless Communication Facility (WCF) Sites**. The purpose of design standards for WCF sites is to ensure the necessary antennae, equipment, and equipment

shelters are sited and screened in a manner to minimize visual and physical impacts on the surrounding area. The following design requirements shall apply to all WCF:

1. *Architectural Compatibility.* All WCF antennae, equipment, and equipment shelters shall incorporate architectural and visual design features intended to reduce visual contrast with surrounding development. Compliance shall be achieved through one or more of the following:
    a. Use of colors that match or closely resemble the predominant colors of the supporting structure or surrounding buildings;
    b. Use of materials and finishes consistent with the supporting structure; or
    c. Integration of antennae within architectural features such as parapets, steeples, towers, or facade elements.
2. *Landscaping and Screening.*
    a. Existing vegetation shall be preserved to the maximum extent practicable where it contributes to screening of ground-mounted equipment.
    b. Where existing vegetation or topography does not adequately screen ground-mounted equipment, supplemental landscaping and/or fencing shall be required.
    c. Required fencing shall:
        (1) Be constructed of materials that blend with the surrounding environment;
        (2) Not exceed the maximum fence height permitted in the underlying zoning district; and
        (3) Be supplemented with landscaping unless otherwise precluded by site constraints.
3. *Height.* The height of all WCF antennae and support structures shall be limited to the minimum height necessary to provide reliable service coverage and capacity, as demonstrated by technical and engineering documentation submitted with the application.
4. *Visual Mitigation.* All WCF antennae, equipment, and equipment shelters shall be sited, designed, and screened to minimize the visibility of such equipment from surrounding properties, public roads, and neighborhoods.
5. *Color and Finish.* All WCF antennae, equipment, and equipment shelters shall utilize non-reflective, neutral, or earth-tone colors designed to reduce visual contrast with the surrounding environment.
6. *Co-Location.*
    a. Co-location of WCFs on existing towers, buildings, or structures shall be permitted and encouraged where technically feasible; or
    b. Applicants proposing new freestanding facilities shall submit documentation demonstrating that co-location on existing facilities within the service area is not feasible due to documented technical or operational constraints.
7. *Lighting.* WCFs shall not be artificially lighted except where required by the Federal Aviation Administration (FAA) or other applicable regulatory agency.
8. *Legal Compliance.*
    a. All WCFs shall comply with all state and federal law.

b. Review and action on applications for WCFs shall comply with applicable federal and state law, including the review timelines, tolling provisions, and deemed approval procedures established by C.R.S. § 29-27-401 *et seq*., § 332(c)(7) of the Telecommunications Act of 1996, § 6409(a) of the Spectrum Act, and applicable Federal Communications Commission regulations and orders, as each may be amended from time to time.

c. Nothing in this Section shall be construed as a waiver of the County's authority to require complete applications, enforce adopted standards, or exercise discretion as otherwise permitted by state and federal law.

9. Applications that do not meet the standards in this Division require a waiver. The Director of Community and Economic Development may issue a waiver if the following criteria are met:

a. The waiver, if granted, will not alter the essential character of the neighborhood or district in which the property is located, nor substantially or permanently impair the appropriate use of the development of adjacent property.

b. There are no reasonable design alternatives that would remove the need for the requested waiver or would reduce the amount of waiver required.

B. **Design Standards for Structure or Building Mounted WCFs.** All structure or building mounted WCF antennae and equipment shall be designed and constructed to blend with and enhance the architectural characteristics of the accompanying building or structure and shall be subject to Building Permit approval.

1. *Panel Antennae Standards.*

a. No panel antenna shall exceed the maximum height limitation for the zone district in which the panel is located.

b. Panel antennae shall not be mounted in a freestanding, sled, or rack-mounted fashion on the roof of a building unless all of the following are met:

(1) the proposed panel antennae will be fully screened from public view along with such equipment;

(2) Screening materials shall match or be visually consistent with the color, materials, and architectural character of the existing building; and

(3) The applicant demonstrates that alternative mounting locations permitted by this Section are not technically feasible.

2. *Whip Antennae Standards*.

a. Single whip antennas shall not extend more than 15 feet above the building height.

b. Where more than one whip antenna is attached to one building, such antennae shall maintain a minimum separation of 15 feet between antenna owned by different WCF providers.

C. **Design Standards for Freestanding WCFs**. All freestanding WCFs shall be subject to an Administrative Review Permit Process as outlined in Sec. 13-02-01. The following design standards shall apply to all freestanding WCFs:

1. A freestanding WCF shall be set back from all property lines a minimum distance equal to the height of the facility.
2. Co-location of WCFs on the same freestanding facility shall be required to the maximum extent practicable. A freestanding WCF shall not be located closer than 1,000 feet from any other freestanding WCF.

D. **Design Standards for Small Cell Wireless Facilities**. All small cell wireless facilities located outside of the public right-of-way shall be subject to an Administrative Review Permit Process as outlined in Sec. 13-02-01. The following design and performance standards shall apply to all small cell wireless facilities:

1. Small cell wireless facilities shall be located and sited based on the following order of preference:
   a. Small cell facilities shall be collocated and attached to existing and previously approved small cell facilities.
   b. Small cell facilities shall be attached to or replace available structures previously approved in the County right-of-way.
   c. New freestanding small cell facility poles shall be built in a manner that allows for collocation.
2. Any new pole with an antenna must be architecturally consistent with the surrounding area by utilizing one of the following:
   a. Replacing existing permitted facilities (including, without limitation, traffic signals, light poles, or light standards) so that the presence of the small cell facility is not readily apparent;
   b. Integrating the equipment in an architectural feature of an existing structure; integrating or attaching equipment to an outdoor fixture such as a traffic signal, light standard, utility pole or flagpole.
   c. Using a design which mimics or is consistent with the nearby natural or architectural features, this includes compatibility with color and shape of the proposed structure; and
   d. Using a design that is consistent with the size and shape of the pole-mounted equipment installed by communication companies on utility poles within three hundred feet of the facility.
3. The facility shall be separated from all other freestanding wireless facilities within the right-of-way by a distance of at least 600 feet, except for facility replacements to an existing traffic signal, street light pole, or other similar structure as determined by the Director of Community and Economic Development.
4. Poles and related appurtenances shall not interfere with traffic operations, legally permitted parking, or approved Traffic Control Devices.
5. Facilities shall be located in alignment with existing tress, utility poles, and streetlights whenever possible.
6. Facilities shall be located and designed to minimize visual impacts to adjacent properties and public rights-of-way and shall not create visual obstructions greater than those typically

associated with legally permitted utility infrastructure or similar encroachments in the same zoning district.

7. Facilities shall not be located in the sight distance triangle.
8. Poles and related facilities shall not encroach into or interfere with pedestrian ways such as sidewalks, trails, or transit stops or facilities.
9. No alternative tower structure may be located or maintained in a manner that causes unreasonable interference. Unreasonable interference means any use of the right-of-way that disrupts or interferes with its use by the County, the general public, or other person authorized to use or be present upon the right-of-way, when there exists an alternative that would result in less disruption or interference. Unreasonable interference includes any use of the right-of-way that disrupts vehicular or pedestrian traffic, any interference with public utilities, and any other activity that will present a hazard to the public health, safety, or welfare.

E. **Design Standards for WCF Equipment Shelters**.

1. To the maximum extent practicable, equipment shelters associated with roof or building-mounted WCF antennae shall be located in one of the following areas in order of preference:
   a. On the ground and screened according to the design criteria for WCFs.
   b. Painted or treated the same color and located in such a manner so that an additional protrusion is not created on the roof.
   c. Outside of a penthouse on the roof of a building if a parapet exists taller than the WCF equipment shelter. If the parapet is not taller than the WCF equipment shelter, consideration will be given to increase the height of the parapet provided the building materials used are the same as those existing and if the design of the parapet is found acceptable to County standards and the parapet extension is architecturally compatible with the building.
   d. If no penthouse exists, consideration may be given to the creation of a screen, which is deemed architecturally compatible with the associated building by the Director of Community and Economic Development, screening both the equipment shelter and the existing service equipment associated with the building such as heating and air-conditioning equipment.
   e. Immediately adjacent to the exterior of an existing equipment or elevator penthouse if the shelter can be visually incorporated into the penthouse structure by the use of screening of similar style and color to the penthouse.
   f. Inside an existing equipment penthouse on the roof of a building.
   g. Inside the building or structure to which the panel or whip antennae are attached.
2. WCF equipment shelters associated with freestanding WCFs shall:
   a. Either be located in an enclosed building architecturally compatible with the surrounding environment; or
   b. Be screened completely with an architecturally compatible wall or fence so the shelter is not visible from adjacent properties, roads, or public areas.

3. All WCF equipment shelters associated with freestanding WCFs shall:
   a. Have enclosed buildings, walls, or fencing, the appearance of which is enhanced by vegetation;
   b. Be grouped as closely as technically possible to each other and the freestanding facility;
   c. Cover a surface area not to exceed 450 square feet per provider;
   d. Use designs, materials, and colors compatible with structures and vegetation on the same parcel and adjacent parcels; and
   e. Not reduce the parking or landscaped areas below the minimum zone district requirements for other principal uses on the parcel.

# Div. 3-13 Accessory Uses and Structures

## 3-13-01 General Provisions

A. **Purpose**. This Section authorizes the establishment of accessory uses and structures that are incidental and customarily subordinate to principal uses and structures, provided that the accessory use or structure complies with all applicable standards in this Section.

B. **Applicability**.
   1. *Where Permitted*. The standards of this Section are for accessory uses and structures that are permitted in any zoning district, unless otherwise noted in the standards below, in association with a principal use or uses.
   2. *Interpretation of Unlisted Accessory Use*.
      a. The Director of Community and Economic Development shall evaluate applications for accessory uses or structures that are not defined in this Section on a case-by-case basis, based on the following standards:
         (1) The definition of "accessory use" or "accessory structure" and the general accessory use and structure standards established in this Section;
         (2) The purpose of the district in which the accessory use is located;
         (3) Potential adverse impacts that the accessory use or structure may have on other lots, compared with other accessory uses permitted in the district; and
         (4) The compatibility of the accessory use with other principal and accessory uses permitted in the district.
      b. The Director may require an unlisted accessory use to meet use standards for similar uses permitted by this DSR.
   3. *General Application*. The provisions of this Section shall apply to all accessory uses and structures. If the specific accessory use or structure standards of this Section conflict with a standard of this Section, the specific standard shall apply.

C. **Incidental to Main Use or Structure**. An accessory uses and structures shall be customarily incidental to a main use.

D. **Located on Same Lot as Main Use**. An accessory use or structure shall be located on the same lot or parcel the main use, except as otherwise provided in this Section.

E. **Accessory Structures** Accessory structures shall meet the following requirements, unless otherwise indicated in this DSR:

1. *Setbacks*.
   a. An attached accessory structure shall meet required setbacks for the zone district in which it is located.
   b. A detached accessory structure shall have a minimum rear and side setback of three feet and a front setback that is the same as that of the principal structure.
2. *Percentage of Yards*. No accessory structure shall occupy more than 50% of the area of the rear yard.
3. *Compliance with Building Codes*. Any accessory structure on residentially used property exceeding 200 square feet shall obtain a Building Permit. Any accessory structure on nonresidential or mixed use property exceeding 120 square feet shall obtain a Building Permit. All accessory structures shall comply with adopted Building Codes.
4. *Separation*. No accessory structure shall be located closer than six feet to any other structure.
5. *Easements*. Accessory structures permanently affixed to the ground shall not encroach into an easement.

F. **Commercial Use**. Accessory structures located on residentially zoned or used property shall not be used for commercial purposes other than home occupations that comply with this Section.

# 3-13-02 Residential Accessory Use and Structures

## 3-13-02.A Accessory Dwelling Units (ADU)

1. **Purpose**. The purposes of the accessory dwelling unit (ADU) provisions are as follows:
   a. To provide homeowners with an opportunity for companionship, security, and supplemental income;
   b. To better utilize existing infrastructure and community resources;
   c. To provide a housing type that responds to changing needs and lifestyles (e.g., small families, retirees, caretakers);
   d. To add to the County's stock of affordable dwelling units; and
   e. To protect neighborhood character and stability by ensuring that visible ADUs are compatible with surrounding land uses.
2. **Applicability**. One ADU on an existing legal lot is permitted by right as an accessory and subordinate use to single family residential uses, and one ADU per primary dwelling unit is permitted by right as an accessory and subordinate use to two-family residential uses in any residential zoning districts, in addition to legal nonconforming single-family detached or two-family uses in those zones as allowed by these regulations. As the purpose of an ADU is to be an accessory use/structure to a primary dwelling unit, an ADU shall not be platted for individual sale through the condominium platting process or otherwise.
3. **Process**.
   a. *New ADU*. Subject to building and occupancy permits and shall conform to all of the following standards.

b. *Existing (Undocumented) ADUs*. If an ADU was created without being part of a project for which building and occupancy permits were obtained, the County shall require building and occupancy permits to determine if the structure meets the requirements of this Section and applicable Building Codes. Adherence to this DSR is required.

4. **Development Standards**.

a. *Building Type*. Site built and modular construction is allowed. Prefabricated homes, such as manufactured homes, are allowed for use as an ADU if placed on a permanent foundation and connected to metered utility services.

b. *Number*. One ADU shall be allowed in each residential lot as a subordinate use to any new or existing single-family detached dwelling unit use of the property. One ADU per independent dwelling unit shall be allowed on each residential lot as a subordinate use to any new or existing two-family dwelling unit use of the property.

c. *Provision of Water and Sewer*. Proof of adequate provisions for potable water supply, sewage disposal, solid waste disposal, fire protection meeting the requirements of applicable building and life safety codes, utility service, and access shall be provided.

d. *Size*.

(1) *Attached or Internal*. ADUs shall not exceed 40% of the principal dwelling unit's residential floor area or 750 square feet in floor area, whichever is greater.

(2) *Detached*. ADUs shall not exceed 40% of the primary dwelling unit's residential floor area or 750 square feet in floor area, whichever is greater; provided, however, that no detached ADU shall exceed 1,500 square feet in floor area.

(3) *Floor Area Calculation*. If the ADU is adjoined to or placed atop an unoccupied structure, such as a garage or covered porch, the garage or covered porch shall not be included in the gross floor area counted towards the ADU. Storage and mechanical space, including utility rooms and closet space, associated with the ADU shall be counted towards the floor area calculation.

e. *Location*. The ADU may be added to or included within the principal dwelling unit, or located in a detached structure on the same lot as the principal dwelling unit. If detached, the ADU is required to meet all accessory structure setbacks for the zone district, except that the minimum rear setback shall be the greater of (i) the rear accessory structure setback for the zone district, and (ii) five feet.

f. *Parking*.

(1) One off-street parking space is required to be designated for an ADU in addition to the parking required for the principal dwelling unit if the parking space already exists at the time the ADU is constructed or converted. The construction of a new off-street parking space for the ADU is required if:

(A) The ADU is in a zone district that, as of January 1, 2024, required one or more off-street parking spaces for a single-family detached or two-family dwelling use;

(B) There is no existing parking space on the lot (including a driveway, garage, or tandem parking space) that could be used for the ADU; and

(C) The ADU is located on a block where on street parking is prohibited.

(2) Parking spaces must be paved and may include private garages, carports, or all weather-surfaced, off-street areas reserved for vehicles. Tandem parking is allowed.

g. *Home Occupations*. The ADU and/or principal dwelling unit may contain a home occupation if the home occupation complies with these regulations.

h. *Other Development Standards*.

(1) Accessory Dwelling Units shall meet all other development standards (e.g. setbacks, lot coverage, etc.) for buildings in the zoning district, except in the following circumstances:

(A) The gross floor area of the ADU shall not count towards the maximum accessory building coverage, but rather the maximum principal structure coverage.

(B) The height of a detached ADU shall not exceed 25 feet.

(C) If detached, the ADU shall be setback at least 10 feet to the rear of the front structure line of the principal dwelling unit to the maximum extent feasible. If the lot is not large enough to accommodate this standard, then the ADU may be placed in front of the front structure line at the discretion of the Director of Community and Economic Development.

(D) Minimum rear setbacks shall not be greater than those that apply to other accessory structures in the same zone district, or five feet, whichever is greater.

(2) For legal nonconforming situations, ADUs shall also adhere to the following requirements:

(A) *Legal Nonconforming Principal Single-Family Detached or Two-Family Dwelling Uses*.

(I) It is recognized that in some zones, an existing principal single-family detached or two-family dwelling use may be considered legal nonconforming. In the event that an existing, legal nonconforming, single-family detached or two-family use requests an ADU per these standards, it shall be an allowed accessory use to the legal nonconforming use. If the legal nonconforming principal single-family detached or two-family dwelling use ceases to exist, the ADU shall also cease to exist.

(II) Conformance with Sec. 14-01-02.G, *Extension or Enlargement of Nonconforming Conditions*, applies to the principal single-family detached or two-family dwelling use.

(B) *ADUs in Existence Prior to these Regulations*.

(I) Existing ADUs shall meet the requirements of these regulations.

(II) A Building Permit is required for the Building Official to determine if the structure meets the adopted building code requirements. As-built information about the existing structure shall be required as part of the Building Permit submittal.

(III) Additional improvements may be required by the applicant in order for the ADU to meet adopted Building Codes.

(C) *Previously Approved Caretaker Dwelling Units*. Previously approved Caretaker Dwelling Units may be extended in accordance with 13-03-02, *Conditional Use Permit*.

(3) Design Standards.

(A) *New Detached Structures, Exterior Alterations and Additions to Existing Structures*. The development of a newly constructed detached ADU and exterior alterations and additions to existing structures for ADU development shall be designed consistent with the existing color, façade treatment, roof pitch, siding, lighting, and windows of the principal single-family detached or two-family dwelling unit(s), unless these design standards are more restrictive than those currently required for single-family detached or two-family dwelling units.

i. *Density*. An ADU shall not be included in the density calculations of a lot.

j. *ADUs in Planned Unit Developments (PUD)*. ADUs are allowed on any lot in a PUD that has an existing single-family detached dwelling use and shall meet the following standards:

(1) Detached ADUs shall meet the accessory structure dimensional standards as set out in the governing PUD document. If there are no accessory structure dimensional standards in the PUD document, the ADU shall meet the dimensional standards of this Section and shall be setback at least five feet from any internal side property line, and ten feet from any side corner property line. Detached ADUs shall not count toward the total allowed number of accessory buildings or the total allowed accessory structure coverage as set out in the governing PUD document.

(2) Attached ADUs shall meet the principal structure dimensional standards as set forth in the governing PUD document.

## 3-13-02.B Animal Keeping

1. **Relationship to Other Standards.** This Section contains standards to ensure the safekeeping of household pets, bees, chickens, and pigeons in Agricultural and Residential Zone Districts, and any other zone district with an existing residential use. Refer to the following Sections for additional standards related to animal keeping:

a. Sec. 3-04-02(A), Animal Feeding Operations (AFOs) and Concentrated Animal Feeding Operations (CAFOs)

b. Sec. 3-07-18, Kennels, Commercial.

c. Sec. 3-12-02.F, Kennels.

d. Sec. 3-13-03.A, Agricultural Animal Keeping (Non-commercial AFOs and CAFOs).

e. Sec. 3-13-03.G, Stables.

2. **Household Pets**.

a. *Allowed*. Household pets shall be allowed as accessory to a residential use according to the following:

**Table 3-13-02.B-1, Number of Household Pets**

| A-2 and A-3[1] | RE and A-1 | R-1-C and R-2 | R-3 and R-4 | All other zone districts[2] |
|---|---|---|---|---|
| 30 | 10 | 8 | 5 | 5 |
| [1]The keeping of more than 10 dogs and cats must conform with private kennel standards in Sec. 3-13-02.F | | | | |
| [2]Must be associated with a residential use | | | | |

b. *Penned*. All household pets shall be penned or otherwise confined to their owner's property except when on a leash and in the control of the owner. Unconfined animals are a violation of the "Pet Animal Licensing and Control Regulations", as adopted December 2016, as amended.

d. *Conformance with Private Kennel Standards*. The keeping of more than the number of household pets allowed by paragraph a above, or 10 dogs or cats, whichever is less, shall conform to private kennel standards (See 3-12-02.F).

3. **Agricultural Animals**

a. *Applicability*. Agricultural animals, except chickens and bees as provided in this Section, shall only be allowed accessory to a residential use in the Residential Estate (RE), Agricultural-1 (A-1), Agricultural-2 (A-2), and Agricultural-3 (A-3) zone districts. See Sec. 3-13-03.A for Agricultural Animal Keeping standards.

4. **Chicken Keeping, Non-Commercial AFOs and CAFOs**

a. *Purpose***.** The purpose of these regulations is to permit limited small animal husbandry uses, including non-commercial animal feeding operations (AFOs) and concentrated animal feeding operations (CAFOs), within residential environments to promote access to fresh food and the associated health benefits as well as encourage sustainability through reduced vehicle trips for food and energy consumption associated with food production. The regulations below are intended to permit the keeping of chickens for household purposes, and not for a profit, while preventing negative impacts associated with this use.

b. *Applicability.* The keeping of chickens is allowed as accessory use with any legal single-family detached or two-family residential use, excluding where regulated by State law. Accessory dwelling units are also allowed to keep chickens so long as the cumulative number of chickens on the property does not exceed the allowance.

c. *Performance Standards*

(1) *Allowed Number of Chickens.* Except in the Agricultural and Residential Estate zone districts, no more than six domestic chicken hens are permitted per each single-family detached or two-family residential use. Three chickens shall equal one household pet. The maximum number of allowable chickens per lot does not apply to chicks not yet at egg bearing age, or six months of age, whichever is less. See Sec. 3-13-03.A for chicken keeping allowances in the Agricultural and Residential Estate zone districts.

(2) *Shelter Requirements.*

(A) *Type*. Chickens must be provided with a covered, predator-resistant shelter structure that is properly ventilated and heated, with nesting boxes, designed to be easily accessed, cleaned, and maintained.

(B) *Size*. The shelter structure shall provide at least three square feet per chicken. The shelter structure shall not exceed 120 square feet.

(3) *Perimeter Fencing*.

(A) In addition to the shelter requirements described above, chickens shall be confined to areas that are fully enclosed with adequate perimeter fencing to prevent the chickens from escaping when not in their shelters, to prevent predators' entry, and from coming into contact with wild ducks, geese or their excrement. Each chicken shall be provided at least 10 square feet of area within the perimeter fencing.

(B) Fences required by this subsection shall comply with the provisions of Sec. 3-05-01(D), *Residential Use Fencing, Walls, and Screening*, and shall be resistant to predators.

(C) Adequate fencing material for purpose of this subsection shall include wood, wire, and stone. Fencing with openings that would allow chickens to pass through, such as a split rail or wrought iron fence with wide openings, will not be deemed adequate for purposes of this subsection.

(4) *Location of Shelter Structures and Perimeter Fences.* Chicken structures and perimeter fencing shall be located in the rear or backyard of the lot as determined by street frontage, and not the orientation of the residence. Chickens shall be kept within such facilities and are not permitted within any other portions of the lot.

(5) *Setbacks.* Neither the shelter structure nor perimeter fencing shall be located less than five feet from any abutting property line.

(6) *Access*.

(A) During daylight hours, the chickens must have access to the shelter structure, located adjacent to the shelter, which is adequately fenced with perimeter fencing as required by this Section to protect them from predators.

(B) From dusk till dawn, the chickens must be further protected from predators by being closed inside the shelter structure.

d. *Provision of Food, Water, and Sanitation*

(1) *Water*. Fresh water must be available at all times in adequate receptacles.

(2) *Food*. Sufficient nutritive food must be provided daily and must be stored in a resealable, airtight, rodent proof container to discourage attracting mice, rats, and other vermin.

(3) *Cleanliness*. The shelter and surrounding area must be kept clean from accumulation of excrement and debris so as to not create a nuisance and be compliant with the County's stormwater regulations.

(4) *Compliance with Current Stormwater Regulations.* The use of excrement as applied fertilizer shall only be allowed in conformance with the County's stormwater regulations.

e. *Nuisance Protection.*

(1) *Nuisance-Free Facilities as Prerequisite*. A permit to keep chickens within the County shall not be granted or renewed unless the owner or keeper provides facilities which will reasonably assure the Director of Community and Economic Development that the premises will be maintained in a sanitary condition, free from insects and rodents,

offensive odors, excessive noise or any other conditions which constitute a public nuisance.

(2) *Dust, Odors, and Waste Prohibited*. All coops and runs shall be regularly cleaned and maintained to control dust, odor, and waste and to prevent the facilities from constituting a nuisance, safety hazard, or health problem to surrounding properties. Odors associated with the coop shall be contained within the owner's property boundary

(3) *Slaughtering Prohibited*. The chickens may not be slaughtered by the owner or keeper thereof, except pursuant to the lawful order of State or County health officials or for the purpose of euthanasia when surrendered to a licensed veterinarian.

(4) *Disposal*. Dead animal carcasses shall be properly and safely disposed of within 24 hours as recommended by the applicable health department.

(5) *Roosters Prohibited*. Roosters are not permitted, except where allowed in Agricultural zone districts as described in these regulations.

f. *Permitting (Annual Registration of Use).*

(1) *Requirements.*

(A) Any person keeping chickens pursuant to this Section must obtain a permit from the County.

(B) The Permit Application shall include:

(I) A plan or drawing showing the proposed locations of all chicken facilities to be located upon the property for which the permit is requested.

(II) Details demonstrating the applicant's compliance with the requirements of this Section.

(C) No property with outstanding code violations will be issued a permit.

(D) Prior to the issuance of a permit, the County may inspect the parcel for which the permit is requested.

(E) A permit issued pursuant to this Section shall allow the keeping of chickens on the specific property identified in the permit. The permit shall be personal to the permittee and is non-transferrable.

(F) A permit issued pursuant to this Section shall be in effect for 12 months after which the permittee may reapply or will expire.

(2) *Denial or Revocation of Permit*.

(A) *Denial or Revocation.* The Director of Community and Economic Development may deny or revoke a permit to keep, maintain or possess chickens within the County if determined that any provision of this Section is being violated or if the County finds that maintenance of chicken(s) interferes with the reasonable and comfortable use and enjoyment of property.

(B) *Removal of Shelter.* Upon expiration, revocation or denial of a permit, all chicken facilities shall be removed from the property within 14 days of such expiration, revocation, or denial.

5. **Bee Keeping**.

a. *Purpose*. The purpose of these regulations is to permit limited small animal husbandry uses within residential environments to promote access to fresh food and the associated health benefits as well as encourage sustainability through reduced vehicle trips for food and

energy consumption associated with food production. The regulations below are intended to permit beekeeping for household purposes, and not for profit, while preventing negative impacts associated with this use.

b. *Applicability*. The keeping of bees is only allowed as an accessory use with any detached, single-family or two-family residential use. Other accessory uses, such as accessory dwelling units, are also allowed to keep bees so long as the cumulative number of colonies on the property does not exceed the total allowance for the detached, single-family or two-family residential use.

c. *Development Regulations*.

(1) *Allowed Number of Bee Colonies.*

(A) Except in the Agricultural zone districts, no more than two bee colonies are permitted per detached, single-family or two-family residential use. See Sec. 3-13-03.A for beekeeping allowances in the Agricultural zone districts.

(B) Two bee colonies shall equal one household pet.

(2) *Performance Standards.*

(A) Type. Bee colonies must be provided with a predator-resistant structure, or hive, that is properly ventilated and elevated from the ground and designed to be easily accessed, cleaned, and maintained.

(B) Size. The hive shall not exceed eight square feet.

(C) Number. One colony per hive. A maximum of two hives are allowed per lot.

(D) Location. Bee keeping structures shall be located in the rear or backyard of the lot. They shall not be located between the rear of the dwelling and the front yard lot line.

(E) Orientation. The entrance/exit of the structure shall be oriented away from the closest adjacent property line(s).

(F) Access. All bee colonies shall be kept in inspectable hives with removable combs.

(G) Setbacks. The structure shall be setback at least 15 feet from any abutting property line.

(H) Flyway Barriers.

(I) A flyway barrier constructed at least six feet in height around the structure consisting of a fence or vegetation. This barrier must be designed so that the bees are forced to fly at an elevation of at least six feet above the ground level over the property line.

(II) Fences shall comply with the provisions of Sec. 3-05-01.E, *Fencing, Walls, and Screening*.

(3) *Provision of Food, Water, and Sanitation.*

(A) Water. Freshwater must always be available in adequate receptacles in order to prevent swarming near water sources where they may cause human, bird or domestic pet interactions.

(B) Cleanliness. The shelter and surrounding area must be kept clean from colony-produced materials, such as honey, honeycomb and brood comb, and debris so as to not create a nuisance.

(4) *Nuisance Prevention.*

(A) Nuisance-Free Facilities as Prerequisite. A permit to keep bees within the County shall not be granted unless the owner or keeper provides facilities which will reasonably assure the Director that the premises will be maintained in a sanitary condition, free from colony-produced materials, such as honeycomb and brood comb, or any other conditions which constitute a public nuisance.

(B) *Removal of Materials from the Colony*. Any materials removed from the colony shall be immediately moved away from the colony and enclosed in a bee and predator-proof location that is inaccessible to bees or their predators.

(C) Prohibited Attributes.

(I) Aggressive or Africanized bees are not permitted. Africanized, hybrid bee species, Apis mellifera scutellata, or bees displaying abnormally aggressive behavior are not permitted.

(II) Aggressive queens are not permitted. Aggressive queens shall be removed, and the colony shall be re-queened with a non-aggressive species.

(III) Bees not residing in a structure are not permitted. Bee colonies living outside of a designated colony structure as determined by these regulations are not permitted.

(5) *Permitting (Annual Registration of Use).*

(A) Requirements. Any person keeping bees pursuant to this Section must first have been issued a permit by the County.

(I) Permitting is subject to the following requirements:

1. The application shall include a plan or drawing showing the proposed locations of all bee facilities to be located upon the property for which the permit is requested.

2. Such plan or drawing shall include details demonstrating the applicant's compliance with the requirements of this Section.

3. No outstanding code violations exist on the subject property.

(II) Prior to the issuance of a permit, the County may inspect the parcel for which the permit is requested.

(III) A permit issued pursuant to this Section shall allow the keeping of bees on the specific property identified in the permit. The permit shall be personal to the permittee and is non-transferrable.

(IV) A permit issued pursuant to this Section shall be in effect for 12 months after which the permit will expire unless the permittee reapplies.

(6) *Denial or Revocation of Permit.*

(A) Denial or Revocation. The Director of Community and Economic Development may deny or revoke a permit to keep, maintain or possess bees within the County if it is determined that any provision of this Section is being violated or if the County finds that maintenance of bees interferes with the reasonable and comfortable use and enjoyment of property.

(B) Removal of Colony. Upon expiration, revocation or denial of a permit, all bees and bee keeping-related facilities shall be removed from the property within 14 days of such expiration, revocation, or denial.

6. **Pigeon Keeping**. Pigeon keeping shall be required to meet the following standards:

a. *Loft Floor Space*. There shall be up to 2.5 square foot of loft floor space for each mature pigeon.

b. *Loft Design*. The pigeon loft shall be of such sufficient size and design, and constructed of such material, it can be easily maintained in a clean and sanitary condition.

c. *Loft Compliance*. The loft shall be in compliance at all times with all applicable Adams County Health regulations.

d. *Setback from Residential Structure*. The loft shall be set back a minimum of 25 feet from any residential structure.

e. *Lot Line Setbacks*. The loft shall be set back from all lot lines in accordance with the accessory setbacks for the zone district in which it is located.

f. *Pigeon Feed*. All pigeon feed shall be stored in such containers as to protect against intrusion by rodents and other vermin.

g. *Pigeon Feeding*. All pigeons shall be fed within the confines of the loft.

h. *Pigeon Release for Flying*. Pigeons will not be released for flying for four hours after feeding.

i. *Pigeon Confinement*. All pigeons shall be confined to the loft, except for limited periods necessary for exercise, training, and competition. At no time shall pigeons be allowed to perch or linger on the buildings or property of individuals other than the owner of the pigeons.

## 3-13-02.C Class Instruction

1. **Incidental Use**. The class instruction shall be clearly incidental and secondary to the use of the dwelling for dwelling purposes and shall not change the character of the dwelling.
2. **Indoor Activities**. All activities related to the class instruction shall be conducted entirely within a dwelling.
3. **Employees**. The class instruction shall be conducted by the inhabitants of the dwelling and shall have only one additional employee.
4. **Exterior Advertising**. There shall be no exterior advertising other than identification of the class instruction with a sign not exceeding six square feet which must be located on the face of the home.
5. **No Sales on Premises**. There shall only be incidental sales of stocks, supplies or products conducted on the premises.
6. **No Outdoor Storage**. There shall be no exterior storage on the premises of material or equipment used as a part of the class instruction.
7. **No Offensive Impacts**. There shall be no offensive noise, vibration, smoke, dust, odors, heat or glare noticeable at or beyond the property line.

## 3-13-02.D Day Care Home (Adult and Child)

1. **General**.

   a. *Licensing*. Day care facilities must be properly licensed by the State of Colorado.

   b. *Drop-Off/Pick-Up Area*s. Day care facilities must provide adequate drop-off and pick-up areas. The required area shall be based upon the maximum number of individuals cared for at a single time. Specifically, there shall be 160 square feet of signed off-road drop-off/pick-up area for every eight individuals. All drop-off space shall meet the requirements

of these standards and regulations and be approved by the Director of Community and Economic Development.

c. *Outdoor Recreation Facilities*. Where outside recreation facilities are provided, a six-foot high sight-obscuring fence around the recreation area shall be required to be maintained and the recreation area shall be situated in the rear half of the site.

d. *Residential Appearance*. Existing residential structures shall not be significantly modified in appearance.

e. *New Construction in Residential Area*. Any new construction allowed in an agricultural or residential zone district for the operation of a day care center shall substantially resemble a conventional single-family detached dwelling.

2. **Child Day Care Home**.

a. *Maximum Number of Children not Attending School Fulltime*. The maximum number of children shall be 12, including the caretaker's children under 16 years of age not attending full-day school.

3. **Adult Day Care Home**.

a. *Maximum Number of Adults*. Elderly day care homes shall be permitted as an accessory use, provided the maximum number of elderly persons receiving care, protection, and supervision in any such home shall not exceed four at any given time.

b. *Criminal Background Investigation*. The Adams County Sheriff's Office shall complete a Criminal Background Investigation and shall issue identification cards to all employees/operators.

c. *Annual Reporting*. The applicant/operator shall provide an annual report for review by the Director of Community and Economic Development and the Adams County Sheriff's Office. Reports shall include recertification of any education requirements, revised Criminal Background Investigation, and issuance of identification cards to any new employees.

## 3-13-02.E Home Occupation

1. **Maximum Floor Area**. The area to be used for home occupation activities shall not exceed one-half the floor area of the dwelling unit.
2. **Incidental Use**. A home occupation shall be clearly incidental and secondary to the use of the dwelling for dwelling purposes and shall not change the character of the dwelling.
3. **Indoor Activities**. All activities related to a home occupation shall be conducted entirely within a dwelling, garage, or other accessory building. If conducted in an accessory building, the building shall meet the accessory building requirements of these standards and regulations.
4. **Employees**. A home occupation shall be conducted solely by the inhabitants of the dwelling.
5. **Exterior Advertising**. There shall be no exterior advertising other than identification of the business with a sign not exceeding six square feet which must be located on the face of the home.
6. **No Sales on Premises**. There shall only be no sales of stocks, supplies or products conducted on the premises.
7. **No Outdoor Storage**. There shall be no exterior storage on the premises of material or equipment used as a part of the home occupation.
8. **Parking and Storage of Vehicles**.

a. Parking and storage of vehicles shall comply with the residential accessory use performance standards for parking and storage except as allowed with a Conditional Use Permit in 3-12-02.K, *Storage and Parking of Vehicles*.

b. No employees of an off-site business may report to a residence to pick up vehicles or equipment.

9. **No Offensive Impacts**. There shall be no offensive noise, vibration, smoke, dust, odors, heat or glare noticeable at or beyond the property line.

10. **Permitted Home Occupations**. Permitted home occupations include, but are not limited to, the following uses:

a. Artisan/Handcrafted Manufacturing;

b. Art Studio;

c. Class Instruction (See Sec. 3-13-02.C for detailed performance standards for class instruction);

d. Dressmaking or Millinery Work;

e. Professional Office;

f. Office for Insurance or Real Estate Sales; and

g. Teaching.

11. **Uses Not Considered Home Occupations**. The following uses are not considered home occupations:

a. Animal Hospital;

b. Long-Term Care Facility;

c. Restaurant;

d. Bed and Breakfast (a bed and breakfast is considered a principal permitted use in certain zone districts);

e. Group Home, FHAA and Group Residential Facility;

f. Special trade contractors such as landscaping and construction businesses;

g. Auto Painting, Repair, Sales, or Service;

h. Truck Repair, Sales, or Service;

i. Short-Term Rental; and

j. Vacation Rental.

## 3-13-02.F Kennels

1. **Special Use Permit**. A Special Use Permit must be obtained.

2. **Compliance with State Requirements**. All private kennels must meet the state standards as stipulated under the Private Animal Care Facilities Act.

3. **Permitted Number of Dogs and Cats**. Up to 30 dogs and cats may be permitted through a Special Use Permit for a private kennel on Agricultural-2 and Agricultural-3 properties. For all other districts, up to 20 dogs or cats may be permitted through a Special Use Permit for a private kennel.

4. **Building Permit Required**. A Building Permit shall be obtained for all kennels, pens, shelters, or other similar structures.

5. **Prohibited Animals**. Boarding dogs and cats other than those animals owned by the resident or owner and immediate family shall be considered a commercial kennel and will need to meet the standards in Sec. 3-13-04.C.
6. **Minimum Space Requirements**.
   a. *Dogs*. Each dog shall be provided a minimum space equal to the following equation:
      (1) Width of Kennel = Length of dog from nose to base of tail + two feet.
      (2) Length of Kennel = Width of Kennel + two feet.
      (3) Height of Kennel = Head height of dog standing on all four legs + one foot.
   b. *Cats*. Each adult cat shall be provided a minimum of six cubic feet of area. Adult female cats with kittens below three months of age shall be provided with a minimum of eight cubic feet of area.
7. **Garbage Disposal**. All animal and food waste shall be handled and disposed of in a sanitary manner as approved by Adams County Health Department.
8. **Pest Control**. Environmental and/or chemical and scientific controls shall be provided for pest control.
9. **Drainage**. Adequate drainage facilities or improvements shall be constructed to protect any adjacent rivers, streams, or other bodies of water from pollution.
10. **Mixing of Dogs and Cats**. Dogs and cats shall not be housed in the same primary enclosure.
11. **Care of Animals**. All dogs and cats shall be cared for in a humane and sanitary manner as approved by Adams County Animal Management.
12. **Other Standards**. All animal keeping shall conform to Sec. 3-12-02.B, *Animal Keeping*, of these standards and regulations.

## 3-13-02.G Solar Energy System, Accessory

1. **Site Plan**. A Site Plan shall be submitted with the Building Permit which demonstrates compliance with setback and height requirements.
2. **Lot Coverage**. The area covered by ground-mounted solar energy systems, where the ground beneath is permeable or pervious, shall not be included in calculations for lot coverage for purposes of zoning.
3. **Location**. All solar panels and equipment (excluding fencing, poles, and wires necessary to connect to facilities of the electric utility) shall meet the minimum accessory structure setbacks for the applicable zone district or shall meet the minimum structure setbacks for the applicable zone district when an accessory structure setback is not specified. Additional setbacks may be required to mitigate noise and visual impacts, or to provide for designated road or utility corridors, as identified through the review process.
4. **Maximum Height**.
   a. *Ground-Mounted*. The height of ground-mounted solar energy systems shall be measured from the highest grade below each solar panel. In residential zone districts, solar panels shall not exceed 15 feet in height. In all other zone districts, solar panels shall not exceed 20 feet in height.
   b. *Roof-Mounted*. The height of roof-mounted solar energy systems shall not exceed the maximum permitted height of the structure type by more than five feet.

c. *Parking Lot or Parking Canopy*. The height of systems will be measured from the highest grade below each solar panel. Parking lot cover solar panels shall not exceed 20 feet in height. Parking lot cover solar panels shall be no less than 14 feet in height to allow clearance for emergency vehicles.

5. **Signage**. For ground-mounted solar energy systems, clearly visible warning signs shall be placed on the fence, barrier, or facility perimeter to inform individuals of potential voltage hazards.
6. **Security**. Except parking lot or parking canopy solar energy systems, all solar panels and equipment (excluding poles and wires necessary to connect to facilities of the electric utility) shall be enclosed by a fence at least six feet high. Wildlife-friendly fence options are encouraged.
7. **Lighting**. If lighting is provided at the site, lighting shall be shielded and downcast such that the light does not spill onto the adjacent parcel. Motion sensor control is preferred.
8. **Decommissioning**. Any solar energy system which is no longer producing energy or has been abandoned shall be removed. The owner or operator shall physically remove the installation within 150 days after the date of discontinued operations. The owner or operator shall notify the Adams County Community & Economic Development Department by certified mail of the proposed date of discontinued operations and plans for removal. Decommissioning shall consist of.
   a. *Removal*. Physical removal of all solar energy systems, structures, and equipment from the site.
   b. *Disposal*. Disposal of all solid and hazardous waste in accordance with local, state, and federal waste disposal regulations.
   c. Stabilization or Re-Vegetation. Stabilization or re-vegetation of the site as necessary to minimize erosion. Adams County may allow the owner or operator to leave landscaping or designated below-grade foundations in order to minimize erosion and disruption to vegetation.

## 3-13-02.H Storage and Parking of Vehicles

1. **Storing and Parking Vehicles**. Vehicles that are allowed to be stored or parked in agricultural and residential zone districts, include but are not limited to boats, boat trailers, trailers, campers, fifth-wheel trailers, all-terrain vehicles, motor homes, stock cars, and ski mobiles on a trailer (but not on the ground). The storage or parking of any vehicle in any zone district must meets the standards listed in this Section.
2. **Total Number Vehicles Stored**.
   a. *Lots less than 1 Acre*. A total of two vehicles may be stored outdoors.
   b. *Lots of 1 Acre or More*. A total of two vehicles per acre, with a maximum of five vehicles may be stored outdoors.
   c. *Storage*. A vehicle is “stored” on a property when it is located on the same property without moving for a period of 72 hours or more.
3. **Vehicles Stored on or Attached to a Trailer**. Recreational vehicles stored on a trailer, and any vehicle attached to a trailer, shall be counted as one vehicle.
4. **Inhabiting Recreational Vehicles**. Motor homes, trailers, 5th wheels, tiny homes on a mounted trailer, and other recreational vehicles may be inhabited one time for a maximum of 30 consecutive days within a calendar year. The use of a motor home, trailer, 5th wheel, or other

recreational vehicle must be in conjunction with a residence on residentially zoned property and shall be prohibited on non-residentially zoned property.

5. **Right-of-Way Parking**. Recreational vehicles and any type of trailer may only be parked on any public right-of-way for a maximum period of 24 hours. The same recreational vehicle or trailer may not be moved and re-parked within a five-mile vicinity for six months. Unlicensed and inoperable vehicles may not be stored or parked on any public right-of-way for any time period.

6. **Inoperable and Unregistered Vehicles.** Inoperable vehicles or unregistered vehicles without a properly displayed and valid State Motor Vehicle Registration Certificate may not be stored or parked outdoors.

7. **Storage on an Approved Surface**.

   a. In residential zone districts, all storage of tractor trailers, over-the-road semi-trucks, road cleaners, motor graders, tow trucks, and similar maintenance or construction equipment listed in this section shall be located on an approved, hard surface of asphalt or concrete and no parking of vehicles is allowed in the back yard or any landscaped area.

   b. In the A-1 zone district, all storage of vehicles and machines listed in this section may be located on gravel or recycled asphalt and no parking of vehicles is allowed in the back yard or on any landscaped area. Gravel or recycled asphalt areas within the rear or side setback, as established in the definition of "setback", is not considered part of the backyard and parking is permitted. This Paragraph b does not apply to commercial vehicles in the A-1 zone district that require an Administrative Review Permit.

8. **Commercial Vehicles.**

   a. *Permit Required.* Commercial vehicle parking and/or storage accessory to a residential use requires a permit as follows:

      (1) *Administrative Review Permit (ARP).* An ARP is limited to one commercial vehicle and is valid for a term of no more than five years. An ARP may be issued by the Director of Community and Economic Development if all the criteria below are met:

         (A) The application meets the criteria for approval of an ARP.

         (B) The property owner agrees to comply with both the home occupation and the parking and storage of vehicles performance standards.

         (C) Vehicle trips generated by the commercial vehicle must fall below the threshold to trigger a traffic impact study as provided in Div. 7-02, *Guidelines for Traffic Impact Studies*.

         (D) The property has legal access to an arterial road or a road with a higher level of service.

         (E) The property is at least one acre in size.

         (F) The property is zoned RE, A-1, A-2, or A-3.

         (G) The use of the commercial vehicle is related to a lawfully existing home occupation.

         (H) The commercial vehicle is 16,000 lbs. gross vehicle weight (GVW) or less.

      (2) *Special Use Permit (SUP).* A SUP may be issued for up to three commercial vehicles and is valid for a term of no more than five years. A SUP may be issued by the Board of Adjustment if all the criteria below are met:

         (1) The use of each commercial vehicle is related to a lawfully existing home occupation.

(2) The property is zoned A-3.

(3) The property owner agrees to comply with both the home occupation and the parking and storage of vehicles performance standards.

(4) The application meets the criteria for approval of a SUP.

(3) *Expiration of Permit.* Notwithstanding any other provision of these standards and regulations to the contrary, a property owner desiring to continue commercial vehicle parking and/or storage accessory to a residential use permitted hereunder may timely apply to the appropriate

b. *Commercial Vehicle Parking.* The following performance standards apply to commercial vehicle parking and/or storage accessory to a residential use.

(1) *Home Occupation.* The commercial vehicle parking and/or storage is in conformance with the home occupation standards as provided in Sec. 3-12-02.G, *Home Occupation*.

(2) *Location of Vehicle.* The vehicle(s) must be setback at least 20 feet from any property line and must be screened from adjacent properties all abutting vehicular rights-of-way.

(3) *Parking Surface.* A parking surface of concrete or poured asphalt is required. Initial water quality measures are subject to review at the time of permit application and must meet all water quality measures as provided in Chapter 10, *Stormwater Management*.

(4) *No Vehicle Service.* No on-site servicing or repairing of vehicle(s) may be performed at the subject property.

(5) *Vehicle Noise.* Vehicle noise must not exceed the noise ordinance level limits for the zone district.

(6) *Idling.* Vehicle idling may not exceed five minutes. Use of block heaters for diesel engines is encouraged.

(7) *Prohibited Storage.* No construction materials or equipment may be stored or parked accessory to a residential use.

(8) *Prohibited Vehicles.* No commercial vehicle intended or used for the transportation of flammable or hazardous materials may be stored or parked accessory to a residential use.

c. *Required Documentation.* Proof of current vehicle registration and insurance is required with each application and, thereafter, shall be submitted annually to the Director of Community and Economic Development on the anniversary of the permit issuance.

d. *Exempt Vehicles.* The following commercial vehicles are exempt from the requirements of this Subsection:

(1) Commercial vehicles with a GVW of 10,000 lbs. or less.

(2) Gas, electric, telephone or similar utility service vehicles.

(3) Police, fire, and emergency service provider vehicles owned or operated by a political subdivision of the State of Colorado.

## 3-13-02.I Swimming Pools, Private

1. **Location**. No swimming pool shall be located in the area from the right-of-way to the front structure line.

2. **Fencing**. Swimming pools shall be completely enclosed by a fence not less than 48 inches in height with no opening large enough to permit children to pass through other than gates or doors equipped with self-latching devices placed on the inside top of the gate. Above-ground swimming pools of at least 48 inches above the perimeter shall not be required to provide fencing.
3. **Pre-Existing Pools**. All pre-existing pools shall be completely enclosed by a fence no later than six months following adoption of these standards and regulations.
4. **Wading Pools**. Wading pools with a maximum possible water depth of 20 inches or less are not required to be fenced.

## 3-13-02.J Short-Term Rentals

1. **Applicability**. A short-term rental is an accessory use in any dwelling and shall conform to the requirements set forth herein. Short-term rentals are only allowed by obtaining a valid license from the County; provided, however, that the requirements for a license shall not take effect until the Board of County Commissioners adopts companion licensing regulations.
2. **License**. At least 30 days prior to any advertising for or lease of a short-term rental property, the owner shall file a written application for a Short-Term Rental License with the Director of Community and Economic Development. An application for renewal of a Short-Term Rental License shall be submitted at least 30 days prior to expiration of the existing license. A Short-Term Rental License shall expire one year following the year of initial license issuance, or when title of the short-term rental property transfers to a new owner, whichever occurs first. An application for renewal of a Short-Term Rental License shall be submitted at least 30 days prior to expiration of the existing license.
3. **Complaints**.
   a. *Initial Complaint to Responsible Agent*. Initial complaints concerning a short-term rental property shall be directed to the responsible agent. The agent shall respond to the complaint, including visiting the site if necessary.
   b. *Formal Complaint to Director*. If an initial complaint is not resolved, a formal complaint may be filed with the Director of Community and Economic Development. The formal complaint shall describe in detail the violation(s) of this Section alleged to have occurred on the short-term rental property. Within three business days of receipt of such a complaint, the County shall provide a copy of the formal complaint to the owner and agent.
   c. *Investigation*. The County may investigate any formal complaint received, in order to determine if it is a substantiated complaint that represents a documented violation of any County regulations. Violations shall be subject to the code enforcement provisions, in accordance with all remedies provided by law, including, but not limited to, withholding any development approvals, inspections or permits and issuing stop work orders. If violations are not corrected or if there are repeat offenders of County requirements, Adams County may pursue formal action and by applicable law. If there is one or more unresolved substantiated complaints for a short-term rental property, or if upon review at any time, the County determines that the license holder has failed to comply with any of the performance standards or conditions, the County may take such action as is deemed necessary to remedy the noncompliance, including but not limited to revocation of the license. The Community and Economic Development Department may revoke the license for that short-term rental property upon written notice to the owner. The County shall notify an owner, in writing, of any revocation. The owner may appeal any revocation by

filing an Appeal of Administrative Decision, as described in Chapter 13 of this DSR. For a minimum of two years following revocation of a Short-Term Rental License, the County shall not accept an application for a new license for the same short-term rental property; with the exception that a new application by a new property owner, proven to be unaffiliated with the property owner whose license was revoked, may be considered.

4. **Conditional Use Permit**. A Conditional Use Permit shall be required in lieu of a Short-Term Rental License for any proposed short-term rental that proposes an occupancy of more than 12 people. This requirement applies regardless of whether the Board of County Commissioners has adopted companion licensing regulations.

5. **Responsible Agent Required**.

   a. *Designation*. Each owner of a short-term rental property shall designate a person or company to serve as the responsible agent. The owner may designate themselves.

   b. *Availability*. The responsible agent shall have access and authority to assume management of the unit and take remedial measures. The agent shall always be available to respond to potential issues and violations related to this DSR. The responsible agent must be able to affirmatively respond to complaints within an hour of notification of such complaint being sent via email or text.

   c. *Modifications*. The owner shall notify the Director of Community and Economic Development in writing of any modification to the responsible agent appointment within five days of any such modification.

6. **Parking**. A minimum of one parking space is required on the property per unit. At no time shall more than five cars permitted to be parked outdoors on any property. Designated parking spaces shall comply with the parking plan on the approved Short-Term Rental License. All vehicles shall be parked on-site in designated parking areas; parking is prohibited in any landscaped area, or in a manner that blocks egress for adjacent residents (driveways, sidewalks, alleys, or mailboxes). A copy of the County-approved parking plan for the short-term rental property shall be provided in the rental/occupant agreement and posted in a prominent location within the property. The allowable number of parking spaces shall be clearly stated in all short-term rental advertising.

7. **Trash Disposal and Collection**. All short-term rental properties shall provide a trash disposal and collection plan to ensure that trash containers are not left outdoors where they can cause issues for wildlife or snow removal operations. The proposed trash disposal and collection plan shall be reviewed and approved by the County during the Short-Term Rental License review and during review of any license renewals. There shall be enough trash receptacles to accommodate all trash generated by those occupying the short-term rental property.

8. **Pets**. If pets are allowed, renters/occupants shall be informed of applicable requirements for controlling pets, pet waste disposal, and barking/noise considerations. All short-term rental properties shall comply with Sec. 3-12-02.B, *Animal Keeping.* All pet food shall be stored indoors.

9. **Signage**. An owner shall post a sign or notice conspicuously inside the short-term rental property, which includes the responsible agent's current contact information and/or the owner's current contact information, the street address of the short-term rental property, and the Short-Term Rental License or Conditional Use Permit number. The Good Neighbor Guidelines, parking plan and trash disposal requirements shall be posted in a prominent location within the short-term rental property. Short-term rental uses are considered accessory uses to

a principal residential use, and therefore limited to the Residential Sign requirements in Sec. 4-05, *Signs*.

10. **Properties Served by Septic Systems**. If a short-term rental property is connected to an On-site Wastewater Treatment System (OWTS) for sewer service, the maximum overnight occupancy of the unit shall be limited to the capacity established on the OWTS permit.

11. **Health and Safety Standards**.

    a. *Use*. Buildings, structures, or rooms shall not be used for purposes other than those for which they were designed or intended.

    b. *Fire Safety*. Smoke detectors, carbon monoxide detectors, and fire extinguishers shall be installed and operable, and all woodburning fireplaces and stoves shall be cleaned on an annual basis.

    c. *Bathroom*. An operable toilet, sink, and either bathtub or shower shall be located within the same building.

    d. *Maximum Occupancy*. Permitted occupancy shall be limited to two persons per bedroom plus four additional occupants; or 1 person per 200 square feet of living area, whichever allows for a greater occupancy.

    e. *Fire Pits*. Outdoor fire pits shall be permanently installed improvements that are permitted and inspected by the applicable fire district and/or the Building Official, if required per applicable building and fire code requirements. Short-Term Rental owners/license applicants should check with the applicable fire district and the Director of Community and Economic Development to determine if fire permits are needed. The use of portable outdoor fireplaces is prohibited. In the event of a fire ban within Adams County, the responsible agent is required to notify renters/occupants of the current fire restrictions during their stay.

    f. *Cell Service*. All short-term rental properties shall have reliable cellular service available or provide access to a landline telephone to enable tenants/occupants to call 911 in the event of an emergency.

    g. *Hot Tub, Spa, or Swimming Pool.* All hot tub, spa, or swimming pool installations require both a Building Permit and an electrical permit from the Building Official. Hot tubs, spas, and swimming pools shall be properly maintained in a way to prevent the spread of illness.

# 3-13-03 Agricultural Accessory Uses and Structures

## 3-13-03.A Agricultural Animal Keeping, Non-Commercial AFOs and CAFOs

1. **Zone Districts**. The keeping of Agricultural Animals, except chickens and bees, is only allowed in the Agricultural and Residential Estate (RE) Zone Districts. Agricultural Animals may be kept on property in the Residential Estate and Agricultural-1 (A-1) Zone Districts only if the owner of said livestock resides on the property. This does not apply to horses kept for recreational purposes.

2. **Number**. The keeping of non-commercial agricultural animals, except chickens and bees, is allowed as follows. The maximum number of allowable agricultural animals per lot does not apply to young animals below weaning age, or six months of age, whichever is less.

    a. A-1 and RE zone districts: 2 agricultural animal units per acre shall be permitted.

b. Agricultural-2 (A-2) and Agricultural-3 (A-3) zone districts: For properties that are smaller than 10 acres, 4 agricultural animal units per acre are allowed. For properties 10 acres and larger, the number of agricultural animal units shall not be regulated.

3. **Agricultural Animal Count**. All agricultural animals shall count as one agricultural animal unit, except the following:
   a. Two goats shall count as one agricultural animal unit.
   b. Two beehives shall count as one agricultural animal unit.
   c. Four small poultry (40 pounds or less) shall count as one agricultural unit.
4. **Standards**. On those properties where agricultural animals are allowed, the following standards shall be observed:
   a. *Manure.* All manure shall be removed periodically or incorporated into the soil on a regular basis so the manure does not draw flies, or other insects, or cause obnoxious odors.
   b. *Drainage.* Adequate overflow drainage on drinking facilities shall be provided to prevent the saturation of soil on adjacent property. Adequate drainage facilities or improvements shall be constructed to protect any adjacent rivers, streams, or other bodies of water from pollution.
   c. *Feed.* Spillage and left-overs from agricultural animal feedings must be removed or so disposed of as to prevent fly, bird, or rodent propagation, or creation of odors.
   d. *Pens.* Any new shed, shelter, pen, or enclosure for agricultural animals shall not be closer than 100 feet to any off-property residence or place of business and shall be set back 25 feet from the side lot line and 50 feet from the front lot line.
   e. *Insects and Rodents.* All sheds or other shelter for agricultural animals shall be kept reasonably free of rodents and insects and shall be kept in good repair.
   f. *Fencing.* In subdivided areas, all agricultural animals shall be kept within a fenced area.
   g. *Colorado Rules.* Adherence to the Colorado Confined Animal Feeding Regulations, promulgated by the Colorado Department of Public Health and Environment, Water Quality Control Commission.
5. **Large Properties** On A-2 and A-3 zone districts of greater than 10 acres, the number of agricultural animals is not regulated, unless the operation meets the definition of a Livestock Confinement Operation. However, the keeping of such agricultural animals must comply with the standards listed above except the keeping of agricultural animals shall be exempt from the manure and feed requirements on parcels greater than 35 acres in size.

## 3-13-03.B Agritourism

1. **Agritourism permitted**. Agritourism is allowed as an accessory use in all agricultural zone districts, subject to the restrictions of this Section. Agritourism activities shall be secondary and subordinate to and support the agricultural use of the property. The property must maintain ongoing agricultural production. For purposes of this Section, “active agricultural use” means a working farm, ranch, or agricultural operation engaged in the commercial production of agricultural products, including crops, livestock, or value-added agricultural goods.
2. **Review Required.** A site plan review for an agritourism use is required.
   a. *Exemption*: The following agritourism events or activities do not require a staff review:

i. Agritourism events or activities with fewer than 150 attendees per day ; and
ii. Agritourism events or activities occurring on one site 10 or less times in one calendar year; and
iii. Agritourism events or activities on one site not lasting more than two consecutive days.

3. **Location:** All agritourism activities shall take place on the subject site and shall not block or be located within any right-of-way or public sidewalk.
4. **Setbacks:** The setbacks for the zone district apply for any permanent or temporary structure associated with the use.
5. **Signage:** Agricultural sign standards shall apply.
6. **Parking:**
   a. Parking shall not block or be located within any right-of-way or public sidewalk.
   b. A parking surface of crushed asphalt or gravel is encouraged to maintain the agricultural character of the land.
   c. Parking areas shall be designed to minimize impacts to agricultural land and may be required to be temporary or seasonal in nature.
7. **Traffic.** To the maximum extent possible, temporary traffic control (TTC) measures shall be provided by the operator to mitigate increased traffic volumes rather than permanent infrastructure improvements. TTC measures shall be approved as part of the site plan review process.
8. **Hours of Operation***:* Hours of operation for agritourism events or activities shall be limited from 7:00 A.M. to 10:00 P.M.
9. **Outdoor Storage***.* Accessory outdoor storage is prohibited.
10. **Food trucks.** Any food trucks associated with the agritourism event shall be subject to Sec. 3-13-04.D, *Mobile Food Vendors.*
11. **Conditional Use Permit Required.** Any agritourism use that is not secondary and subordinate to the agricultural use shall be considered an Agricultural Support Business and will require a Conditional Use Permit. In determining whether an agritourism use shall be treated as an Agricultural Support Business, the following shall be considered:
    a. *Frequency of use.* A site that hosts agritourism activities or events more than 180 days per year is considered to be an Agricultural Support Business.
    b. *Intensity of use.* A site that hosts an agritourism event that draws at least 500 people more than 30 days per year is considered to be an Agricultural Support Business.

       *Director determination*. The Director of the Community and Economic Development Department reserves the right to review the use and determine if it exceeds the definition of accessory use in Chapter 16.

## 3-13-03.C Agrivoltaics

1. **Site Plan.** A site plan review is required for agrivoltaic solar energy systems prior to building permit approval. Site Plan documents shall include:
   a. Property lines and physical features, including roads, for the project site;

i. Proposed changes to the landscape of the site, grading, vegetation clearing and planting, exterior lighting, screening vegetation or structures;
ii. Blueprints or drawings of the solar energy system showing the proposed layout of the system, the distance between the proposed solar collector and all property lines, and the tallest finished height of the solar collector;
iii. Name, address, and contact information for proposed system installer; and
iv. Name, address, phone number and signature of the project proponent, as well as all co-proponents or property owners, if any.

2. **Site Layout.** Clear zones must be maintained between rows of solar panels. All racking system components must be installed in a way that does not obstruct the movements of people, vehicles, or animals, including drivelines and inverters.
3. **Grading, Vegetation Preservation, and Minimizing Site Disturbance.** Soil disturbance for agrivoltaic system installation shall be minimized. Grading for agrivoltaic systems shall be avoided to the extent practical, with existing land contours used to design the layout of the solar panels. Grading should be strictly limited on an agrivoltaic site, though allowed for transformer pads, access roads, and grid connection infrastructure.
    a. Use of non-invasive mounting methods (such as driven piles) shall be utilized to the extent practicable, with use of concrete footers minimized where feasible based on site-specific engineering requirements.
    b. All portions of the site where existing vegetative cover is damaged or removed shall be revegetated with vegetation conducive to planned agricultural activities or with drought-tolerant, perennial vegetation (e.g., grasses, forbs).
4. **Wire Management Plan.** A wire management plan must be submitted prior to building permit approval that describes methods to avoid hanging or exposed wires and cables to protect grazing livestock and humans working under the panels. Best management practices include:
    a. Bundling electrical wires into conduit or protected by wire mesh that is flush with the solar panel or associated structural supports.
    b. Designing conduits and electrical boxes within the structural supports and minimizing extensions outside of such supports.
    c. Bundling wires with metal clasps instead of plastic.
    d. Placing wires leading into the ground into metal conduit, preferably Schedule 80 steel.
    e. Trenching cables is necessary, however, digging trenches for cables should be minimized to reduce land disturbance. The depth of buried cables should be deep enough to not disrupt agricultural activities, such as tilling.
5. **Agricultural Implementation Plan.** An agricultural implementation plan must be submitted prior to building permit approval. The plan must include information on how the land will be used, timeline for agricultural activities, generally what types of crops or livestock will be grown, the on-site water use required, irrigation information including the source: existing water rights, an on-site well, water delivery by truck, or another method, and weed management.
6. **Agrivoltaic Lease Agreement.** A copy of the lease agreement between the landowner and solar development company must be submitted prior to building permit approval. This agreement must address the ongoing ability of both the solar development company and the landowner to

work with agricultural entities to utilize the agrivoltaic system for agricultural purposes throughout the life of the system.

7. **Stewardship Report.** A land stewardship report shall be provided by the agrivoltaic system owner to the jurisdiction every five (5) years documenting agrivoltaic operations and summarizing the agricultural uses, electricity generated, how the design facilitates or hampers agricultural performance, and plans for future agricultural activities.
8. **Decommissioning and Financial Assurance.** A Decommissioning Plan and financial assurance shall be provided in accordance with Sec. 3-06-01(D), *Decommissioning and Financial Assurance for Large-Scale Energy Projects*.

## 3-13-03.D Biosolids Application

1. **Biosolids Regulations.** The applier must operate in compliance with the Colorado Department of Public Health and Environment Biosolids Regulations, Reg. No. 64.
2. **Monitoring Reports.** Monitoring reports are required as a condition of the State Permit and shall be forwarded to the Adams County Community and Economic Development Department as they are forwarded to the Colorado Department of Public Health and Environment.
3. **Nuisance Impacts.** The applier must control odor and dust generated during the application of biosolids using appropriate best practices.
4. **Conditions of Approval.** The applier shall operate in accordance with all approved plans and required conditions of approval as stated in the permit issued by Adams County.
5. **Sewage, Sewage Sludge, and Septage.** Land applications of sewage, sewage sludge, or septage are prohibited.

## 3-13-03.E Communication Tower, Non-Commercial

1. **Maximum Height**. Non-commercial communication towers shall be a maximum of 90 feet in height.
2. **Setback Encroachment Prohibited**. No portion of the non-commercial tower or its antennae may encroach into the required front, side, or rear setback. All towers shall be setback from all lot lines or zoning lot lines a minimum of the height of the tower.
3. **Marking of Cables and Wires**. Cables, ropes, or wires used to secure the tower shall be appropriately and conspicuously marked to prevent injury. No cables or wires shall cross any public rights-of-way or properties not owned by the same property owner as the property on which the tower is located.

## 3-13-03.F Farm Employee Housing

1. **Multi-family or Multiplex Buildings as Farm Employee Dwellings**.
   a. *Permit Required*. A Conditional Use Permit approval shall be required for the use of a multi-family or multiplex dwelling as a farm employee dwelling.
   b. *Provision of Water and Sewer*. Proof of adequate provisions for water, sewer, fire protection, other utilities and access shall be provided.

## 3-13-03.G Stables

1. **Setback from Residence on Property**. All stables shall have a minimum building separation of 25 feet from any residence on the property.
2. **Setback from Adjacent Property**. All stables shall be set back 100 feet from any dwelling or pool on an adjacent property.
3. **Maintenance**. All animal and food waste shall be handled and disposed of in a sanitary manner as approved by the Adams County Health Department. When in use, stables shall be cleaned weekly.
4. **Pest Control**. Environmental and/or chemical and scientific controls shall be provided for pest control.
5. **Drainage**. Adequate drainage facilities or improvements shall be constructed to protect any adjacent rivers, streams, or other bodies of water from pollution. Stables shall be well drained and dry, and shall not be located within or cross drainages whether intermittent or perennial.
6. **Care of Animals**. All animals shall be cared for in a humane and sanitary manner as approved by Adams County Animal Management.

## 3-13-03.H Vending and Produce Stands

1. **Permit Required.** A Temporary Use Permit, as established in Sec. 13-03-05 shall be required for vending and produce stands, and is subject to administrative approval depending on the conformance of the application with the requirements of this Section.
2. **Minimum Lot Area**. No vending or produce stand shall be located on a parcel of land less than four hundred (400) square feet in size.
3. **Location**. The stand shall be located on a gravel, recycled asphalt, or paved parking lot or on agricultural land. The stand shall not block or be located within any right-of-way or public sidewalk.
4. **Setbacks**. The setbacks for the zone district in which the stand is located shall apply.
5. **Signage**. All signs shall be affixed to the stand. The total sign area shall not exceed 16 square feet in area.
6. **Parking**. Parking for the stand shall not block or be located within any right-of-way or public sidewalk. At least five off-road parking spaces shall be provided per 200 square feet of stand area.
7. **Access**. All vending and produce stands shall have highway, arterial, or collector road access.
8. **Period of Operation**. The stand shall operate for no more than 90 days annually.
9. **Hours of Operation**. The stand shall limit its hours of operation to 7:00 a.m. to 7:00 p.m.

## 3-13-03.I Wind Powered Generators

1. **Maximum Height of Generator**. The height of the generator, including blades, shall not exceed the height limit of the zone district in which the generator is located, unless a height exemption is granted by the Board of Adjustment. The maximum height of the generator may be further restricted if located within an aviation zone district.
2. **Minimum Height of Blades Above Ground**. 20 feet.
3. **Minimum Setbacks**. No wind generator shall be located closer than the height of the generator from any property line, unless granted by Variance from the Board of Adjustment.

4. **Number of Generators Permitted**. Only one generator per lot or parcel is permitted unless a Conditional Use Permit is approved.
5. **Location**. The generator serving the structure shall be located on the same lot as the structure it serves.
6. **Liability Coverage**. The County shall be provided with a copy of rider to owner's insurance showing coverage of liability prior to issuance of a Building Permit for construction of a wind powered generator.
7. **High Wind Mitigation**. The County shall be provided with assurance from the manufacturer all safety features to mitigate the effects of high wind conditions have been designed for the particular generator prior to issuance of a Building Permit for construction of a wind powered generator.
8. **Storage Batteries**. Storage batteries, if applicable, shall be housed in accordance with the following standards:
    a. *Location*. The structure shall be accessory to and detached from the residence by a minimum of 20 feet.
    b. *Ventilation*. Adequate ventilation shall be provided in the structure to eliminate the accumulation of explosive gases.
9. **Noise Levels**. Permitted noise levels shall meet the performance standards of these standards and regulations.
10. **Electromagnetic and Electrical Interference**. No equipment shall be operated in such a manner as to adversely affect the operation of any off-premises electrical, radio or television equipment. No use may be made of land or water within the County, which will create electrical interference with navigational signals for radio communications between an aviation facility and aircraft.
11. **Manual Shut-off Required**. Any individual wind powered generator shall include a manual shut-off, which may be utilized by utility company personnel.
12. **Utility Company Approval**. The local utility provider of gas and electric service shall provide written approval prior to construction.

# 3-13-04 Commercial Accessory Uses and Structures

## 3-13-04.A Communication Tower, Non-Commercial

1. **Maximum Height**. Non-commercial communication towers shall be a maximum of 90 feet in height.
2. **Maximum Number of Antennae**. A maximum of two antennae may be mounted on a non-commercial communication tower.
3. **Setback Encroachment Prohibited**. No portion of the non-commercial tower or its antennae may encroach into the required front, side, or rear setback. All towers shall be setback from all lot lines or zoning lot lines a minimum of the height of the tower.
4. **Marking of Cables and Wires**. Cables, ropes, or wires used to secure the tower shall be appropriately and conspicuously marked to prevent injury. No cables or wires shall cross any public rights-of-way or properties not owned by the same property owner as the property on which the tower is located.

## 3-13-04.B Guard Dogs

Guard Dogs, patrolling for the protection of property, shall be allowed in all Commercial and Industrial Zone Districts, subject to the following:

1. **Number of Guard Dogs Permitted**. Two (2) guard dogs are permitted per Commercial or Industrial property. An additional three (3) may be allowed by Special Use Permit.
2. **Confinement of Guard Dog(s)**. The area being patrolled by a guard dog(s) shall be fenced with a minimum 72-inch -high chain link or solid screen fence.
3. **Notice of Guard Dog(s)**. A sign warning of the presence of dog(s) stating what hours the dog(s) is on patrol shall be posed in plain view of the public around the perimeter of the fenced area. The sign must also state the name of the owner and the handler of the dog(s), with a phone number where the handler can be reached.
4. **Garbage Disposal**. All animal and food waste shall be handled and disposed of in a sanitary manner as approved by Adams County Health Department.
5. **Pest Control**. Environmental and/or chemical and scientific controls shall be provided for pest control.
6. **Care of Animals**. All dogs shall be cared for in a humane and sanitary manner as approved by Adams County Humane Society and Adams County Animal Management.

## 3-13-04.C Kennel/Cattery, Commercial

1. **General Provisions.** The operation of commercial kennels and/or catteries is allowed as an accessory use in Agricultural, Commercial and Industrial Zone Districts. Commercial kennels and/or catteries shall not be conducted without first having obtained a Conditional Use permit and approval of a management plan from the Board of County Commissioners.
2. **Offspring Not Limited**. The total number of dogs and/or cats allowed under the Conditional Use Permit shall not apply to offspring under five months of age, belonging to one of the adult animals.
3. **Management Plan Required**. A management plan detailing how the facility will be operated shall be submitted prior to issuance of a Conditional Use Permit.
4. **Minimum Standards**. In addition to the requirements of Sec. 3-12-02.H, *Kennels*, commercial kennels shall meet the following minimum standards:
    a. A washroom consisting of a basin or sink and a lavatory shall be provided to maintain the cleanliness among animal caretakers.
    b. All breeding and boarding kennel operators shall be licensed by the appropriate governmental authority.
    c. A person responsible for the commercial kennel or cattery, whether the owner of the facility or an employee, shall reside permanently on the subject property. If a responsible party is not available on site, the kennel shall be posted with the name and phone number of a responsible party.
    d. Any dwelling unit newly constructed to house the owner or employee shall meet the applicable zone district requirements.
5. **Exemptions**. Those operations exempt from obtaining a Conditional Use Permit shall be as follows:

a. A public or private zoological park;
b. A public animal pound;
c. A veterinary hospital operated by a licensed veterinarian;
d. A research institution using animals for scientific research;
e. An animal shelter operated by an organized humane society;
f. A pet shop; or
g. A circus.

## 3-13-04.D Mobile Food Vendor

1. **General.**
    a. Outdoor Storage. Accessory outdoor storage is prohibited. All facilities for storage of supplies shall be located within a building.
    b. Garbage Storage. Garbage area screening shall consist of a six foot high minimum screen fence made of wood or masonry material. Fencing materials must be clean and maintained at all times to present an orderly appearance. No garbage storage area shall be located within 20 feet of a public sidewalk.
    c. Smoke and Odor Control. Smoke and odor shall be controlled by kitchen exhaust fans, or other means.
    d. Operations are prohibited on undeveloped lots and lots with unpaved surfaces. All mobile food vendors must operate on a parking surface of gravel, crushed asphalt, concrete, or poured asphalt. In the case of gravel or crushed asphalt, accessible pedestrian routes shall be maintained to provide clear, firm, and stable ADA-compliant paths.
2. **Exemption.** A single permitted commercial, recreational, institutional, or industrial principal use may have an accessory mobile food vendor onsite for up to 15 days per calendar year without obtaining a permit.
3. **Permit required.** An administrative review permit shall be obtained for each site the applicant intends to operate before locating to any site. An administrative review permit for a mobile food vendor shall expire after one year. This permit must be reviewed within 14 days and a permit may be issued by the Director of Community and Economic Development if all the criteria below are met:
    a. Health department approval (can be from other local govt)
    b. Fire department approval (can be from other district)
    c. Formal lease agreement between the principal use operator and applicant to allow the use on the site as well any other agreemen
    d. Bathroom usage, utilities (Water or electric)
    e. Site Plan:
        i. Property boundaries
        ii. Proposed location of food truck and setback distance from all property lines and other structures.
        iii. Designated onsite parking
        iv. Vehicle circulation plan
        v. Sitting area - if applicable
        vi. All access points to the property
        vii. Proof of taxes paid for the property
    f. The following performance standards apply to accessory mobile food vendors:

i. *Location.* An accessory mobile food vendor is only permitted accessory to a permitted commercial, recreational, institutional, or industrial principal use.
   1. The accessory mobile food vendor and all associated activities must be located on the same property as the associated principal use.
   2. No food truck shall be permitted in a residential or agricultural zone district, except when accessory to an agritourism use.

ii. *Setbacks.*
   3. Must adhere to the respective setbacks from zoning district or a minimum of 15 feet whichever is greater.
   4. Must be a minimum of 20 feet from any access point. Mobile food vendor activities shall not impede traffic movement within the site.

iii. *Hours of operation.* Hours of operation are limited to the hours of operation for the associated principal use.

iv. *Signage* – One temporary sign per food truck is permitted. No signs may be located in the public right-of-way.

## 3-13-04.E Rooftop Mechanical Equipment

1. **Location**. No outdoor storage, loading or garbage collection or compaction areas shall be located within 20 feet of any public road, public sidewalk, or pedestrian way.
2. **Incorporation into Overall Design**. Loading docks, truck parking, outdoor storage, utility meters, HVAC and other mechanical equipment, garbage collection, garbage compaction, and other service functions shall be incorporated into the overall design theme of the building and the landscape so the architectural design is continuous and uninterrupted by ladders, towers, fences and equipment.
3. **Screening**. All outdoor storage, loading or garbage collection or compaction areas shall be located and screened so the visual and acoustic impacts of these functions are fully contained and out of view from adjacent properties and public roads. No attention shall be attracted to these by use of screening materials different from or inferior to the principal materials of the principal structure and landscape. If areas are to be covered, then the covering shall conform to those used as predominant materials and colors on the principal structure.
4. **Rooftop Equipment**. All rooftop mechanical equipment shall be screened from public view from both above and below by integrating it into building and roof design to the maximum extent feasible.

## 3-13-04.F Safe Parking Site

1. **Purpose**. The purpose of this use is to provide for the establishment and operation of safe parking sites at existing commercial and institutional uses that assures compatibility with the surrounding uses.
2. **Approval**. All safe parking sites shall be approved through an Administrative Review Permit (ARP). The Administrative Review Permit shall be valid for one year from the date of issuance. Additional ARPs can be applied for after the one-year expiration. Additional applications of the safe parking site permit shall be made to the Community and Economic Development Director and shall require re-inspection of the safe parking site premises to ensure ongoing compliance with safe parking site standards. A complete application must be filed with the Director a minimum of forty days before the original ARP is set to expire.

3. **Accessory Use**. Safe parking sites are allowed as accessory uses to permitted commercial and institutional uses in any zone district.
4. **Public Notification**. At time of the Administrative Review Permit review of a safe parking site permit application, the County shall notify by mail residents and property owners directly adjacent to the property for which a complete Administrative Review Permit application has been submitted. Public Notice allows for the adjacent property owners to be aware of the accessory use.
5. **Inspection**. Prior to the approval of a safe parking site, County staff shall perform an inspection of the site to ensure compliance with the safe parking site standards.
6. **Safe Parking Site Standards**.
    a. *Minimum Size*. 25% of existing parking area or 5 spaces, whichever is less must be provided for the use of safe parking
    b. *Vehicle Spacing*. A minimum of one parking space between vehicles must be provided.
7. **Setbacks**.
    a. *Adjacent to Residential Use*. All vehicles within a safe parking area that is adjacent to a residential use must be setback a minimum of 20 feet from the property line.
    b. *Adjacent to Nonresidential Use*. All vehicles within a safe parking area that is adjacent to a non-residential use must be setback a minimum of five feet from the property line.
8. **Approved Vehicles**. All vehicles utilizing a safe parking site must fit completely within a standard parking stall, with no portions of the vehicle that overhang into additional stalls or the drive lanes.
9. **Hours of Operation**. All safe parking areas may only operate within the hours of 6 p.m. to 7 a.m. Quiet hours must be observed between 10 p.m. and 7 a.m. (no generators).
10. **Operations Plan Required**. An operations plan that includes, but is not limited to, services provided and security measures, is required at the time of application. The Director of Community and Economic Development shall have the ability to approve, deny, or modify an ARP permit based on the information provided in the operations plan if it does not address concerns on. security or services to the residents and does not sufficiently mitigate impacts to the surrounding neighbors and property owners based on the neighborhood meeting and site-specific review.
11. **Water and Sanitation**. All safe parking areas shall have adequate water and sanitation approved by the local Health Department, which may include bottled water and/or portable toilet facilities.
12. **Screening**. Garbage areas and portable toilets, if applicable, screening shall consist of a six-foot high minimum screen fence made of wood or masonry material. Fencing materials must be cleaned and maintained at all times to present an orderly appearance. No garbage storage area or portable toilet shall be located within 20 feet of a public sidewalk.
13. **Safety**.
    a. *Prohibitions*. Outdoor storage, temporary shelters, and use of fires, heaters, or outdoor grills is prohibited within a safe parking area.
    b. *Fire Safety*. Fire extinguishers and/or combination smoke/carbon monoxide detectors shall be provided within vehicles and onsite.
    c. *Access*. All safe parking areas must use existing parking areas only and must maintain emergency vehicle access and access to fire protection systems at all times.

14. **Trash Disposal and Collection**. All Safe Parking areas shall provide a trash disposal and collection plan to ensure that trash is being picked up from the site and trash containers are not left outdoors where they can cause issues for wildlife or snow removal operations. There shall be enough trash receptacles to accommodate all trash generated by those utilizing the safe parking area.
15. **Parking Surface**. All off-road parking areas used for safe parking shall be surfaced and maintained with a Portland or asphalt concrete surface, or other suitable surface as determined by the Director of Community and Economic Development. Parking must meet all other requirements outlined in Div. 4-02, *Off-Street Parking, Loading, and Stacking*.
16. **Current Registration**. All vehicles utilizing the safe parking areas must have current registration and be operable to drive on County ROW.
17. **Responsible Agent Required**.
    a. *Responsible Agent*. Each owner of a safe parking site property shall designate a person or company to serve as the responsible agent. The owner may designate themselves. The responsible agent information must be submitted as part of the ARP permit.
    b. *Management and Remediation*. The responsible agent shall have access and authority to assume management of the safe parking site and take remedial measures. The agent shall always be available to respond to potential issues and violations related to these Regulations. The responsible agent must be able to affirmatively respond to complaints within an hour of notification of such complaint being sent via email or text. The responsible agent shall appoint one person to be in attendance on the site during Operating Hours.
    c. *Modification and Notice*. The owner shall notify the Director of Community and Economic Development in writing of any modification to the responsible agent appointment within five days of any such modification.
    d. *Contact Information*. The site address, email, and phone number for the responsible agent shall be posted in a visible location on the safe parking site. In addition, the information for Adams County Code Compliance, including phone number and email, shall be listed on the posting.

## 3-13-04.G Vacation Rentals

4. **Applicability**. Vacation rentals are only allowed by obtaining a valid license from the County; provided, however, that the requirements for a license shall not take effect until the Board of County Commissioners adopts companion licensing regulations.
5. **License**. At least 30 days prior to any advertising for or lease of a vacation rental property, the owner shall file a written application for a Vacation Rental License with the Director of Community and Economic Development. An application for renewal of a Vacation Rental License shall be submitted at least 30 days prior to expiration of the existing license. A Vacation Rental License shall expire one year following the year of initial license issuance, or when title of the vacation rental property transfers to a new owner, whichever occurs first. An application for renewal of a Vacation Rental License shall be submitted at least 30 days prior to expiration of the existing license.
6. **Complaints**.

d. *Initial Complaint to Responsible Agent*. Initial complaints concerning a vacation rental property shall be directed to the responsible agent. The agent shall respond to the complaint, including visiting the site if necessary.

e. *Formal Complaint to Director*. If an initial complaint is not resolved, a formal complaint may be filed with the Director of Community and Economic Development. The formal complaint shall describe in detail the violation(s) of this Section alleged to have occurred on the vacation rental property. Within three business days of receipt of such a complaint, the County shall provide a copy of the formal complaint to the owner and agent.

f. *Investigation*. The County may investigate any formal complaint received, in order to determine if it is a substantiated complaint that represents a documented violation of any County regulations. Violations shall be subject to the code enforcement provisions, in accordance with all remedies provided by law, including, but not limited to, withholding any development approvals, inspections or permits and issuing stop work orders. If violations are not corrected or if there are repeat offenders of County requirements, Adams County may pursue formal action and by applicable law. If there is one or more unresolved substantiated complaints for a vacation rental property, or if upon review at any time, the County determines that the license holder has failed to comply with any of the performance standards or conditions, the County may take such action as is deemed necessary to remedy the noncompliance, including but not limited to revocation of the license. The Community and Economic Development Department may revoke the license for that vacation rental property upon written notice to the owner. The County shall notify an owner, in writing, of any revocation. The owner may appeal any revocation by filing an Appeal of Administrative Decision, as described in Chapter 13 of this DSR. For a minimum of two years following revocation of a Vacation Rental License, the County shall not accept an application for a new license for the same vacation rental property; with the exception that a new application by a new property owner, proven to be unaffiliated with the property owner whose license was revoked, may be considered.

12. **Conditional Use Permit**. A Conditional Use Permit shall be required in lieu of a Vacation Rental License for any proposed vacation rental that proposes an occupancy of more than 12 people. This requirement applies regardless of whether the Board of County Commissioners has adopted companion licensing regulations.

13. **Responsible Agent Required**.

a. *Designation*. Each owner of a vacation rental property shall designate a person or company to serve as the responsible agent. The owner may designate themselves.

b. *Availability*. The responsible agent shall have access and authority to assume management of the unit and take remedial measures. The agent shall always be available to respond to potential issues and violations related to this DSR. The responsible agent must be able to affirmatively respond to complaints within an hour of notification of such complaint being sent via email or text.

c. *Modifications*. The owner shall notify the Director of Community and Economic Development in writing of any modification to the responsible agent appointment within five days of any such modification.

14. **Parking**. A minimum of one parking space is required on the property per unit. At no time shall more than five cars permitted to be parked outdoors on any property. Designated parking spaces shall comply with the parking plan on the approved Vacation Rental License. All vehicles shall be parked on-site in designated parking areas; parking is prohibited in any landscaped area,

or in a manner that blocks egress for adjacent residents (driveways, sidewalks, alleys, or mailboxes). A copy of the County-approved parking plan for the vacation rental property shall be provided in the rental/occupant agreement and posted in a prominent location within the property. The allowable number of parking spaces shall be clearly stated in all vacation rental advertising.

15. **Trash Disposal and Collection**. All vacation rental properties shall provide a trash disposal and collection plan to ensure that trash containers are not left outdoors where they can cause issues for wildlife or snow removal operations. The proposed trash disposal and collection plan shall be reviewed and approved by the County during the Vacation Rental License review and during review of any license renewals. There shall be enough trash receptacles to accommodate all trash generated by those occupying the vacation rental property.
16. **Pets**. If pets are allowed, renters/occupants shall be informed of applicable requirements for controlling pets, pet waste disposal, and barking/noise considerations. All vacation rental properties shall comply with Sec. 3-12-02.B, *Animal Keeping.* All pet food shall be stored indoors.
17. **Signage**. An owner shall post a sign or notice conspicuously inside the vacation rental property, which includes the responsible agent's current contact information and/or the owner's current contact information, the street address of the vacation rental property, and the Vacation Rental License or Conditional Use Permit number. The Good Neighbor Guidelines, parking plan and trash disposal requirements shall be posted in a prominent location within the vacation rental property. Any exterior signs advertising the vacation rental must first be reviewed and permitted in accordance with the sign requirements in Div. 4-05, *Signs*.
18. **Properties Served by Septic Systems**. If a vacation rental property is connected to an On-site Wastewater Treatment System (OWTS) for sewer service, the maximum overnight occupancy of the unit shall be limited to the capacity established on the OWTS permit.
19. **Health and Safety Standards**.
    a. *Use*. Buildings, structures, or rooms shall not be used for purposes other than those for which they were designed or intended.
    b. *Fire Safety*. Smoke detectors, carbon monoxide detectors, and fire extinguishers shall be installed and operable, and all woodburning fireplaces and stoves shall be cleaned on an annual basis.
    c. *Bathroom*. An operable toilet, sink, and either bathtub or shower shall be located within the same building.
    d. *Maximum Occupancy*. Permitted occupancy shall be limited to two persons per bedroom plus four additional occupants; or 1 person per 200 square feet of living area, whichever allows for a greater occupancy.
    e. *Fire Pits*. Outdoor fire pits shall be permanently installed improvements that are permitted and inspected by the applicable fire district and/or the Building Official, if required per applicable building and fire code requirements. Vacation Rental owners/license applicants should check with the applicable fire district and the Director of Community and Economic Development to determine if fire permits are needed. The use of portable outdoor fireplaces is prohibited. In the event of a fire ban within Adams County, the responsible agent is required to notify renters/occupants of the current fire restrictions during their stay.

f. *Cell Service*. All vacation rental properties shall have reliable cellular service available or provide access to a landline telephone to enable tenants/occupants to call 911 in the event of an emergency.

g. *Hot Tub, Spa, or Swimming Pool.* All hot tub, spa, or swimming pool installations require both a Building Permit and an electrical permit from the Building Official. Hot tubs, spas, and swimming pools shall be properly maintained in a way to prevent the spread of illness.

# 3-13-05 Industrial Accessory Uses and Structures

## 3-13-05.A Caretaker's Quarters

1. **Location**.
   a. Caretaker's Quarters shall be permitted as an accessory structure in association with the tables in Div. 3-02, *Use Categories*.
   b. The location of the structure on the site shall comply with setback standards for the zoning district in which it is located.
2. **Number**. Only one residential caretaker unit shall be permitted per property.
3. **Use**. The structure shall be used only to house the caretaker of the principal use, plus immediate family members.
4. **Prohibited Structures**. Recreational vehicles and buses shall not be used as living quarters.

## 3-13-05.B Accessory Outdoor Storage

1. **Districts Allowed**. Outdoor storage as an accessory use shall be allowed in all industrial zone districts, the Aviation zone district (AV), and the Heavy Commercial (HC) zone district. Accessory outdoor storage is prohibited in all other zone districts.
2. **General Requirements.** In addition to the following, all the requirements of Sec. 3-09-08, *Outdoor Storage,* shall apply to Accessory Outdoor Storage.
   a. *Materials Stored.*
      i. Goods stored outdoors shall be limited to those provided for lease, processing, use, or repair, (including vehicles) by a principal use on the property.
   b. *Location on a Site.*
      i. In the Industrial-1 (I-1), AV, and HC zone districts, no outdoor storage is allowed without a principal building on site. In these zone districts, outdoor storage shall not be permitted between the front building and the front lot line.
   c. *Permitted size of an accessory outdoor storage yard*
      i. In the I-1 zone district, outdoor storage shall not exceed 25% of the gross floor area of the principal building. Outdoor storage between 25% and 100% of the gross floor area of the principal building may be approved the Board of County Commissioners by a Conditional Use Permit. Outdoor storage over 100% of the gross floor area of the principal building is not permitted.
      ii. In the HC zone districts, outdoor storage shall not exceed 25% of the gross floor area of the principal building.
      iii. In the AV zone district, outdoor storage shall not exceed 10% of the gross floor area of the principal building.

d. *Outdoor Display*. Anything that meets the definition of Outdoor Display in Chapter 16 is not considered outdoor storage.

# 3-13-06 Marijuana Accessory Uses and Structures

## 3-13-06.A [Reserved]

# 3-13-07 Accessory Special Use Standards

## 3-13-07.A General

1. **Obtain a Special Use Permit**. All special uses shall obtain a Special Use Permit in accordance with 13-03-04, *Special Use Permit*, prior to beginning operation. All special uses shall comply with the special use standards established in this Section.
2. **Duration of Special Use**. No special use shall be permitted for a period exceeding five years, unless otherwise noted. Renewals of special uses may be granted in one-year increments, following the same procedures as the original permit issuance. Temporary Use Permits may only be issued for maximum of 90 days administratively. Any operation proposed to operate greater than 90 shall be processed as a Special Use Permit.
3. **Zone District Standards and Requirements Apply**. Setbacks and all other standards and requirements of the zone district in which the special use is located shall apply to all structures connected with the special use.
4. **No Undue Disturbance to Residential Neighborhoods**. Lighting, activities, noise, or increased traffic associated with a special use shall not unreasonably disturb surrounding residential neighborhoods.
5. **No Disruption to Commercial or Industrial Uses**. Lighting, activities, noise, or increased traffic associated with a special use shall not unreasonably disrupt the operation of nearby commercial or industrial uses.
6. **Signage**. Any signs associated with an approved Special Use Permit shall be considered a permanent sign and are required to obtain a Building Permit for the sign and, if applicable, a general Building Permit.

## 3-13-07.B Computing Facility

1. **Special Use Permit Required**. Computing Facilities intended to operate as an accessory use to the principal use onsite shall obtain a special use permit. Examples of where computing facilities could be an accessory use include, but are not limited to, oil and gas facilities, geothermal facilities, solar and wind energy facilities. With an approved special use permit, computing facilities as an accessory use would be allowed in the following zone districts: A-2, A-3, NC, GC, HC, and I-1, I-2, I-3.
2. **Site Plan Required**. The site plan for an accessory Computing Facility shall include the following:
    a. A complete list of all equipment to be installed onsite with maximum heights of such equipment
    b. A complete equipment inventory that includes all permanent or temporary equipment and the height and use of such equipment.

c. A site plan diagram depicting all equipment and layout, including equipment related to the principal use and proposed accessory use.
d. The distance of the computing facility(s) and all associate equipment siting relative to: the principal use, existing residences or platted residential lots, residential uses, high occupancy building units, school or future school facilities, state licensed daycares, environmentally sensitive areas, and designated parks and open spaces.
e. Identify access points and any internal drive aisles
f. The amount of parking that may be required. Any full or part-time occupied structures shall require additional site plan review.

3. **Emergency Preparedness and Response**. Computing Facilities shall not cause unreasonable risks of emergency situations such as explosions, fires, gas, oil or water pipeline leaks, ruptures, hydrogen sulfide or other toxic gas or fluid emissions, and hazardous material vehicle accidents or spills.
    a. Emergency Preparedness Plan. Each Applicant is required to implement an emergency preparedness plan for each Computing Facility. The plan shall be referred to the Office of Emergency Management (OEM), and the applicable fire district, filed with the County and updated as conditions change (responsible field personnel change, ownership changes, etc.). The emergency preparedness plan shall consist of information that is required by the Director of Community & Economic Development. These items may include a fire district will serve letter, 24-hour emergency numbers, and information regarding site access and information.
4. **Safety Standards for Location at an Oil & Gas Facility**.
    a. Automatic safety protective systems and surface safety valves. Applicant shall install an automated safety system prior to commencement of use of data center as an accessory use at oil and gas facilities. Automated safety system shall include the installation, monitoring, and remote control of a surface safety valve or a wellhead master control valve and shall be able to remotely shut-in wells on demand. Surface safety valve or a wellhead master control valve shall be equipped to operate remotely via the automated safety protective system. Operator shall test the automated safety system at least annually to ensure functionality and provide results of testing to County upon request.
        i. The automatic safety system must be capable of immediately shutting-in the source well(s).
    b. Containment. In order to minimize and prevent liquid spills and releases from accessory use Computing Facility at Oil & Gas Facilities, the following shall be required:
        i. Berms or other secondary containment devices around Computing Facility and associated equipment, including generators. Where Computing Facility are cooled with liquids, other than fresh water, berms or secondary containment shall enclose an area sufficient to contain at least 150% of the maximum volume of liquid.
        ii. Berms or other secondary containment devices shall be sufficiently impervious as to contain any spill or released material.

iii. Inspection of all berms and containment devices at regular intervals, but not less than monthly.
iv. Maintain all berms and containment devices to ensure they are in good condition.

c. Any supply line at the site shall be high temperature flexible hosing, be of adequate strength to withstand at least the maximum discharge pressure of the supplied gas, if used, and shall be inspected by the applicant at regular intervals, but not less than monthly for evidence of damage or weakness.
d. Fire Suppression. The Computing Facility shall contain an onsite fire suppression system.
e. Off-site impacts: An evaluation and review of potential off-site impacts from the Computing Facility use (including, but not limited to, visual impacts, noise, odor, and light) and applicant-proposed best management practices or control measures to mitigate or avoid such impacts.

5. **State Agency Approvals**. Applicant shall provide proof of state agency approvals, where applicable.
6. **Building Permit Required**. A building permit may be required depending on the facility.
7. **Setbacks.**
   a. All setbacks associated with the principal use apply to the accessory Computing Facility.
   b. For Computing Facility within 2,000 feet of a residentially used or zoned property line, requirements to minimize or avoid impacts include the following:
      i. Neighborhood meeting: A neighborhood meeting that complies with Sec. 13-01-03 is required.
      ii. Air quality: General air quality protection measures and site-specific air quality protection measures that comply with Sec. 3-09-07(H) are required.
      iii. Noise: Noise levels must be controlled in accordance with Sec. 3-09-07(G).
      iv. Visual Mitigation: Landscaping and screening requirements must be applied to address any potential impacts to nearby residential uses.

## 3-13-07.C Vending and Produce Stands

1. **Special Use Permit Required**.
   a. Vending and/or produce standards intended to be in operation on a long-term basis shall obtain a Special Use Permit. However, the Director of Community and Economic Development may issue a Temporary Use Permit for a vending and/or produce stand for a maximum of 90 days in advance of any hearing before the Board of Adjustment.
   b. No Special Use Permit shall be required for a produce stand located on agriculturally zoned land provided the stand is an accessory use and meets the use standards in this Subsection. In addition, no Special Use Permit shall be issued if the stand has been erected on the subject site without a Temporary Use Permit.
2. **Minimum Lot Area**. No vending or produce stand shall be located on a parcel of land less than 400 square feet in size.

3. **Location**. The stand shall be located on a gravel, recycled asphalt, or paved parking lot or on agricultural land. The stand shall not block or be located within any right-of-way or public sidewalk.
4. **Period of Operation**. The stand shall operate for no more than 90 days annually.
5. **Hours of Operation**. The stand shall limit its hours of operation to 7:00 a.m. to 7:00 p.m**.**
6. **Parking**. Parking for the stand shall not block or be located within any right-of-way or public sidewalk. At least five off-road parking spaces shall be provided per 200 square feet of stand area.
7. **Access**. All vending and produce stands shall have highway, arterial, or collector road access.

# Div. 3-14 Temporary Uses and Structures

## 3-14-01 General Provisions

A. **Temporary Use Permit Required.** All temporary uses shall obtain a Temporary Use Permit in accordance with Sec. 13-03-05, *Temporary Use Permit,* prior to beginning operation. All temporary uses required by these regulations to obtain a Temporary Use Permit, shall comply with the performance standards established by this Section for the temporary use. Temporary uses shall also conform to all zone district standards contained in this DSR.

B. **Duration of Temporary Use**. No temporary use shall be permitted for a period exceeding 90 days, unless otherwise noted. The Director of Community and Economic Development may issue a renewal of a Temporary Use Permit for a maximum of 90 days. Any operation proposed to operate greater than 90 days shall be processed as a Special Use Permit in accordance with Sec. 13-03-05, *Special Use Permit*.

C. **Zone District Standards and Requirements Apply**. Setbacks and all other standards and requirements of the zone district in which the temporary use is located shall apply to all structures connected with the temporary use.

D. **No Undue Disturbance to Residential Neighborhoods**. Lighting, activities, noise, or increased traffic associated with a temporary use shall not unreasonably disturb surrounding residential neighborhoods.

E. **No Disruption to Commercial or Industrial Uses**. Lighting, activities, noise, or increased traffic associated with a temporary use shall not unreasonably disrupt the operation of nearby commercial or industrial uses.

F. **Signage**. Any sign associated with an approved Temporary Use Permit shall be depicted on the Site Plan and allowed for the duration of the permit. The maximum sign area shall be 32 square feet. Signs shall be placed on private property, outside any right-of-way or easement and shall be placed to avoid any sight obstruction for motorists, cyclists, and pedestrians. Signs shall not be illuminated. Signs for Temporary Use Permits do not require a Sign Permit but may require a Building Permit.

G. **Number of Temporary Use Permits per Year**. No property shall receive more than four Temporary Use Permits per 12-month period.

## 3-14-02 Carnival or Circus

A. **Temporary Use Permit Required**. All carnivals or circuses shall obtain a Temporary Use Permit before operating and shall comply with the standards of this Section.

B. **Minimum Lot Area**. No carnival or circus shall be located on a parcel of land less than five acres in size.

C. **Period of Operation**. No carnival or circus shall be allowed to operate for a period exceeding 14 days, exclusive of a three-day period, before and after the operation, during which amusement rides, concessions, etc. are erected or removed from the site.

D. **Hours of Operation**. The carnival or circus shall limit its hours of operation to 9:00 a.m. to 10:00 p.m.

E. **Access**. All carnivals and circuses shall have highway or arterial road access.

F. **Parking**. Every carnival or circus shall provide either paved or dust-treated off-road parking for not less than 300 automobiles per acre of area used for amusement purposes.

G. **Signage**. All signs associated with a Carnival or Circus shall be consistent with Sec. 3-14-01(F), *Signage*.

## 3-14-03 Chile Stand or Tent

A. **Temporary Use Permit Required**. All chile stands or tents shall obtain a Temporary Use Permit before operating and shall comply with the standards of this Section.

B. **Insurance**. The applicant shall submit to Adams County a certificate of insurance. The minimum coverage for the property damage and/or bodily injury shall be an amount agreeable to the Director of Community and Economic Development.

C. **Maximum Size of Stand or Tent**. If multiple stands or tents are located on one site, all requirements of the Adams County Chile Stand/Tent under Sec. 3-13-11 shall be followed. Chile stands or tents shall not exceed a gross floor area of 800 square feet per stand or tent.

D. **Hours of Operation**. Chile stands or tents shall limit their hours of operation to 7:00 a.m. to 10:00 p.m.

E. **Clear Areas Around Tent or Stand.** A clear area is a minimum area in which the chile stand or tent shall be setback from property lines, fences, vehicles, propane tanks, burners, and all permitted banners. The clear area shall be measured from the supporting wall of the stand or from the anchor point of the tent.

F. **Clear Areas**. A clear and unobstructed distance of at least 30 feet is required around the stand or tent.

G. **Clear Areas Around Propane Tanks and Burners**. A clear area is a minimum area in which the propane tanks and burners shall be setback from property lines, fences, vehicles, tents, stands, and all banners.

H. **Vegetation and Weeds within Clear Areas**. Vegetation within the required clear areas shall be a maximum of two inches above the ground except for trees and shrubs.

I. **Anchoring**. All tents and stands shall be properly anchored to the ground as approved by the Community and Economic Development Department.

J. **Wiring**. Electrical wiring shall meet all requirements of the State of Colorado.

K. **Pennants**. Strings of flags, pennants, and streamers may identify the clear area or the parking area. Pennants shall not be attached to a stand or tent. Pennants shall be depicted on the Site Plan**.**

L. **Signage**. All signs associated with a chile tent or stand shall be consistent with Sec. 3-14-01(F), *Signage*.

M. **Trash**. The site shall always be kept clean of trash and debris. Trash dumpsters shall be used and located on the site during operations.

## 3-14-04 Concrete or Asphalt Batch Plant

A. **Temporary Use Permit or Special Use Permit Required**. All concrete or asphalt plants intended to be in operation shall obtain a Special Use Permit in accordance with Se. 13-03-04, *Special Use Permit*. However, the Director of Community and Economic Development may approve a Temporary Use Permit for a concrete or asphalt batch plants for a maximum of 90 days in advance of any hearing for the Special Use Permit.

B. **Minimum Lot Area**. No temporary concrete or asphalt batch mixing plants shall be located on a parcel of land less than one-half acre in size.

C. **Location**. The use shall be located on the same property or right-of-way, or directly adjacent to the same property or right-of-way, as the construction project.

D. **Period of Operation**. Temporary concrete or asphalt batch plants shall only be permitted as an accessory use to the construction of roads or other public improvements.

E. **Hours of Operation**. The temporary concrete or asphalt batch plants shall limit the hours of operation to 7:00 a.m. to 7:00 p.m.

F. **Use Area Setback**. Vehicular-use areas, material storage areas, and structures shall be setback at least 100 feet from the property boundary.

G. **Access**. All temporary batch plants shall have highway, major or minor arterial, or collector road access.

H. **Dust Control**. It is the responsibility of the temporary plant operator to control dust, dirt, and any other debris from blowing from the site on to other properties.

I. **Washout**. Concrete washout shall be contained on-site. Discharge to adjacent properties or drainageways is prohibited.

J. **Road Damage**. Any road damage to the roads providing access to the site of the temporary plant shall be repaired by the temporary plant operator as deemed necessary by the Director of Public Works. The Director of Public Works shall require the plant operator to post a performance bond to cover all potential repair costs.

K. **Trucking**. Due to the magnitude of the use, the Director of Community and Economic Development may add additional standards regarding trucking routes and the size of loads to protect the general welfare of the citizens.

## 3-14-05 Construction Site Fencing

A. **Temporary Use Permit Required**. All construction site fencing shall obtain a Temporary Use Permit before operating and shall comply with the standards of this Section.

B. **Maximum Height**. The maximum height of construction site fencing shall be 96 inches.

C. **Fencing Material**. Land under development may be surrounded by a chain link fence or solid wood fence.

D. **Location**. Construction site fencing shall be installed within or along the property lines of the development.

E. **Sign Posting**. Construction site fencing shall be posted with the name and phone number of the responsible party for emergency and trespassing purposes.

F. **Period of Placement and Removal**. Construction site fencing may exist during the period of construction for the project. It shall be removed within 30 days of issuance of a Certificate of Occupancy.

## 3-14-06 Fireworks Stand/Tent

A. **Temporary Use Permit Required**. A Temporary Use Permit shall be obtained for each stand or tent before locating any permissible fireworks stand or tent and shall comply with the standards of this Section. Only the sale of "permissible fireworks," as that term is defined by Colorado Revised Statutes, is permitted with Temporary Use Permit for permissible fireworks stand or tent. Fireworks that do not meet the definition of "permissible fireworks" shall not be sold or stored at permissible fireworks stands or tents.

B. **Submittal Deadline**. All Temporary Use Permit applications for permissible fireworks stands or tents shall be submitted no later than the last business day in May. All applications shall be complete at the time of submittal.

C. **Insurance**. The applicant shall submit to the Director of Community and Economic Development a certificate of insurance. The minimum coverage for the property damage and/or bodily injury shall be an amount agreeable to the Director of Community and Economic Development.

D. **Maximum Size of Stand/Tent**. If multiple stands or tents are located on one site, all requirements of this Section shall be followed. Permissible Fireworks stands or tents shall not exceed a gross floor area of 800 square feet per stand or tent.

E. **Period of Operation**. Permissible fireworks stands or tents may be operated between June 15 and July 5.

F. **Dismantle and Removal Date**. All stands or tents shall be dismantled and removed no later than July 15.

G. **Hours of Operation**. Permissible fireworks stands or tents shall limit their hours of operation to 7:00 a.m. to 7:00 p.m.

H. **Clear Area**.

1. *Description*. A clear area is a minimum area in which the permissible fireworks stand or tent shall be setback from property lines, fences, vehicles, detached firework storage, and all permitted banners. The clear area shall be measured from the supporting wall of the stand or from the anchor point of the tent.
2. *Distance*. A clear and unobstructed distance of at least 30 feet is required between the stand or tent and detached fireworks storage.
3. *Vegetation and Weeds within Clear Areas*. Vegetation within the required clear areas shall be a maximum of two inches above the ground except for trees and shrubs.
4. *Setbacks from Permanent Buildings, Flammable Liquids, and Fuel Dispensing Operations*. A clear and unobstructed distance of 50 feet is required between the stands or tents and permanent buildings, flammable liquids, and fuel dispensing operations.

# 3-14-07 Garage or Yard Sales

A. **Maximum Sales Permitted per Year**. No more than two garage or yard sales shall be permitted per calendar year for any one residence.

B. **Period of Operation**. A garage or yard sale shall not exceed a period of three consecutive days.

C. **Hours of Operation**. The garage or yard sale shall limit its hours of operation to 7:00 a.m. to 7:00 p.m.

D. **Signage**. The total sign area shall not exceed 16 square feet in area. All signage shall be located on private property and not within the public right-of-way.

# 3-14-08 Inert Fill Operations

A. **Applicability**. This Section establishes permit requirements for inert fill operations based on duration, scale, and operational characteristics.

1. For purposes of determining the applicable permit type, the Director may evaluate the cumulative amount of fill to be imported to a site and the cumulative duration of fill activity over time, including multiple permits or phases associated with the same property or operation.

**Table 13-14-08-1, Inert Fill Permit Types**

| Permit Type | Duration | Volume Threshold | Area |
|---|---|---|---|
| **Exempt** | N/A | < 10 cubic yards | N/A |
| **Temporary Use Permit** | ≤ 6 months | < 500,000 cubic yards* | N/A |
| **Special Use Permit** | > 6 months up to 5 years | < 500,000 cubic yards (within any 6-month period) | ≤ 10 acres |
| **Conditional Use Permit** | > 5 years OR > 6 months. See criteria below. | ≥ 500,000 cubic yards (total or within 6 months) | > 10 acres |

B. **Exemption.** Importation of less than ten (10) cubic yards of inert fill is exempt from the requirement to obtain a Temporary Use Permit, Special Use Permit, or Conditional Use Permit. The exempted volume of fill material must meet the definition of inert fill for grading.

C. **Temporary Use Permit Required**. Inert fill operations with a proposed duration of six (6) months or less shall obtain a Temporary Use Permit. A Temporary Use Permit may be issued for a maximum of six (6) months.

1. Only one Temporary Use Permit application for an inert fill operation may be processed at a time for the same property or operation. The application shall identify the total amount of fill proposed under the permit and the anticipated duration of the activity.
2. Successive or multiple Temporary Use Permits shall not be used to avoid review under a Special Use Permit or Conditional Use Permit. Where the Director determines that the cumulative duration of fill activity, cumulative quantity of fill, or phased nature of the operation indicates a longer-term or larger-scale operation, the Director may require the application to be processed as a Special Use Permit or Conditional Use Permit, as applicable.

D. **Special Use Permit Required.** Inert fill operations intended to be in operation for more than six (6) months and up to five (5) years shall obtain a Special Use Permit. Special Use Permits for inert fill shall not exceed a maximum duration of five (5) years and shall not be issued for operations where the area to be filled exceeds ten (10) acres.

E. **Conditional Use Permit Required.** Where the cumulative quantity of inert fill proposed, imported, or approved for a site within any six (6) month period exceeds five-hundred thousand (500,000) cubic yards, the operation shall require a Conditional Use Permit. Additionally, any operation proposed to fill greater than ten (10) acres or to operate for more than five (5) years shall be processed as a Conditional Use Permit.

1. Any conditional use permit for inert fill shall be processed in accordance with Sec. 13-03-02.

F. **Hours of Operation**. The inert fill operation shall limit its hours of operation from 7:00 a.m. to 7:00 p.m., unless otherwise restricted by the Director of Community and Economic Development.

G. **Source of Material**. The site operator shall have sole discretion of the source of fill material and shall provide details of the source material with the permit application. Proof of clean, inert material may be provided by any one of the following:

1. *Signed Letter*. A signed letter from the source providing the fill material certifying that the material is clean;
2. *Assessment or Report*. Phase I environmental site assessment or due diligence report for the borrow site demonstrating no Recognized Environmental Concerns (REC); or
3. *Samples and Analysis*. Sampling and analysis of the material to be used as fill demonstrating the material does not contain contaminants in excess of respective EPA residential screening levels. Specifically, two composite samples each consisting of 3 discrete samples shall be collected from 1,000 cubic yards of material with one composite sample collected for each additional 1,500 cubic yards. Laboratory analysis of the following contaminants must be provided:
   a. Volatile Organic Compounds (VOCs) and Semi-Volatile Organic Compounds (SVOCs);
   b. Eight 8 Resource Conservation and Recovery Act (RCRA) metals (As, Ba, Cd, Cr, Pb, Hg, Se, Ag);
   c. Polycyclic Aromatic Hydrocarbons;
   d. Polychlorinated Biphenyls (PCBs) at the Director of Community and Economic Development's discretion;
   e. Pesticides at the Director of Community and Economic Development's discretion;
   f. Groundwater impacts; and

g. Fill material is not likely to contaminate groundwater.

H. **Traffic/Haul Route**. The haul route for the traffic to and from the fill operation shall be provided with the permit application and may be jointly reviewed and approved by the Community and Economic Development Department.

I. **Grading and Drainage Plan and Permit**. A Clearing and Grading Permit per 13-02-03 and final grading and drainage plan shall be required as part of any inert fill approval, whether by temporary use permit, special use permit, or conditional use permit.

# 3-14-09 Seasonal Sales Lots

A. **Temporary Use Permit Required**. All seasonal sales lots shall obtain a Temporary Use Permit before operating and shall comply with the standards of this Section.

B. **Maximum Lot Area**. The sales lot shall not occupy more than 10% of a gravel, recycled asphalt, or paved parking lot on which the sales lot is located. In no case shall the sales area exceed 10,000 square feet.

C. **Location**. Seasonal sales lots shall be located on a gravel, recycled asphalt, or paved parking lot in a commercial zone district or on agricultural land. The sales area shall not block or be located within any right-of-way or public sidewalk.

D. **Period of Operation**. Seasonal sales shall not exceed a period of 60 days.

E. **Hours of Operation**. The seasonal sales lot shall limit its hours of operation to 7:00 AM to 7:00 PM.

F. **Setbacks**. The setbacks for the zone district shall apply.

G. **Signage**. All signs associated with seasonal sales shall be consistent with Sec. 3-14-01(F), *Signage*.

H. **Parking**. Parking for the stand shall not block or be located within any right-of-way or public sidewalk. At least five off-road parking spaces shall be provided per 200 square feet of sales area.

I. **Access**. All seasonal sales lots shall have highway, arterial, or collector road access.

J. **Tree Display Restrictions**. No sale items shall be displayed within 50 feet of an intersection of the curb line of any two roads or within any sight distance triangle.

# 3-14-10 Temporary Sales

The sale of any products from a temporary stand, motor vehicle, or trailer shall be prohibited. The sale of any products from a temporary stand, motor vehicle, or trailer is prohibited except if allowed by Special Use Permit or as otherwise permitted by these standards and regulations.

# 3-14-11 Tents (as Temporary Structures for Temporary Sales)

A. **Temporary Use Permit Required**. All temporary structures intended to be located on a property for up to 90 days, such as tents, shall obtain a Temporary Use Permit before operating and shall comply with the standards of this Section.

B. **Period of Operation**. Temporary Use Permits for temporary structures may only be issued for a maximum of ninety days. Any structure intended to be used for more than 90 days shall obtain a Special Use Permit in accordance with Sec. 13-03-04.

C. **Code Requirements**. All Temporary Structures shall meet the building and fire code requirements prior to approval of any Temporary or Special Use Permit.

D. **Maximum Size**. Temporary Structures shall not exceed a gross floor area of 800 square feet per structure. If multiple temporary structures are located on one site, all requirements of this Section shall be followed.

E. **Location**. The temporary structure shall be located on gravel, recycled asphalt, or paved parking lot or on agricultural land. The structure shall not block or be located within any right-of-way or public sidewalk. The structure shall not be located within any required parking spaces. The structure shall meet all zone district requirements for which the structure is located.

F. **Height**. The temporary structure shall not exceed the height limit of the zone district in which the structure is located.

G. **Exits**.

1. *Stands (Wood-Built Structures)*. Any stand measuring more than 25 feet in length across the face shall have two exits. Exit doors shall be a minimum of 20 inches in width and six feet in height and swing in the direction of egress. Stands with floor areas between 300 and 400 square feet must have three exits.
2. *Tents*. All aisles within a tent shall measure no less than 48 inches in width. All tents shall have at least two sides of the tent open and unobstructed for use as an exit.

H. **Construction Materials**. All temporary structures shall be constructed of wood, metal, fire retardant tent as approved by the Director of Community and Economic Development or other approved materials. Stands shall not have wheels or tires. Combustible construction materials shall be painted with a water based latex paint.

I. **Anchoring**. All temporary structures shall be properly anchored to the ground as approved by the Director of Community and Economic Development.

J. **Wiring**. Electrical wiring shall meet all requirements of the State of Colorado.

K. **Signage**. All signs associated with a Temporary Structure shall be consistent with Sec. 3-14-01(F), *Signage*.

## 3-14-12 Vending and Produce Stands

See Secs. 3-13-03.H and 3-13-07.C, V*ending and Produce Stands,* for standard and permitting requirements for temporary and long-term vending and produce stands.

# Div. 3-15 Operational Standards

## 3-15-01 Purpose

The purpose of these operational standards is to limit or eliminate conditions, which may negatively impact the environment and use of surrounding properties. These standards shall apply in all zone districts and to all uses of lands in Adams County.

## 3-15-02 Lighting

A. **Generally**. All outdoor lighting within the County shall comply with the requirements of this Section unless required in Div. 4-06, *Outdoor Lighting,* or otherwise by state, federal, or local law.

B. **Compatibility**. Exterior lighting shall be compatible with that of adjacent properties.

C. **Position of Lighting Facility**. Lighting facilities shall be arranged and positioned so no direct light or reflection creates a nuisance or hazard on any adjacent property or right-of-way. Exterior lighting shall be compatible with that of adjacent properties.

D. **Lighting Fixture**. All lighting fixtures shall be located to shield direct rays from adjoining properties. Luminaries shall be of an indirect, diffused type and shall not exceed a height of greater than 20 feet above finished grade.

   1. *Parking Areas.* Lighting used to illuminate parking areas of commercial uses shall be designed, located, and installed to be shielded and downlit and to reflect away from any nearby residential or open space zoning districts.

   2. *Flags and Monuments*. Light fixtures used to illuminate flags, statues, or any other object mounted on a pole, pedestal, or platform, shall use a narrow cone beam of light not to extend beyond the illuminated object.

   3. *Signs*. Lighting for advertising signs shall not create glare or light which extends to surrounding properties.

E. **Upward Lighting**. Upward lighting for architectural, landscape or decorative purposes, shall have at least 90% of the total distribution pattern within the profile of the illuminated structure.

## 3-15-03 Vibrations

Operations that cause ground vibration shall not be perceptible beyond the property line of origin without the use of instruments, except those activities typically performed as part of an agricultural operation in an Agricultural Zone District, which shall be exempt.

## 3-15-04 Noise

A. **Noise**. No use shall be conducted in any zoning district that creates sound in violation of the noise regulations set forth in this Section.

B. **Maximum Permissible Sound Pressure Levels**. Any continuous source of sound is established for a time period within each zone district listed, see Table 3-15-04-1, *Maximum Permissible Sound Pressure Levels.*

C. **Boundaries**. Sound pressure levels shall be measured at the property line or boundary of a public right-of-way, at a height of at least four feet above the immediate surrounding surface, on a sound level meter of standard design and operated on the "A" weighting network.

**Table 3-15-04-1 Maximum Permissible Sound Pressure Levels**

| Zoning Districts | Day (7:00 AM - 10:00 PM) | Night (10:00 PM - 7:00 PM) |
|---|---|---|

| | | |
|---|---|---|
| Residential Estate (RE)<br>Residential-1-C (R-1-C)<br>Residential-2 (R-2)<br>Residential-3 (R-3)<br>Residential-4 (R-4)<br>Neighborhood Commercial (NC)<br>Neighborhood Park (NP)<br>Natural Areas (NA)<br>Conservation (CO)<br>Public Lands and Facilities (PL) | 55 | 50 |
| General Commercial (GC)<br>Heavy Commercial (HC)<br>Industrial-1 (I-1) | 60 | 55 |
| Agricultural-1 (A-1)<br>Agricultural-2 (A-2)<br>Agricultural-3 (A-3)<br>Industrial-2 (I-2)<br>Industrial-3 (I-3)<br>Regional Park | 80 | 75 |
| Other overlay zones | Same as underlying zone district | Same as underlying zone district |
| Aviation (AV)<br>Denver International Airport (DIA) | None | None |

D. **Construction Activities**. No person shall engage in outdoor construction activities in any zone district between the hours of 10:00 p.m. and 7:00 a.m. Construction projects shall be limited to a maximum permissible noise level of 80 dBA in all zone districts. Construction activities directly connected with abatement of an emergency are excluded from this time restriction. Any construction activity which will be performed outdoors between the hours of 10:00 p.m. and 7:00 a.m. shall be required to obtain a Special Use Permit.

## 3-15-05 Dust and Debris Control

A. **Prohibition of Blowing Dust and Debris**. The blowing of fugitive dust, dirt, sand, or debris from one property onto adjacent or surrounding properties, or rights-of-way, is prohibited, except for agricultural operations in Agricultural Zone Districts where it is permitted.

B. **Prevention of Blowing Dust and Debris**. The prevention of blowing fugitive dust, dirt, sand, or debris may be accomplished through various methods, including but not limited to:

1. Placement of base course.
2. Asphalting.
3. Application of calcium chloride, cornstarch, soy, or similar.

4. Watering and wetting down the area.
5. Installation of snow fences or barriers.
6. Chiseling the ground.
7. Vegetative cover and hydro-mulching.
8. Soil-stabilizing polymers and enzymes.
9. Other effective means.

## 3-15-06 Electromagnetic and Electrical Interference

A. **Electromagnetic Interference**. Any operation or use in any district that causes electromagnetic interference shall not adversely affect the operation of equipment located off the lot where such interference originates.

B. **Aviation Communications.** No use shall be made of land or water within the County, which will create electrical interference with navigational signals for radio communications between an aviation facility and aircraft.

## 3-15-07 Humidity, Heat, Glare, Smoke, and Radiation

A. **Humidity**. Any operation producing humidity in the form of steam or moist air shall be carried on in such a manner that the humidity is not perceptible at any lot line.

B. **Heat and Glare.** Any operation producing intense light or heat, including high-temperature processes such as combustion or welding, shall not be visible or felt beyond any lot line bounding the property wherein the use is conducted. All exterior lighting on private property shall be positioned as to extend glare away from adjacent properties or rights-of-way and meet the requirements of Sec. 3-14-02, *Lighting.*

C. **Smoke**. Any operation or use that causes, creates, or allows the emission of visible smoke, particulate matter, or other air pollutants from any land use in an amount sufficient to constitute a general nuisance to adjoining properties shall be prohibited—whether from open burning, industrial processes, combustion equipment, or other sources—shall be prohibited if such emissions create a nuisance, hazard, or noticeable impact at or beyond any property line.

D. **Radiation**. Any operation involving radioactive materials capable of producing ionizing radiation, i.e., the use of gamma rays, x-rays, alpha and beta particles, high-speed electrons, neutrons, protons, and other atomic or nuclear particles, shall be permitted only in accordance with state and federal laws, rules, and regulations, or any other applicable regulation.

## 3-15-08 Odor

*Air Pollutant Emissions and Odor Control*. Emissions of air pollutants and odor shall be mitigated to the extent feasible through the use of appropriate controls and best management practices and shall comply with all applicable regulations of the Air Quality Control Commission (AQCC).

## 3-15-09 Moving Buildings or Structures

A. **Permit Required**. No building or structure shall be moved into, within, or set down in the unincorporated area of Adams County or transported upon any public right-of-way within said area until a moving permit and a Building Permit have been obtained.

B. **Inspection and Conformance Required**. Buildings or structures proposed to be moved shall meet all the regulations of Adams County and shall be compatible in size, structure, age, value, and general architectural design to the neighborhood in which they are proposed to be moved. A building proposed to be moved, is required to be inspected prior to being moved.

## 3-15-10 Waste Management

C. **General.** There shall be no discharge of any liquid or solid waste material(s) into the ground or waterway except as authorized by approved permit and in accordance with these regulations and standards, and the regulations of the Adams County Health Department and Colorado Department of Public Health and Environment.

# CHAPTER 4 GENERAL DEVELOPMENT STANDARDS

**Contents:**

Div. 4-01 Purpose and Applicability
Div. 4-02 Off-Street Parking, Loading, and Stacking
Div. 4-03 Pedestrian Circulation Facilities
Div. 4-04 Landscaping and Buffering
Div. 4-05 Signs
Div. 4-06 Outdoor Lighting
Div. 4-07 Road Impact Fees

## Div. 4-01 Purpose and Applicability

### 4-01-01 Purposes

Table 4-01-01-1, *General Development Standards Purpose Statements*, provides the purpose for each of the Divisions in this Chapter other than Div. 4-07, *Road Impact Fees*, which purpose is addressed therein.

| Table 4-01-01-1, General Development Standards Purpose Statements | |
|---|---|
| Division | Purpose Statements |
| Div. 4-02, *Off-Street Parking, Loading, and Stacking* | The purposes of this Division are to:<br>▪ Ensure that adequate off-street parking for vehicles and bicycles and facilities for loading and stacking are provided for new land uses and changes in use;<br>▪ Minimize the negative environmental and urban design impacts that can result from excessive parking, driveways, and drive aisles within parking lots;<br>▪ Establish standards and regulations for safe and well-designed vehicle use areas that minimize conflicts between pedestrians and vehicles; and<br>▪ Access to sites is managed to maintain the desired function and safety of the adjacent streets. |
| Div. 4-03, *Pedestrian Circulation Facilities* | The purposes of this Division are to:<br>▪ Create a safe, attractive, and usable pedestrian circulation system internal to all applicable developments.<br>▪ Ensure a direct pedestrian connection between the street and buildings on the site and between buildings and other activities within the site.<br>▪ Provide for connections between adjacent sites, where feasible. |
| Div. 4-04, *Landscaping and Buffer Standards* | The purposes of this Division are to:<br>▪ Establish standards that promote high-quality, water-efficient landscapes that enhance community character, pedestrian comfort, and compatibility among land uses.<br>▪ Conserve potable water through Water-Wise principles, plant selection, hydrozoning, efficient irrigation, and reduced turf.<br>▪ Integrate Low-Impact Development (LID) practices so landscaped areas also provide stormwater quality, infiltration, and heat-island reduction.<br>▪ Preserve and incorporate significant existing vegetation and habitat, emphasizing native and regionally adapted species and biodiversity.<br>▪ Utilize buffers and streetscapes that mitigate visual, noise, and use conflicts while supporting safe access and visibility. |

| Table 4-01-01-1, General Development Standards Purpose Statements | |
|---|---|
| Division | Purpose Statements |
| Div. 4-05, *Signs* | The purposes of this Division are to:<br>▪ Set out reasonable regulations for the design, location, installation, operation, repair, and maintenance of signs;<br>▪ Provide for reasonable regulation while also safeguarding the constitutionally protected right of free speech;<br>▪ Create content neutral sign regulations which balance the legitimate needs of individuals, entities, and organizations to convey messages with the legitimate objectives of the City to promote public safety, enhance community character and enhance private property values;<br>▪ Prevent and reduce sign clutter which can have the negative consequences to the City which include:<br>  ▪ Undue visual distractions which may create a public safety hazard for motorists, bicyclists, and pedestrians;<br>  ▪ Degrading the aesthetic character of the City and therefore making the City less attractive for residents, visitors, commerce, and private investment; and<br>  ▪ Physical obstructions within the public right-of-way which create public safety hazards. |
| Div. 4-06, *Outdoor Lighting* | The purposes of this Division are to:<br>▪ Minimize adverse off-site effects from glare and light trespass or obtrusive light; and<br>▪ Protect residential uses from light sources from non-residential uses that are improperly selected, placed, aimed, maintained, or shielded. |

## 4-01-02 Applicability

A. **Generally.** The standards of this Chapter apply to new development, redevelopment, substantial improvement, and expansions of uses, sites, and buildings, as shown in Table 4-01-02-1, *Development Standards Applicability*, or as set forth in Div. 4-07, *Road Impact Fees*. Each Division may have more tailored applicability thresholds that Table 4-01-02-1 does not show. For example, Div. 4-04, *Landscaping and Buffering*, generally applies to new construction; however, some provisions of the Division apply to nonresidential development that do not apply to all residential types of development.

B. **Timing of Compliance**. No permanent Certificate of Occupancy shall be issued until all building and site improvements required in this Chapter are constructed in conformance with the approved permit or plan required in Chapter 13, *Development Review Procedures*.

| Table 4-01-02-1, Development Standards Applicability | | | | | |
|---|---|---|---|---|---|
| Development Thresholds | Divisions of this Chapter | | | | |

| Div. 4-06, *Outdoor Lighting* | ♦ | -- | -- | ♦ |

**TABLE NOTES:**

1. If a sign is constructed or structurally modified, then Div. 4-05 applies to the new sign. If outdoor lighting is constructed or modified, then Div. 4-06 applies to the new lighting, and so forth. The standards of the applicable Division shall only apply to the features being constructed or modified unless otherwise noted.

# Div. 4-02 Off-Street Parking, Loading, and Stacking

## 4-02-01 Parking Ratios

A. **Minimum Parking**.

1. Table 4-02-01-1, *Off-Street Parking Requirements,* establishes the minimum number of off-street parking spaces required for each listed use.
2. In addition to land uses in Table 4-02-01-1 with "--" in the Minimum Off-Street Parking Column, the following land uses shall have no minimum parking requirement:
   a. Residential adaptive reuse project; and
   b. A mixed use adaptive reuse project with at least 50% of its gross floor area devoted to residential uses.

B. **Maximum Parking**. Except for single-family detached residential uses, the number of parking spaces provided per use shall not exceed 150% of the minimum number of spaces established in Table 4-02-01-1.

**Table 4-02-01-1, *Off-Street Parking Requirements***

| Use Category | Specific Use | Minimum Off-Street Parking |
|---|---|---|
| | | |
| **Agriculture** | All Agriculture Uses | -- |
| | | |
| **Residential** | Single-Family, Detached or Modular Home | 2 spaces per unit |
| | Townhouse | 1.5 space for each dwelling unit. The Planning Commission may require up to 0.25 space for every 1 unit for visitor parking. |
| | Manufactured Home Park | 1.5 spaces for each manufactured home site |
| | Multiplex or Multi-Family Dwelling[1] (Studio/ Efficiency) | 0.5 spaces per unit type |
| | Multiplex or Multi-Family Dwelling[1] (1 Bedroom) | 0.75 spaces per unit type |
| | Multiplex or Multi-Family Dwelling[1] (2 Bedroom) | 1.25 spaces per unit type |
| | Multiplex or Multi-Family Dwelling[1] (3+ Bedroom) | 1.5 spaces per unit type |
| | Multi-Family Dwelling[1] (Visitor) | Minimum of 10% of the required parking shall be provided for visitors in addition to the minimum required off-road parking |

| Table 4-02-01-1, *Off-Street Parking Requirements* | | |
|---|---|---|
| **Use Category** | **Specific Use** | **Minimum Off-Street Parking** |
| | Group Home, FHAA | 0.75 per unit type |
| | All other Household Living Uses other than Listed Above | 2 spaces for each dwelling unit |
| | | |
| **Community Service** | Event Center | 1 space for each 5 seats or 1 space for each 40 sq. ft. of gross floor area available for the accommodation of movable seats in the event center, whichever is greater. |
| | Funeral Homes | 1 space for each 6 seats in chapel |
| | Library | 1 per 500 sq ft |
| | Museums | 1 space for each 300 sq. ft. of gross floor area |
| | All other Community Service Uses other than Listed Above | Based on review by the Director of the Community and Economic Development Department |
| **Day Care** | All Day Care Uses | 1 space for each employee on a major shift, plus 2 drop off spaces for patrons |
| **Educational Facilities** | Colleges and Universities | Based on review by Director of Community and Economic Development |
| | Commercial Dormitory | 1 space for each rental unit |
| | Kindergarten, Elementary | 1 space for each classroom and 1 space per 300 sq. ft. of administrative office space |
| | High School, College, Vocational, Business | 6 spaces for each classroom and 1 space per 300 sq. ft. of administrative office space |
| | All other Educational Facilities Uses other than Listed Above | Based on review by the Director of the Community and Economic Development Department |
| **Medical Facilities** | Hospitals | 1 space for every 2 beds; 1 space for each doctor and nurse; and 1 space for every 4 additional employees |
| | Laboratories, Research | 1 space per 1,000 sq. ft. of floor and area facilities |
| | All other Medical Facilities Uses other than Listed Above | 4 spaces for each doctor or nurse and 1 space for each employee |

| Table 4-02-01-1, *Off-Street Parking Requirements* | | |
|---|---|---|
| **Use Category** | **Specific Use** | **Minimum Off-Street Parking** |
| **Parks and Open Areas** | All Parks and Open Area Uses | Based on review by the Director of Community and Economic Development considering site size, topography and supporting facilities |
| **Passenger Terminals** | Freight | 1 space per 1,000 sq. ft. of gross floor space |
| | Passenger | 1 space per 200 sq. ft. of gross floor space |
| **Places of Worship** | All Places of Worship Uses | 1 space for every 6 seats |
| **Social Service Establishments** | Correctional Facility | Sufficient spaces to supply 1 space for each employee per shift and 1 space for every 5 occupants. The requirement may be modified at the time of Conditional Use Permit approval. |
| | All other Social Service Establishments | 1 space per 4 beds plus 1 space for each 2 staff members |
| **Utilities** | All Utility Uses | -- |
| | | |
| **Office** | Banks and Other Financial Institutions | 1 space for each 200 sq. ft. of gross floor area used by general public and 1 space for each 600 sq. ft. not used by general public |
| | All other Office Uses other than Listed Above | 1 space for each 300 sq. ft. of gross floor area |
| **Overnight Accommodations** | Bed and Breakfast Establishment | 1 space per rental unit and 1 space per 4 employees |
| | Lodging, Commercial | 1 space per rental unit |
| | Motels | 1 space per rental unit |
| | All other Overnight Accommodation Uses other than Listed Above | 1 space per rental unit |
| **Restaurants** | All Restaurant Uses | 1 space for every 3 seats |
| | Food Truck Park | 2 spaces per mobile food vendor |
| **Retail, Repair, Sales, and Service** | Services or retail dealing frequently with the public, such as grocery stores, dry cleaners, or general merchandise. | 1 space per 200 sq. ft. of gross floor area |

| Table 4-02-01-1, *Off-Street Parking Requirements* | | |
|---|---|---|
| **Use Category** | **Specific Use** | **Minimum Off-Street Parking** |
| | Services or retail dealing infrequently with the public, such as cabinet sales or furniture repair. | 1 space per 600 sq. ft. of gross floor area |
| | Veterinary Establishments | 4 spaces for each doctor and 1 for each employee |
| **Vehicle Sales and Service** | Auto Repair Shops | 2 spaces for each service bay |
| | Car Wash, Automatic or Self-Service | 3 stacking spaces per car wash bay |
| | All other Vehicle Sales and Service Uses other than Listed Above | Based on review by the Director of Community and Economic Development considering site size, topography and supporting facilities |
| | | |
| **Indoor Recreation** | Night Clubs | 1 space for each 3 seats |
| | Health and fitness center | 1 space per each 100 sq. ft. of gross floor area |
| | All other Indoor Recreation Uses other than Listed Above | 1 space per 200 sq. ft. of gross floor area generally<br>1 space per 4 seats of fixed seating areas<br>4 spaces per active patron station (i.e. 4 per bowling lane, etc.)<br>1 space per 100 sq. ft. of gross floor area for food and beverage service areas |
| **Outdoor Recreation** | Fairgrounds | 1 space for each 600 sq. ft. of gross floor area |
| | Golf Courses | 2 spaces per hole, plus one space per employee on maximum shift |
| | Miniature Golf or Driving Range | 3 spaces per hole or platform, plus one space per employee on maximum shift |
| | All other Outdoor Recreation Uses other than Listed Above | 3 spaces per 1,000 sq. ft. of active outdoor area<br>1 space per picnic table |
| | | |
| **Heavy Industrial** | | |

| Table 4-02-01-1, *Off-Street Parking Requirements* | | |
|---|---|---|
| **Use Category** | **Specific Use** | **Minimum Off-Street Parking** |
| | Manufacturing, processing, assembly, distribution, bottling works, machine shop, metal, woodworking, plumbing, electrical, printing shop, roofing shop | 1 space for each 1,000 sq. ft. of floor area |
| | All other Heavy Industrial Uses other than Listed Above | 1 space for each 1,000 sq. ft. of floor area |
| **Light Industrial** | Contractor's Offices | 1 space for each 10,000 sq. ft. of gross floor area |
| | Contractor's Yards, Building | 1 space for each 10,000 sq. ft. of yard materials, storage |
| | All other Light Industrial Uses other than Listed Above | 1 space for each 10,000 sq. ft. of gross floor area |
| **Warehousing** | All Warehousing Uses | 1 space for each 5,000 sq. ft. of gross floor area |
| **Waste-Related** | All Waste-Related Uses | 1 space for each 10,000 sq. ft. of gross floor area |
| **Wholesale and Distribution** | All Wholesale and Distribution Uses | 1 space for each 900 sq. ft. of gross floor area |
| | | |
| **Marijuana** | All Marijuana Uses | 1 per 300 sq ft |
| | | |
| **Resource Extraction** | All Resource Extraction Uses | -- |

# 4-02-02 Parking Lot Design and Layout

A. **Location of Parking.**

1. *Principal Use.* Except as otherwise expressly provided in this Section, required off-street parking stalls and aisles shall be located on the same lot or parcel as the principal use.
2. *Setbacks in Nonresidential Zone Districts.* In all nonresidential zone districts except the Industrial zone districts, off-street parking shall not be located within the required front, corner, and street side setback area.
3. *Setbacks from Rivers, Streams, Wetlands, and Other Bodies of Water.* Parking, loading and stacking areas shall be set back a minimum of 25 feet from delineated river or stream corridors, wetlands, and bodies of water used for municipal purposes.
4. *Parking in Driveways.* Parking of single-family detached and two-family dwellings may be located in residential driveway areas that meet parking stall dimensions, excluding RVs and boats.

5. *Garage Parking*. Visitor parking shall not be located within a secured private or common parking garage that requires a key, handset, or other electrical or mechanical device to gain access.
6. *Motorcycle Parking*. Motorcycle spaces shall be located according to the same criteria and standards of this Division.
7. *Street Buffer.* Off-street parking areas shall be separated from the street edge by a street buffer area established in Div. 4-04-02, *Landscaping and Buffering*.

B. **Parking Stall and Aisle Dimensions**. Standard parking spaces shall conform to the dimensions established in Tables 4-02-02-1 and 2.

1. *Wheelstops*. When provided, they shall be positioned eighteen inches into the parking stall. Wheelstops shall not be used in conjunction with curbs.

**Table 4-02-02-1, *Single Row Parking Space Dimensions***

| Number of Rows and Space Angle | Dimensions | | | | | | Illustration |
|---|---|---|---|---|---|---|---|
| | **(A) Parking Space Width** | **(B) Parking Row Depth** | **(C) Driving Aisle Width** | | **(D) Total Module Size (row + aisle)** | | |
| | | | **One Way** | **Two Way** | **One Way** | **Two Way** | |
| 0° (Parallel Parking) | 9 ft. | 22 ft. | 12 ft. | 18 ft. | 33 ft. | 42 ft. |   |
| 45° (Diagonal Parking) | 9 ft. | 20 ft. | 13 ft. | 20 ft. | 33 ft. | 40 ft. |   |
| 60° (Diagonal Parking) | 9 ft. | 20 ft. | 14 ft. | 24 ft. | 34 ft. | 43 ft. |   |

**Table 4-02-02-1, *Single Row Parking Space Dimensions***

| Number of Rows and Space Angle | Dimensions | | | | | | Illustration |
|---|---|---|---|---|---|---|---|
| | **(A) Parking Space Width** | **(B) Parking Row Depth** | **(C) Driving Aisle Width** | | **(D) Total Module Size (row + aisle)** | | |
| | | | **One Way** | **Two Way** | **One Way** | **Two Way** | |
| 90° (Head-In Parking) | 9 ft. | 20 ft. | 15 ft. | 24 ft. | 35 ft. | 45 ft. |   |

**Table 4-02-02-2, *Double Row Parking Space Dimensions***

| Number of Rows and Space Angle | Dimensions | | | | | | Illustration |
|---|---|---|---|---|---|---|---|
| | **(A) Parking Space Width** | **(B) Parking Row Depth** | **(C) Driving Aisle Width** | | **(D) Total Module Size (row + aisle)** | | |
| | | | **One Way** | **Two Way** | **One Way** | **Two Way** | |
| 0° (Parallel Parking) | 9 ft. | 22 ft. | 12 ft. | 24 ft. | 30 ft. | 42 ft. |   |
| 45° (Diagonal Parking) | 9 ft. | 21.1 ft. | 12 ft. | 20 ft. | 54.2 ft. | 62.2 ft. |   |

**Table 4-02-02-2, *Double Row Parking Space Dimensions***

| Number of Rows and Space Angle | Dimensions | | | | | | Illustration |
|---|---|---|---|---|---|---|---|
| | **(A) Parking Space Width** | **(B) Parking Row Depth** | **(C) Driving Aisle Width** | | **(D) Total Module Size (row + aisle)** | | |
| | | | **One Way** | **Two Way** | **One Way** | **Two Way** | |
| 60° (Diagonal Parking) | 10 ft. | 22.3 ft. | 14 ft. | 20 ft. | 58.6 ft. | 63 ft. |  |
| 90° (Head-In Parking) | 10 ft. | 20 ft. | 15 ft. | 24 ft. | 55 ft. | 64 ft |  |

2. *Paving Reduction*. Parking stalls with low landscape or additional hardscape, such as a raised walkway at the head of the stall be allowed to reduce the paved portion of the stall length by two feet, provided that the vehicle can overhang into the landscaped or hardscape area by two feet without impacting pedestrian walkway widths or proposed landscaping. Vehicle overhang shall be indicated on all construction drawings where this technique is used.

## 4-02-03 Parking Lot Access

A. **Off-Street Parking Access.** All off-street parking shall have direct access to a public right-of-way through an alley, driveway, or permanent access easement in all districts.

B. **Street Classification.** Access to developed property shall be placed along a street in conformance with the type listed for the subject zoning district in Div. 2-07, Districts Dimensional Standards, unless otherwise stated in this DSR.

C. **Vehicle Circulation.**

1. *Vehicles Spaces*. Except for where parking is on a driveway or where valet or tandem parking is utilized, all required parking shall be designed so that vehicles enter or leave a parking space without having to move any other vehicle.
2. *Turn-Arounds.* Any parking row that does not provide two means of vehicular egress must provide a space designated as a turn-around area. This space shall be located at the end of a parking row, be designed with the minimum dimensions as shown in Figure 4-02-03-1, *Vehicle Parking Turnaround Configuration*, or another configuration deemed acceptable by the County Engineer, and include a "No Parking" sign.
3. *Curb Cuts and Curb Returns*. All curb cuts are subject to approval of the Director of Community and Economic Development or the Colorado Department of Transportation for State Highways and are not a use by right. Their placement, size, use, signing, and construction shall conform to the Director of Community and Economic Development written requirements, at the developers' expense. An Access Permit for all entrances, curb cuts, and curb returns shall be obtained from the Director of Community and Economic Development.
4. *Shared Access.* Where there are adjacent and compatible land uses, parking areas shall be designed with circulation between the uses in mind, providing shared access for the adjacent uses.

**Figure 4-02-03-1, Vehicle Parking Turnaround Configuration**

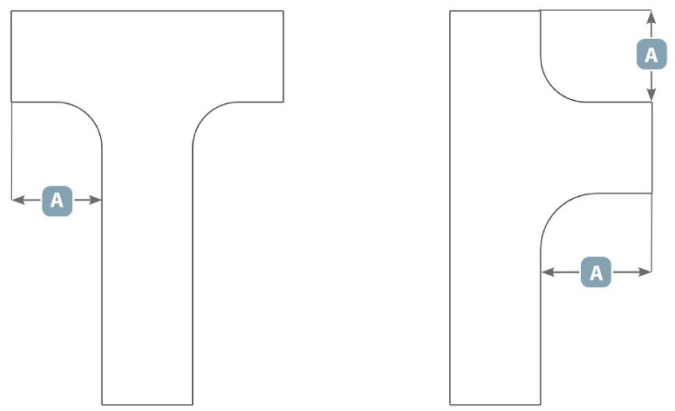

**FIGURE NOTES:**
A = 24 ft.

5. *Multi-Family Residential and Non-residential*.
   a. Parking areas shall be designed with clearly defined and unobstructed points of ingress and egress rather than continuous access from an adjacent roadway. No parking space or lot will be permitted which would require a vehicle to back into the roadway to exit the space or lot.
   b. Entrances and Exits.
      (1) Parking lot access shall be sited to minimize disruption to traffic flow on the access road.
      (2) When a parking lot abuts both an arterial road and a lower classification road such as a collector, access shall be from the lower classification road to preserve the arterial's primary function of traffic movement rather than access.

(3) Entrances and exits shall be sited to minimize conflicts within the parking lot and to promote efficient circulation.

(4) The property owner shall be responsible for maintaining access to and from the public right-of-way.

(5) When located off of higher classification roads, parking lot access shall be sited to minimize interference with intersections and preserve the road's traffic carrying capacity. Speed change lanes or auxiliary lanes shall be provided if required by the Director of Public Works. when feasible, entrances and exits shall be separated from intersections.

D. **Emergency Access.**

1. *Required*. The applicant shall provide emergency access lanes (*i.e.,* fire lanes) where necessary to provide adequate protection for a structure.
2. *Dimensions*. Dimensions for emergency access lanes and turnarounds, including width and clearance, shall comply with the requirements of the Fire Code. Any emergency access lane shall either connect at each end to a dedicated public street or be provided with a turnaround established in the Fire Code, with an additional distance of 10 feet on all sides clear of permanent structures. The driving surface within emergency access lanes shall be designed and constructed according to standards established for local public streets.
3. *Location*. All structures shall be located within 150 feet of an emergency access lane or public street.

## 4-02-04 Signs

A. **Generally**. Only signs indicating entrances and exits or designating conditions of use, direction, or identification shall be maintained within a parking area. Signs indicating entrances, exits, or conditions of use shall not exceed four (4) square feet in area, nor shall there be more than one such sign for each entrance or exit.

## 4-02-05 Parking for Single-and Two-Family Dwelling Parking

B. **Generally**. Off-road parking for one- and two-family dwellings shall be designed to provide an adequate number of parking spaces for each use and to minimize conflicts with traffic on adjacent roadways.

C. **Minimum Spaces.** Each one- and two-family dwelling shall provide a minimum of two off-road parking spaces per dwelling unit. Group Home, FHAA Small shall provide a minimum of two off-road parking spaces, and a Group Home, FHAA Large shall provide a minimum of four off-road parking spaces.

D. **Access**. Access to off-road parking shall comply with all applicable standards and regulations, including, but not limited to:

1. Obtaining an access permit, if required; and
2. Limiting the number and spacing of access points based on the functional classification of the roadway.

E. **Paved Parking**. Where access to off-road parking spaces is adjacent to a paved road, the access shall be paved with asphaltic concrete, concrete, or a similar material from the edge of the roadway to the right-of-way line.

F. **Single-Family and Duplex Parking**. Any area used for parking vehicles on a single-family detached or duplex lot shall be:

1. Clearly delineated;
2. Improved with concrete, asphalt, stone pavers, or a minimum of three-quarter inch rock;
3. Installed to support vehicle loads;
4. Maintained free of weeds; and
5. Maintained without a visible dirt surface.

G. **Location Restrictions**. Parking vehicles or trailers behind the primary residential unit(s) or on any landscaped area is prohibited.

H. **Lot Coverage**. At least 30% of the front and side yards shall be covered in living material and may not be used for parking, established in Chapter 4, *General Development Standards* and Chapter 5, *Subdivision Standards*.

I. **Access Permit.** An access permit shall be required if a new driveway from the right-of-way is created.

## 4-02-06 Multi-Family and Nonresidential Parking

A. **Purpose**. Off-road parking for multi-family and non-residential developments shall be designed to ensure the safe and convenient movement of vehicles, bicycles, and pedestrians to and from the site and within the site, to efficiently provide an adequate number of parking spaces, and to minimize interference from drive-in facilities and loading zones with access and circulation.

B. **Access Points and Site Layout**.

1. *Entrances and Exits*. Parking areas shall have clearly defined and unobstructed points of ingress and egress. No configuration shall require vehicles to back into the roadway to exit.
2. *Traffic Flow*. Access points shall be sited to minimize disruption to traffic flow on adjacent roads.
3. *Road Classification*. Where a parking lot borders both an arterial and a lower classification road (such as a collector), access shall be from the lower classification road.
4. I*ntersection Conflict.* Entrances and exits shall be located to minimize conflicts with intersections and preserve the capacity of the road network.
5. *Auxiliary Lane.* Speed change lanes or auxiliary lanes shall be provided if required by the Director of Public Works.
6. *Intersection Separation*. Access points shall be separated from intersections in accordance with Chapter 7 of these regulations, where feasible.

C. **Parking Lot Design, Internal Circulation, and Connections.**

1. *Parking Area Safety.* Parking areas shall be designed with clearly defined circulation aisles, parking spaces, and pedestrian pathways to promote safety and efficiency.
2. *Circulation Routes.* Circulation routes shall facilitate safe movement of vehicles, bicycles, and pedestrians, minimizing conflicts and confusion.
3. *Entrances and Exits.* Entrances and exits shall be sited to promote efficient circulation within the parking lot and reduce internal conflicts.

4. *Adjacent Land Uses*. Where compatible land uses are adjacent, internal circulation routes shall connect parking areas to improve traffic flow, reduce curb cuts, and prevent unnecessary vehicle movements onto public roads.
5. *Space Dimensions.* Parking spaces shall be sized in accordance with applicable standards, including accessibility requirements.
6. *Owner Maintenance*. The property owner shall be responsible for maintaining all access points, circulation routes, signage, and pathways to ensure continued safety and operational efficiency.

D. **Multi-Family Residential Development and Certain Adaptive Re-Uses.**

1. *Transit Service Areas.* Notwithstanding any other provision of these standards and regulations to the contrary, per C.R.S. § 29-36-103, no minimum off-road parking requirement applies within an Applicable Transit Service Area to a multifamily residential development, adaptive re-use for residential purposes, or adaptive re-use mixed use that includes at least 50% of use for residential purposes. Nothing herein limits the ability of the County, pursuant to C.R.S. § 29-36-104(1), to impose or enforce a minimum off-road parking requirement within an Applicable Transit Service Area in connection with a housing development project that is intended to contain twenty units or more or contain regulated affordable housing by requiring no more than one off-road parking space per dwelling unit in the housing development.
2. *Residential Developments*. In the event the County proceeds pursuant to C.R.S. § 29-36-104(1), the County may require that up to one off-road parking space be provided for each dwelling unit if all of the following requirements are met:
   a. The housing development project is a new development project containing 20 or more dwelling units, or contains regulated affordable housing as defined in C.R.S. § 29-36-102.
   b. Within 90 days after receipt of a complete application for the proposed housing development project, the County has published written findings that not imposing or enforcing a minimum off-road parking standard in connection with the proposed housing development project would have a substantial negative impact on:
      (1) Safe pedestrian, bicycle, or emergency access to the housing development project; or
      (2) Existing on- or off-road parking spaces within one-eighth mile of the housing development project.
   c. The findings required in subsection (b)(2) above must:
      (1) Be supported by substantial evidence in support of such findings;
      (2) Include parking utilization data collected from the area within one-eighth mile of the housing development project;
      (3) Demonstrate that the County's implementation of strategies to manage demand for on-road parking in the area within one-eighth mile of the housing development project would not be effective to mitigate the substantial negative impacts contained in such findings; and
      (4) Have been reviewed and approved by a professional engineer, as defined in C.R.S. § 12-120-202(7).

# 4-02-07 Waivers and Adjustments

A. **Purpose**. The purpose of this Section is to provide flexible standards and adjustment options for parking requirements in order to promote development practices that reduce reliance on automobiles, decrease the land area dedicated to parking, and lower the overall parking needs while ensuring adequate parking for all uses and users. These measures aim to minimize spillover parking into adjacent neighborhoods and support sustainable development objectives.

B. **Parking Flexibility**. The required off-street parking spaces, in whole or in part, may be provided through alternative measures, including but not limited to:

1. *Off-Site Parking*. Required parking may be located off the development site within 600 feet of the subject property, measured by the shortest distance from property line to property line along a sidewalk or other pedestrian path. Off-site parking may be shared among multiple uses if all applicable parking requirements and shared parking provisions are met.
2. *Shared Parking*. Required parking may be shared among Public, Civic, and Institutional Use Categories, Commercial Use Categories, Recreational Use Categories, and Household Living uses if all of the following criteria are satisfied:
   a. Shared parking is permitted only if the uses have substantially different peak traffic usage periods (e.g., a theater and a bank) or share customers (*e.g.*, a barber shop and a tailor).
   b. Shared parking must be within 600 feet, measured as described in subsection B(1), *Off-Site Parking*, above, from the use it serves.
   c. A barrier-free pedestrian pathway shall connect shared parking facilities to the associated uses, designed with appropriate lighting and safety features.
   d. A binding agreement shall be executed among all owners/operators of the shared uses, a recorded copy of which shall be provided to the Director of Community and Economic Development, which shall include:
      (1) A stipulation that the shared parking land shall not be encroached upon, used, sold, leased, or conveyed for purposes unrelated to the uses served, for as long as the shared parking is required;
      (2) Specification of the primary hours of operation for each use;
      (3) Maintenance responsibilities for parking facilities and landscaping;
      (4) Filing the contract with the deed of the involved parcels to ensure enforceability by successors; and
      (5) Any amendments or terminations must be reviewed and approved by the Director.
3. *Electric Vehicle Charging Stations*. For each electric vehicle charging station provided, the required parking spaces may be reduced by an equivalent number, up to a maximum of 5% of the total required parking spaces; and
4. *Other Parking Measures.* The Director may approve additional parking measures that align with the intent of this Section, such as vertical stacking spaces or family-friendly parking (e.g., priority parking for pregnant women, young children, or individuals with disabilities after ADA spaces).

C. **Parking Adjustments**.

1. *Transportation Demand Management (TDM) Study*. The Director of Community and Economic Development may approve a 25% reduction in total required off-street parking if the applicant submits a TDM Study prepared by a qualified traffic or parking professional. The Study shall evaluate the potential for reducing parking based on regional comparable projects and demonstrate the following:
    a. Availability of pedestrian, bicycle, or mass transit facilities or services that reduce single-occupant vehicle use, including but not limited to:
        (1) On-site car and bike sharing programs.
        (2) Vanpool services.
        (3) Shuttle services.
        (4) Transit passes for employees, residents, or customers.
        (5) Transit-supportive site design features such as:
            (A) Bus stops adjacent to the development.
            (B) On-site transit loading spaces.
            (C) Transit information centers.
            (D) Enhanced pedestrian routes within one-half mile of a Park & Ride or Rail Station, with requirements for:
                (I) Generally continuous weather protection covering at least 50% of the frontage, excluding crossings;
                (II) Continuous, direct sidewalks or walkways to transit facilities;
                (III) Adequate street lighting; and
                (IV) Minimized or enhanced pedestrian crossings of vehicular routes
    b. The density of the development exceeds 14 dwelling units per acre.
    c. The presence or provision of basic daily amenities within 1,300 feet or approximately one-quarter mile, such as grocery or convenience stores, drug stores, childcare, and weekly destinations like banks, restaurants, or theaters.
    d. Other criteria supported by the Study and deemed consistent with the purpose of this Section, as determined by the Director.
2. *Multi-Family Residential Development and Certain Adaptive Re-Uses.*
    a. Notwithstanding any other provision of these standards and regulations to the contrary, per C.R.S. § 29-36-103, no minimum off-road parking requirement applies within an Applicable Transit Service Area to a multifamily residential development, adaptive re-use for residential purposes, or adaptive re-use mixed use that includes at least 50% of use for residential purposes. Nothing herein limits the ability of the County, pursuant to C.R.S. § 29-36-104(1), to impose or enforce a minimum off-road parking requirement within an Applicable Transit Service Area in connection with a housing development project that is intended to contain twenty units or more or contain regulated affordable housing by requiring no more than one off-road parking space per dwelling unit in the housing development.
    b. In the event the County proceeds pursuant to C.R.S. § 29-36-104(1), as may be amended, the County may require that up to one off-road parking space be provided for each dwelling unit if all of the following requirements are met:

(1) The housing development project is a new development project containing 20 or more dwelling units, or contains regulated affordable housing as defined in C.R.S. § 29-36-102.

(2) Within 90 days after receipt of a complete application for the proposed housing development project, the County has published written findings that not imposing or enforcing a minimum off-road parking standard in connection with the proposed housing development project would have a substantial negative impact on:

(A) Safe pedestrian, bicycle, or emergency access to the housing development project; or

(B) Existing on- or off-road parking spaces within one-eighth mile of the housing development project.

(3) The findings required in subsection (b)(2) above must:

(A) Be supported by substantial evidence in support of such findings;

(B) Include parking utilization data collected from the area within one-eighth mile of the housing development project;

(C) Demonstrate that the County's implementation of strategies to manage demand for on-road parking in the area within one-eighth mile of the housing development project would not be effective to mitigate the substantial negative impacts contained in such findings; and

(D) Have been reviewed and approved by a professional engineer, as defined in C.R.S. § 12-120-202(7).

## 4-02-08 Accessible Parking

A. **Generally.** Accessible parking spaces shall be provided in accordance with this Division, as required by the Americans with Disabilities Act (ADA) and Colorado Accessibility Standards, for all uses that are served by a parking lot.

B. **Relationship to Required Number of Parking Spaces.** Accessible off-street parking spaces required by this Division shall count toward fulfilling the total off-street parking requirements.

C. **Location of Accessible Spaces**. Accessible parking spaces shall be located as close as possible to an entrance that allows such persons to enter and leave the parking area and building without assistance. Accessible spaces shall be located away from driveways and public rights-of-way to minimize exposure to vehicular traffic, and the accessible route from each accessible space to the building entrance shall not cross a driving aisle or roadway where feasible.

D. **Number of Accessible Parking Spaces.**

1. *Generally*. In general, the number of accessible spaces established in Table 4-02-08-1, *Off-Street Accessible Parking Spaces Required*, or as required by the Americans with Disabilities Act (ADA) Standards for Accessible Design and ADA Accessibility Guidelines for Buildings and Facilities published by the United States Access Board. If any of the standards within this Subsection and the United States Access Board are in conflict, then whichever requires more spaces shall be used.

2. *Multi-Dwelling Residential Development*. In multi-dwelling residential development, one accessible parking space shall be provided for each unit that is designed for occupancy by a person with disabilities.

3. *Valet Parking*. No accessible spaces are required for valet-only parking lots.

| Table 4-02-08-1, Off-Street Accessible Parking Spaces Required | |
|---|---|
| Total Number of Parking Spaces Provided | Minimum Number of Accessible Parking Spaces1 |
| 1 to 25 | 1 |
| 26 to 50 | 2 |
| 51 to 75 | 3 |
| 76 to 100 | 4 |
| 101 to 150 | 5 |
| 151 to 200 | 6 |
| 201 to 300 | 7 |
| 301 to 400 | 8 |
| 401 to 500 | 9 |
| 501 to 1000 | 2% of total parking |
| 1001 and over | 20 plus 1 for each 100 over 1000 |
| Special Parking Conditions for Specific Uses | Minimum Number of Accessible Parking Spaces1 |
| Hospital Outpatient Facilities | 10% of patient and visitor parking |
| Rehabilitation Facilities | 20% of patient and visitor parking |
| Outpatient Physical Therapy Facilities | 20% of patient and visitor parking |

**TABLE NOTES:**

1. At least one out of six accessible spaces, rounded up, shall be van-accessible.

E. **Accessible Parking Space Design and Dimensions.** Figure 4-02-08-1, *Accessible Parking Space Dimensions*, details the specific size requirements for both standard automobile and van-accessible ADA-accessible parking spaces.

**Figure 4-02-08-1, *Accessible Parking Space Dimensions***

| Accessible Space Type | | (A) Parking Space Width (min.) | (B) Access Aisle Width (min.) | Illustration |
|---|---|---|---|---|
| **Car Accessible Space** | | 96 in. | 60 in. |  |
| **Van Accessible Space** | Option 1: | 132 in. | 60 in. |  |
| | Option 2: | 96 in. | 96 in. |  |

# 4-02-09 Bicycle Parking

A. **Applicability.** Bicycle parking is required for new development, redevelopment, or substantial improvement of land for which there are at least 50 vehicle parking spaces required.

B. **Exemptions.** This Section shall not apply to the following uses:

1. Single-family detached residential;
2. Home occupations;
3. Street vendors or temporary sales operations;

C. **Number of Spaces.** A minimum number of bicycle parking spaces shall be provided, equal in number to 5% of the total number of automobile parking spaces provided, but not less than one space and not more than 20 spaces.

D. **Bicycle Parking Design Standards**.

1. Location. Wherever possible, bicycle racks should be located within 100 feet of a building entrance and be visible from the building entrance and its approaches. If necessary, signs should be posted that indicate the location of bicycle parking.
2. Facility Design. Bicycle parking facilities shall be easy to recognize, attractive, and functional and shall not impede pedestrian or vehicular circulation.
3. Surface. The surface of a bicycle parking area need not be paved but shall be finished to avoid mud and dust.
4. Anchored. Bicycle racks shall be anchored to a hard surface to prevent easy removal.
5. Bicycle Protection. Bicycle racks shall be coated in a material that will not damage the bicycle's painted surfaces.
6. Spatial Dimensions and Clearance. Bicycle parking facilities shall have a minimum separation from one another of 18 inches.
7. Security. Bicycle parking facilities shall be designed to allow the bicycle frame and both wheels to be securely locked to the parking structure, which shall be of permanent construction materials such as heavy gauge tubular steel permanently attached to the pavement.
8. Multi-Tenant Sites and Centers. Sites that have more than one principal building shall provide racks within 50 feet of the main entrance of each building.
9. Signage. When not clearly visible, signage of one square foot in size is required to safely direct cyclists to bicycle parking areas.

E. **Administrative Relief.** The Director of Community and Economic Development may grant relief from the bicycle parking requirements according to the following criteria:

1. Remote or isolated location. The site is located in an isolated area where bicycle activity is unlikely due to lack of bicycle infrastructure and connectivity; or
2. Safety. The use is located in an area with heavy truck traffic or other safety hazards that are incompatible with bicycle travel; or
3. Existing public bicycle parking. The site is located within one quarter mile of existing, adequate public bicycle parking facilities.

# 4-02-10 Electric Vehicle Charging Stations (EVCS)/Spaces Requirements

A. **As an Accessory Use.** Level 1 and Level 2, and Level 3 EVCS and EV-Ready parking spaces shall be permitted as an accessory use in all zone districts.

B. **EV-Ready Parking Spaces Required.**

1. *Multi-family Housing Developments.* Multi-family housing developments and planned developments that include multi-family housing shall be required to provide one Level 2 electric vehicle charging station (EVCS) for every 15 required parking spaces established in Table 4-02-01-1, *Parking Ratios*.
2. *Commercial Uses.* All commercial uses with 15,000 square feet in floor area or more shall install Level 2 EV charging stations at a rate of 10% of the total required off-street parking spaces.
3. *Fractions.* When the calculation of required parking spaces, EV charging stations, and EV-Ready parking spaces results in a fractional parking space, the result of the parking calculation shall be rounded up to the nearest whole number.

C. **Space Count.** Spaces served by EV charging stations and EV-Ready spaces shall count towards the required on-site parking and are not in addition to the required parking.

D. **Screening Required.** Above-ground electrical equipment supporting the operation of an electric vehicle charging station, such as electrical transformers, shall be screened according to the minimum standards in Div. 4-04, *Landscaping and Buffering.*

# 4-02-11 Loading Requirements

A. **Minimum Number of Off-Street Loading Spaces Required.** The number of off-street loading spaces is established in Table 4-02-11-1, *Minimum Off-Street Loading Spaces Required*. Each loading space shall be designated as such and shall only be used for loading purposes.

B. **Outdoor Storage.** For the purposes of this Section, each two square feet of exterior area used for outdoor storage shall be considered equivalent to one square foot of enclosed gross floor area.

C. **Common Loading Spaces.** Multiple uses or occupancies located in a single building or on one site may be served by a common loading space if the Director determines that the loading space can adequately serve each use. For this purpose, the minimum number of required spaces shall be based on the use category having the greatest number of resulting spaces.

**Table 4-02-11-1, Minimum Off-Street Loading Spaces Required**

| Use Categories[1] | Gross Floor Area (GFA) | Number of Required Loading Spaces (min.) |
|---|---|---|
| Public and Civic or Commercial | Less than 10,000 sq. ft. | 0 |
| | 10,001 to 50,000 sq. ft. | 1 |
| | 50,001 to 84,000 sq. ft. | 2 |
| | 84,001 to 156,000 sq. ft. | 3 |
| | 156,001 to 236,000 sq. ft. | 4 |
| | 236,001 to 325,000 sq. ft. | 5 |

| Table 4-02-11-1, Minimum Off-Street Loading Spaces Required | | |
|---|---|---|
| Use Categories[1] | Gross Floor Area (GFA) | Number of Required Loading Spaces (min.) |
| | Each additional 100,000 sq. ft. | 1 |
| Industrial | Less than 10,000 sq. ft. | 0 |
| | 10,001 to 150,000 sq. ft. | 1 |
| | 150,001 to 300,000 sq. ft. | 2 |
| | 300,001 to 500,000 sq. ft. | 3 |
| | 500,001 to 1 million sq. ft. each | 4 |
| | Each additional 200,000 sq. ft. | 1 |
| Residential or Agricultural | Not Applicable | 0 |

**TABLE NOTES:**

1. Refer to Use Categories in Div. 3-02, *Use Categories.*

D. **Loading Space and Area Design**.

1. *Location*.
   a. All loading spaces shall be located within a building or on the same lot as the principal building.
   b. Docks and loading spaces shall be located behind buildings or, when possible, at the sides or rear of the building to minimize interference with access and circulation on public roads and within parking lots.
   c. No portion of a loading space shall extend into a public right-of-way, off-street parking area, or setbacks.
   d. Loading spaces shall not be located within thirty feet of road intersections or within required yard spaces.
2. *Entrances and Exits*.
   a. Each required off-road loading space shall be provided with a means of unobstructed ingress and egress to an alley or onto a public road wide enough to accommodate expected vehicles.
   b. Where such ingress and egress are made into a public road, they shall be through driveways or openings that meet required standards.
   c. Permanent wheel stops or curbing shall be installed to prevent vehicles from encroaching onto front yards, side yards, or adjacent property.
   d. Access to parking lots that shall also be used by delivery and service vehicles shall be designed to reduce conflicts.
3. *Dimensions*.
   a. At least half of the required loading spaces shall be at least 10 feet by 40 feet.
   b. The remaining spaces shall be at least 10 feet by 20 feet.
   c. All loading spaces shall have a vertical clearance of at least 14 feet unless the Director modifies this standard where site or use conditions warrant.

4. *Surfacing*. All open off-road loading areas shall be surfaced with an all-weather material such as concrete or asphalt capable of supporting the heaviest expected vehicles, including fire and sanitation equipment.
5. *Repair and Service.* No motor vehicle repair work or vehicle servicing shall be permitted in conjunction with loading facilities.
6. *Utilization*. Space allocated to any off-road loading, accessory drives, or aisles shall not be used to satisfy parking or trash handling space requirements.
7. *Lighting*. Any lighting used to illuminate off-street loading or unloading areas shall not cause glare on any right-of-way or adjacent property and shall comply with all standards of Div. 4-06, *Outdoor Lighting*.
8. *Screening and Buffering.*
    a. Docks and loading spaces shall be screened from view from abutting properties and public rights-of-way.
    b. Truck access and loading areas located between a principal building and a residential property shall comply with the following additional standards:
        (1) The loading area shall be enclosed by a roof and walls between the principal building and the property boundary, as depicted in Figure 4-02-11-1, *Illustrative Example of Enclosed Loading*.
        (2) The walls shall be tall enough to completely screen delivery vehicles and shall be designed with architectural features such as windows or awnings that complement the principal building.
        (3) The buffer yard between the enclosed loading area and the property line may be reduced by one level of opacity, with the remainder complying with the opacity levels specified in Section 4-04-03, *Bufferyard Standards*.

**Figure 4-02-11-1, Illustrative Example of Enclosed Loading**

9. *Circulation and Placement.*
    a. Loading zones and service areas shall be designed to minimize interference with access and circulation on public roads and within parking lots.

b. Loading zones shall be located on separate routes from primary vehicle, bicycle, and pedestrian circulation routes, such as at the sides or rear of the building.

## 4-02-12 Stacking Requirements

A. **Generally.** Driveway stacking areas are used to queue vehicles off-street prior to exiting a property, minimize congestion, and increase safety.

B. **Minimum Number of Stacking Spaces Required.** Stacking spaces shall minimum stacking spaces stablished in Table 4-02-12-1, *Minimum Vehicle Stacking Spaces Required.*

**Table 4-02-12-1, Minimum Vehicle Stacking Spaces Required**

| Activity | Stacking Requirement | Measured From |
|---|---|---|
| Automotive Servicing and Automotive and Body Repair | 2 | Entrance to stall/service bay |
| Automated Teller Machine (ATM), attached | 2 | ATM keypad |
| Batch Plant | Determined by the Director | |
| Car / Automobile / Vehicle Wash, automated and self-service | 4 | Entrance to wash bay |
| Drop-off, Day Care Facilities | 3 plus 1 per every 500 square feet of gross floor area | Facility passenger loading/drop-off area |
| Drive-through, Bank, Credit Union, or Other Financial Institution | 4 vehicles per window or kiosk | Teller window or pneumatic tube station |
| Drive-through, Restaurant or functionally similar[1,2,3] | 4 vehicles behind menu board | Point of order |
| | 4 vehicles behind first window | Point of order to first window |
| | 2 | First window to second window |
| Drive-through, other (e.g. pharmacy, dry cleaner, etc.) | 3 | Order box or pickup window |
| Educational Facilities | Determined by the Director | |
| Fuel Sales (retail) | 2 vehicles per pump | Gas pump |
| Parking Lot or Structured Parking | 1 vehicle per gate/door | Keycode box or ticket station |
| Other | Determined by the Director | |

**TABLE NOTES:**

1. If one window is provided (for both payment and pick-up), then six stacking spaces are required measured at the order box and five stacking spaces are required between the order box and the window.
2. If one window is provided (for ordering, payment, and pickup), then four stacking spaces are required measured at the order box/pick-up window.
3. Example of stacking for a drive-through, restaurant is illustrated in Figure 4-02-14-1, *Drive-Through Restaurant Stacking Illustration*.

C. **Vehicle Stacking Space and Area Design Standards.**

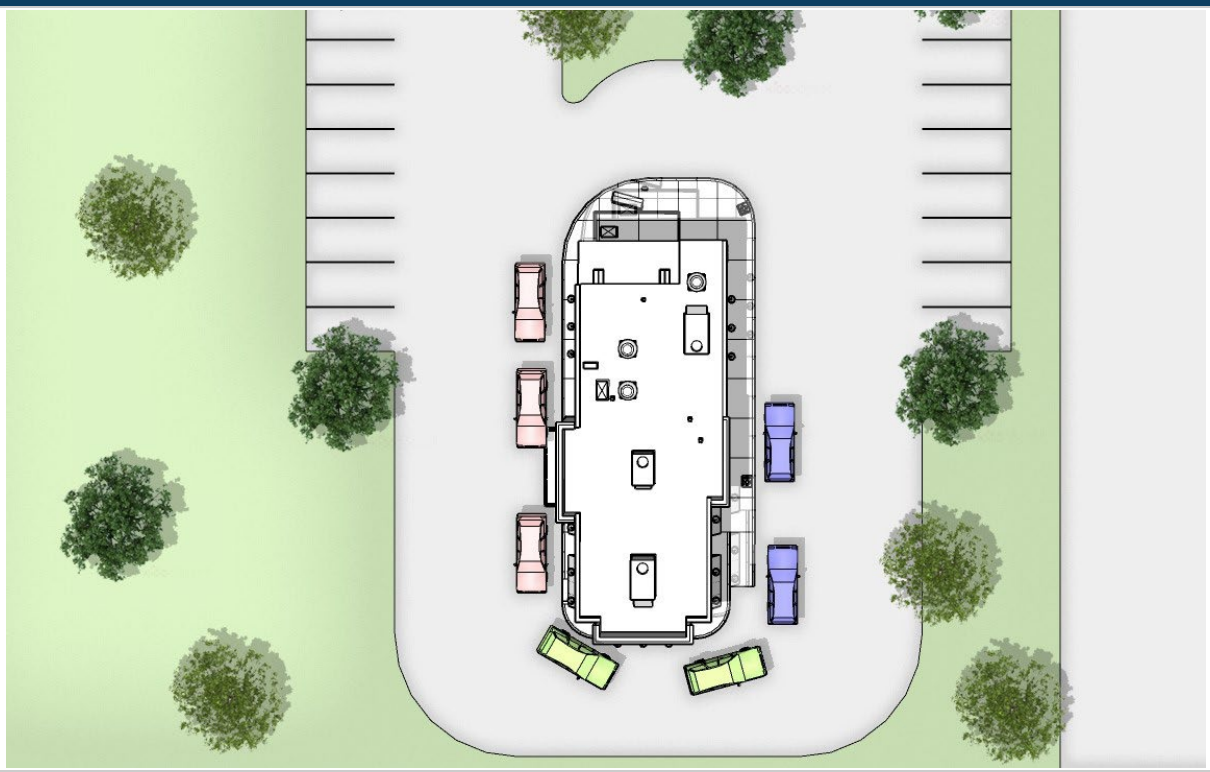
1. *Bypass Lane.* Stacking lanes shall be designed with an abutting bypass lane that meets the minimum width established in Table 4-02-14-2, *Vehicle Stacking Dimensions,* to allow vehicles to circumvent the drive-through lane.
2. *Circulation and Marking.* Stacking lanes shall be clearly marked and shall not interfere with on-site or off-site traffic circulation.
3. *Turn-Around Area.* Controlled or gated entrances shall be designed so that vehicles may turn around without backing out into the public right-of-way.
4. *Blocking Prohibited.* Stacking areas shall be designed to avoid, if reasonably possible, and otherwise minimize, the blocking of access to driveways or parking areas.
5. *Not Permitted in ROW.* Stacking spaces shall not occupy any portion of a public right-of-way.
6. *Stacking Space Dimensions.* Vehicle stacking spaces shall meet the minimum dimensional standards established in Table 4-02-12-2, *Vehicle Stacking Dimensions*.

**Table 4-02-12-2, Vehicle Stacking Dimensions**

| Space Width | Space Length | Bypass Lane Width |
|---|---|---|
| 8 ft. | 20 ft. | 10 ft. |

D. **Drive-Through, Restaurant.** Figure 4-02-12-1, *Drive-Through Restaurant Stacking Illustration*, provides an illustration of a restaurant use with a drive-through.

**Figure4-02-12-1, Drive-Through Restaurant Stacking Illustration**



# Div. 4-03 Pedestrian Circulation Facilities

# 4-03-01 Pedestrian Circulation Facilities

A. **Generally.**

1. *Design Integration*. Parking lots shall be designed to minimize pedestrian-vehicle conflicts through:
   a. Strategic placement of parking spaces and driving aisles;
   b. Integration of dedicated pedestrian circulation systems during preliminary design; and
   c. Implementation of traffic calming measures where appropriate.
2. *Route Planning.* Pedestrian routes shall:
   a. Provide direct and convenient access based on pedestrian desire lines;
   b. Connect building entrances, transit stops, and adjacent pedestrian facilities; and
   c. Minimize walking distances and eliminate unnecessary detours.

B. **Infrastructure Standards**.

1. *Dedicated Walkways*. Pedestrian improvements shall:
   a. Collect and channel pedestrians safely through the lot;
   b. Minimize pedestrian use of vehicle driving aisles as walkways;
   c. Provide continuous pathways with minimum clear widths of five-feet for primary routes and four-feet for secondary routes; and
   d. Comply with Americans with Disabilities Act accessibility guidelines.
2. *Construction Requirements*. Pedestrian facilities shall provide:
   a. Stable, firm, and slip-resistant walking surfaces;
   b. Maximum cross-slopes of 2% and maximum running slopes of 5%, and
   c. Proper drainage to prevent ponding and ice formation.

C. **Visibility and Safety Features.**

1. *Route Delineation*. Pedestrian routes shall use one or more of the following design elements:
   a. Grade Separation. Raised walkways, curbed pathways, or depressed pedestrian lanes.
   b. Special Materials. Distinct paving, textures, or colors contrasting with standard pavement.
   c. Pavement Marking. High-visibility striping, symbols, or colored treatments.
   d. Safety Features. Bollards, landscaping, lighting, or overhead signage.
2. *Intersection Design.* Where pedestrian routes cross driving aisles, they shall:
   a. Provide clearly marked crosswalks using high-contrast materials;
   b. Install a minimum six-foot wide pedestrian refuge areas for crossings longer than 40-feet;
   c. Ensure adequate lighting for nighttime visibility; and
   d. Install appropriate warning signage for drivers.
3. *Drop-off Areas.*
   a. Required Locations. Dedicated drop-off areas are mandatory for facilities serving:
      (1) Schools, childcare centers, and youth programs.

(2) Senior centers, assisted living facilities, and medical facilities.

(3) Other venues primarily serving mobility-impaired individuals.

b. Pedestrian Loading and Unloading. Drop-off areas shall be:

(1) Positioned as close as practical to main building entrances;

(2) Located entirely within private property boundaries, not within public road rights-of-way;

(3) Provide a minimum 12-foot wide lane widths for passenger vehicle access;

(4) Include dedicated waiting areas separate from vehicle travel lanes; and

(5) Provide weather protection where feasible.

# Div. 4-04 Landscaping and Buffering

## 4-04-01 General Provisions

A. **Generally**.

1. *Materials*. All landscape materials shall conform to the requirements of this Division.

2. *Types of Landscaping*. This Division contains regulations for three types of landscaping, as depicted in Figure 4-04-01-1, *Landscaping*, below.

B. **Prior Approvals**. Projects with approved plans or permits prior to the effective date remain subject to the standards in effect at that time unless the applicant voluntarily elects to comply with the provisions of this Section.

C. **Approved Landscape Plan Compliance**. The landscaping, as planted, shall comply with the approved Landscape Plan. Amendments to an approved landscape plan must be approved in writing by the Director.

D. **Landscape Plans Required**.

1. *Review Procedures*. Landscape Plans are a required component of the Site Plan review process established in Chapter 13, *Development Review Procedures*.

2. *Contents*. At a minimum a landscaping plan shall contain or display the following:

a. Scale - written and graphic;

b. North arrow;

c. Label the zoning of subject property and adjacent properties;

d. Current land use of subject property and all adjacent properties;

e. Existing plant material, if applicable;

f. Plants to be removed or relocated, if applicable;

g. Existing and proposed structures, overhangs, and paving, if applicable;

h. Planting details specifying mulching materials;

i. Watering method (i.e. irrigation, hand water) and frequency;

j. Proposed plant material located according to low, moderate or high hydrozones (label number, species, and size if not minimum size). Plants within any one hydrozone shall have similar water requirements. Draw plant material at a low estimate of mature size.

k. Low-impact development features;

l. Proposed functional use(s) for any high-water use turfgrass areas;

m. Details of berms, walls, or any other structural buffering device if required by this DSR;

n. Title block with name of project, name of person preparing plan and date;

o. A written statement describing type of irrigation system proposed - detail the proposed irrigation system or method of irrigation; and

p. Plant schedule showing the following:

(1) Number and location of plants of each species;

(2) Plant name (common name, botanical name, and variety name);

(3) Size and condition of plants - size be expressed in terms of size of container, height of plant, or caliper of tree; condition to be expressed in terms of size of container, ball, and burlap, and/or bare root plant division (list shall be divided according to trees, shrubs and ground covers, and turfgrass types); and

(4) Cost estimate including materials and cost of installation when installation of landscaping is deferred.

E. **Species**. Plant selection shall prioritize water-wise species acceptable for the region, as defined by a regionally specific plant list. Plant materials shall be grouped according to similar moisture, light, and drainage needs. Landscape improvements shall consist of a variety of species to enhance the visual and functional aspects of the landscaped area, such as shading and windbreaks.

F. **Drought or Water Shortage Emergencies**. When a drought or water shortage has been officially declared by Adams County or the State of Colorado, postponing plant installation, the following shall be completed prior to issuance of a Certificate of Occupancy: final grading; mainline irrigation infrastructure; prepared plant beds with mulch; and temporary erosion/sediment controls. The postponed plant installation shall be guaranteed through a Landscape Completion Agreement and associated collateral, and completed during the next suitable planting season following the end of the declared drought.

**Figure 4-04-01-1, Landscaping**

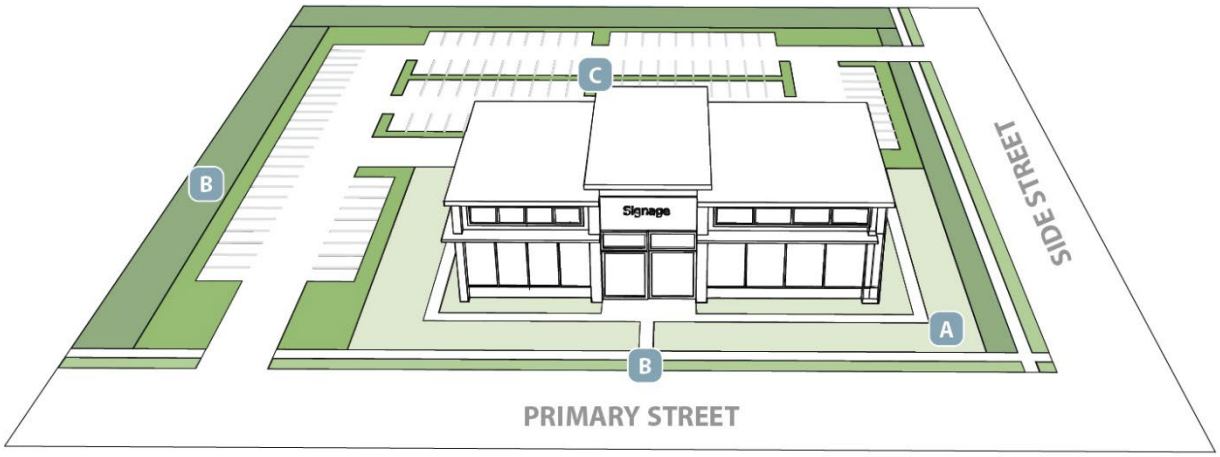


**FIGURE NOTES:**
A = Site Landscaping | B = Bufferyards | C = Off-Street Parking Landscaping

G. **Landscape Standards Cumulative**. The standards set forth in this Division shall be cumulative in nature. As an example, the Landscape Plan of a parking lot that is located next to an arterial street must meet the parking lot landscape requirements in addition to the street bufferyard requirements established for lots adjoining arterial streets.

H. **Sight Distance Triangle**. Landscaping shall be placed and maintained so as not to cause a visual obstruction and so as not to violate the sight distance triangle.

I. **Consideration Criteria**. Upon review of the Landscape Plan, the Community and Economic Development Director shall make affirmative findings that the Plan:

1. *Reinforcement and Extension*. Reinforces and extends any existing patterns of outdoor spaces and vegetation where practicable;
2. *Functional Purposes*. Supports functional purposes such as spatial definition, visual screening, creation of privacy, management of microclimate or drainage;
3. *Appearance*. Enhances the appearance of the development and neighborhood;
4. *Protection*. Protects significant trees, natural systems, and habitat;
5. *Pedestrians*. Enhances the pedestrian environment;
6. *Identification*. Identifies all landscape areas and all landscaping elements within each landscape area;
7. *Front Range*. Contains plants that are well-suited for healthy growth along the Colorado front range; and

8. *Efficiencies*. Supports water efficiencies by using plants from Appendix B, *Plant List*, and appropriate irrigation techniques, as outlined in Sec. 4-04-09, *Maintenance and Installation*. Appendix B is incorporated herein by reference and made a part hereof.

J. **Existing Vegetation**. Existing valuable trees, shrubs, and grasses shall be preserved within natural drainage areas and areas not needed for development. Healthy, mature trees and younger plants, which would normally succeed older plants, shall be preserved. An applicant shall receive no credit for preserving trees that are decayed, diseased, or reaching the end of their natural life span. If valuable trees are destroyed by the development, new trees shall be installed to replace the destroyed trees. Existing vegetation, which is retained as part of the development, may be counted as part of the landscaping requirement, unless prohibited by Sec. 4-04-05, *Weeds and Dangerous Trees*.

K. **Landscape Materials and Location**. All landscape materials shall be healthy and compatible with the local climate and the site soil characteristics, drainage, and water supply. This includes native or regionally-adapted low-water-use plants.

1. *Landscape Materials*. No artificial trees, plants, or turfgrass shall be used as a landscape material with the following exception:

   a. *Single-family homes.* If an applicant is interested in using artificial turf in their development, they shall meet the minimum standards for required plant materials and apply for an alternative turf design with drainage specifications to the Director of Community and Economic Development.

2. *Landscape Location*.

   a. Landscaped areas shall not be enclosed by a fence, which limits its visibility. If a sight obscuring fence is required, it shall be set back from the landscaped area. This will have the effect of making the landscaped area adjacent to the right-of-way visible and the fence will be located behind the landscaped area.

   b. All landscaping shall be located so it does not interfere with utilities, easements, road lighting or fire hydrants.

L. **Water-Wise Landscaping**. All required landscaping shall be designated to incorporate water-wise materials and techniques to support water conservation and water use efficiency. Each landscaping plan shall organize and group planting areas into distinct hydrozones according to their microclimate needs and water requirements, as per the hydropzones criteria in Sec. 4-04-09, *Installation and Maintenance*. High hydrozones shall be separated from moderate and low hydrozones and consistent with the requirements of these Standards and Regulations.

1. *Low Hydrozone Content.* All nonresidential and multifamily residential landscapes shall include a minimum of 75% of plant materials classified as *low hydrozone* from Appendix B. Single-family residential landscapes shall include at least 50% of materials classified as *low hydrozone*.

2. *Water-Wise Plant Selection*. At least 75% of annuals and trees and 100% of shrubs, perennials, groundcovers, and ornamental grasses on each site must come from approved Water-wise lists (e.g., CSU Extension Water Wise Guidance), as detailed in Appendix B.

3. *Water-wise Techniques*. Water-wise landscaping techniques avoid artificial turf or plants, mulched (including gravel) beds or areas without living landscape material, paving of areas not required for walkways, plazas or parking lots, bare ground, weed-covered or -infested surfaces, and any landscaping that does not comply with the standards of this Section. Water-wise landscaping includes the following techniques:

a. Grouping plants with similar water requirements together on the same irrigation zones as per the Hydrozones criteria in Sec. 4-04-09, *Installation and Maintenance*;
b. Limiting high-irrigation turfgrass to areas where it serves a defined functional purpose;
c. Use of low-water demanding plants and functional grass where practicable;
d. Use of efficient irrigation systems;
e. Incorporation of soil improvements;
f. Use of native or regionally-adapted seeds, where seeding is utilized;
g. Use of mulches; and
h. Provision of regular and attentive maintenance.

4. *Soil Improvements*. Soil improvement allows for better absorption of water and improved water-holding capacity of the soil. Soils with organic matter also provide nutrients to plants. Improve the soil prior to planting and installation of any irrigation system by digging in a minimum of three cubic yards of organic matter per 1,000 square feet to be planted. Organic matter could include aged manure, sphagnum peat moss, humus, compost, or aged sawdust. All planted beds must include a minimum 3-inch layer of organic mulch to retain soil moisture and prevent weed growth.
5. *Efficient Irrigation*. When used, well-planned sprinkler systems can save water. All automatic irrigation systems shall utilize weather-based or soil moisture-based controllers to prevent unnecessary watering. For efficient water use, irrigate grass areas separately from other plantings. Landscape plantings should be grouped according to similar water needs. Grass areas are best watered with sprinklers. Trees, shrubs, and groundcovers can be watered efficiently with low-volume drip systems.
6. *Mulches*. Mulched planting beds are an ideal replacement for turf areas. Mulches cover and cool the soil, minimize evaporation, reduce weed growth, and slow erosion. Mulches also provide landscape interest. All planted beds must include a minimum 3-inch layer of organic mulch to retain soil moisture and prevent weed growth.

M. **Fruit Trees**.

1. *Prohibition*. Fruit trees are prohibited in rights-of-way and parking lot landscape islands; however, they are permitted in other landscaped areas provided that they do not cause a nuisance. For purposes of this subsection, a nuisance includes fallen fruit accumulation, attraction of wildlife or pests, fermentation odors, or any condition that creates a slip hazard on sidewalks, trails, or pedestrian areas.
2. *Separation*. Fruit trees shall not be planted within 20 feet of:
   a. Sidewalks, trails, or shared-use paths;
   b. Property lines adjacent to public rights-of-way; or
   c. Stormwater inlets, detention pond edges, or bioswale channels.
3. *Tree Count*. Fruit trees shall not exceed 25% of the total required tree count on a development site.

N. **Cover in Landscaped Areas**.

1. *Living Material Requirement.* All required landscaped areas and bufferyards must contain a minimum of 75% living organic landscaping material, with a maximum of 25% non-living landscaping materials such as decorative rock, mulch, boulders, or permeable paving.
2. *Non-Recreational Areas.* For non-recreational areas, such as building yards, parking lot islands, street edges, and other spaces not intended for active recreation or programmed open space, lawn and turfgrass areas shall be minimized and shall not exceed 10% of the

total landscaped area. Grass in such areas shall consist only of low- or moderate-water-use species consistent with guidance from Colorado State University (CSU) Extension or Denver Water.

3. *Maintenance and Irrigation.* All required landscaped areas and bufferyards shall be irrigated, maintained, and kept free of weeds, debris, and litter.
4. *Eastern Adams County.* In eastern Adams County, the percentages of living landscaping material shall be reduced to 50% and an automatic irrigation system is not required if the landscape design demonstrates survivability with water-wise plant species and hydrozones. In eastern Adams County, single-family detached dwellings are not required to install landscaping and no landscaping is required for commercial and industrial land uses, which are serviced exclusively by wells, and which are restricted by the Colorado Division of Water Resources to inside use only.

O. **Landscape Phasing**. A Landscape Completion Agreement will be accepted in partial lieu of landscape if the applicant chooses to install landscaping in phases. In the case of phased landscaping, a Certificate of Occupancy may be issued only if collateral is filed with the Director of Community and Economic Development in an amount designated by the Director, along with a schedule of completion, and a Landscape Completion Agreement. The amount of the collateral will reflect 125% of the estimated cost of purchasing and installing the landscaping. All landscape phasing shall be approved at the discretion of the Director.

P. **Utilities**. Landscape and utility plans shall be coordinated. This Subsection sets forth minimum dimension requirements for the most common tree/utility separations. Exceptions to these requirements may be approved by the Director of Community and Economic Development where utilities are not located in their standard designated locations. Tree/utility separations shall not be used as a means of avoiding the planting of required street trees.

1. Forty feet of separation is required between shade trees and streetlights. Fifteen feet is required between ornamental trees and streetlights.
2. Ten feet of separation is required between trees and water or sewer mains.
3. Ten feet of separation is required between trees and above ground electrical equipment such as transformers and cabinets.
4. Six feet of separation is required between trees and water or sewer service lines.
5. Four feet of separation is required between trees and gas lines or underground electric lines.
6. Street trees planted within the utility easement may conflict with utilities. Additional conduit may be required to protect underground electric lines.
7. Additional landscaping may be required in other areas of the site based on specific site conditions.

Q. **Prohibited Practices and Elements**.

1. *Undesirable Design*. The use of undersized landscape materials or landscape in an unnatural spaced design is highly discouraged, unless specifically addressed in this DSR.
2. *Nonfunctional Turfgrass, Nonfunctional Artificial Turf, and Invasive Plant Species*.
   a. No person shall install, plant, or place, or allow any person to install, plant, or place, any nonfunctional turfgrass, nonfunctional artificial turf, or invasive plant species, as part of a new development project or redevelopment project, on any portion of applicable property.

(1) For purposes of this prohibition, "new development project" means a new construction project that requires a building permit, Site Plan review, landscaping permit, infrastructure permit, or grading or inert fill permit.

(2) For purposes of this prohibition, "redevelopment project" means a construction project that:

(A) Requires a building permit, Site Plan review, landscaping permit, infrastructure permit, or grading or inert fill permit; and

(B) Results in a disturbance of more than 50% of the aggregate landscape area of the site.

(3) For purposes of this prohibition, "applicable property" means:

(A) Commercial, institutional, or industrial property as defined in C.R.S. § 37-60-135(2)(b);

(B) Common interest community property as defined in C.R.S. § 38-33.3-103(8); or

(C) A street right-of-way, parking lot, median, or transportation corridor.

b. On and after January 1, 2028, no person shall install, plant, or place, or allow a person to install, plant, or place, any nonfunctional turfgrass, nonfunctional artificial turf, or invasive plant species, as part of a new development project or redevelopment project, on any portion of applicable property.

(1) For purposes of this prohibition, "new development project" and "redevelopment project" have the meaning as set forth in subsection (a) above.

(2) For purposes of this prohibition, "applicable property" means:

(A) Commercial, institutional, or industrial property as defined in C.R.S. § 37-60-135(2)(b);

(B) Common interest community property as defined in C.R.S. § 38-33.3-103(8);

(C) A street right-of-way, parking lot, median, or transportation corridor; or

(D) A multifamily residential housing premises property that includes more than twelve dwelling units.

(3) For purposes of this prohibition, "multifamily residential housing premises property" means common interest property such as entryways, parks, and other "common elements" as defined in C.R.S. § 38-33.3-103(5).

3. *Fruit Trees*. Fruit trees are prohibited in rights-of-way and parking lot landscape islands. Refer to Sec. 4-04-08, *Alternative Compliance*, for additional provisions.

4. *High-Water Use Turfgrass.* The use of high-water turfgrass shall be prohibited in new developments, except where a functional use is defined, such as active recreational areas like parks and athletic fields.

# 4-04-02 Site Landscaping

A. **Generally**. In addition to the bufferyards required in Sec. 4-04-03, and the bufferyard landscaping, the following site landscaping shall also be required in the nonresidential and mixed use zone districts unless otherwise noted.

1. Water-wise vegetative buffers may be used as a substitution for traditional buffer types if the design provides an equivalent or greater level of screening and coverage.

2. Bioswales, dry creek beds, and other low-impact stormwater features are encouraged within bufferyards and may count toward required landscaping when designed with native vegetation.

B. **Minimum Landscape Area**.

1. *All Applicable Zone Districts.* At least 50% of the required landscape area shall be placed so it abuts adjoining public rights-of-way, excluding alleys and drives.
2. *Non-Industrial Zone Districts*. In the non-industrial zone districts, and for non-industrial uses in the industrial zone districts, all areas not designated as foundation plantings, bufferyards, parking lot landscaping, or utilized for pedestrian and vehicular access to the building (for example, sidewalks, parking spaces, loading spaces, service areas, and drive-in or drive-through facilities) shall be landscaped meeting the requirements of this Subsection.
3. *Industrial Zone Districts*. All industrial uses, as listed in Sec. 3-02-06, *Industrial Use Categories*, in the I-1, I-2, and I-3 zone districts shall be required to landscape a minimum of 10% of the lot area.

C. **Other Requirements**. The placement and design of the landscaping shall be at the discretion of the developer but shall be approved as part of the Site Plan review process established in Chapter 13, *Development Review Procedures*. In addition to the plantings required under this Section, both Sec. 4-04-03, *Bufferyards*, and Sec. 4-04-04, *Off-Street Parking Landscaping*, shall apply. The bufferyard landscaping requirements and the required landscaping adjacent to the front of a lot are required even if the required lot coverage is exceeded. The landscape area depth is measured from the property line (generally, the right-of-way line) inward.

D. **Relocation, Alteration, or Removal**. The applicant/owner of land where landscaping is placed with or without County approval is responsible for relocation, alteration, or removal if required by the County at the owner's expense. Any landscaping within the right-of-way will not be used in the assessment of the land as part of right-of-way acquisition.

## 4-04-03 Bufferyards and Screening

A. **Generally**. The bufferyards required in this Section provide physical barriers and transition between properties of differing land uses, between a parking area and a street, and between a building and a street, to reduce the effects of sound, sight, noise, and other incompatibilities. The land use, perimeter parking, and street bufferyards, as depicted in Figure 4-04-03-1, *Bufferyards*, are based on the amount of buffering and screening they provide. They are classified from less buffering (Type A) to more buffering (Type D), depending on the abutting zoning districts, parking lot, or street type.

**Figure 4-04-03-1, Bufferyards**

Use Bufferyard - Between Differing Zoning Districts

Perimeter Parking Bufferyard - Between a Parking Area and a Street or Adjacent Property

Street Bufferyard - Between a Street and the Remainder of the Property

**Figure 4-04-03-1, Bufferyards**

B. **General Standards**.

1. *Groundcover*. Except as otherwise specified, in addition to the required plantings, walls, fences, and berms, all remaining portions of bufferyards shall be covered with groundcover other than turfgrass.
2. *Plant Groupings*. Bufferyard trees may be spaced irregularly in informal groupings or be uniformly spaced, as consistent with larger overall planting patterns and organization.
3. *Encroachment*. No part of any required bufferyard shall be used for structures, storage, parking, loading, locating refuse containers, or any similar activity.
4. *Access Breaks*. Breaks for pedestrian, bicycle, and vehicle access are permitted on the condition that access shall be designed to cross a bufferyard at as near a perpendicular angle as practical. The existence of access ways or driveways within a bufferyard yard shall not reduce the minimum requirements for trees and shrubs.
5. *Low Impact Development*. Low-impact development and other similar stormwater management features are permitted in a required bufferyard. *Relation to Setbacks*. Bufferyards may be provided in the area required for setbacks by the zone district.
6. *Bufferyards Exceeding Setbacks*. Where the required bufferyard exceeds the setback required by the zone district the bufferyard required by this Section shall be provided.
7. *Credit for Existing Buffer*. An existing vegetated area proposed to be preserved shall be credited toward these bufferyard requirements. The plant material to be saved shall be listed in Appendix B, *Plant List*, shall be identified and illustrated to show their size and height, and shall be in a healthy condition.
8. *Bufferyards Adjacent to a Vacant Parcel*. Bufferyards adjacent to vacant parcels of property shall only be required to provide one-half of the required bufferyard in this Section. When

the vacant property develops, it shall be required to provide the remainder of the required bufferyard.

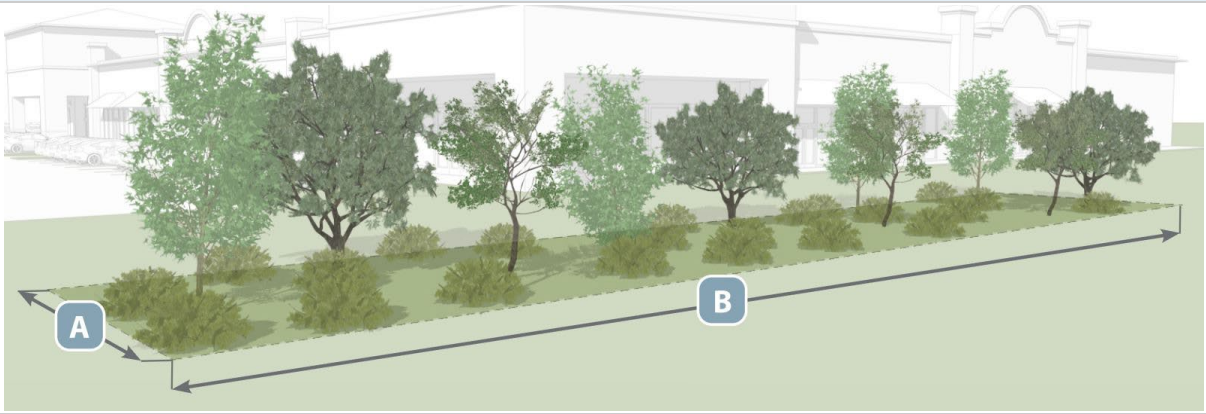
C. **Bufferyard Types.** There are four types of bufferyards, each of which varies in width and the numbers and types of plants required per 100 linear feet. The minimum planting requirements for each type of bufferyard are specified and illustrated in Table 4-04-03-1, *Bufferyard Classifications and Illustrations*.

**Table 4-04-03-1, Bufferyard Classifications and Illustrations**

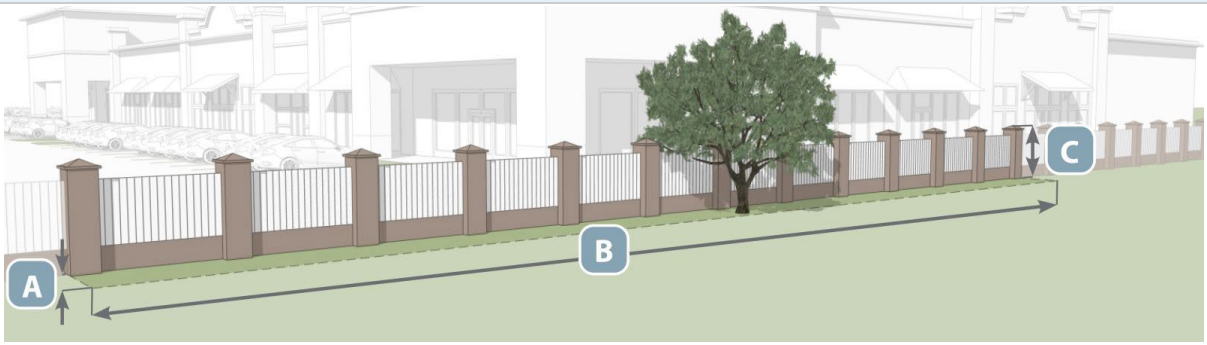
| Type | Width (A) | Required Plantings per 80 Linear Feet (B) | | | | Height of brick or stone wall or opaque fence[1] (C) |
|---|---|---|---|---|---|---|
| | | **Shade Trees** | **Ornamental Trees** | **Evergreen Trees** | **Shrubs and Grasses** | |
| **Option 1: Landscape-Only Bufferyard** | | | | | | |
| Type A | 5' | 1 | 1 | 0 | 4 | N/A |
|  | | | | | | |
| Type B | 10' | 1 | 2 | 0 | 8 | N/A |
|  | | | | | | |
| Type C | 15' | 2 | 2 | 1 | 10 | N/A |
|  | | | | | | |

**Table 4-04-03-1, Bufferyard Classifications and Illustrations**

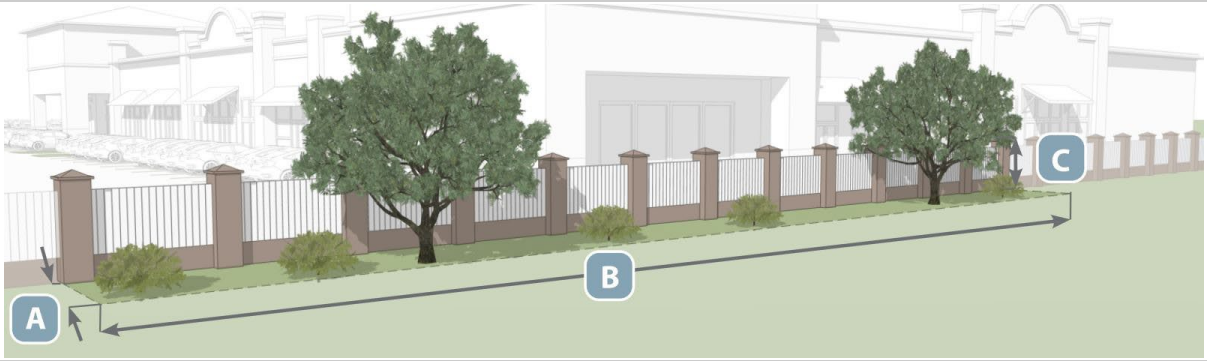
| Type | Width (A) | Required Plantings per 80 Linear Feet (B) | | | | Height of brick or stone wall or opaque fence[1] (C) |
|---|---|---|---|---|---|---|
| | | **Shade Trees** | **Ornamental Trees** | **Evergreen Trees** | **Shrubs and Grasses** | |
| Type D | 20' | 3 | 3 | 4 | 27 | N/A |



| **Option 2: Landscape with Berm or Wall** | | | | | | |
|---|---|---|---|---|---|---|
| Type A | 5' | 1 | 0 | 0 | 0 | 6' |



| | | | | | | |
|---|---|---|---|---|---|---|
| Type B | 8' | 2 | 0 | 0 | 5 | 6' |



| | | | | | | |
|---|---|---|---|---|---|---|
| Type C | 10' | 1 | 1 | 1 | 8 | 6' |

**Table 4-04-03-1, Bufferyard Classifications and Illustrations**

| Type | Width (A) | Required Plantings per 80 Linear Feet (B) | | | | Height of brick or stone wall or opaque fence[1] (C) |
|---|---|---|---|---|---|---|
| | | **Shade Trees** | **Ornamental Trees** | **Evergreen Trees** | **Shrubs and Grasses** | |
|  | | | | | | |
| Type D | 15' | 1 | 2 | 4 | 15 | 6' |
|  | | | | | | |

**TABLE NOTES:**
1. Plant material shall be installed on the side of the wall or fence that faces the abutting property or right-of-way.

D. **Special Bufferyards**. Any new development abutting any portion of the designated Adams County Trail System, a public park, a water ditch, or limited access highway, shall be buffered from the trail, or park, using a Type C Bufferyard, unless increased or decreased by the Director of Community and Economic Development.

E. **Use Bufferyard**.

1. *Table Instructions*. Table 4-04-03-2, *Bufferyard Requirements by Use Category*, shows the use categories established in Div. 3-02. The rows indicate the use category of the property proposed for development, and columns indicate the use category of the adjoining land. The letters indicate which type of bufferyard is required to be planted on the parcel proposed for development as detailed in Table 4-04-03-1, *Bufferyard Classifications and Illustrations*. Where "--" is found, there is no bufferyard required. Refer to Sec. 4-04-08, *Alternative Compliance*, for situations such as infill development, that may allow for a lesser bufferyard than required in the table.

2. *Bufferyard Composition*. Walls or fences that are part of the use district bufferyard shall:

a. Be composed of masonry, stone, or wood only. Prohibited wall or fence materials include, but are not limited to, corrugated steel sheets, and chain-link with or without weave mesh or slats;

b. Not encroach into the public right-of-way;

c. Be maintained by the homeowner or homeowners' association, or property owner or property owners' association, as applicable; and

d. Have plans and details designed and sealed by a licensed professional engineer and be approved by the Building Official if required.

**Table 4-04-03-2, Bufferyard Requirements by Use Category**

| Use Category of Parcel Proposed for Development | Use Category of Abutting Property | | | | |
|---|---|---|---|---|---|
| | **Agricultural** | **Residential** | **Public, Civic, and Institutional** | **Commercial[1] and Recreational** | **Industrial[2] and Other** |
| Agricultural | N/A | N/A | N/A | N/A | N/A |
| Residential | A | A | A | C | D |
| Public, Civic, and Institutional | A | A | A | B | D |
| Commercial and Recreational | C | C | B | A | B |
| Industrial and Other | D | D | D | B | N/A |

**TABLE NOTES:**
[1]In the Medical Marijuana Use Category, the following uses are deemed Commercial for the purposes of this table: Medical Marijuana Center and Retail Marijuana Store.
[2]The following uses are deemed Industrial for the purposes of this table: Medical Marijuana-Infused Products Manufacturer, Optional Premises Cultivation Operation, Retail Marijuana Cultivation Facility, Retail Marijuana Products Manufacturer, and Retail Marijuana Testing Facility.

3. *Use Buffer Standards*.

a. Trees, shrubs, and native grasses planted as part of the buffer requirement cannot be used to meet any other landscaping requirement in this DSR.

b. The bufferyard requirements of this Section apply whether or not the adjacent property is developed.

c. For reasons of conflicting uses, unfavorable topography, or other unique or extraordinary circumstances, the Director may increase or decrease landscape plantings in any required bufferyard in accordance with Sec. 4-04-08, *Alternative Compliance*.

d. In situations where the Director determines that the arrangement of uses or design of buildings does not adequately mitigate conflicts reasonably anticipated to exist between dissimilar uses or building designs, one or more of the following landscape buffering techniques shall be used to mitigate the conflicts.

(1) *Separation and Screening with Plant Material*. Planting groups of evergreen trees, shade trees, ornamental trees, shrubs, or native grasses;

(2) *Integration with Plantings*. Incorporating trees, vines, planters, or other plantings into the architectural theme of buildings and their outdoor spaces to subdue differences in architecture and bulk and avoid harsh edges;

(3) *Establishing Privacy*. Establishing vertical landscape elements to screen views into or between windows and defined outdoor spaces where privacy is important, such as where larger buildings are proposed next to side or rear yards of smaller buildings;

(4) *Visual Integration of Fences or Walls*. Providing plant material in conjunction with a screen panel, arbor, garden wall, privacy fence, or security fence to avoid the visual effect created by unattractive screening or security fences; and

(5) *Landform Shaping*. Using berms or other grade changes to alter views, subdue sound, change the sense of proximity and channel pedestrian movement.

F. **Perimeter Parking Bufferyard**.

1. *Type Required*. The perimeter of parking areas for a multi-family, nonresidential, or mixed use development shall contain a bufferyard based on the size of the parking area as follows:

   a. 1 to 10 parking spaces: no bufferyard required;

   b. 11 to 50 parking spaces: Type A landscape-only bufferyard;

   c. 51 to 100 parking spaces: Type B landscape-only bufferyard;

   d. 101 to 150 parking spaces Type C landscape-only bufferyard; and

   e. 151 or more parking spaces: Type D landscape-only bufferyard.

2. *Shrubs and Hedgerows*. In place of shrub planting requirements in the landscape-only bufferyard type, a perimeter parking bufferyard shall contain an evergreen hedgerow a minimum of three feet in height or native grasses that provide a continuous screen within three years of planting.

G. **Street Bufferyards**.

1. *Location*.

   a. Street bufferyards are required on private property, outside of and along the existing street right-of-way or, for private streets, adjacent to the paved roadway, along the entire length of the property excluding driveway openings.

   b. Street bufferyards are required for multi-family, nonresidential, or mixed use development.

   c. A street bufferyard shall include an area beginning at the property line adjacent to a street right-of-way or adjacent to an easement line for a private street, extending into the private property to establish the required width as listed in this Subsection.

2. *Type Required*. Except for single-family dwelling, two-family dwelling, and multi-unit dwelling development, the property shall contain a bufferyard based on the adjacent street classification as follows:

   a. Local street: Type A bufferyard;

   b. Collector: Type B bufferyard;

   c. Arterial: Type C bufferyard; and

   d. Colorado DOT State Highway and Interstate: Type D bufferyard.

3. *Design*. The design of fences or walls in a street bufferyard shall avoid long stretches to the point of visual monotony and shall be varied by using changes in height, different material combinations, offset angles, or other types of articulation.

4. *Noise Reduction*. Where a residential subdivision borders a railroad right-of-way, a highway, or an arterial, a Type D bufferyard shall be provided for adequate reduction of noise pollution.

# 4-04-04 Off-Street Parking Landscaping

A. **Generally**. The following landscaping requirements can be used together with the Site Landscaping requirements in Sec. 4-04-02 to satisfy the requirements of Sec. 4-04-02.B, *Minimum Landscape Area*, and shall be consistent with the following:

1. *Trees*. There shall be one canopy tree provided for every ten parking stalls.
2. *Internal Landscape Area:* Depending on the number of spaces, the following square feet of landscaped area must be placed within the vehicle use areas. The required landscaped area shall be "stepped" up based on the number of stalls, which will be provided. For example, a parking lot with 52 stalls shall provide 25 square feet per stall.

**Table 4-04-04-1, Landscaped Area per Parking Stalls**

| Number of Parking Stalls | Required Landscaped Area |
|---|---|
| 0-9 | None required |
| 10-25 | 15 sq. ft. per stall |
| 26-50 | 18 sq. ft. per stall |
| 51-99 | 25 sq. ft. per stall |
| 100 or more | 35 sq. ft. per stall |

**TABLE NOTES:**

1. Shade trees required in parking lots shall be selected from a pre-approved list of drought-tolerant, canopy-forming native species.
2. Landscaped islands shall prioritize bioretention functionality through the use of amended soils and water-harvesting design features.
3. Projects that incorporate permeable pavement systems and use 100% water-wise plant materials within all interior parking lot islands may reduce internal landscaping area requirements by 10%.

B. **Distance to Landscaping**. No parking stall shall be more than 120 feet from a required internal landscaped area.

C. **Terminal Islands**. The developer is encouraged to utilize landscaped terminal islands at the end of parking rows and/or divider strips between parking rows to help disperse the required landscaping throughout the entire parking lot.

D. **Curbs**. Landscaped areas within parking lots or along the perimeter of the property must be protected from vehicular traffic through the use of continuous concrete curbs, extruded asphalt or other approved permanent barriers.

E. **Clear Vision Area.** Clear vision areas within the off-road parking area must be established road intersections by maintaining a maximum height for shrubs and ground cover of thirty (30) inches. Within a clear vision area, tree branches must be trimmed up eight (8) feet from the ground.

F. **Minimum Landscape Islands**. The minimum width or length of any landscaped area shall be eight feet. All of the required landscaped areas must contain a minimum of 75% living landscaping material, with a maximum of 25% nonliving landscaping material. In eastern Adams County, the percentages of living landscaping material may be reduced to 50%. Sidewalks

abutting public rights-of-way are not counted toward the nonliving landscape material percentage.

G. **Splitting Parking Lots**. Parking lots containing between 200-750 parking stalls are required to be divided into two or more lots, separated by a landscaped strip that may be counted toward the required off-road parking landscaping area. Parking lots with more than 750 stalls are required to be divided into at least two parking lots with a landscaped strip separating them. The minimum width of these landscaping strips shall be 10 feet.

H. **Sidewalks Counted**. A landscaped divider strip within a parking lot that separates either parking rows or parking lots shall be allowed to count a sidewalk located within this divider strip toward a part of the required off-street parking lot landscaping. The intent of this sidewalk is to help facilitate safe pedestrian movement. This sidewalk must meet the following criteria if it is to be counted toward the required landscaping:

1. The sidewalk has a five-foot wide walking path and shall add two feet for vehicle overhang if the sidewalk abuts a parking stall.
2. The sidewalk runs the entire length of the divider strip.
3. The sidewalk is bordered on at least one side by landscaping, of which the sidewalk cannot account for more than 50% of the area of the divider strip.

I. **Other Vehicle Areas**. Areas used for vehicle service, parking, and business transactions such as areas adjacent to gasoline pumps (even if under a canopy) and areas for drive up service, shall be considered parking areas and shall comply with the parking lot landscaping requirements. Drive areas shall be calculated at a rate of one parking space per 200 square feet of vehicle service area.

J. **Vehicle Sales Lots**. Vehicle sales lots shall provide trees at the rate of one tree per 100 lineal feet, and shrubs at the rate of one shrub per ten lineal feet of display area fronting a public right-of-way. Plants may be grouped together, provided at least 250 square feet of contiguous growing area, not encroached upon by shrubs or impervious surfaces, surrounds each planted tree.

## 4-04-05 Weeds and Dangerous Trees

A. **Generally**.

1. *Noxious Weed Laws*. All landscape areas shall be maintained in a healthy, weed-free condition consistent with the requirements of the Colorado Noxious Weed Act and the Adams County noxious weed management guidance.
2. *Controlling Spread*. Property owners and landscape managers are responsible for controlling the spread of all state-listed and county-listed noxious weeds. Common species include Canada thistle (Cirsium arvense), cheatgrass (Bromus tectorum), and field bindweed (Convolvulus arvensis).
3. *Prevention*. Preventative strategies such as the use of certified weed-free mulch, hand-pulling, targeted herbicide application, and maintenance of dense, healthy vegetation shall be prioritized over reactive treatments.
4. *Weed Suppression*. Landscape designs should avoid large expanses of bare or disturbed soil and instead incorporate native and drought-tolerant plant species that suppress weed establishment through competitive ground coverage.

B. **Weeds and Offending Vegetation**.

1. *Duty to Control Weeds*. It is the duty of every owner or occupant to abate weeds and offending vegetation on all premises. The use of invasive or noxious species is prohibited.
2. *Maximum Height of Weeds*. Weeds and offending vegetation greater than 12 inches in height, on all premises, shall be cut to and maintained at a height of six inches or less according to the following:
    a. In Residential (except RE), Commercial, and Industrial Zone Districts, within the entire lot or parcel.
    b. In the A-1 and RE Zone Districts, within the established front building setback and within the required side and rear setback for principal dwellings. If no structure exists on the property, then the minimum required principal dwelling setbacks. In the A-2 and A-3 Zone Districts, within the required or established principal dwelling setbacks. In all Agricultural and the RE Zone Districts a minimum of a twenty-foot perimeter around the existing principal dwelling and all accessory structures.
    c. In CO, PL, AV, and DIA Zone Districts, there are no requirements.
    d. Notwithstanding the requirements above, any weeds classified as noxious by the State of Colorado or Adams County must be completely abated in accordance with the requirements of the State of Colorado or Adams County, as applicable.

C. **Dangerous Trees**.
1. *Duty to Control Dangerous Trees.* Any owner or occupant of a lot shall cause to be cut or removed any dangerous trees located on the lot that may be considered troublesome, a hindrance to the general public, or which in any way endangers the security and usefulness of any public road, highway, aviation facility, alley, utility, sidewalk, or bicycle trail.
2. *Tree Branch Clear Height*.
    a. *Roads, Alleys, and Highways*. All trees located on a lot shall be trimmed to a clear height of 12 feet above the surface of public roads, alleys, or highways when the branch extends into the established right-of-way or existing roadway.
    b. *Public Sidewalks and Bicycle Trails.* All trees shall be trimmed to a clear height of eight feet above public sidewalks or bicycle trails when the branch extends into or over the sidewalk or trail. All tree limbs shall be trimmed so as not to interfere with the sight distance triangle.
    c. *Duty to Control Interfering Roots*. Dangerous trees upon a lot whose roots are causing interference with public sidewalks or utilities shall be controlled or removed.

# 4-04-06 Landscaping Standards for Specific Uses

A. **Generally**.
1. *Conflicts*. The following standards shall apply to certain specific uses. If there is a conflict between these standards and other similar standards in this Division, these standards shall control.
2. *Evergreens*. For the purposes of this Section, evergreens shall be considered equivalent to ornamental trees.

B. **Residential Uses.**
1. *Dwelling, Single-family Detached; Dwelling, Two-family; Dwelling, Multiplex.* Front and side yard landscaping of all single-family detached, two-family, and multiplex lots shall meet the following requirements:

a. Turfgrass.
    1. Turfgrass shall be limited to no more than 30% of total front yard landscaped area.
    2. Use only low-water-use turf species shall be required in permitted turf areas.

b. Water-Wise Plants.
    1. The applicant shall prioritize planting from the County's Plant List, Appendix B.
    2. Model homes shall include at least one fully water-wise example yard for public education and demonstration.

c. Front and Side Setbacks. The entire front and side setbacks shall be landscaped, except for driveways.

d. Back Yard Setback. A minimum 30% of the back yard shall be landscaped.

e. Required Ground Cover. A minimum of 30% of the required front and side landscape area must be covered by living ground material, such as low growing ground cover, shrubs, or grass, within one year following occupancy and thereafter.

f. Required Trees and Shrubs. A minimum of one large canopy tree and five shrubs, or two ornamental trees and five shrubs, shall be required for each lot.

2. *Dwelling, Townhouse.*

a. Minimum Area. Not less than 30% of the site area shall be landscaped.

b. Required Ground Cover. A minimum of one-third of the required landscape area must be covered by living ground material within one year following occupancy and thereafter.

c. Required Trees and Shrubs. A minimum of one canopy tree and two shrubs, or two ornamental or evergreen trees and two shrubs, shall be required for each increment of 1,500 square feet in western Adams County and 3,000 square feet in eastern Adams County.

d. Parking Lot Landscaping. All parking lots which consist of 30 spaces or more must be designed to include landscaped islands between rows. This landscaping shall be credited toward the total landscaped area required.

e. Required Tree Mix. The selection of trees shall be a mix of large canopy (minimum of 30% - maximum of 70%) and ornamental or evergreen (30% - 70%) trees.

3. *Dwelling, Multi-family.*

a. Minimum Landscaped Area. Not less than 30% of the site area shall be landscaped.

b. Required Ground Material. A minimum of one-third of the required landscape area must be covered by living ground material within one year following occupancy and thereafter.

c. Required Trees and Shrubs. A minimum of one large canopy tree and two shrubs, or two ornamental trees and two shrubs, shall be required for each increment of 1,500 square feet in western Adams County and 3,000 square feet in eastern Adams County.

d. Parking Lot Landscaping. All parking lots which consist of 30 spaces or more must be designed to include landscaped islands between rows. This landscaping shall be credited toward the total landscaped area required.

e. Required Tree Mix. The selection of trees shall be a mix of large deciduous (minimum of 10% - maximum of 50%) and ornamental (10% - 50%).

4. *Dwelling, Manufactured Home Park*.

a. A Type D bufferyard, as established in Sec. 4-04-03, *Bufferyards*, shall be required around the perimeter of the park. All amenity spaces and other unimproved areas must be suitably landscaped.

C. **Nonresidential Uses**.

1. *Campgrounds, Commercial*. In addition to all other required landscaping, interior landscaping of the campground shall require at least one tree and two shrubs per campsite. Each tree shall be at least two-inch caliper in size when planted. Shrubs shall be a minimum of five-gallon size when planted.

## 4-04-07 Subdivision Landscaping

A. **General Provisions**.

1. *Native Seeds*. A developer shall use certified native and regionally adapted seed mixes in all required detention ponds, amenity space areas, and right-of-way plantings.

2. *Water-wise Species*. A minimum of 80% of vegetated cover in amenity space areas shall be composed of species classified as “low water use hydrozone” according to Appendix B.

B. **Right-of-Way Landscaping**. Right-of-way landscaping shall be installed along all arterial and collector roads within or abutting a subdivision prior to the issuance of a Building Permit for any residential, commercial, mixed use, or industrial structures. Unless the local road right-of-way landscaping is installed by the subdivider, the adjacent property owner is responsible for installation of the right-of-way area landscaping adjacent to their property along a local road prior to final inspection and occupancy of any residential, commercial or industrial structures. An Improvements Agreement and appropriate collateral shall be required for all landscaping improvements to be installed by the subdivider. The use of high-water turfgrass is prohibited in right-of-way areas.

C. **Fencing and Screening**.

1. *Design*. All fences or walls along the perimeter of a new subdivision adjacent to a public right-of-way or private street shall be uniform in design for each type of fencing provided. Landscaping and berms are the preferred method of providing a buffer, but well-designed perimeter fencing and walls may be approved in certain circumstances. Any perimeter fencing shall be approved by the Director of Community and Economic Development and be maintained by the homeowners association.

2. *Installation*. When used, perimeter fencing shall be installed by the developer and constructed to include masonry, painted concrete or stucco columns (two feet minimum width) spaced a maximum of 65 feet apart. Such fencing or walls shall be a maximum of six feet in height and shall not encroach into the public right-of-way. In some cases, such as adjacent parks or in special rural circumstances, the fence may be modified to include low profile split rail fencing. All horizontal supporting structures of wood shall be constructed toward the interior of the subdivision to reduce visibility of the support structures from roads and other public areas. Any required fencing shall be included with the Improvements Agreement for the subdivision.

3. *Street Buffer Reference*. Refer to Div. 4-04, *Landscaping and Buffering*, for street buffering provisions.

D. **Detention Pond Landscaping**.

1. Detention pond landscaping shall be installed prior to the issuance of a Building Permit for any residential, commercial, mixed use, or industrial structures. An Improvements Agreement and appropriate collateral shall be required for all detention pond landscaping improvements.

E. **Amenity Space Landscaping**. Amenity space landscaping shall be installed prior to the issuance of a Building Permit for any residential, commercial, mixed use, or industrial structures. An Improvements Agreement and appropriate collateral shall be required for all open space landscaping improvements.

F. **Maintenance.** All subdivision landscaping and fencing/screening required by this Section shall be maintained by an HOA, metropolitan district, or another entity approved by the County. The applicable maintenance entity shall be identified in the Improvements Agreement and recorded documents.

## 4-04-08 Alternative Compliance

A. **Generally**. The development review body denoted in Table 13-01-12-1, *Development Review Summary Table*, as taking final action on an application may review and approve an alternative compliance Landscape Plan that may be substituted in whole or in part for a Landscape Plan meeting the standards of this Division. Alternative Compliance related to any approved application shall be noted on the application approval with the development review body's signature and/or with the development review body's written findings on the application.

B. **Applicability.** Alternative compliance with these landscape standards may be considered when one or more of the following conditions are met:

1. *Features*. The subject property contains unique natural features such as soil characteristics, topography, geological characteristics, water features, and significant existing vegetation;
2. *Shape and Size*. The subject property is peculiarly shaped, through no action of the owner;
3. *Space Limitations*. The subject property has space limitations as a result of the locations of existing structures, paved areas, surrounding existing development, and other built features;
4. *Preservation of existing mature vegetation*. The subject property contains existing mature vegetation that could be preserved through an alternative landscaping design; or
5. *Safety.* Safety conditions, such as sight distance triangle, make strict compliance infeasible.

C. **Financial Hardship**. Financial hardship is not justification for alternative compliance.

D. **Landscaping Priorities**. The following priorities shall be evaluated in the review of an alternative landscaping plan:

1. *Use Buffers*. Adjacent residential uses shall be buffered;
2. *Street Buffers*. An attractive appearance of the project shall be provided along adjacent roads by street buffers;
3. *Parking Areas and Buildings*. The parking areas and building elevations that form major public views of the project shall be visually softened and enhanced.
4. *Water-Wise Designs.* Alternative landscape designs shall prioritize water-wise plant species and a reduction in watering requirements.
5. *Existing mature vegetation.* Existing mature vegetation shall be preserved to the maximum extent possible.

# 4-04-09 Maintenance and Installation

A. **Maintenance Standards**. All landscaping and required buffering shall be continually maintained including irrigation if applicable, weeding, pruning, and replacing in a substantially similar manner as originally approved. The following survival standards shall apply to all landscaping and required buffering:

1. All projects must include a Landscape Establishment Plan identifying:
   a. Temporary irrigation method and duration;
   b. Plant survival inspection schedule;
   c. Soil preparation and amendment documentation.
2. Water-wise landscapes must be maintained free of invasive species and must meet the following survival benchmarks:
   a. 50% plant survival by end of the first year
   b. 90% plant survival by end of second year.
3. Water audits may be required within one year of Certificate of Occupancy for commercial and multifamily projects exceeding 10,000 square feet of landscape area.
   a. *Living Ground Covers*. Living ground covers must be 50% established after the first growing season, and 90% established after the second growing season.
   b. *Non-Living Ground Covers*. Non-living ground covers, such as rock or mulch must be 100% intact after one year and 80% intact after two years.
   c. *Trees and Shrubs*. Trees and shrubs must have a 100% survival rate after one year and a 90% survival rate after two years.

B. **Landscaping Installation and Certificate of Occupancy**. All required landscaping and buffering shall be installed prior to issuance of a Certificate of Occupancy. If weather conditions necessitate a delay in installation of landscaping, a Certificate of Occupancy may be issued only if the applicant files collateral with the Director of Community and Economic Development in an amount designated by the Director, along with a schedule of completion, and a Landscape Completion Agreement. The amount of the collateral shall reflect 125% of the estimated cost of purchasing and installing the landscaping. If the landscaping has not been completed within one planting season, the County may proceed against the bond to complete the landscaping.

C. **General Landscape Materials, Maintenance, and Replacement Standards**.

1. *Topsoil*. To the maximum extent feasible, topsoil that is removed during construction activity shall be conserved for later use on areas requiring re-vegetation and landscaping.
2. *Soil Amendments*. The soil in areas that have been compacted or disturbed during construction or other activities shall be thoroughly loosened. Organic soil amendments shall also be thoroughly incorporated into the soil at a rate of a minimum of five cubic yards per one thousand square feet of landscape area and be tilled to a depth of at least six inches.
   a. Soil amendments shall be required in water-wise landscaping areas that are cleared and set to hold plant material; and
   b. The use of glyphosates and neonicotinoids is prohibited.
3. *Plant Size*.
   a. *Caliper.* The caliper of all trees shall be measured at a point one foot above grade level.

b. *Outside of Right-of-Way*. The caliper of deciduous trees shall be measured six inches above the base. Plant material sizes shall meet the following requirements of Table 4-04-09-1, *Minimum Plant Size Requirements*.

c. *Right-of-Way and Detention Area Plant Sizes*. The minimum sizes required in the right-of-way and detention areas are 2½" caliper for canopy or ornamental trees. Twenty percent of the trees shall be 3" caliper canopy or ornamental trees and 8' in height evergreens or taller.

**Table 4-04-09-1, Minimum Plant Size Requirements**

| Plant Type | Minimum Size |
|---|---|
| Canopy Tree | 2-inch caliper |
| Evergreen | 6-foot height |
| Ornamental Tree | 1.5-inch caliper |
| Shrubs | 5-gallon |
| Ornamental Grasses | 1 gallon |

4. *Grading*. Prior to the installation of the required landscaping and irrigation, all proposed landscape areas shall be graded to allow for proper site drainage.

5. *Replacement*. Any landscape element that dies or is otherwise removed shall be promptly replaced based on the requirements of this DSR.

D. **Irrigation Required**.

1. *Irrigation*.

a. All landscape areas shall include adequate, permanent, automatic irrigation of all plant material, except certified water-wise landscaping that meets the requirements of Sec. 4-04-01.H, *Water-Wise Landscaping*, and that does not require permanent irrigation for survival once established. In such case, the landscape plan must provide for temporary irrigation to ensure the proper establishment of the water-wise elements.

b. If the landscape plan contains a minimum of 51% water-wise materials, the following shall apply:

(1) Automatic irrigation zones shall be retrofitted to water the remaining grass adequately and irrigate the new landscape efficiently;

(2) Drip irrigation is preferred. If overhead sprays are used, high-efficiency nozzles shall be required. Hand water and semi-automatic irrigation is permissible; and

(3) Trees shall have dedicated irrigation.

2. *Over-Watering*. Automatic irrigation systems shall be designed so as not to over-water based upon the needs of the landscape being irrigated.

E. **Water-Wise Landscaping and Hydrozones**. In order to reduce the impact of drought on landscapes, and provide efficiency in the use of water, landscape plans shall incorporate low, moderate, and high hydrozones. Appendix B, *Plant List*, assigns a hydrozone to each plant species. Plant groupings and irrigation methods shall reflect the water requirements of each hydrozone. These are as follows:

1. *Generally*. Landscaping shall be designed based upon zones of different water requirements – referred to as "hydrozoning." The applicant shall identify low, moderate,

and high hydrozones on Landscape and Irrigation Plans. Plant choice and irrigation design must reflect the hydrozone requirements of this Subsection.

2. *Low Hydrozones*. Low hydrozones are classified by plantings that generally do not require more than three gallons per square foot of supplemental water per year, and plants in this zone generally need lower levels of water to thrive. Although plants in this zone may grow with minimal use of supplemental water, in times of plant establishment or drought, these low water use plants benefit from controlled, supplemental watering. Irrigation methods in this zone will typically be micro-spray or drip.
3. *Moderate Hydrozones*. Moderate hydrozones are classified by plantings that generally require 10 gallons per square foot of supplemental water per year, and plants in this zone generally need this level of water to thrive. Irrigation methods in this zone will typically be spray heads.
4. *High Hydrozones*. High hydrozones are classified by plantings that will generally require 18 gallons per square foot of supplemental water per year. Plants in this zone generally need this high level of water to thrive. Irrigation methods in this zone will typically be spray or rotor heads.

# Div. 4-05 Signs

## 4-05-01 General Provisions

A. **Generally**.

1. *Applicability*. This Division shall apply to all signs in the County unless explicitly exempted.
2. *Compliance Required*. It is a violation of this Division for any person to erect, install, convert, relocate, enlarge, or structurally modify any sign that violates this DSR or state and federal law including the Colorado Outdoor Advertising Act, C.R.S. § 43-1-401 *et seq*., and the Colorado Rules and Regulations promulgated under C.R.S. § 43-1-401 by the Colorado Department of Transportation.
3. *Prohibition*. Any sign not specifically authorized by this Division is prohibited unless required by law.

B. **Content Neutral**. This Division is intended to regulate the physical characteristics of signs in a content-neutral manner. Any sign authorized to display a commercial message may display a noncommercial message in its place without obtaining additional approval. Nothing in this Section shall be construed to limit the County's regulation of on-premises and off-premises signs or other location-based sign classifications as provided in this Division.

C. **Permit Required**.

1. *Building Permit for Sign*. Except as provided in Sec. 4-05-02, *Signs Exempt from Regulation*, no sign shall be erected, installed, converted, relocated, enlarged, or structurally modified without a Building Permit issued in accordance with Sec. 13-02-02, *Building Permit,* except as provided in Sec. 4-05-02, *Signs Exempt from Regulation.* Murals as a sign require a Building Permit but solely for the purpose of reviewing compliance with this DSR and not for Building Code compliance.
2. *Conditional Use Permit for Off-Premise Advertising Devices.* Conditional Use Permits are required for off-premise advertising in those zone districts that allow off-premise

advertising. See Div. 2-06, *Principal Use Tables*, to determine where off-premise advertising is allowed.

D. **Actions Not Requiring a Permit**. The following actions do not require a Building Permit for a sign:

1. Routine maintenance, not involving structural changes to the sign;
2. Changes of message, either manually or electronically, on an electronic message sign or changeable copy sign, subject to limitations of Sec. 4-05-08, *Illumination and Changeable Copy*, on the frequency of message changes; or
3. Changes of sign panels or letters that do not involve structural changes to the sign.

E. **Signs for Conditional and Special Uses**. The regulations of this Division apply to uses that are permitted by right or that are subject to a Conditional or Special Use Permit in Div. 2-05, *Principal Use Table*; however, the Board of County Commissioners or Board of Adjustment, as appropriate, may approve more restrictive sign requirements in granting a Conditional or Special Use Permit when either body deems it necessary for the protection of adjacent properties and the public interest.

F. **Sign Locations and Dimensions.** All sign locations and dimensions shall meet the sight distance triangle.

## 4-05-02 Signs Exempt from Regulation

A. **Generally**.

1. *No Building Permit Required*. The provisions of this Division do not apply to sign types listed in this Section, which therefore do not require a Building Permit.
2. *Temporary Signs*. Temporary signs do not require a Building Permit, but shall adhere to the standards in Sec. 4-05-06, *Temporary Signs*.

B. **Exempt Signs.**

1. *Art*. Works of art including murals not used in connection with a commercial promotion or as an advertising device. Murals that are used in connection with a commercial promotion or as an advertising device are not exempt.
2. *Merchandise*. Merchandise or models of products or services, which are incorporated as an integral part of an indoor window display. Merchandise includes photographic window displays of real estate available for sale, lease, or rental from a licensed real estate broker.
3. *Signs on Vehicles*. Signs displayed on operable motor vehicles or trailers with current registration and tags which are being operated or stored in the normal course of business; provided, the primary purpose of such vehicles is not for the display of signs, and provided such vehicles are parked or stored in areas appropriate to their use as vehicles.
4. *Cornerstones*. Cornerstones, tablets, and the like with a message carved into stone, concrete, bronze, or other permanent material and that are made an integral part of a building or structure.
5. *Menu Display Boxes*. One menu display box of up to two square feet is allowed for each restaurant, bar, and lounge for the purpose of displaying menus. A permit shall be obtained for menu display boxes larger than two square feet, and the excess two square feet shall be counted against the total allowable sign area. For menu boards located in drive-through facilities, refer to Sec. 4-05-08(A)(4), *Menu Boards*.

6. *Small Signs*. Signs not legible beyond the boundaries of the lot or parcel upon which they are located, or from any public right-of-way.
7. *Interior Signs*. Signs displayed within the interior of a building, which are not legible from the exterior of the building.
8. *Address Numbers*. Address numbers, provided they do not exceed five square feet in area.
9. *Single-Family Detached and Two-Family Residential Signs*. Non-illuminated wall-mounted signs for single-family detached and two-family uses that do not exceed three square feet in area and non-illuminated freestanding signs no more than five feet in height and three square feet in area.
10. *Pennants*. Strings of flags, pennants, and streamers shall only be permitted in the HC Zone District on properties that have frontage on a road in the state highway system, excluding the interstate system.
11. *Official Notices and Warning Signs*. Official notices erected by the government, public utility companies, or construction companies to warn of danger or hazardous conditions, including signs indicating the presence of underground cables, gas lines, or similar devices. These signs shall not be legible from the property line unless required to be larger by Federal, State, or local laws. This includes signs in the right-of-way that comply with the current Manual on Uniform Traffic Control Devices (MUTCD) published by the Federal Highway Administration to control traffic, identify roads, warn of danger, or are otherwise required by Federal, State, or local laws.

# 4-05-03 Sign Measurement

A. **Sign Area Measurement.**

1. *Generally*. The area of a sign face (which is also the sign area of a wall sign or other sign with only one face) shall be computed by means of the smallest square, circle, rectangle, triangle, or combination of shapes that will encompass the extreme limits of the writing, representation, emblem, or other display, together with any material or color forming an integral part of the background of the display or used to differentiate the sign from the back drop or structure against which it is placed, but not including any supporting framework, bracing, or other decorative fence or wall when such fence or wall otherwise conforms to these regulations and is clearly incidental to the display itself. For canopy signs, if the canopy is backlit, the entire canopy area shall be used to determine sign area.
2. *Cabinet Signs*. Sign copy mounted, affixed, or painted on a background panel or area distinctively painted, textured, or constructed as a background for the sign copy, is measured by the area contained within the sum of the smallest rectangle(s) which will enclose both the sign copy and the background, as depicted in Figure 4-05-02-1, *Cabinet Sign Area Measurement*.

**Figure 4-05-02-1, Cabinet Sign Area Measurement**

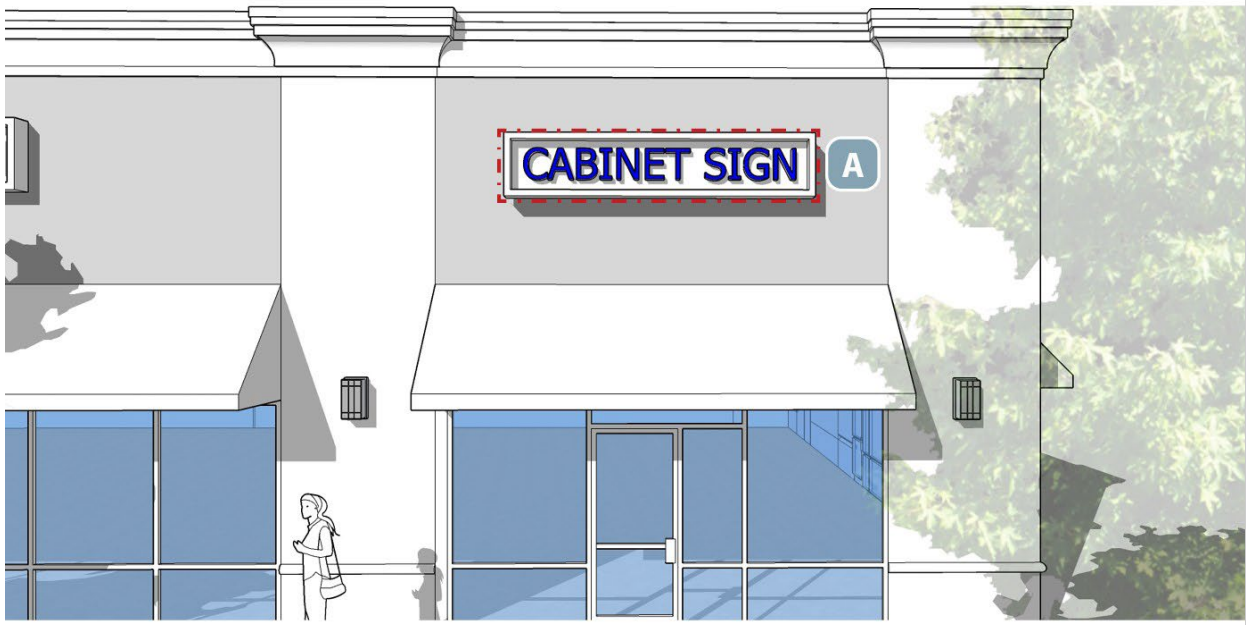


**FIGURE NOTES:**
A = Portion of sign that counts toward sign area

3. *Channel Letter Signs*. Sign copy mounted as individual letters or graphics against a wall, fascia, mansard, or parapet of a building or surface of another structure, that has not been painted, textured, or otherwise altered to provide a distinctive background for a sign copy, is measured as a sum of the smallest rectangle(s) which will enclose each word and each graphic in the total sign, as depicted in Figure 4-05-02-2, *Channel Letter Sign Area Measurement*.

**Figure 4-05-02-2, Channel Letter Sign Area Measurement**

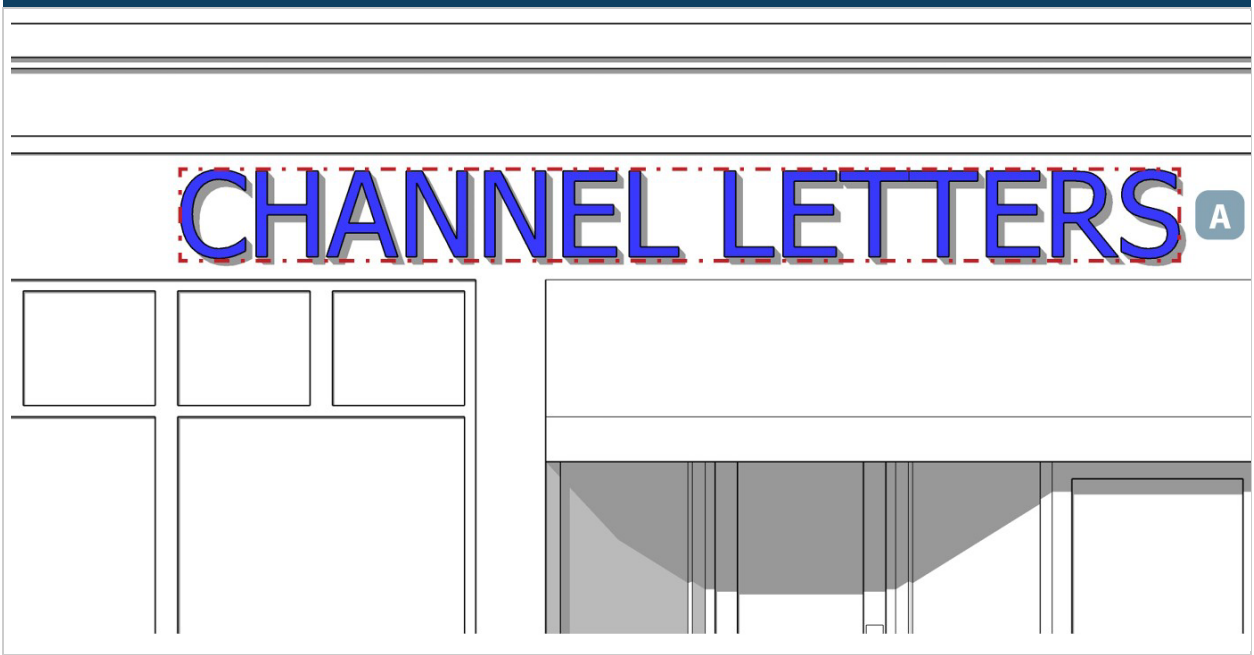

**FIGURE NOTES:**
A = Portion of sign that counts toward sign area

4. *Illuminated Signs*. Sign copy mounted, affixed, or painted on an illuminated surface or illuminated element of a building or structure, is measured as the entire illuminated surface, or illuminated element, which contains sign copy. Such elements may include, but are not limited to lit canopy fascia signs, spanner board signs, and/or interior lit awnings, as depicted in Figure 4-05-02-4, *Illuminated Sign Area Measurement*.

**Figure 4-05-02-4, Illuminated Sign Area Measurement**

**FIGURE NOTES:**
A = Portion of sign that counts toward sign area

5. *Multi-Faced Signs*.
   a. *Billboards*. Where a billboard has two faces that are designed to be back-to-back, the faces shall not be more than three and one-half feet from one another. Where an off-premise sign has two faces arranged in a V-shape, the faces shall be: a maximum of 45 degrees at the interior angle, or a maximum of 15 feet apart at its widest point, whichever is less.
   b. *All Other Signs*. Multi-faced signs are measured as a total of all sign faces. However, when two sign faces are placed back-to-back so that both faces cannot be viewed from any one point at the same time, and when such sign faces are part of the same sign structure and are not more than twenty-four inches apart, the sign area shall be computed by the measurement of one of the faces. If the sign area of the faces is not equal, computation will be based on the larger of the two sign faces, as depicted in Figure 4-05-02-5, *Multi-Faced Sign Area Measurement*.

**Figure 4-05-02-5, Multi-Faced Sign Area Measurement**

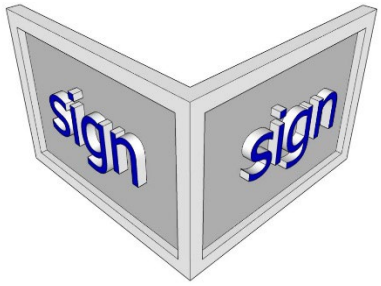

**FIGURE NOTES:** Both sign faces visible from one point at the same time counts as one sign face

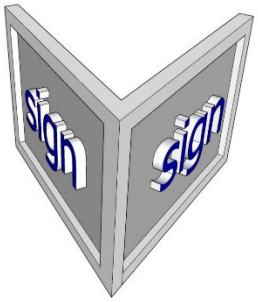

**FIGURE NOTES:** Both sign faces not visible from one point at the same time count as two sign faces

6. *Sculptural Signs*. Spherical, free-form, sculptural, or other non-planar sign areas are 75% of the sum of the areas using only the four vertical sides of the smallest four-sided polyhedron which will encompass the sign structure, as depicted in Figure 4-05-02-5, *Multi-Faced Sign Area Measurement*. Signs with greater than four faces are prohibited.

**Figure 4-05-02-5, Multi-Faced Sign Area Measurement**

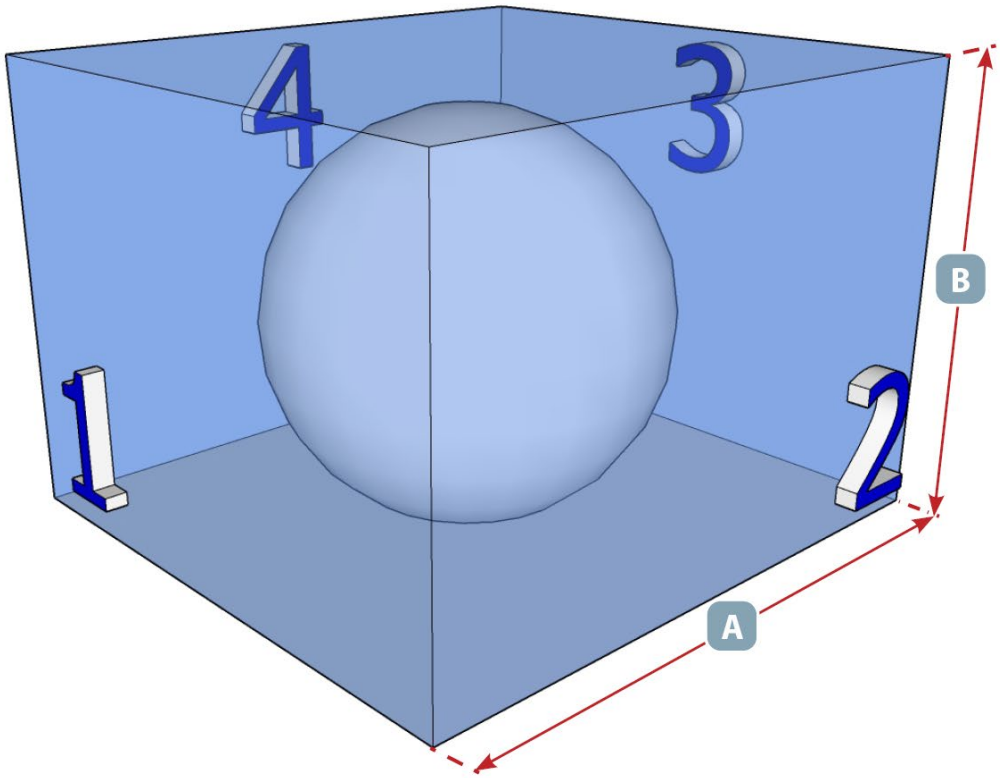

**FIGURE NOTES:**
A x B = Area of one side.

B. **Sign Height Measurement**.

1. *Generally*.

a. The height of a sign shall be computed as the distance from the base of the sign at normal grade to the top of the highest attached component of the sign. Normal grade shall be construed to be the lower of:

(1) Existing grade prior to construction; or

(2) The newly established grade after construction, exclusive of any filling, berming, mounding, or excavating solely for the purpose of locating the sign.

b. In cases in which the normal grade cannot reasonably be determined, sign height shall be computed based on the elevation of the base of the sign being equal to the elevation of the nearest point of the crown of the adjacent public road or the grade of the land at the principal entrance to the principal structure on the lot, whichever is higher.

2. *Freestanding Signs*. Sign height is the distance measured from grade at the base of a sign to the topmost portion of a sign, excluding decorative embellishments. The height of any monument sign base or other structure erected to support or adorn the sign is measured as part of the sign height, as depicted in Figure 4-05-02-6, *Freestanding Sign Height Measurement*.

**Figure 4-05-02-6, Freestanding Sign Height Measurement**

**FIGURE NOTES:**
A = Height of the freestanding sign

3. *Building-Mounted Signs*. The height of wall, fascia, mansard, parapet, or other building-mounted signs is the vertical distance measured from the base of the wall on which the sign is located to the top of the sign or sign structure, as depicted in Figure 4-05-02-7, *Building Mounted Sign Height Measurement*.

**Figure 4-05-02-7, Building-Mounted Sign Height Measurement**

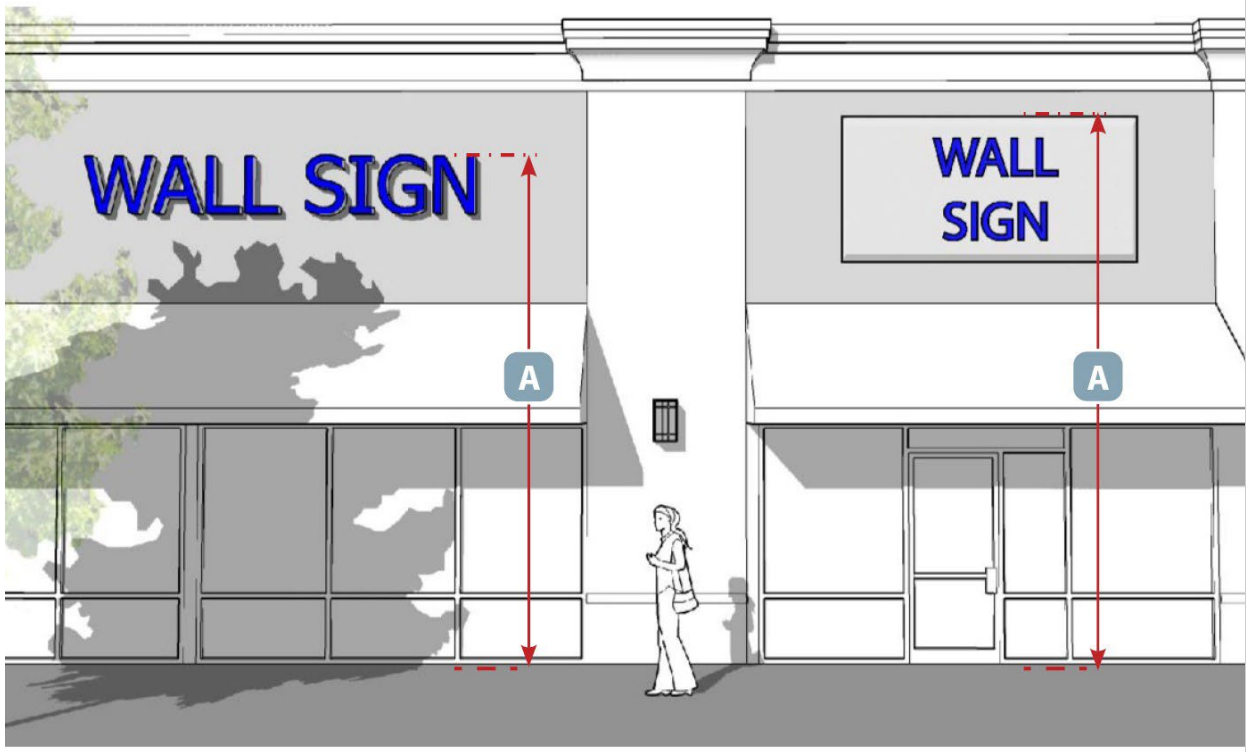

**FIGURE NOTES:**
A = Height of the wall sign

C. **Sign Setback**. The setback of a sign shall be measured as the shortest distance from each property line to the leading edge of the sign, as depicted in Figure 4-05-02-8, *Sign Setback*.

**Figure 4-05-02-8, Sign Setback**

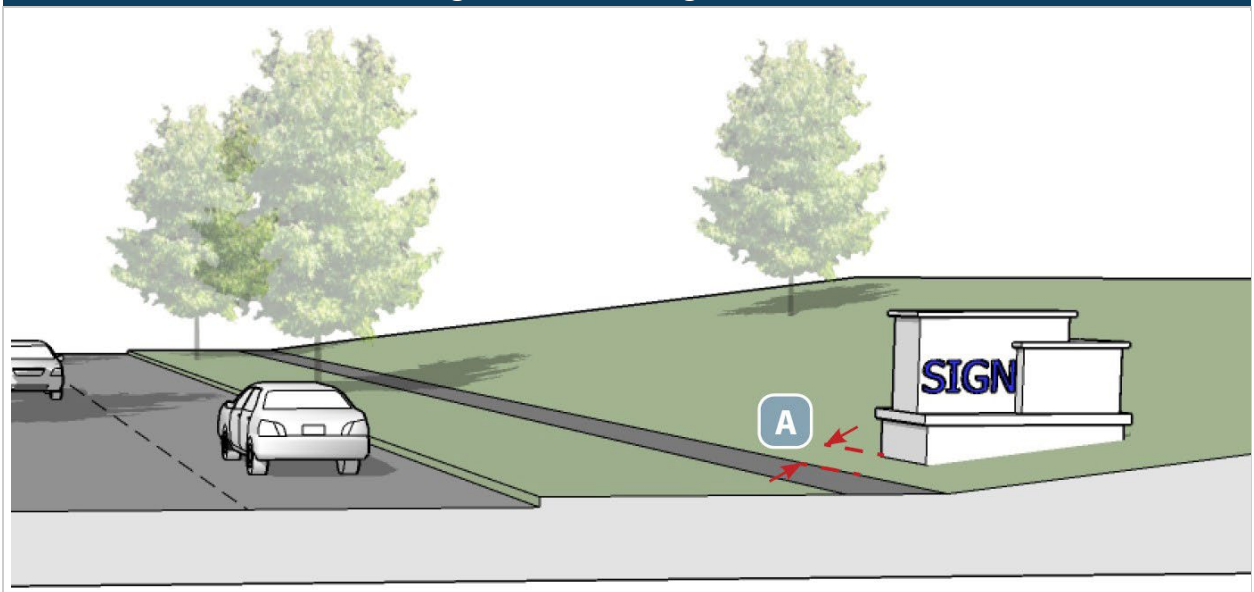

**FIGURE NOTES:**
A = Setback

# 4-05-03 [Reserved]

# 4-05-04 Prohibited Sign Types, Materials, Design Elements, and Locations

A. **Prohibited Sign Types**.

1. Any banner, temporary, or portable sign not addressed in Sec. 4-05-06, *Temporary Signs*, including, but not limited to:
   a. Animated signs, or costumed characters, or stuffed animals;
   b. Vehicles used as a sign or sign structure except as allowed in Sec. 4-05-03, *Signs Exempt from Regulation*; or
   c. Strings of lights arranged in the shape of a product, an arrow, or any message with the exception of holiday decorations.
2. Any roof sign.
3. Any sign unlawfully erected or maintained.
4. Any sign considered graffiti.

B. **Prohibited Design Elements**.

1. Any sign or attractive lighting device with exposed incandescent (except for portable signs), metal halide, fluorescent light bulbs, or other exposed light source.
2. Any sign that emits audible sound, odor, smoke, steam, laser or hologram lights, or other visible matter, including any sign that employs any stereopticon, or motion picture projection.

3. Any sign that includes animated images or graphics, scrolling messages, or video moving images similar to television, movie, or streaming images.
4. Any sign that includes search lights or beacons.
5. Auditory commercial messages or music.
6. Any sign that interferes with, obstructs the view of, or may be confused with any authorized traffic sign, signal, or device because of its position, shape, or color.
7. Any sign that constitutes a hazard to safety or health by reason of inadequate design, construction, repair, or maintenance.
8. Any sign that uses the words "stop," "look," "go slow," "caution," "danger," "warning," or any other word, phrase, symbol, or character in a manner that has the potential to interfere, mislead, or confuse pedestrians or traffic.
9. Unfinished wood support structures.

C. **Prohibited Sign Locations**.

1. Except for marquee signs, projecting signs, and hanging signs that comply with the standards in Sec. 4-05-05, *Permanent Signs*, any sign located within, on, or projecting over a property line that borders a public or private road, highway, alley, lane, parkway, avenue, road, sidewalk, easement, or other right-of-way.
2. Any sign that would create a sight obstruction for traffic or create a hazard for motorists, cyclists, or pedestrians.
3. Any sign attached to any public utility pole or structure, road light, tree, fence, fire hydrant, bridge, curb, sidewalk, park bench, or other location on public property.
4. Any sign placed, which by reason of its location, will obstruct the view of any authorized traffic sign, signal, or other traffic control device or which by reason of shape, color, or position interferes with or could be confused with any authorized traffic signal or device.
5. Any sign that is placed so as to prevent or inhibit free ingress to or egress from any door, window, or any exit way required by the building and fire codes as adopted by Adams County.
6. Any sign or lighting device, whether on the exterior of the building, or on the inside of a window which is visible beyond the boundaries of the lot or parcel, or from any public right-of-way, with intermittent, flashing, rotating, scintillating, blinking, or strobe light illumination.
7. Any sign mounted, attached, or painted on a trailer, boat, or motor vehicle when parked, stored, or displayed conspicuously on the public right-of-way or private premises in a manner intended to attract attention of the public for advertising purposes.
8. Any sign painted, attached, or mounted on fuel tanks, outdoor storage containers and/or solid waste receptacles or their enclosures.
9. Any sign that advertises a business or product that is no longer in existence;
10. Any sign erected or maintained at the intersection of streets in such a manner as to obstruct free and clear vision of the intersection.
11. Any sign attached to or located upon outdoor exposed amenities such as trees, street signs, or utility poles that are visible from any street.
12. Any sign that is painted on or attached to semi-trailers, shipping containers, or portable storage units except for the brand name of the semi-trailer, container, or storage unit.

13. Any sign placed on private or public property without the consent of the owner or authorized agent.

# 4-05-05 Permanent Signs

A. **Generally**. These regulations apply in every zone district in the County except where otherwise specified. Building Permits in accordance with Sec. 13-02-02 are required for signs and sign types described and identified below in this Section.

1. *Building-Mounted Signs*.

   a. All attached signs must be affixed to a building wall within the designated sign area and may not exceed the allowable dimensions of this Section.

   b. The maximum total area of all building-mounted signs shall be:

      (1) 15% of the building wall area for signs in the GC and HC zone districts;

      (2) 5% of the building wall area on which the signs are placed for signs in the A-1, A-2, A-3, R-4, NC, MU, I-1, I-2, and I-3, NP, and RP zone districts; and

      (3) 40 square feet for signs in the RE, R-1-C, R-2, R-3, MH, NA, CO, and PL zone districts.

2. *Freestanding Signs*.

   a. All freestanding signs must be permanently installed in locations designated in the approved Building Permit and/or Site Plan review and may not exceed the allowable dimensions of this Section.

   b. One freestanding sign is permitted at permitted access points for lots or parcels with zero feet to 499 feet of street frontage; one additional freestanding sign is permitted at permitted access points for lots or parcels with 500 feet of street frontage or more. Additional freestanding signs may be permitted at the discretion of the Director of Community and Economic Development at permitted accesses points to enhance wayfinding. Such signs shall be a maximum of four feet in height and have a maximum area of four square feet.

B. **Unlisted Signs.** Signs that are not listed in this Section are prohibited as permanent signs.

C. **Allowed Sign Types by District.** Table 4-05-05-1, *Permanent Sign Types by District*, identifies permanent signs allowed by zone district.

D. **Permanent Sign Standards**. Tables 4-05-05-2, *Permanent Building-Mounted Signs*, and 4-05-05-3, *Freestanding Signs*, establish the number, dimensional, placement, and illumination standards for permanent signs. For standards related to specific sign types, refer to the additional sign standards in Subsection E, *Additional Sign Standards*, below.

**Table 4-05-05-1, Permanent Sign Types by District**

**Key: P = Permitted | -- = Not Permitted**

| Sign Type | Zone Districts | | | |
|---|---|---|---|---|
| | **A-1, A-2, A-3, RE, R-1-C, R-2, R-3, NA, CO, PL** | **GC, HC** | **R-4, NC, MU, TOD, NP, RP** | **I-1, I-2, I-3** |
| Permanent Building-Mounted Signs | | | | |
| Awning Sign | -- | P | P[1] | -- |
| Canopy Sign | -- | P | -- | -- |

**Table 4-05-05-1, Permanent Sign Types by District**

**Key: P = Permitted | -- = Not Permitted**

| Sign Type | Zone Districts | | | |
|---|---|---|---|---|
| | **A-1, A-2, A-3, RE, R-1-C, R-2, R-3, NA, CO, PL** | **GC, HC** | **R-4, NC, MU, TOD, NP, RP** | **I-1, I-2, I-3** |

| Other Standards | 1. Shall be constructed of brick, or other approved material by the Director of Community and Economic Development and reviewed as part of a new subdivision and/or Building Permit request.<br>2. All subdivision entry signs on the same side of a road or highway shall be separated by a minimum of 1,320 linear feet.<br>3. All subdivision entry signs shall be maintained by a homeowners association, lot owners association, or other County-approved management entity. | | | |

**TABLE NOTES:**
[Reserved]

E. **Additional Sign Standards**.

1. *Building-Mounted Signs*.

   a. *Sign Area*. For uses permitted by Conditional Use Permit, Special Use Permit, or nonconforming uses, the Director of Community and Economic Development shall determine which sign area allowance best suits the use. In making this determination, the Director of Community and Economic Development shall find one or more of the following: 1) The proposed sign area is compatible with the surrounding area; 2) The type of use and associated sign area are more consistent with a different Zone District; or 3) The Zone District where the use is a principally permitted use is more consistent for the basis of sign area.

2. *Freestanding Signs*.

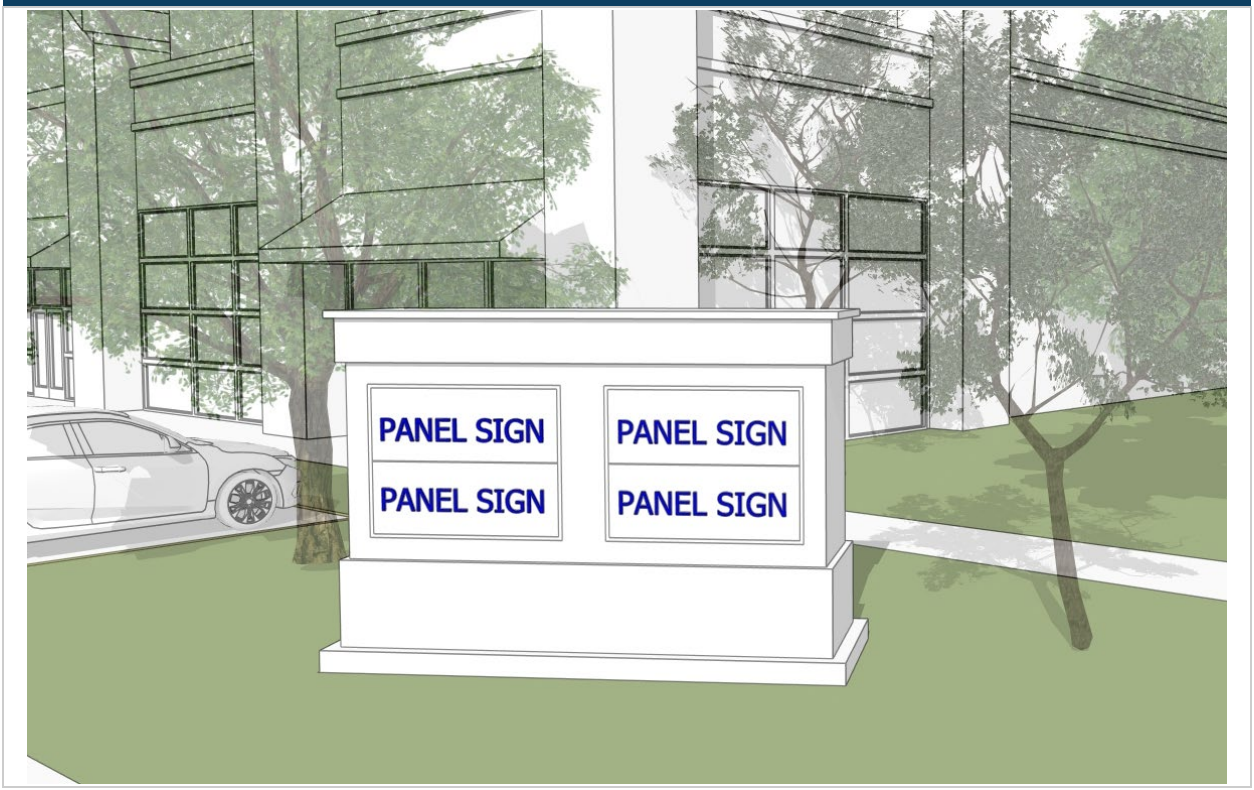
   b. *Sign Design.* The permanent sign base of a freestanding sign shall be reviewed at the time of a Sign and/or Building Permit submittal.

   c. *Sign Landscaping.* A landscaped area located around the base of the sign equal to two and one-half square feet for each square foot of sign area, is required for all freestanding signs. The landscaped area shall contain living landscape material

consisting of shrubs, and/or perennial ground cover plants placed throughout the required landscaped area having a spacing of not greater than three feet on center. Where appropriate, deciduous, or evergreen trees shall be planted in a manner, which frames or accents the sign structure.

d. *Number of Sign Panels.* A freestanding sign may consist of more than one sign panel provided all such sign panels are consolidated into one common integrated sign structure, as depicted in Figure 4-05-05-1, *Sign Panels*, below. In the event a sign is installed which does not utilize the maximum sign area permitted, any supplemental additions shall conform within, and be compatible with the existing sign structure.

**Figure 4-05-05-1, Sign Panels**



e. *Embellishments.* Freestanding sign structures may extend above the allowable height and/or permitted horizontal dimension for the purposes of sign structure enhancement or embellishment, provided such extension does not exceed a maximum of 12 inches on any side, as depicted in Figure 4-05-05-2, *Sign Embellishments*. Such extensions for elevated and monument signs shall require an increased setback in accordance with Table 4-05-05-3, *Permanent Freestanding Signs*.

**Figure 4-05-05-2, Sign Embellishments**

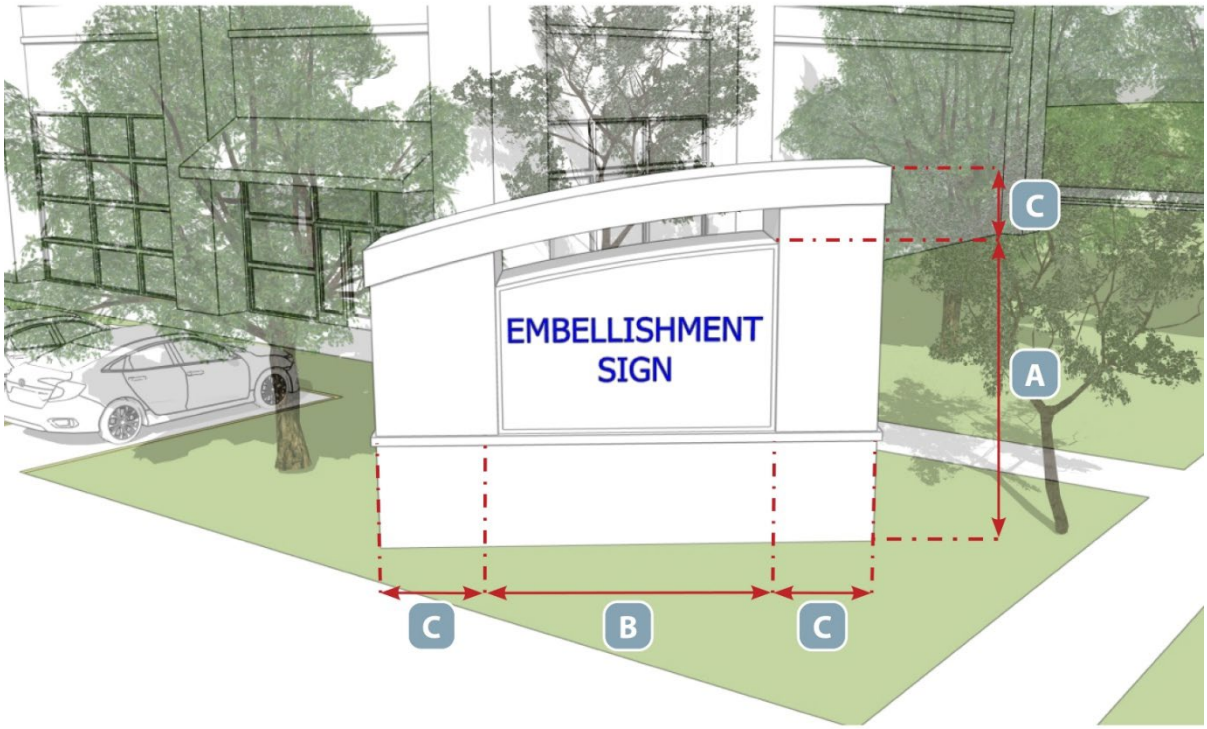


**FIGURE NOTES:**
A = Permitted Sign Height | B = Permitted Sign Width | C = Permitted Embellishment Extension

f. *Sign Height.* For uses permitted by Conditional Use Permit, Special Use Permit, or nonconforming uses, the Director of Community and Economic Development shall determine which sign height allowance best suits the use. In making this determination, the Director of Community and Economic Development shall find one or more of the following: 1) The proposed sign height is compatible with the surrounding area; 2) The type of use and associated sign height is more consistent with a different zone district; or 3) The zone district where the use is a principally permitted use is more consistent for the basis of sign height.

g. *Sign Area.* For uses permitted by Conditional Use Permit, Special Use Permit, or nonconforming uses, the Director of Community and Economic Development shall determine which sign area allowance best suits the use. In making this determination, the Director of Community and Economic Development shall find one or more of the following: 1) The proposed sign area is compatible with the surrounding area; 2) The type of use and associated sign area is more consistent with a different zone district; or 3) The zone district where the use is a principally permitted use is more consistent for the basis of sign area.

h. *Projection.* No freestanding sign shall project over any sidewalk, private drive, parking lot, or public road.

i. *Sight Distance Triangle.* Freestanding signs are prohibited in the sight distance triangle.

# 4-05-06 Temporary Signs

A. **Generally**. This Section identifies temporary signs that are permitted on a one-time, limited duration, and/or intermittent basis. The temporary signs identified in this Section do not require a Building Permit and may be validly erected and maintained for the period set forth in Table 4-05-06-2, *Temporary Signs.*

B. **Standards for all Temporary Signs.**

1. *Animation*. No temporary sign shall use any form of animation.
2. *Illumination*. Except for portable signs, temporary signs shall not be illuminated. Portable signs may be illuminated with exposed incandescent bulbs.
3. *Location*. Except for sidewalk a-frame signs, signs shall be placed on private property, outside any right-of-way, easement, or amenity space, and shall be placed to avoid any sight obstruction for motorists, cyclists, and pedestrians.
4. *Secured Sign*. All temporary signs except for sidewalk a-frame signs, which shall be removed at the close of business, shall be affixed in a manner to minimize the possibility that the forces of nature will destroy or remove the sign.
5. *Material Durability*. Temporary signs shall be made of materials that will not deteriorate over the life of the sign and can withstand external weather conditions.
6. *Maintenance*. Temporary signs that are frayed, torn, broken, or that are no longer legible shall be deemed unmaintained and required to be removed.
7. *Removal*. Where temporary signs are not removed within the time limit allowed or after notice to be removed by the County, the County may cause the signs to be removed and the costs of removal will be charged to the person named on the sign.
8. *Temporary and Special Use Permits*. Signs associated with an approved Temporary Use Permit shall be allowed for the duration of the permit. Signs associated with a Special Use Permit shall require a Building Permit regardless of sign type.

C. **Unlisted Signs.** Signs that are not listed in this Section are prohibited as permanent signs.

D. **Allowed Sign Types by District.** Table 4-05-06-1, *Temporary Sign Types by District*, identifies temporary signs allowed by zone district.

E. **Temporary Sign Standards**. Table 4-05-06-2, *Temporary Signs,* establishes the number, dimensional, placement, and duration standards for temporary signs.

**TABLE NOTES:**

1. Setback from public right-of-way, or in the context of a shopping center or similar development, from the adjacent drive aisle.
2. Setback taken from back of sidewalk or, when no sidewalk is present, from back of curb.

# 4-05-07 Off-Premise Advertising Device

A. **Purpose**. The purpose of this section is to advance the County's legitimate and substantial interest in limiting the number and area of off-premise advertising devices (billboards and advertising banners) permitted to maintain the visual appearance of scenic corridors, avoid clutter, and protect the health, safety, and welfare of the citizens of Adams County by mitigating traffic distractions.

B. **CUP or PUD Required.**

1. *Billboards.*

a. Billboards are permitted with an approved Conditional Use Permit or Major Amendment to a Conditional Use Permit in the Heavy Commercial (HC) and industrial

zone districts or as part of an approved Planned Unit Development. All billboards shall meet the standards contained in this Section.

b. A Conditional Use Permit or a major amendment to a Conditional Use Permit is required to display, erect, relocate, or alter any billboard excluding external indirect lighting traditionally used and attached to a sign.

2. *Advertising Banners*. Advertising Banners may be approved by issuance of an approved Conditional Use Permit. In addition to the standards of this Section, the Board of County Commissioners may impose additional conditions to mitigate negative externalities associated with the location or operation of the Advertising Banner to ensure compatibility with the surrounding area.

C. **Maximum Number of Signs**. One two-faced billboard shall be permitted per lot.

D. **Maximum Area**. No billboard shall exceed 300 square feet per face.

E. **Maximum Height and Minimum Clearance**. No billboard shall exceed 40 feet in height. Height shall be determined as the distance from the grade of the right-of-way on which the sign fronts to the top of the sign including all projections. If located within 1,000 feet of an intersection of two or more public rights-of-way, the lowest point of the sign face shall be at least eight feet above the ground.

F. **Other Limitations**. All billboards shall meet the following requirements:

1. *Separation*. All billboards on the same side of a road or highway shall be separated by a minimum of 2,000 linear feet.

2. *Setbacks*. The minimum right-of-way and property line setback requirements shall be equal to the height of the billboard as measured from the leading edge of the sign face. Variations in the setback requirement may be granted with the issuance of a Conditional Use Permit according to the following criteria:

a. The proposed location and reduced setback do not obstruct visibility for motorists, cyclists, or pedestrians at intersections, driveways, or access points.

b. The billboard's location maintains the required sight distance triangle and does not impair traffic control devices or signals.

c. The reduced setback is compatible with adjacent land uses and zoning, considering existing building setbacks, sign locations, and visual context.

d. The billboard will not dominate nearby buildings or visually intrude into residential or scenic areas.

e. A unique site condition, such as topography, irregular parcel shape, easement, or utility corridor, makes compliance with the standard setback impractical without unduly limiting use of the site.

f. The reduction is the minimum necessary to accommodate the sign given such constraints.

3. *Illumination*. All billboards may be illuminated.

4. *Changeable Copy*. Billboards that contain, include, or are illuminated by a changeable message including electronic, digital, LED, fiber optics, light bulbs, or other illumination devices are allowed and shall remain motionless for periods not less than 10seconds. A Conditional Use Permit, Major Amendment to an existing Conditional Use Permit, or Planned Unit Development shall be required prior to installing any electronic means to any off-premise sign.

5. Where a billboard has two faces that are designed to be back-to-back, the faces shall not be more than three and one-half feet from one another. Where an off-premise sign has two faces arranged in a V-shape, the faces shall be: a maximum of 45 degrees at the interior angle, or a maximum of 15 feet apart at its widest point, whichever is less.
6. Before any billboard is erected, a Building Permit must be approved and issued by the Director of Community and Economic Development.

G. **Other Uses**. An off-premise sign may be classified as a principal or accessory use on the property.

H. **Advertising Billboard (Horizontal Billboard)**. An advertising billboard must not be legible to the general public at ground level and is solely intended to be viewed by air passengers.

I. **Advertising Banners**. For purposes of this subsection (I), an "Advertising Banner" means an off-premise sign, horizontal to the ground and of sufficient size to be seen by air passengers either landing or departing at Denver International Airport or other areas near commercial airports as approved by the Board of County Commissioners. All Advertising Banners shall meet the standards contained in this Section.

1. *Legibility*. An Advertising Banner must not be legible to the general public at ground level and is solely intended to be viewed by air passengers
2. *Location and Separation*. Advertising Banners are permitted with an approved Conditional Use Permit in the A-3, Agriculture 3 zone district. Advertising Banners are permitted within a five-mile perimeter of Denver International Airport. All Advertising Banners shall be separated by a minimum of 2,000 linear feet.
3. *Maximum Size of an Advertising Banner and Minimum Size of Property*. The area of an Advertising Banner shall be a maximum of ten acres. An Advertising Banner shall not be located on A-3 zoned property that is less than two and a half acres in area.
4. *Maximum Height of an Advertising Banner*. The height of an Advertising Banner shall be a maximum of six feet.
5. *Other Limitations*. All Advertising Banners shall meet the following requirements:
   a. The minimum setback requirements for Advertising Banners shall be consistent with the minimum setback requirements of the A-3 zone district.
   b. An Advertising Banner shall not be legible from adjacent public roadways, freeways, or adjacent properties. Where the property on which an Advertising Banner is located fronts a public roadway and the advertising banner is attached to the ground, the Advertising Banner shall be screened from the public roadway by a wood or brick screen fence, a minimum of six feet high, along the portion of the Advertising Banner that is adjacent to the public roadway. No Advertising Banner may be located within 500 feet of a residentially zoned or used property (measured from the property line to the leading edge of an Advertising Banner) unless a waiver is obtained from the affected property owner(s) and the waiver is recorded with the Adams County Clerk and Recorder.
   c. Advertising Banners may be illuminated provided that such illumination:
      (1) Shall not present a hazard to pilots of any type of aircraft; and
      (2) Is not directed upward; and
      (3) Has been approved by the County.

6. *Aviation Considerations*. The Board of County Commissioners may consider comments from the FAA and DIA in their decision regarding the issuance of a Conditional Use Permit.
7. *Building Permit*. Before any Advertising Banner is erected, a Building Permit for a sign must be approved.
8. *Material*. Advertising Banners shall be made of a non-reflective, flame-retardant material (i.e., mesh) as approved by the Building Official.
9. *Anchoring*. Advertising Banners shall be securely fastened to the ground and/or an appropriate support structure shall be constructed to County specifications.
10. *Collection of Rainwater*. Advertising Banners shall be constructed of material that does not allow collection of rainwater or other significant amounts of precipitation that may cause a nuisance to aircraft pilots.
11. *No Other Uses*. Once an Advertising Banner is established on a lot, all other use or accessory use of the lot shall cease, and no principal use or accessory use shall be established until such Advertising Banner is removed from the property.

# 4-05-08 Illumination and Changeable Copy

A. **General Design Standards**.

1. *Enclosure*. Electronic or manual changeable copy message centers are permitted as part of a sign if they are enclosed on all sides with a finish of brick, stone, stucco, powder-coated metal, or anodized aluminum.
2. *No Mixing*. No sign structure that includes manual changeable copy may also include electronic changeable copy, and vice-versa.
3. *Maximum Area*.
   a. Electronic or manual changeable copy message centers may make up a maximum of the following sign types:
      (1) 25% of the sign area of a monument sign, pylon sign, or a menu board that is visible from a residential property or a public or private street; or
      (2) The lesser of 100 square feet or 40% of the sign area of a marquee sign.
4. *Menu Boards*. If a menu board sign is not visible from a residential property or a public or private street, 100% of the copy area may be electronic.

B. **Illumination**. Signs may be illuminated as specified in this Section, consistent with the following standards:

1. *Location*. Tables 4-05-05-2, *Permanent Building-Mounted Signs*, and 4-05-05-3, *Permanent Freestanding Signs*, provide information about what types of illumination are permitted for each sign type in each character district.
2. *Visibility*. Light sources to illuminate signs shall neither be visible from any street right-of-way, nor cause glare hazardous or distracting to pedestrians, vehicle drivers, or adjacent properties.
3. *Sign Illumination*. Signs shall not exceed 0.3 foot-candle of light over ambient light conditions.
4. *Types of Illumination*. Where permitted, illumination may be:
   a. Signs with external illumination are subject to the following standards:
      (1) The source of the light shall be concealed by opaque covers.

(2) Any light sources intended to illuminate surfaces behind a sign letter or symbol to produce a halo effect shall be fully concealed from view.

(3) Exposed illumination shall be by a steady, stationary light source, shielded and directed solely at the sign. The light source shall be static in color.

**Figure 4-05-08-1, Example Signs with External Illumination**

| Uplighting | Downlighting |
|---|---|
| | |

b. Signs with internal illumination are subject to the following standards:

(1) Internal illumination, including neon lighting, shall be static in intensity and color.

(2) Changeable copy signs are permitted in accordance with the regulations in this Section.

**Figure 4-05-08-1, Example Signs with Internal Illumination**

| Cabinet Sign | Channel Letter Sign |
|---|---|
| | |
| Halo Letter Sign | |

**Figure 4-05-08-1, Example Signs with Internal Illumination**

| Cabinet Sign | Channel Letter Sign |
|---|---|

C. **Electronic Changeable Copy.**

1. *Generally*. An electronic changeable copy message center, as depicted in Figure 4-05-08-2, *Electronic and Manual Changeable Copy Message Centers*, is permitted to be incorporated into a permanent freestanding or permanent wall sign subject to the following restrictions.
2. *Duration of Message*. Each message displayed shall remain motionless for a minimum of 10 seconds. All such signs shall have a default mode to prevent the display from malfunctioning in a flashing or intermittent fashion.
3. *Transition of Message*. Each message shall transition to the next message instantaneously.
4. *Prohibited Electronic Signs*. Any sign that includes animated images or graphics, scrolling messages, video, moving images similar to television images, emits audible sound, employs stereopticon, or includes motion picture projection is prohibited. Any sign that displays its message or portion thereof for less than 10 seconds before a change occurs shall be considered flashing or intermittent.
5. *Brightness / Luminance*. Electronic signs shall be equipped with and employ the use of light monitors and controls that allow sign brightness to automatically adjust to outside conditions. Electronic signs shall not exceed a maximum of 0.3 foot-candles over ambient lighting conditions when measured at the required distance. The required distance shall be calculated using the following formula:

$$distance\ measuring\ maximum\ brightness\ in\ linear\ feet = \sqrt{(sign\ area\ in\ square\ feet\ \times 100)}$$

**Figure 4-05-08-2, Electronic and Manual Changeable Copy Message Centers**

Electronic Changeable Copy Message Center

Manual Changeable Copy Message Center

## 4-05-09 Installation and Maintenance

A. **Installation**.

1. *Identification*. Every permitted sign shall display in a conspicuous place on the sign, in letters no less than one inch in height, the date of erection, the permit number, the name of the sign manufacturer and installer, and the voltage of any electrical apparatus used.
2. *Anchoring*. Signs shall not be suspended by chains or other devices that will allow the sign to swing, due to wind action. Signs shall be anchored to prevent any lateral movement that could cause wear on supporting members or connections.
3. *Supports*. Supports and braces shall be an integral part of the sign design. Angle irons or wires used for supports or braces shall be hidden from public view to the extent technically feasible.
4. *Use of Fill Under Monument Signs*. Mounds or berms may be used to elevate permanent monument signs, provided that the mound or berm elevates the base of the sign not more than three feet above the natural grade at the location of the sign.
5. *Electrical Switch*. The sign shall be equipped with a switch that prevents electricity from flowing to the sign in order to promote safety during maintenance.
6. *Inspection Request*. After any sign requiring a permit is constructed or erected, the sign contractor performing the work or service shall notify the Building Official for final inspection of the sign.

B. **Maintenance**.

1. *Upkeep of Ground Around Sign*. The area within a 10-foot radius of the base of a sign shall be kept free of weeds, rubbish, or flammable waste or material.
2. *Supports and Other Hardware*. Structural supports, braces, bolts, clips, supporting frames and fastenings of a sign shall be kept in good repair and safe condition, including replacement of defective parts, so that the sign is securely fastened or anchored to a building wall, structural framing, or other foundation.
3. *Paint and Finishes*. Paint and other finishes shall be maintained in good condition. Peeling finishes shall be repaired. Signs with running colors shall be repainted, repaired, removed, or replaced if the running colors were not part of the original design.
4. *Corrosion and Rust*. Permanent signs and sign structures shall be finished and maintained to prevent corrosion and rust. A patina on copper elements is not considered rust.
5. *Level Position*. Signs that are designed to be level shall be installed and maintained in a level position.

C. **Removal of Abandoned or Dilapidated Signs**. Abandoned and dilapidated signs that are inadequately maintained so as to show evidence of deterioration, including peeling, rust, dirt, fading, discoloration, or holes, shall be repaired or removed within 30 days of receipt of notice from the County.

# Div. 4-06 Outdoor Lighting

## 4-06-01 Lighting Plan

A. **Submittal Requirements.** A lighting plan shall be submitted for any development subject to Site Plan, Building Permit, or land use review under this DSR, unless exempted in accordance with subsection B(2), *Exemptions*, below. The plan shall include the following elements:

1. *Photometric Plan.* A photometric diagram showing initial horizontal foot-candle levels across the site, including at all property lines and key functional areas (e.g., parking lots, walkways, building entries).
2. *Site Plan.* A scaled Site Plan indicating the location, height, orientation, and type of all proposed and existing exterior lighting fixtures.
3. *Manufacture Cut Sheets.* Specification sheets for all proposed fixtures, demonstrating full cut-off or shielding features, mounting details, and correlated color temperature (CCT).
4. *Fixture Height.* Height of each fixture measured from finished grade to the highest point of the fixture or luminaire.
5. *Lighting Narrative.* A brief narrative explaining lighting controls such as timers, motion sensors, photocells, or dimming technology, where applicable.

B. **Timing of Review.**

1. *Review for Compliance.* The lighting plan shall be reviewed for compliance with this Code at the time of the earliest applicable development application.
2. *Exemptions.* The Director of Community and Economic Development may waive the lighting plan requirement for projects that only include minor, decorative, or incidental fixtures such as:
   a. Wall-mounted sconces at entrances;
   b. Bollard or pathway lights less than 3 feet in height; or
   c. Other fixtures with limited intensity and scope, at the Director of Community and Economic Development's discretion.
   d. Developments or uses that do not operate during nighttime hours and will not utilize exterior lighting after dark.

## 4-06-02 General Lighting Standards

A. **Shielding and Direction.** All lights shall be fully shielded or cut-off so no light is directly emitted onto surrounding properties.

B. **Glare and Hazard Control.** Outdoor lighting shall be located, aimed, and shielded so that direct glare is not visible from neighboring properties or public rights-of-way. Light shall be arranged so neither direct nor reflect light may create a traffic hazard and no color light(s) may be used in a manner that would be confused with traffic control devices.

C. **Light Color.** Outdoor lighting shall emit a neutral white color (between 3000K and 4000K correlated color temperature) unless otherwise approved by the County.

D. **Prohibited Lighting Types.** No blinking, flashing, rotating, or otherwise animated lights shall be permitted except temporary holiday lighting displays or safety devices required by federal, state, county, or local regulations.

E. **Light Spillover.** Light levels measured 20 feet beyond the property line shall not exceed one-tenth foot-candle as a direct result of on-site lighting.

F. **Operational Considerations.** Public and quasi-public recreational facilities such as baseball, softball, soccer, or football fields are exempt from lighting height restrictions and glare limitations onto adjacent properties provided:

1. *Active Use*. The lights are only used while the field is in use.

2. *Hours of Operation.* Reasonable Hours of Operation limitations may be placed on any recreational use by the Director of Community and Economic Development.

# 4-06-03 Use-Specific Lighting Standards

A. **Use-Specific Standards.** The requirements in Table 4-06-03-1, *Use-Specific Lighting Standards,* apply to all new development, redevelopment, or changes of use that involve outdoor lighting associated with the listed use types. Where a standard in this table conflicts with the general standards in 4-06-02, *General Lighting Standards*, the more restrictive provision shall apply.

B. **Maintenance and Compliance.**

1. *Upkeep.* All lighting fixtures shall be kept in working condition.
2. *Retrofits.* Replacement or retrofit fixtures shall meet current standards.
3. *Enforcement.* The County may require modification or replacement of lighting fixtures to address documented complaints about glare, trespass, or nuisance lighting.

**Table 4-06-03-1 Use-Specific Lighting Standards**

| Use Type | Max. Avg. Illuminance (fc) | Max. Fixture Height | Color Temp (K) | Special Requirements |
|---|---|---|---|---|
| **Parking Areas** | 1.0 | 30 ft | 3000–4000 | Uniform distribution; turn off or dim during non-business hours |
| **Pedestrian Walkways/Plazas** | 0.2 (min) / 1.0 (max) | 14 ft | ≤3000 | Pedestrian-scale fixtures; compatible with streetscape design |
| **Loading/Unloading Zones** | 20.0 | 30 ft | ≤4000 | Shielded from adjacent properties; auto shutoff within 30 minutes of use |
| **Recreational Fields** | -- | -- | ≤4000 | Auto shutoff within 30 minutes of field use; Director may limit hours |
| **Construction/Temporary** | 2.0 | 20 ft | ≤4000 | Limited to active use hours; max 30 days without Director approval |

| Table 4-06-03-1 Use-Specific Lighting Standards | | | | |
|---|---|---|---|---|
| **Use Type** | **Max. Avg. Illuminance (fc)** | **Max. Fixture Height** | **Color Temp (K)** | **Special Requirements** |
| **Building-Mounted** | 5.0 (accent only) | 15 ft | ≤3500 | Full cut-off required; shall not shine above roofline or property line |
| **Canopy/Drive-Thru Areas** | 20.0 (under canopy) | Flush-mount | ≤4000 | Fixtures shall be recessed; dim after hours |
| **Fueling Station Canopies** | 30.0 (under canopy) | Flush-mount | ≤4000 | Fixtures shall be fully recessed with no lens protrusion; average-to-minimum uniformity ratio ≤4:1; lighting shall be reduced by 50% when station is closed. |
| **Outdoor Display/Sales Areas** | 5.0 | 25 ft | ≤4000 | Lighting shall be directed inward; motion sensors encouraged at night |
| **Outdoor Dining Areas** | 1.0 | 14 ft | ≤3000 | Decorative lighting shall be low-wattage and shielded; dim or shut off after hours |
| **Industrial Yards** | 2.0 | 30 ft | ≤4000 | Shielding required; dim lighting during non-operational hours |
| **Multi-Family Residential** | 1.0 | 14 ft | ≤3000 | Porch and balcony lighting shall be downward and not spill into neighboring units |

# Div. 4-07 Road Impact Fees

## 4-07-01 General

A. **Authority**.

1. The Board of Commissioners of Adams County has the authority to adopt road impact fees pursuant to C.R.S. §§ 29-20-101 through 29-20-107, C.R.S. §§ 29-20-202 through 29-20-204, C.R.S. § 30-28-101 *et seq*., and all other relevant laws of the State of Colorado.

B. **Applicability**. This Division shall apply to all lands in unincorporated Adams County.

C. **Intent And Purpose**.

1. *General*. This Division is intended to implement and be consistent with the Roads Development Impact Fee Study for Adams County prepared by TischlerBise and dated April 29, 2026 ("Road Impact Fee Study").

2. *Implementation*. This objective is accomplished by requiring all new Traffic Generating Development to contribute its proportionate share of the funds, land, or public facilities necessary to accommodate the incremental impacts of such development on regional road capital facilities having a rational nexus to the proposed land development and for which the need is reasonably attributable to the proposed development. The adopted road impact fee schedule, which is included as part of the Fee Schedule adopted by the Board of County Commissioners, establishes a presumptively proportional fee; however, any fee payer may demonstrate, through an Independent Fee Calculation Study, that the impacts attributable to the proposed development are materially different than those assumed by the Fee Schedule, and the fee shall be adjusted accordingly. The impact fee schedule set forth in the Fee Schedule may be increased annually by a percentage equal to the percentage increase in the CPI during the preceding twelve (12) month period. For purposes of this provision, CPI means the Consumer Price Index for All Urban Consumers (CPI-U) for the Denver-Aurora-Lakewood area, as published by the U.S. Bureau of Labor Statistics. If the CPI is discontinued or no longer published, the Board of County Commissioners may substitute a similar official inflation index.

3. *Fair Allocation of Costs*. This Division is intended to be consistent with the principles for allocating a fair share of the costs of new public facilities to new users. It approaches the problem of determining the fair share of road impact costs in a conservative and reasonable manner. This fee will only partially capture the governmental expenditures associated with improving the County's major road system. Given the very different development patterns between the eastern (rural) and western (suburban/urban) areas of the County, two distinct service areas are established, based on planning areas contained in County transportation plans.

D. **Level of Service Standard**. The Board of County Commissioners have determined the County's major road system shall operate at a minimum of a Level of Service (LOS) "D."

## 4-07-02 Imposition of Fees

A. **Time and Obligation of Payment.**

1. Any person who causes the commencement of Traffic-Generating Development shall be obligated to pay a road impact fee consistent with the terms of this Division. The fee shall

be determined and paid to the Impact Fee Administrator at the time of issuance of a Building Permit for the development. If any credits are due pursuant to Sec. 4-07-04, *Credits*, they shall be determined during the approval of the Traffic-Generating Development. The fee shall be computed separately for the amount of development covered by the permit, if the Building Permit is for less than the entire development. If the fee is exacted for Traffic-Generating Development that increases road/traffic impact because of a change in use, the fee shall be determined by computing the difference in the Fee Schedule between the new Traffic-Generating Development and the existing Traffic-Generating Development. The obligation to pay the impact fee shall run with the land. The amount of the road impact fee imposed on a specific Traffic-Generating Development shall be reasonably related and roughly proportional to the transportation impacts created by that development.

2. Any person who, prior to January 1, 2027, agreed as a condition of development approval to pay a road impact fee shall be responsible for the payment of the fees under the terms of such agreement, and the payment of such fees will be offset against any impact fees otherwise due pursuant to the terms of this Division.

B. **Exemptions/Rebates**.

1. The following development shall be exempt from the terms of this Division. An exemption must be claimed by the fee payer at the time of application for a Building Permit.
    a. The construction of accessory buildings or structures not producing additional vehicular trips over and above that produced by the principal building or use of the land.
    b. The construction of an accessory dwelling unit.
    c. The replacement of a destroyed or partially destroyed building or structure of the same size and use, provided no additional trips will be produced over and above that produced by the original land use.
2. The construction of qualifying affordable housing units in accordance with the Area Median Income (AMI) amounts and affordability period as set forth in the Fee Schedule adopted by the Board of County Commissioners may be eligible for a rebate of road impact fees. The road impact fee must be paid for all non-qualifying units.

C. **Establishment Of Fee Schedule.**

1. Any person who causes the commencement of Traffic-Generating Development, except those persons exempted or preparing an Independent Fee Calculation Study pursuant to Sec. 4-07-03, *Independent Fee Calculation Study*, shall pay a road impact fee in accordance with the Fee Schedule adopted by the Board of County Commissioners. For residential development, the road impact fee shall be calculated on a per-dwelling-unit basis in accordance with the Fee Schedule adopted by the Board of County Commissioners, regardless of the form of residential ownership or tenure.
2. If a fee is based on 1,000 square feet, the square footage of the structure shall be measured in terms of gross floor area. Gross floor area is defined as the area within the outside dimensions of a building including each floor level, halls, lobbies and stairways. It shall not include floor space within the building reserved for parking or loading vehicles and unimproved basement space or separate space used only for building maintenance and utilities or exterior features for the building, such as stairs, porches, walkways and other similar exterior features.

3. If a fee is to be paid for mixed uses, then the fee shall be determined according to the Fee Schedule adopted by the Board of County Commissioners by apportioning the space committed to uses specified on the schedule.
4. If the type of Traffic-Generating Development for which a Building Permit is requested is not specified on the Fee Schedule, the Impact Fee Administrator shall determine the fee on the basis of the fee applicable to the most nearly comparable type of land use on the Fee Schedule. The Impact Fee Administrator shall be guided in the selection of a comparable type of land use by using trip generation rates contained in the most current edition of the report titled Trip Generation prepared by the Institute of Transportation Engineers (ITE), articles or reports appearing in the ITE Journal, studies or reports prepared by the U.S. Department of Transportation or the Colorado Department of Transportation, or other similar source.
5. In the event the Impact Fee Administrator determines there is no comparable use in the Fee Schedule, the fee shall be computed by use of an Independent Fee Calculation Study as provided in Sec. 4-07-03, *Independent Fee Calculation Study*.

D. **Preliminary Impact Fee Calculation**. Any person contemplating establishing a Traffic-Generating Development may request a preliminary determination of the impact fees due from such development. A person requesting a pre-development review impact fee calculation shall complete and submit to the Impact Fee Administrator the proper application form and application fee. Using the information regarding the proposed traffic generating land development activity as submitted on the application, the Impact Fee Administrator will provide, within 15 days of the date of submittal of the completed application, a preliminary calculation of the road impact fees due for the proposed Traffic-Generating Development.

## 4-07-03 Independent Fee Calculation Study

A. **General Provisions**.

1. The impact fee may be computed by the use of an independent fee calculation study at the election of the fee payer, and for any proposed land development activity for which the Impact Fee Administrator concludes the nature, timing, or location of which is likely to generate impacts costing substantially more to mitigate than the amount the fee would generate by the use of the Fee Schedule.
2. The preparation of the Independent Fee Calculation Study shall be the responsibility of the electing party.
3. Any person who requests to perform an Independent Fee Calculation Study shall pay an application fee for administrative costs associated with the review and decision on such Independent Fee Calculation Study.

B. **Formula**.

1. The Independent Fee Calculation Study for the road impact fee shall be proportional to the traffic generated by the development and be calculated by using the following formula:

Impact Fee = (APD / ITED) x BIF

Where:

APD = Applicant Provided Data. This factor is the number of average vehicle trips per day (vpd) generated by the development as calculated using the Institute of Transportation Engineers Trip Generation Manual.

ITED = Institute of Transportation Engineers Data: This factor is the number of average vehicle trips per day as calculated using the Institute of Transportation Engineers Trip Generation Manual and calculated using gross floor area of the structure.

BIF = Base Impact Fee. This factor is the base impact fee as shown in the approved Impact Fee Table for the land use type based on square area of the building in 1,000 square foot increments.

2. The fee calculations shall be based on data, information or assumptions contained in this Division or independent sources, provided:
    a. The independent source is an accepted standard source of transportation engineering or planning data or information; or the independent source is a local study on trip characteristics carried out by a qualified traffic planner or engineer pursuant to an accepted methodology of transportation planning or engineering; and
    b. The percent new trips factor and average trip length used in the Independent Fee Calculation Study, if different from those contained in the Road Impact Fee Study for the same land use type, shall be based on actual surveys conducted in Adams County.

C. **Procedure**.

1. An Independent Fee Calculation Study shall be undertaken through the submission of an application for an Independent Fee Calculation Study. A potential feepayer may submit such an application. The County shall submit such an application for any proposed Traffic-Generating Development interpreted as one that is not comparable to any land use on the Fee Schedule, and for any proposed Traffic-Generating Development for which it concludes the nature, timing, or location of the proposed development make it likely to generate impacts costing substantially more to mitigate than the amount of the fee which would be generated by the use of the Fee Schedule.
2. Within 15 days of receipt of an application for Independent Fee Calculation Study, the Impact Fee Administrator shall determine if the application is complete. If the Impact Fee Administrator determines the application is not complete, a written statement specifying the deficiencies shall be sent to the person submitting the application. The application shall be deemed complete if no deficiencies are specified. The Impact Fee Administrator shall take no further action on the application until it is deemed complete.
3. When the Impact Fee Administrator determines the application is complete, the application shall be reviewed and the Impact Fee Administrator shall render a written decision in 20 days on whether the fee should be modified, and if so, what the amount should be, based on the standards in Sec. 4-07-04, *Credits*, below.

D. **Standards**. If on the basis of generally recognized principles of impact analysis it is determined the data, information and assumptions used by the applicant to calculate the Independent Fee Calculation Study satisfies the requirements of this Section, the fee determined in the Independent Fee Calculation Study shall be deemed the fee due and owing for the proposed Traffic-Generating Development. The adjustment shall be set forth in a Fee Agreement. If the Independent Fee Calculation study fails to satisfy the requirements of this Section, the fee applied shall be the fee established for the Traffic-Generating Development in Sec. 4-07-02, *Imposition of Fees*.

E. **Appeal**.

1. A fee payer affected by the administrative decision of the Impact Fee Administrator on an application for Independent Fee Calculation Study, or on an application for Independent Fee Calculation Study initiated by the County staff on the proposed Traffic-Generating Development, may appeal such decision by filing a petition with the Board of County Commissioners. In reviewing the Impact Fee Administrator's decision, the Board of County Commissioners shall make written findings of fact and conclusions of law.
2. This appeal process will not be honored by the Board of County Commissioners without a substantial effort upon the applicant to rectify any fee discrepancies with the Impact Fee Administrator and additional Adams County staff if necessary.

## 4-07-04 Credits

A. **General Standards**.

1. Any person initiating Traffic-Generating Development may apply for a credit against road impact fees otherwise due, up to but not exceeding the full obligation for impact fees proposed to be paid pursuant to the provisions of this Division, for any contribution, payment, construction, or dedication of land accepted and received by Adams County for any road capital improvements on the County's major road system. No credits shall be provided for site-related improvements.
2. Credits for contributions, payments, construction or dedication of land for road improvements on the County's major road system shall be transferable in the same development but shall not be transferable for credit against impact fees required to be paid for other public facilities. The credit shall not exceed the amount of the impact fees due and payable for the proposed Traffic Generating Development.
3. The County may enter into a Capital Contribution Front-Ending Agreement with any person initiating Traffic Generating Development who proposes to construct non-site related road capital improvements on the County's major road system. To the extent the fair market value of the construction of these road capital improvements exceed the obligation to pay impact fees for which a credit is provided pursuant to this Section, the Capital Contribution Front-Ending Agreement shall provide proportionate and fair share reimbursement linked to new growth and development's use of the road capital improvements constructed.
4. The Department of Community and Economic Development and the Department of Public Works shall endeavor to agree to a condition with a proponent of a Traffic-Generating Development and any potential credits against qualifying improvements prior to the public hearing on the Preliminary Plat or Preliminary Development Plan (if applicable). The following example shall be used as a framework for decision-making:
    a. Developer A proposes a 100-lot subdivision in the West Service Area with homes that are between 1,801 square feet and 2,400 square feet;
    b. Subject site is one mile away from the nearest paved road and has a gravel road adjacent to the site;
    c. County regulations require paving of all perimeter roads and internal streets;
    d. Total estimated road impact fee is $688,000 (100 times $6,880);
    e. Traffic generated from the new development creates a larger demand on the non-contiguous road; and

f. The total cost to connect the subject site to the nearest paved road is $359,907.

5. Staff may consider the following alternatives in proposing a condition on a Traffic-Generating Development:
    a. Developer A submits the required road impact fee at the time of each individual Building Permit.
    b. Developer A constructs the non-site related improvements at a total cost not to exceed $359,907 (total improvement amount) and is given a credit against the road impact fee. If additional off-site improvements are required, but not paid for with the total improvement amount, the County may either budget for the balance of the improvements or other developers may construct them in the future. This option is generally discouraged and will only be considered when all other options have been proven to be insufficient.
    c. Developer A constructs the non-site related improvements at the total cost of $359,907 and is given a credit against the road impact fee. Developer A is reimbursed by other developers (B, C, or D) at the time of their development and in a proportionate share of their improvements.
    d. Developer A provides the County an amount of funds in a manner as determined appropriate by the County in lieu of constructing the required contiguous road improvement, when the contiguous road improvement is part of a larger future County road project indicated on the 5-year plan (unless otherwise determined by the County). No credit for this payment shall be given against the road impact fee.
6. In the event the staff and the proponent cannot reach an agreement regarding the condition, the matter may be forwarded to the Planning Commission for a recommendation and a subsequent final decision by the Board of County Commissioners.

B. **Credit Against Fees***.* Credit shall be in an amount equal to fair market value of the land dedicated for right-of-way at the time of dedication, the fair market value of the construction at the time of its completion, or the value of the contribution or payment at the time it is made to Adams County. Credit determinations shall be roughly proportional to the impact of the development and directly related to mitigating the impacts of the development.

C. **Procedure For Credit Review**.
1. The determination of any credit shall be undertaken through the submission of an Application for Credit Agreement, which shall be submitted to the Impact Fee Administrator.
2. The Application for Credit Agreement shall include the following information:
    a. If the proposed Application for Credit Agreement involves a credit for any contribution, the following documentation must be provided:
        1. A certified copy of the development approval in which the contribution was agreed;
        2. If payment has been made, proof of payment; or
        3. If payment has not been made, the proposed method of payment.
    b. If the proposed Application for Credit Agreement involves credit for the dedication of land, the following documentation must be provided:
        1. A drawing and legal description of the land.

2. The appraised fair market value of the land at the date a Building Permit is proposed to be issued for the Traffic-Generating Development, prepared by a professional Real Estate Appraiser who is a member of the Member Appraisal Institute (MAI) or who is a member of Senior Residential Appraisers (SRA), and if applicable, a certified copy of the development permit in which the land was agreed to be dedicated.

c. If the proposed Application for Credit Agreement involves construction, the following documentation must be provided:

1. The proposed plan of the specific construction prepared and certified by a duly qualified and licensed Colorado engineer or contractor.
2. The projected costs for the suggested improvement, which shall be based on local information for similar improvements, along with the construction timetable for the completion thereof. Such estimated cost shall include the cost of construction or reconstruction, the cost of all labor and materials, the cost of all lands, property, rights, easements and franchises acquired, financing charges, interest prior to and during construction and for one year after completion of construction, costs of plans and specifications, surveys of estimates of costs and of revenues, costs of professional services, and all other expenses necessary or incidental to determining the feasibility or practicability of such construction or reconstruction.
3. Within 15 days of receipt of the proposed Application for Credit Agreement, the Impact Fee Administrator shall determine if the application is complete. If it is determined the proposed agreement is not complete, the Impact Fee Administrator shall send a written statement to the applicant outlining the deficiencies. The Impact Fee Administrator shall take no further action on the proposed Application for Credit Agreement until all deficiencies have been corrected or otherwise settled.
4. Once the Impact Fee Administrator determines the proposed Application for Credit Agreement is complete, it shall be reviewed within 20 days. The Application for Credit Agreement shall be approved if it complies with this DSR.
5. If the Application for Credit Agreement is approved by the Impact Fee Administrator, a Credit Agreement shall be prepared and signed by the applicant and the County. It shall specifically outline the contribution, payment, construction or land dedication, the time by which it shall be completed, dedicated, or paid, and any extensions thereof, and the dollar credit the applicant shall receive for the contribution, payment or construction.

D. **Appeal Of Credit Decision**.

1. A fee payer affected by the decision of the Impact Fee Administrator regarding credits may appeal such decision by filing a petition with the Board of County Commissioners within 30 days of a decision. In reviewing the Impact Fee Administrator's decision, the Board of County Commissioners shall use the standards established in this DSR.
2. This appeal process will not be honored by the Board of County Commissioners without a substantial effort upon the applicant to rectify any credit discrepancies with the Impact Fee Administrator and additional Adams County staff if necessary.

# 4-07-05 Earmarking of Funds

A. **Road Benefit Districts**. For the purpose of **ensuring** fee payers receive sufficient benefit for fees paid, two Road Benefit Districts have been established. Impact fee funds shall be spent within the Road Benefit District from which the Traffic-Generating Development paying the fee is located. Given the very different development patterns between the eastern (rural) and western (suburban/urban) areas of the County, two distinct service areas are established as follows:

1. West Benefit District. The West Benefit District is defined as all unincorporated Adams County west of Schumaker Road. The fees for this service area are calculated using a cost per service unit method.
2. East Benefit District. The East Benefit District is defined as all unincorporated Adams County east of Schumaker Road. The fees for this service area are calculated using a plan-based approach..

B. **Trust Fund**. There is hereby established the Adams County Road Impact Fee Trust Fund for the purpose of ensuring the fees collected pursuant to this Division are designated for the accommodation of impacts reasonably attributable to the proposed Traffic-Generating Development.

1. Proceeds collected for the road impact fee shall be placed in the Road Impact Fee Trust Fund. Proceeds collected and all interest accrued on such funds shall be used solely for capital road improvements that expand capacity or provide new facilities necessary to service Traffic-Generating Development, which improvements are located on the County's major road system within the applicable Road Benefit District from which the fees have been collected. Impact fee revenues shall not be used to correct existing deficiencies, to fund routine maintenance or operations, or to replace existing capacity unrelated to new development.
2. Any proceeds in the Road Impact Fee Trust Fund not immediately necessary for expenditure, shall be invested in interest-bearing assets. All income derived from these investments shall be retained in the trust fund.
3. Each year, at the time the annual budget is reviewed, the Impact Fee Administrator shall propose appropriations to be spent from the Road Impact Fee Trust Fund to the Board of County Commissioners. After review of the Impact Fee Administrator's recommendation, the Board of County Commissioners shall either approve or modify the recommended expenditures of the trust fund monies. Any amounts not appropriated from the trust fund together with any interest earnings shall be carried over in the specific trust account to the following fiscal period.
4. The Road Impact Fee Trust Fund shall be separately accounted for by Road Benefit District, and all revenues, interest earnings, and expenditures shall be tracked and maintained on a district-specific basis.
5. The County shall maintain and make available as a public record an annual accounting of the Road Impact Fee Trust Fund, which shall identify, at a minimum, for each Road Benefit District:
    a. The beginning fund balance;
    b. Impact fees collected during the fiscal year;
    c. Interest earned;

d. Expenditures made, including the specific capital improvements funded;

e. The ending fund balance; and

f. The status of planned or programmed capital improvements for which fees have been collected.

## 4-07-06 Refunds

A. **General.** Any fees collected shall be returned to the fee payer or the successor to the fee payer if the fees have not been spent within seven years from the date the Building Permit for the development was issued. However, the Board of County Commissioners may by resolution extend for up to three years the date at which fees must be refunded. Such an extension shall be made upon a finding that specific road capital improvements on the County's major road system are planned within such three-year period. These road capital improvements shall be constructed within the next three years and shall be reasonably attributable to the Traffic-Generating Development of the fee payer. The first fee collected shall be the first fee spent within the applicable Road Benefit District.

B. **Refund Procedure**. The refund of fees shall be undertaken through the following process:

1. A Refund Application shall be submitted within one year following the end of the seventh year from the date on which the Building Permit was issued on the proposed development. If the time of refund has been extended pursuant to subsection (A), *General*, above, the Refund Application shall be submitted within one year following the end of this extension. The Refund Application shall include the following information:

   a. A copy of the dated receipt issued for payment of the fee;

   b. A copy of the Building Permit; and

   c. Evidence the applicant is the successor in interest to the fee payer.

2. Within 15 days of receipt of the Refund Application, the Impact Fee Administrator shall determine if it is complete. If the Impact Fee Administrator determines the application is not complete, a written statement specifying the deficiencies shall be forwarded by mail to the person submitting the application. Unless the deficiencies are corrected, the Impact Fee Administrator shall take no further action on the Refund Application.

3. When the Impact Fee Administrator determines the Refund Application is complete, it shall be reviewed within 20 days, and shall be approved if it is determined the fee payer or a successor in interest has paid a fee which the County has not spent within the period of time required under this Section.

C. **Appeal**. Any fee payer or a successor in interest may appeal the decision of a Refund Application by filing a petition with the Board of County Commissioners within 30 days of the decision. In reviewing the Impact Fee Administrator's decision, the Board of County Commissioners shall use the standards established in Sec. 4-07-04(D), *Appeal of Credit Decision*.

## 4-07-07 Review Every 10 Years

A. **Periodic Review**. The County's most recent road impact fee study and this Division shall be reviewed and evaluated by the Impact Fee Administrator at least once every 10 years, to determine if modifications need to be made.

B. **[RESERVED]**

# CHAPTER 5 SUBDIVISION STANDARDS

**Contents:**

Div. 5-01 Purpose and Applicability
Div. 5-02 General Development Improvements and Dedications Required for Platting
Div. 5-03 Subdivision Design Standards
Div. 5-04 Subdivision Improvements
Div. 5-05 Land Dedication Standards

## Div. 5-01 Purpose and Applicability

### 5-01-01 Purpose

The purpose of this Chapter is to provide uniform and consistent standards, which are to be met in the design and construction of subdivisions in unincorporated Adams County. Also addressed is the proper procedure for entering into improvements agreements and the securing of collateral to guarantee required public and private improvements.

### 5-01-02 Applicability

A. **Jurisdiction**. This Chapter shall apply to all subdivisions within unincorporated Adams County.

B. **Illegal Subdivisions**. Any division of a lot, tract, or parcel of land completed on or after May 5, 1972 without following the standards and procedures of this DSR or its predecessor documents shall be considered illegal.

C. **Exemptions**.

1. *Statutory and Other Exemptions*. The terms “subdivision” or “subdivided land” shall not apply to any division of land that:

   a. Creates parcels of land each of which comprises 35 or more acres of land and none of which is intended for use by multiple owners;

   b. Creates parcels of land, such that the land area of each of the parcels, when divided by the number of interests in any such parcel, results in 35 or more acres per interest;

   c. Could be created by any court in this state pursuant to the law of eminent domain, or by operation of law, or by order of any court in this state if the Board of County Commissioners is given timely notice of any such pending action by the court and given opportunity to join as a party in interest in such proceeding for the purpose of raising the issue of evasion of this DSR prior to entry of the court order;

   d. Is created by a lien, mortgage, deed of trust, or any other security instrument;

   e. Is created by a security or unit of interest in any investment trust regulated under the laws of this state or any other interest in an investment entity;

   f. Creates cemetery lots;

g. Creates an interest in oil, gas, minerals, or water which is severed from the surface ownership of real property;

h. Is created by the acquisition of an interest in land in the name of a husband and wife or other persons in joint tenancy or as tenants in common, and any such interest shall be deemed for purposes of this subsection (1) as only one interest;

i. Is created by the combination of contiguous parcels of land into one larger parcel. If the resulting parcel is less than 35 acres in land area, only one interest in said land shall be allowed. If the resulting parcel is greater than 35 acres in land area, such land area, divided by the number of interests in the resulting parcel, must result in 35 or more acres per interest. Easements and rights-of-way shall not be considered interests for purposes of this subparagraph (i);

j. Is created by a contract concerning the sale of land which is contingent upon the purchaser's obtaining approval to subdivide, pursuant to this DSR, the land which the purchaser is to acquire pursuant to the contract;

k. Creates a cluster development pursuant to C.R.S. § 30-28-401 *et seq*.;

l. Creates or conveys only easements and rights-of-way; or

m. Creates a parcel of land for public ownership or infrastructure purposes of the United States, the State of Colorado, a county, a municipality, or a special district, unless the transfer is an attempt to avoid the objectives of subdivision review and approval as determined by the Director of Community and Economic Development.

As used in this subsection (1), "interests" includes any and all interests in the surface of land but excludes any and all subsurface interests.

2. *Exemptions by BoCC Resolution per Sec. 13-06-01.* The Board of County Commissioners may by resolution, pursuant to Sec. 13-06-01, exempt any division of land from the definition of the terms "subdivision" and "subdivided land."

## 5-01-03 General Requirements

A. **Approval**. No plat of a subdivision shall be approved by unless it conforms to the provisions of the standards regulations this Chapter.

B. **Approval Required Prior to Filing**. All subdivisions within the County shall be filed and recorded in the Adams County Office of the Clerk and Recorder. Subdivision plats may only be filed after having been approved by the development review body that takes final action in 13-01-12, *Development Review Summary Table*. Approval shall be evidenced by the signature of the Chair of the Board of County Commissioners or Director of Community and Economic Development, as appropriate, on the face of the plat. The Chair or Director shall only sign a plat that has:

1. Been approved by the appropriate development review body pursuant to the procedures established by these standards and regulations; and

2. Has met all the conditions for approval.

# Div. 5-02 General Development Improvements and Dedications Required For Platting

## 5-02-01 Plat Notes Required

The County will require specific plat notes to be included on the Final Plat, or any other plat to be recorded, prior to recording.

## 5-02-02 Approved Plans Required

No improvements shall be made to a subdivision until all required plans, profiles and specifications, including reproducible mylar prints or other formats acceptable to the Director of Community and Economic Development for the improvements, have been submitted to and approved by the Director.

## 5-02-03 Construction Phasing

No portion or phase of a subdivision will be granted Preliminary Acceptance until all items identified in the Improvements Agreement have been completed. The Director of Community and Economic Development shall not permit construction phasing for the purposes of partial acceptance. If the subdivider desires to improve smaller portions of the subdivision, they shall be submitted for review and recorded as individual phased filings.

## 5-02-04 Improvements Agreements ("IA")

A. **Generally**. At the time the plans, profiles, and specifications are approved by the Director of Community and Economic Development and prior to the approval of the final plat, the subdivider shall prepare an agreement providing for the installation of all improvements in the subdivision required by this DSR consistent with the then-current Improvements Agreement template prepared by the County. The agreement shall be in form and substance acceptable to the County Attorney, and executed by the subdivider, committing the subdivider to the construction of the required improvements within the subdivision and providing financial guarantees for the completion of those improvement, both those improvements that will become County-owned and maintained and those that will not be but that are required to be completed as part of the subdivision, including, but not limited to, roads, bridges, sidewalks, drainage, water, sewer, utilities, landscaping, buffering, noise mitigation, and right-of-way monumentation. The agreement shall address, at a minimum, the following:

1. the type and amount of financial guarantee required that is adequate for the County to complete the improvement obligations if the subdivider fails to do so, plus an additional 20% to cover administration and an additional 5% per year for the term of the Improvements Agreement to cover inflation;
2. timing and completion deadlines;
3. subdivider's submittal of as-built plans and required professional engineer certifications of all improvements, including such plans in a format suitable for input into the County's GIS system for all public improvements and drainage components;
4. inspection and acceptance procedures;
5. maintenance and warranty obligations of the subdivider, including the guarantee by the subdivider of the quality of materials and workmanship of all public improvements for at least one year after Preliminary Acceptance is granted by the Director of Public Works;

6. the release of the financial guarantee in phases to guarantee quality of materials and workmanship and maintenance of the improvements until their final completion;
7. default and enforcement provisions;
8. the extent to which the County is to participate in the cost of constructing any public improvements, including, without limitation, collector or arterial roads;
9. requirement that the subdivider fully account to the County for all costs incurred in the construction of any public improvement in which the County is participating; and
10. access to by the County to the books and records of the subdivider relating to the improvements at all reasonable times for the purpose of auditing or verifying such costs.

B. **Assignment or Transfer**. No Improvements Agreement, and no obligations under the agreement, may be assigned, transferred, or assumed as a result of the sale or conveyance of property, without the prior written approval of the County. Prior to any such approval, the County shall have the authority to review and determine the financial capacity, technical qualifications, and ability of the proposed successor entity to complete the required subdivision improvements and to operate and maintain such improvements in a safe and compliant manner, as applicable. Until such approval is granted and all required documents are executed, the original subdivider or obligor shall remain fully responsible for all obligations under the agreement.

C. **Recordation**. The applicable development review body shall not approve a plat requiring an Improvements Agreement, and no such plat shall be recorded, until the Improvements Agreement has been fully approved by the Board of County Commissioners and executed.

D. **Fair Share Reimbursement**.

1. *Generally*. A subdivider is entitled to fair-share reimbursement of the cost of any streets and related facilities, storm drainage facilities, and other improvements the County requires the subdivider to construct adjacent to or outside the subdivision.
2. *Reimbursement Process.* The cost for reimbursement shall be as follows:
   a. The original subdivider shall include reimbursement as a line item on the Improvements Agreement at the time of subdivision. Said line item shall include a cost breakdown of the off-site improvements intended for reimbursement, subject to:
      (1) The off-site improvements included in the reimbursement agreement may be granted credits for Road Impact Fees, but if a credit is granted, reimbursement shall be limited to the amount of the fee credit.
      (2) All cost estimates shall be provided by the developer and shall be subject to review by the Department of Public Works.
      (3) The reimbursement period shall not exceed fifteen years from the date of completion of an improvement and may be less than fifteen years based on a recommendation from the Department of Public Works.
      (4) No interest shall be paid on the amount to be reimbursed and the cost estimates shall not be adjusted for inflation if the reimbursement occurs in a future year; and
      (5) All reimbursement agreements shall be subject to approval of the Board of County Commissioners.
   b. The Improvements Agreement shall be a recorded document, and notice shall be provided to those owners of property that are adjacent to or have presumed use of the improvements by the applicant.

c. Any such reimbursable costs shall be paid to the subdivider, by the owner or owners of property that is adjacent to or has presumed use of the improvements when that property is developed, subject to:

(1) The owner(s) of the property that benefits (beneficiary) from the improvements shall enter into an Improvements Agreement with Adams County at the time of a submittal of a development application. The beneficiary (property owner(s)) shall be responsible for reimbursement if the original owner who entered into the agreement sells the affected property. The Improvements Agreement shall be recorded with the Adams County Clerk and Recorder by the applicant and shall encumber all future property owner(s). Any transfer or assumption of reimbursement obligations by a successor owner or beneficiary shall be subject to prior County approval following a determination by the County that the successor has adequate financial capacity and technical ability to satisfy the obligations of the Improvements Agreement.

(2) The beneficiary shall have one year to reimburse the subdivider that constructed the improvements after final approval of the development as determined by the County.

(A) An annual inflation amount not to exceed 5% may be included in the Improvements Agreement with the beneficiary;

(B) Published and/or written notice shall be provided to all beneficiaries of the existence of the reimbursement agreement by the applicant; and

(C) All reimbursement agreements shall be subject to approval of the Board of County Commissioners.

## 5-02-05 Public Improvements Acceptance

A. **Preliminary Acceptance**. After all items required by the Improvements Agreement have been satisfactorily completed, the subdivider may request that Preliminary Acceptance be granted by the Director of Public Works. Upon issuance of Preliminary Acceptance, the subdivider shall begin the one-year guaranty period. During this period, the subdivider shall be responsible for all maintenance and repairs to the public improvements. Failure by the subdivider to maintain and repair the improvements during this period shall be cause for the Director of Public Works to extend the guaranty period until such work is completed.

B. **Final Acceptance**. All repairs or replacements of failed materials, specifications or workmanship shall be satisfactorily completed before the Director of Public Works recommends final acceptance of the public improvements to the Board of County Commissioners. The Board of County Commissioners shall grant final acceptance of the public improvements and release of all collateral.

## 5-02-06 Required Improvements Before Building Permit Issuance

The following improvements shall be required, completed, and have Preliminary Acceptance granted by the Public Works Director in accordance with this Chapter and the Improvements Agreement prior to issuance of a Building Permit for construction of residential, mixed-use, commercial, or industrial structures, unless otherwise specifically approved in writing by the Board of County Commissioners:

A. **Sanitary Sewer**. The Developer shall provide for and construct adequate lines and stubs to each lot in accordance with the design and construction standards of the applicable utility provider.

B. **Water Mains**. The Developer shall provide for and construct adequate mains and stubs to each lot in accordance with the design and construction standards of the applicable utility provider.

C. **Fire Hydrants.** The Developer shall provide for and construct adequate fire hydrants in accordance with the design and construction standards of the applicable fire protection district.

D. **Stormwater drainage.** The Developer shall provide for and construct all stormwater drainage needed to serve the subdivision in accordance with this DSR and the approved plans for the subdivision.

E. **Roads.** The Developer shall provide for and construct all roads needed to serve the subdivision in accordance with this DSR and the approved plans for the subdivision.

## 5-02-07 Required Improvements Prior to the Issuance of Certificate of Occupancy

The following improvements shall be required, completed, prior to issuance of Certificate of Occupancy for residential, mixed-use, commercial, or industrial structures:

A. **Survey monuments**.

B. **Utilities (including communications, electric power, gas, water, sewer)**. The Developer shall provide for and construct all utilities needed to serve the structure for which a Certificate of Occupancy is sought in accordance with 5-04-05, *Utilities*.

# Div. 5-03 Subdivision Design Standards

## 5-03-01 Planning and Design Standards

A. **Design to Consider Comprehensive Plans, Zoning and the Area's Character**. In designing and planning subdivisions, consideration shall be given to the Adams County Comprehensive Plan, any applicable municipal Comprehensive Plans, the zoning of the property, general character of the area, general requirements of the community and the particular requirements of the neighborhood.

B. **Design to be Compatible With Adjacent Land Uses**. The design and development of subdivisions shall be compatible with adjacent land uses. Compatibility is achieved when adjacent land uses differing in function, scale, and/or intensity do not create adverse effects upon one another. In areas where different uses abut, a variety of measures may be employed to ensure compatibility, including the use of adequate setbacks, landscaping, barriers or transitions, and building height considerations.

C. **Design to Preserve Natural Areas**. The design and development of subdivisions shall preserve, insofar as it is possible, the natural terrain, natural drainage, existing topsoil, trees, wildlife habitat and fisheries. When these natural areas are disturbed by development, mitigation may be required to compensate for these losses.

D. **Hazardous Conditions to be Avoided or Eliminated**. Land subject to hazardous conditions such as landslides, mud or debris flows, flooding, subsidence, shallow water tables, geologic hazards, open quarries, floods, and non-potable water supply shall be identified and shall not be

subdivided until the hazards have been eliminated or will be eliminated by the subdivision construction plans. In the case of new developments to be located downstream of existing or proposed dams, the plans shall comply with the latest edition of the Rules and Regulations for Dam Safety and Dam Construction (Rules) of the Office of the State Engineer. Specifically, no occupied structures shall be placed in the area defined by the Dam Failure Inundation Map prepared in accordance with the Rules.

E. **Design to Mitigate Noise Impacts of Roadways and Railroads**. Noise abatement barriers for sound attenuation purposes may be required for residential developments adjacent to freeways, highways, tollways, railroads, or other heavily traveled transportation corridors where noise levels exceed 60dBA or are anticipated to exceed 60dBA over the life of the project and shall be required where the development fronts a principal arterial road or highways as defined in the Adams County Comprehensive Plan. Generally, noise barriers shall be constructed according to current Colorado Department of Transportation standards except as specifically modified by the standards below.

1. *Noise Barriers Installed Prior to Platting.* Noise barriers shall be installed prior to issuance of any Building Permits for residential, commercial, or industrial structures. An Improvements Agreement and appropriate collateral shall be required to cover the costs of any required noise barriers prior to platting.
2. *Barriers Required in Certain Circumstances.* Noise barriers shall be required in all cases where the nearest residential lot line within a subdivision is located within 100 feet of a highway or principal arterial road as defined in the Adams County Comprehensive Plan. A bermed landscape area may be used as an alternative to a barrier where the nearest residential lot line within a subdivision is located no closer than 75 feet of a highway or arterial road.
3. *Construction Standards When Berms Used as an Alternative to Walls.* Berms shall not exceed a 3:1 slope, be constructed to 80% of the height of any required barrier walls, and be placed in a manner consistent with the placement of barrier walls.
4. *Barrier Walls and Berm Construction Standards.* In constructing a barrier wall the following standards shall be applied:
   a. *Residential Development at the Same Elevation as the Road Surface*. The barriers shall be setback a maximum of 15 feet from the right of way line. The barrier shall be designed and constructed to break the line-of-sight from the roadway to all residential lots located within 150 feet of the highway or principal arterial. Barrier height shall be established based on this line-of-sight requirement and the setback. Barriers shall generally be constructed to a height of eight feet above the residential lot and roadway elevation. However, in no case shall a barrier exceed 12 feet in height. Where barriers must exceed 10 feet to obstruct the view of an existing highway or arterial road, berms and vegetation shall be incorporated into the design to provide additional mitigation and reduce the apparent height of the barrier.
   b. *Residential Development Below the Road Surface*. The barriers shall be setback a maximum of 15 feet from the right-of-way line. The barrier shall be designed and constructed to break the line-of-sight from the roadway to all residential lots located within 150 feet of the highway or arterial. Barrier height shall be established based on this line-of-sight requirement and the setback. Barriers shall generally be constructed to a height of six feet above the residential lot line. However, in no case shall a barrier exceed 12 feet in height. Where barriers must exceed 10 feet to obstruct the view of

an existing highway or arterial road, berms and vegetation shall be incorporated into the design to provide additional mitigation and reduce the apparent height of the barrier.

c. *Residential Development Above the Road Surface*. The barriers shall be setback a maximum of 25 feet from the right-of-way line. The barrier shall be designed and constructed to break the line-of-sight from the roadway to all residential lots located within 150 feet of the highway or arterial road. Barrier height shall be established based on this line-of-sight requirement and the setback. Barriers shall generally be constructed to a height of eight feet above the road surface. However, in no case shall a barrier exceed 10 feet in height. Where barriers must exceed 10 feet to obstruct the view of an existing highway or arterial road, berms and vegetation shall be incorporated into the design to provide additional mitigation and reduce the apparent height of the barrier.

5. *Barrier Wall Materials.* The barrier shall be constructed of materials that match the architecture of the buildings associated with the barrier. Brick, stone, or other masonry units shall be used for fence columns or walls to add permanence and structure to site development. All barriers shall be composed of durable materials and be maintenance-free or require minimal maintenance. Wood privacy fences and railroad tie barriers are prohibited. Generally, barriers shall be constructed of materials with an A-weighted transmission loss of at least 25 dBA. Some materials meeting these specifications include masonry sandstone or concrete-fabricated sandstone (4-6” thick), brick (4-6” thick), concrete with a masonry finish (4-6” thick), stucco on metal lath (1” thick, 4” frame), or solid wood (4” thick).

6. *Barrier Wall Openings.* Openings in the barrier or reduction in the height of the barrier is encouraged as a means of framing and maintaining views of the mountains and residential neighborhood. Barrier openings are also encouraged to facilitate convenient access to transit stops and to provide continuity of bike or pedestrian trails as an alternative means of transportation. However, openings diminish the effectiveness of barriers. Therefore, openings shall be coordinated so as to occur where the development has incorporated setbacks to residential lot lines greater than 150 feet. No continuous section of a barrier shall exceed 500 feet in length. Where breaks in barriers are provided for fire or emergency access or pedestrian access, barrier walls shall be offset by 2.5 times the width of the opening.

7. *Consistency Of Barrier Wall Design*. Barriers shall be constructed of similar designs and materials along each arterial or highway. Once a barrier wall design has been established along an arterial road or highway, said barrier wall design shall be utilized by all subsequent developments along the arterial road or state highway unless an alternative design is approved by the Board of County Commissioners.

F. **Design to Not Encroach into Floodplains**.

1. *100-Year Flood*. No developable lots shall be subject to inundation by a 100-year (1% frequency) flood unless an acceptable plan is submitted to alleviate the flooding condition. Portions of a lot which are inundated by a 100-year (1% frequency) flood may be platted as easements or undevelopable tracts. All developable lots affected by a 100-year flood shall meet the minimum zone district requirements. Land subject to flooding or within a designated 100-year floodplain shall be set aside for uses which will not aggravate the danger of flooding, will not be endangered by flooding, and will not endanger the

general health, safety or welfare of the community. Drainage easements for streams and building setbacks from centerlines of streams may be established by the Board of County Commissioners where calculation of a 1% frequency flood event is not practical and/or where the historic high water elevations cannot be ascertained. Building setback distances and width of drainage easements may be based upon a recommendation of the Director of Public Works.

2. *Floodplain Overlay District*. Where any portion of a developable lot in a proposed subdivision is located within the Floodplain Overlay District, each lot shall be shown to have adequate land area within it for the type of development allowed by the underlying zone district as constrained by the requirements of the Floodplain Overlay District standards and regulations. In addition, base flood elevation data shall be provided for all subdivision proposals where any portion of the subdivision is located within the Floodplain Overlay District.

G. **Design to Avoid High Groundwater**. Any lands subject to high groundwater (meaning groundwater at an elevation such that basement flooding is reasonably anticipated) shall not be platted for buildable lots with basements unless adequate provisions to prevent groundwater from entering basements have been designed. The design must be completed by a Colorado licensed professional engineer, and included with Building Permit applications.

H. **Designed to be Protected from Water Hazards**. If a subdivision includes a water hazard such as an irrigation canal, water body or other water channel, necessary design precautions shall be taken to minimize any hazard to life or property, and additional measures such as fencing, water depth indicators, and erection of warning signs shall be taken, to the extent reasonably feasible. Construction of utility improvements shall not be allowed within a water hazard. All measures shall be approved by the Director of Public Works in consultation with the owner/operator of the water body, if any.

## 5-03-02 Lot Design Standards

A. **Lot Configuration To Be Appropriate For Development Type**. The lot size, width, depth, shape, and orientation shall be appropriate for the location of the subdivision, for the type of development and use contemplated and for future resubdivision, where appropriate. A lot shall be judged to be configured appropriately if the lot is capable of being used for the intended use in consideration of the zoning and all design and performance standards established by these standards and regulations.

B. **Lot Dimensions To Conform To Zoning**. Lot dimensions shall conform to the requirements of the zone district in which the property is located.

C. **Appropriate For Development**. All lots shall be capable of being lawfully developed in accordance with these standards and regulations except for lots to be maintained as open or amenity space or other Adams County approved purposes. No subdivision shall create lots physically unsuitable for improvement due to steepness, size, shape, location of watercourses, problems of sewage disposal, drainage, driveway grades, or other natural physical conditions.

D. **Lots Using On-Site Wastewater Treatment Systems**. Where on-site wastewater treatment systems are being used or proposed, individual lot sizes and shapes must exhibit appropriate dimensions. All lots shall be approved by the Adams County Health Department for on-site wastewater treatment systems prior to platting.

E. **Lots To Have Sufficient Depth And Width**. The depth and width of lots shall be adequate to provide for off-road service and parking facilities required by the type of use and development contemplated.

F. **Lot Depth To Width Ratio**. No lot shall have an average depth greater than three times the average width unless the lot width is a minimum of 425 feet.

G. **Corner Lots To Be Wider**. Corner lots intended for residential use shall have extra width to accommodate the required structure setbacks from both roads.

H. **Lot Configuration**. Table 5-03-02-1, *Lot Configurations*, illustrates the various types of lot configurations.

1. *Double Fronting Lots*. Lots with double frontage shall be avoided. Double frontage lots shall be permitted in rural areas where the lot size is five acres or greater. Access for double fronting lots shall be taken from interior subdivision roads, not perimeter collectors or arterials.

2. *Flag Lots*.

   a. Front and side setbacks for flag lots shall be measured at the base of the pole and not at the street frontage.

   b. The minimum width of the pole of any flag lot shall be 30 feet or be consistent with the minimum width requirements of the particular zone district. The maximum depth of the pole shall be 600 feet. Lots shall be required to share access where inadequate frontage exists for multiple accesses to be provided (See access design standards for specific access control standards).

   c. In addition, no flag lot shall be approved where the flag lot is being used as a means of avoiding the construction of public roads, emergency access or the extension of utilities.

   d. Flag lots shall be allowed in all zone districts but shall only be used where all other subdivision alternatives are impractical. If a reasonable development alternative exists, flag lots shall not be utilized even though their use might allow more lots to be created than other alternatives.

3. *Wedge- Shaped Lots.* In the case of irregular or wedge-shaped lots, no lot shall be less than 30 feet in width at the front property line or meet the required minimum lot width of the pertinent zone district. In all cases where a wedge-shaped lot fronts a highway, arterial, or collector, only one access shall be approved for every 200 feet of road frontage. Lots shall be required to share access where inadequate frontage exists for multiple accesses to be provided (See access design standards for specific access control standards).

4. *Lots Not Divided by Roads or Lots*. No single lot shall be divided by a road, alley, or other lot.

5. *Side Lot Lines.* Side lot lines shall be substantially at right angles or radial to road right of way lines or road centerlines.

| Configuration | Illustration |
| **Side Lot Lines** | |

E. **Access to Lots by Public**. All lots created by a subdivision of land shall front and have access on a dedicated, constructed and maintained public or private road improved to the specifications required by these standards and regulations.

F. **Access to Lots By Private Roads**.

1. *Waiver*. If the Board of County Commissioners finds the most logical development of land requires lots be created which front and are accessed by a private road or other means of access, the Board of County Commissioners shall make written findings supporting the use of private roads in the form of a Waiver from these standards and regulations, in accordance with 13-07-05, *Waiver from Subdivision Design Standards*. Private roads, if approved, shall be constructed and maintained by the property owners. Provisions shall be made to guarantee the roads are maintained for the life of the development through mechanisms approved by the Board of County Commissioners. A maintenance plan shall be submitted as part of the development process.
2. *Intersections*. The use of private roads will not be permitted at intersections with public roads if the geometric design of the private road can create a road safety hazard. In addition, intersections of public and private roads shall conform to the Chapter 7, *Access Management and Traffic Requirements*.
3. *Emergency Access*. Private roads shall be designed to allow for access of emergency vehicles. This includes, but is not limited to, geometric design of the road to allow for adequate clearance of emergency vehicles, and the use of road construction materials that are able to support these vehicles. Proposed designs for private roads shall be submitted to the appropriate fire district for approval prior to completion of review by the Director of Community and Economic Development.

# 5-03-03 Drainage Design Standards

A. **Maintain Drainage Channels**. All new and existing drainage channels shall be designed using the Urban Storm Drainage Criteria Manual, Volumes 1 and 2. Refer to Sec. 2-04-02 *Amenity Space Standards*, for amenity and recreation standards for drainage channels.

B. **Infiltration Preferred**. Whenever feasible, drainage systems shall be designed and constructed to infiltrate stormwater by using vegetated surface conveyance and storage systems, rather than storm sewers. Some nonstructural control techniques that shall be considered include:

1. Limiting land disturbance and grading;
2. Maintaining vegetated buffers and natural vegetation;
3. Minimizing impervious surfaces;
4. Use of terraces, contoured landscapes, runoff spreaders, grass or rock-lined waterways; and
5. Use of recharge basins, seepage pits, dry wells, seepage beds, porous pavement or Dutch drains.

C. **Regional Drainage Needs**. Drainage systems shall be approached in a regional context that accounts for runoff from upstream tributary areas and protects downstream infrastructure. A regional drainage strategy that considers natural onsite drainage, percolation, open channeling, and groundwater recharge is recommended. Natural overland flows, open channels, swales, and large ponds are viewed as important drainage control elements, that also mitigate pollution, soil erosion, and provide open space and trails used for recreation. Storm sewers and flood control structures shall be used only where the natural drainage system is inadequate to handle urban runoff.

D. **Drainage System Provide Water Quality Protection**. The drainage system shall be designed to minimize property damage from storm-related runoff, while at the same time protecting downstream water quality.

E. **Drainage System to be Maintained**.

1. *Ownership and Maintenance*. All drainage improvements shall be owned and maintained by the owner or an association of owners within the subdivision unless the ownership and maintenance obligation is specifically accepted by a public agency which agrees to maintain the drainage improvements and any buildings, structures or other improvements which have been placed on it.
2. *Maintenance Plan*. A drainage facility maintenance plan shall be submitted and approved as part of the subdivision process. The maintenance plan shall meet the rules detailed in the Adams County Engineering Design and Construction Standards and Specifications. The maintenance plan shall utilize a County-approved enforcement framework for failure to maintain the drainage system to the standards identified within the maintenance plan. The enforcement mechanism shall include penalties and reimbursement mechanisms to cover the costs of enforcement or maintenance for failure to maintain the system. The enforcement mechanism shall be approved by the County Attorney prior to platting. The maintenance plan shall take the general form outlined in Chapter 4.

F. **Drainage System to be Designed and Built to County Standards**. All storm drainage and erosion control plans shall meet the rules detailed in the Adams County Engineering Design and Construction Standards and Specifications. Storm drainage and erosion control systems shall be approved by the Director of Public Works prior to platting. All storm drainage shall conform to adopted basin master plans.

G. **Accessibility to Drainage Systems.** All drainage systems shall provide for reasonable accessibility to allow for maintenance of drainage facilities. Access shall be approved by the Director of Public Works prior to platting.

H. **Utilization of Irrigation Ditches for Stormwater.**

1. Utilization of irrigation ditches for stormwater discharge is discouraged. Any subdivider who proposes to utilize existing irrigation ditches as a means of collecting and conveying stormwater runoff shall submit a written agreement from the irrigation company to utilize their irrigation ditches as a collection and conveyance system. The agreement shall guarantee a perpetual right to discharge the specified volume to the irrigation company's irrigation water collection and conveyance system.
2. When developing a drainage plan that utilizes irrigation ditches to collect and convey stormwater, the entire irrigation system shall be analyzed to determine the impacts of the proposed stormwater discharges. No discharge to irrigation ditches shall be permitted to increase the potential flooding to any area downstream of the site.
3. The drainage agreement shall be approved by the County Attorney prior to platting. The drainage plan shall be approved by the Director of Community and Economic Development prior to platting.

# 5-03-04 [Reserved]

# 5-03-05 Road Design Standards

A. **Road System**.

1. *Conformance with Transportation Plan*. The arrangement of roads shall conform to the Adams County Transportation Plan.
2. *Conformance with Engineering Standards*. Roadway design including geometric design, lane widths, cul-de-sacs and turnarounds, intersections, sidewalks, and driveways must adhere to the standards and specifications contained in the Adams County Engineering Design and Construction Standards and Specifications contained in these standards and regulations. All roadway designs shall be approved by the Director of Community and Economic Development prior to platting.
3. Road Hierarchy. Roads shall be classified in a road hierarchy system with design tailored to function. The road hierarchy system shall be defined by road function and average daily traffic (ADT) defined in the Adams County Engineering Design and Construction Standards and Specifications contained in these standards and regulations.
4. *Circulation System Design*.
   a. The circulation system shall be designed in relation to existing or planned roads to:
      (1) Permit safe, efficient, and orderly movement of traffic;
      (2) Minimize grading requirements;
      (3) Minimize erosion and provide for efficient and maintainable drainage and utility systems; and
      (4) Respect the natural features and topography.
   b. In residential subdivisions, the road system shall be designed to serve the needs of the neighborhood and to discourage high speeds and through traffic on local

residential roads, while still providing for the necessary movement of neighborhood automobiles, ample parking, and access by emergency vehicles. Collector roads shall be designed to afford easy access to arterial and other collector roads.

5. *External Road Connections.* Roads shall be designed and rights-of-way shall be platted to permit extension and connection between developments without requiring automobiles, bikes, and pedestrians to use highways or arterials, whenever possible. All necessary rights-of-way shall be provided at the time of platting.
   a. In order to promote connectivity to adjacent properties, every plat shall provide multiple access points, based on the number of units in the subdivision, as required by the Fire Code. Streets in a proposed subdivision must connect, where feasible, to existing streets in abutting platted subdivisions.
   b. Street patterns for estate and suburban developments may be of a radial design consisting of curvilinear streets, cul-de-sacs, and/or U-shaped streets.
   c. Street patterns in an more urban context shall consist of an interconnected grid network.
   d. Streets in a master planned or nonresidential setting may consist of a mix of such designs.
6. *Internal Connectivity*.
   a. Residential subdivisions with 10 or more dwelling units shall be designed in a manner to provide for multiple street connections to and between local destinations, such as parks, schools, and shopping, without requiring the use of arterial streets.
7. *Right-of-Way Dedications*.
   a. Rights-of-way are designed to accommodate roads, sidewalks, and bike trails in accordance with the Adams County Engineering Design and Construction Standards and Specifications.
   b. All new roads within a subdivision and new roads along the perimeter of a subdivision shall meet the minimum design standards established by these standards and regulations including the dedication of the appropriate public road right-of-way. All existing public roads within the subdivision and existing public roads adjacent to the perimeter of the subdivision shall be brought into conformance with the minimum design standards established by these standards and regulations including dedication of additional right-of-way. Where additional right-of-way is necessary to bring an existing road into conformance with these standards and regulations, the subdivider shall acquire the necessary right-of-way prior to approval of the subdivision.
   c. As an alternative to the acquisition of right-of-way by the subdivider, the subdivider may request the County's participation in the right-of-way acquisition either through the County's purchase or condemnation of the right-of-way. It shall be at the County's discretion to participate in the acquisition or condemnation of right-of-way, including the manner and timing of such acquisition. The developer will be required to reimburse the County for all costs associated with the right-of-way acquisition. Such costs include, but are not limited to, property purchase, project administration, appraisals, consultant fees, and legal expenses.
8. *Alignment of Roads*. To the greatest extent possible, alignments of collectors and local roads in sloping areas shall conform to the natural contours of the land.

B. **Road Access**. When a subdivision abuts a major roadway or railroad right-of-way, service roads parallel to and on each side of such right-of-way at a distance suitable for an appropriate use of the intervening land shall be provided.

C. **Dead-Ends**.

1. *Cul-de-Sac Roads*. Cul-de-sac roads that dead-end shall terminate in a cul-de-sac or approved turn-around meeting the Adams County Engineering Design and Construction Standards and Specifications.
2. *Stub Roads*. In order to ensure dead-end roads are not created, stub roads may be permitted when construction is phased over time only if the road, in its entirety, has been approved in the preliminary plan (plat). Roads which are planned to continue at some future date shall provide a temporary cul-de-sac or turn-around meeting the Adams County Engineering Design and Construction Standards and Specifications.

D. **Intersections**. No more than two roads shall intersect at one point. Intersections of local roads with arterial roads shall only be permitted where no other alternative exists. Offset intersections shall be avoided. All intersection separations shall meet the Adams County Engineering Design and Construction Standards and Specifications.

E. **Interim Cross Sections**. An interim cross section contains a lower level of street improvements compared to the final cross section (also known as ultimate cross section) classified in the Adams County Transportation Plan. The County may permit the construction of interim cross sections on a case-by-case basis.

F. **Traffic Calming**. New subdivisions shall be designed to mitigate potential problems associated with cut-through traffic and speeding through the use of neckdowns, traffic circles, or other "traffic-calming" techniques approved by the Director of Community and Economic Development and the local Fire District.

G. **Alleys**.

1. *Location*. Alleys may be required along the rear of certain lots in order to provide secondary access.
2. *Dead Ends*. Dead-end alleys shall be avoided where possible; but if unavoidable, dead-end alleys shall be provided with adequate turn-around facilities approved by the Director of Community and Economic Development and the local Fire District.
3. *Maintenance*. Alleys shall be maintained as determined by the County during Preliminary Plat review.
4. *Minimum Width*. The minimum right-of-way width for an alley shall be 20 feet and the minimum pavement width shall be 15 feet. Corners shall have a maximum turning radius of 20 feet to permit safe vehicular movement.
5. *Alley Intersections*. Alleys shall intersect other alleys and streets at right angles.

## 5-03-06 Pedestrian System and Access Design

A. **Sidewalks**.

1. *Generally*. Sidewalks and trails shall be designed in relationship to existing or planned sidewalks and trails to permit safe and convenient pedestrian travel throughout the neighborhood and between other neighborhoods, land uses, schools, and parks. Sidewalks shall be placed parallel to the road, with exceptions permitted to:
   a. Preserve natural features;

b. Provide visual interest;

c. Facilitate transit access; and

d. Provide connections to residential units and trails. Pathways and trails should be routed efficiently towards transit facilities.

2. *Location*. Sidewalks shall be provided on both sides of the street.

3. *Design and Grade*. Sidewalks shall provide a continuous circulation system and be designed to minimize conflicts among vehicles, pedestrians, and bicyclists. The design and grade of sidewalks and curb ramps shall be compliant with the Americans with Disabilities Act (ADA).

4. *Surfacing*. Sidewalks shall be surfaced with concrete according to Adams County Engineering Design and Construction Standards and Specifications.

B. **Trails**.

1. *Generally*. Off-street, shared-use trails shall be developed to link major attractions and destinations throughout the County, including the neighborhoods, parks, schools, libraries, employment centers, and shopping areas.

2. Easement.

a. The developer shall provide an easement for the construction of a trail.

b. The easement shall be a minimum of eight feet in width and the surface of the trail shall be a minimum of six feet in width.

c. The trail shall consist of a hard surface such as asphalt, concrete, or decomposed granite and shall be lit utilizing appropriate low and high-level lighting.

3. *Maintenance*. Trails shall be maintained as determined by the County during Preliminary Plat review.

C. **Pedestrian Access**.

1. *Generally*. The design of the roadway system and pedestrian system shall be integrated, in order to offer pedestrians convenient and safe access to parks, school, open space, shopping areas, and across roadway intersections.

2. *Pedestrian and Bicycle Access*. Except for subdivisions where all lots are greater than 10 acres, the developer shall provide the following pedestrian access easements across a maximum of two tiers of lots. A pedestrian access easement shall be a minimum of 10 feet in width and shall include an all-weather surface with a minimum width of five feet.

a. *Mid-Block Pedestrian Connections*. The developer shall provide mid-block connections in the form of a pedestrian access easement to bisect blocks greater than 600 feet in length, where such blocks abut an arterial or collector street. In addition, the developer shall provide such mid-block connections to establish linkages to future phases and to common facilities, such as parks, open areas, and uses listed in 3-02-03, *Public, Civic, and Institutional Use Categories*.

b. *Cul-de-Sac Turnaround Pedestrian Connections*. The developer shall provide a pedestrian access easement that connects the cul-de-sac turnaround to existing or proposed sidewalks, trails, public and civic uses, and other cul-de-sacs, as depicted in Figure 5-03-06-1, *Pedestrian Connections*.

3. The Director of Community and Economic Development may determine that construction of a separate access corridor is unnecessary or impractical. Such decision may result from a number of situations, including but not limited to:

a. The nature of abutting existing development makes construction of an access corridor impractical;

b. The access corridor would cross a natural area with significant natural habitat and construction would be incompatible with the protection of natural values; or

c. The access corridor would cross topography where slopes exceed 30% or where path grade would exceed 18% slope.

**Figure 5-03-06-1, Pedestrian Connections**

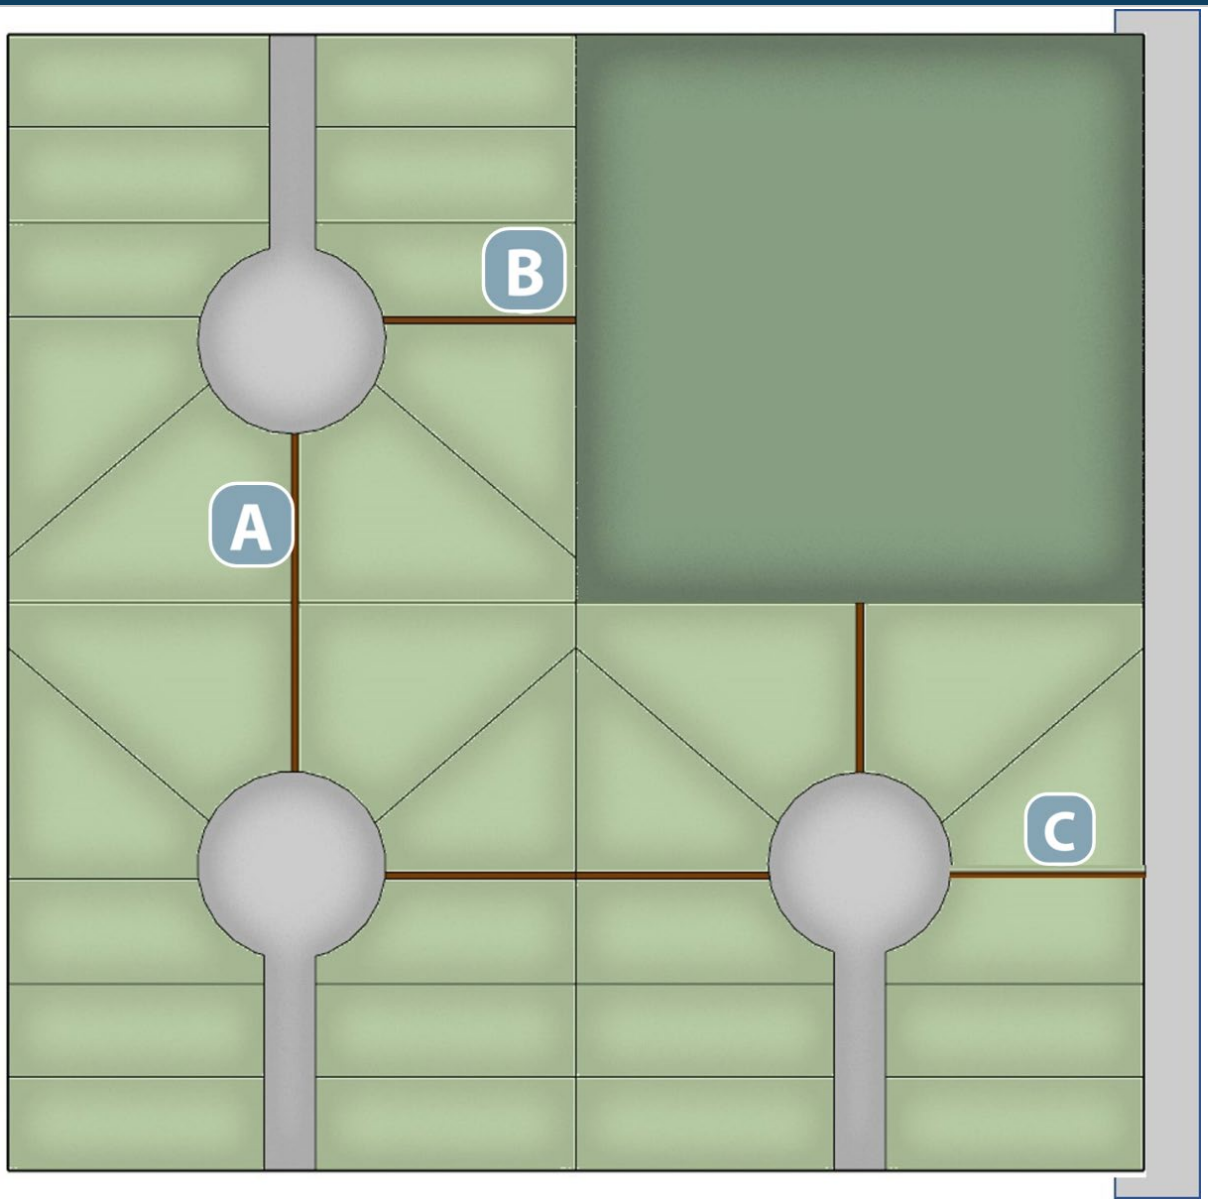

**FIGURE NOTES:**
A = Connection between Cul-de-Sacs | B = Connection to Future Phase | C = Mid-Block Connection to Arterial or Collector Street

D. **Bus Benches**. Bus benches, shelters, and turnouts shall be required for all existing and proposed bus stops adjacent to and within the site boundaries of a subdivision. Bus facilities and turnouts shall meet the requirements of the transit agency providing service and the Adams County Engineering Design and Construction Standards and Specifications. All bus related facilities in

new subdivisions shall be approved by the Director of Public Works. The County may participate in the construction of bus facilities and turnouts at the discretion of the Board of County Commissioners.

## 5-03-07 Parks and Open Space

A. **Public Open Space**. Public parkland dedication shall be made in accordance with Div. 5-05, *Land Dedication Standard*. Acceptance of lands shall be subject to review and approval by the County or any other agency to which land is to be dedicated through the Preliminary and Final Plat process established in Chapter 13, *Development Review Procedures*. If the County or other agency determines the land would not serve the public interest, the County shall require the open space to instead be private or require a payment in lieu of dedication. The County may not preclude utility construction within open space areas.

B. **Private Open Space**.

1. *Dedication*. In addition to the minimum public dedication for parks, open space, and recreational facilities, or where dedication is required but the County does not wish to assume ownership and maintenance responsibilities, private park and open space dedication shall be required. Maintenance of private open space area is the responsibility of the property owners or homeowners association.
2. *Maintenance Plan*. The subdivider shall submit an open space maintenance plan to the Director of Community and Economic Development and the plan must be approved prior to platting. The maintenance plan shall provide an enforcement mechanism for failure to maintain the open space to the standards identified within the maintenance plan. The enforcement mechanism shall include penalties and reimbursement mechanisms to cover the costs of enforcement or maintenance for failure to maintain the open space. The enforcement mechanism shall be approved by the County Attorney prior to platting. The County may not preclude utility construction within open space areas.

## 5-03-08 Location of Public Improvements and Infrastructure

A. **Location**. All public improvements and/or infrastructure shall be located on tract(s) that are denoted as unbuildable and are to be owned and maintained by a property owners or homeowners association. Tract(s) shall have common ownership by such association, as to not place the responsibility on any single property owner within the subdivision.

B. **Owners Association**.

1. *Generally*. Prior to recording the Final Plat of any subdivision utilizing tracts for public improvements or infrastructure, a property owners or homeowners association shall be created and in placed in accordance with 5-03-09, *Private Facilities and Owners Associations*. Public improvements and infrastructure can include, but are not limited to, drainage infrastructure, required landscaping, trails, and private roads.
2. *Maintenance*. In the event that proper maintenance is not being performed, the County has the authority to enter the property to perform required maintenance. All costs incurred by the County will then be assessed to the association of owners.

## 5-03-09 Private Facilities and Owners Associations

A. **Homeowners or Property Owners Association**. A homeowners association or a property owners association shall file all applicable community covenants and restrictions with the County Clerk at the time the Final Plat is filed.

B. **Private Utilities**.

1. *Generally*. Underground private utilities shall be located in dedicated easements or development tracts.
2. *Placement*. The placement and separation of utilities within a designated easement or development tract shall be as acceptable to the Director of Community and Economic Development.

C. **Private Streets**.

1. *Acting as Public Street*. Private streets shall be designated by plat and designed and constructed to the same requirements as a public street based on this Chapter and in conformance with Adams County Engineering Design and Construction Standards and Specifications.
2. *Maintenance*. Maintenance of private streets and private street signs shall be the responsibility of the homeowners or property owners association.

# Div. 5-04 Subdivision Improvements

## 5-04-01 General Provisions

The following Sections outline the subdivision improvements required for any subdivision approved in the County. The identified improvements shall be guaranteed by an Improvements Agreement, and shall be constructed at the expense of the subdivider prior to the issuance of any building permits for residential, commercial or industrial structures unless otherwise provided for in the Improvements Agreement.

## 5-04-02 Streets, Sidewalks, Bridges, and Alleys

A. **Roads**.

1. *General*. All road improvements, such as road pavement, grading, on and off-road parking, shoulders, curbs and curb cuts, turnarounds, and sidewalks, shall be made in conformance with the specifications and standards set forth in the Adams County Engineering Design and Construction Standards and Specifications, and with other specifications and standards approved by the Board of County Commissioners.
2. *Timing*. All roads shall be constructed prior to the issuance of a Building Permit. An Improvements Agreement and appropriate collateral shall be required for all road improvements.

B. **Paving, Curb & Gutter, and Sidewalk Requirements**.

1. *General Improvements*.
   a. All new developments, including one lot sites on one side of an existing or proposed road, shall improve and construct the perimeter roads to meet current Adams County Engineering Design Standards and Specifications.
   b. All new interior and perimeter roads shall be surfaced with asphalt or concrete. In residential or agricultural zoned subdivisions where average lot sizes are one acre or

less, except for Conservation Neighborhoods, all new interior and perimeter roads shall be surfaced with asphalt or concrete and shall be installed with curb/gutter and sidewalk.

c. Road intersections classified as collector or higher in urbanized areas shall be surfaced with concrete pavement extending a minimum of 70 feet in each direction from the centerline of the intersection. Intersections of local roads with roads classified as collector or higher may be paved with hot mix asphalt.

d. All local residential (excluding rural) and commercial/industrial cul-de-sacs shall be surfaced with asphalt or concrete pavement in the bubble area.

2. *Commercial and Industrial Improvements*. All commercial and industrial zoned lots must have curb/gutter and paving regardless of the size of the lots.

3. *Curb/Gutter and Sidewalks to be Installed*. All curb/gutter and sidewalks shall be constructed prior to the issuance of a Building Permit. An Improvements Agreement and appropriate collateral shall be required for all curb/gutter and sidewalk improvements.

4. *Waiver of Responsibility for Improvements*. Curb/gutter/sidewalk improvements may be waived by resolution of the Board of County Commissioners.

C. **Bridges**. Where existing bridges on public rights-of-way and adjacent to new developments do not meet the Adams County Engineering Design and Construction Standards and Specifications, the subdivider shall be responsible to widen, lengthen, replace or improve the bridge to meet the Adams County Engineering Design and Construction Standards and Specifications.

D. **Alleys**. Alleys shall meet the requirements of the Adams County Engineering Design and Construction Standards and Specifications.

E. **Traffic Control Devices, Lighting, and Signs**.

1. *Standards*. Traffic control devices, road name signs, traffic signs, lighting, signals, striping, and pedestrian crosswalks are to be provided in conformance with criteria contained in Adams County Engineering Design and Construction Standards and Specifications and approved by the Director of Public Works.

2. *Traffic Control Devices and Road Signs*. The County shall install all road signs and traffic control devices. The subdivider shall pay all costs associated with the installation of road signs and traffic control devices. All road sign and traffic control device costs shall be paid to the County prior to platting.

3. *Road Lighting*. Road lighting facilities shall be installed in all subdivisions except residential and agricultural subdivisions with average lot sizes greater than one acre. Light for safety shall be provided at intersections, between buildings, and in parking areas. Specific illumination guidelines for roads, parking, and pedestrian areas are set forth in the Adams County Engineering Design and Construction Standards and Specifications.

F. **Landscaping**.

1. *Timing.* Right-of-way landscaping, detention pond landscaping, and open space landscaping shall be installed prior to the issuance of a Building Permit. An Improvements Agreement and appropriate collateral shall be required for all landscaping improvements to be installed by the subdivider.

2. *Right-of Way Landscaping*. Right-of-way landscaping shall be installed along all arterial and collector roads within or abutting a subdivision. Unless the local road right-of-way landscaping is installed by the subdivider, the adjacent property owner is responsible for installation of the right-of-way area landscaping adjacent to their property along a local

road prior to final inspection and occupancy of any residential, commercial or industrial structures. An Improvements Agreement and appropriate collateral shall be required for all landscaping improvements to be installed by the subdivider.

3. *Plant Sizes*. The minimum caliper and height of trees and shrubs shall be as required in Sec. 4-04-09, *Maintenance and Installation*. Twenty percent of the trees shall be three-inch caliper deciduous or ornamental trees and eight-foot evergreens or larger. The caliper of all trees shall be measured at a point one foot above grade level.

## 5-04-03 Easements

A. **General**. Utility easements shall meet the requirements of the Adams County Engineering Design Standards and Specifications. They shall be designed in such a manner to avoid cross connections, minimize trenching, and adequately separate incompatible systems. New utility infrastructure shall be extended to the boundaries of the subdivision to provide access to adjoining property.

B. **Easement Location**.

1. *Location*. Easements shall be located so as to provide efficient installation and maintenance of utilities, drainage, vehicular and pedestrian access, emergency access, detention/retention facilities, water channels and flow courses, and fire protection purposes. The location of easements and the maintenance responsibility, where applicable, shall be shown on the plat. Utility easements shall be provided in accordance with the serving entity or applicable authority.

2. *Type of Easement*. Utility easements shall be identified for electric, natural gas, telephone, cable television, water, sewer, and drainage facilities prior to platting. Additional utility easements may be granted to the utility, public or private, as the development progresses and points of service are defined. Gas easements shall be located on private property immediately adjacent to all platted roadways.

C. **Utility Easement Standards**. All easements for the public utility companies for the installation and maintenance of utilities, including, but not limited to, electric lines, gas lines, telephone lines, water lines, and sewer lines, shall include the right to trim interfering trees and brush and a perpetual right of ingress and egress for installation, maintenance, and replacement of such lines. Utility easements shall not impair the purpose of drainage or access easements.

D. **Conservation Easements**.

1. *Permanent Preservation*. A conservation easement is required in order to permanently preserve common open space that makes up natural areas and greenways listed as amenity spaces in Table 2-04-02-1, *Amenity Space Types*.

2. *No Destructive Encroachment*. Other easements that may result in the disturbance of land shall not be permitted to encroach into a conservation easement, except that pedestrian access easements and non-destructive utility and drainage easements are permitted within areas protected by conservation easements.

3. *Responsible Party*. Conservation easements shall provide for permanent management and maintenance of the property by a responsible party, such as the County, a nonprofit land trust, or a homeowners or property owners association.

## 5-04-04 Fire Protection

Fire protection facilities shall be reviewed and approved by the appropriate Fire Protection District. All required fire improvements shall be constructed prior to the issuance of a Building Permit. An Improvements Agreement and appropriate collateral shall be required for all fire improvements.

## 5-04-05 Utilities

A. **Underground Installation.** All electric and communication utility lines and services, and all road lighting circuits, except as hereinafter provided, shall be installed underground, and road lighting shall be provided by means of the utilities standard ornamental facilities**.**

B. **Exceptions from Underground Utility Requirements.** Exceptions from underground utility requirements shall be the following:

1. Transformers, switching boxes, terminal boxes, meter cabinets, pedestals, ducts and other facilities necessary appurtenant to such underground and road lighting facilities may be placed above ground within the utility easement provided therefore, or within the road or other public place after plans for such facilities and location thereof, have been approved by the Director of Community and Economic Development .
2. All facilities reasonably necessary to connect underground facilities to existing or permitted overhead or aboveground facilities.
3. Overhead electric transmission and distribution feeder lines and overhead communication long-distance, trunk and feeder lines, existing or new utility facilities used or useful in serving the subdivision.

C. **Utilities Required to be Installed.** All utility mains and service laterals shall be installed within the right-of-way prior to completion of the public improvements. Public improvements will not be considered complete unless utility facilities are installed. No Building Permits for any residential, commercial, or industrial structures shall be issued until public improvements are considered complete. If the utilities cannot be installed prior to completion of public improvements, they shall be installed in utility easements outside of the right-of-way. The Improvements Agreement and appropriate collateral shall include all utility improvements within the right-of-way. Prior to platting and in accordance with C.R.S. § 30-28-133, a letter of agreement between the subdivider and the utility serving the site shall be submitted to the County for evidence that provisions have been made for facility sites, easements, and rights of access for electrical and natural gas.

D. **Open Trench Policy**. The developer shall notify all relevant telecommunications and utility service providers of an impending excavation and allow all such service providers the opportunity to utilize the excavation to install, upgrade, co-locate, repair, or improve their facilities during such an excavation project. Any such notice shall be provided at least 30 days prior to the commencement of excavation. All service providers utilizing the same excavation shall be responsible for their own excavation costs, including but not limited to the costs of permitting.

## 5-04-06 Water Supply Systems

A. **Water Supply Approval**. New water supply systems for irrigation, fire protection or other purposes required by the Board of County Commissioners shall be reviewed and approved by the appropriate Fire Protection District, Adams County Health Department, Colorado Division of Water Resources, and the Colorado Department of Public Health and Environment Water Quality Control Division.

B. **General Water Supply Requirements**. All water supply systems for new subdivisions shall be required to provide sufficient water supplies and infrastructure capacity to reliably meet both average annual water demands, peak day demands, and emergency firefighting demands on a continuous year-round basis. Quantities of seasonal supplies sufficient to meet landscaping and/or agricultural irrigation demands shall also be provided.

C. **Water Supply Facilities**.

1. All common water supply sources, storage facilities, and conveyances or delivery systems shall be installed prior to issuance of a Building Permit for any residential, commercial or industrial structures.
2. This applies to open canals in subdivisions, as well as all other facilities related to water supply and distribution.

D. **Special District Water Supply Systems**. Special districts intended to be created to offer water service to a subdivision shall submit a service plan for the proposed special district in accordance with Chapter 8, *Special Service Districts*, and the Special District Act, C.R.S. 32-1-201, et seq. The special district intending to serve a subdivision shall be approved and formed prior to platting.

E. **Public Water Supply Systems**. Where the subdivision is within the service area of a public water supply system, the subdivider must furnish evidence of an adequate annual and peak water quantity and ability to serve the subdivision prior to platting in a will-serve letter. The subdivider shall install complete water system facilities in accordance with the requirements of the water district or adjacent city involved. The applicant shall submit a will-serve letter from the water provider including:

1. A statement that the provider has adequate annual and peak water quantity to serve the subdivision now and into the future.
2. A map of the water provider's service area.

F. **Onsite Water Supply Requirements**.

1. *General Requirements*. All new wells drilled into deep, confined underground aquifers shall be required to be drilled to the bases of their target aquifers in order to prolong the well's useful productivity. No Certificate of Occupancy for any structure shall be issued until a well driller's certification is submitted confirming this requirement has been satisfied.
2. *Public Supply to be Considered*. All subdivisions proposing the use of five or more individual wells shall submit to the County an analysis prepared by a professional qualified to evaluate water delivery systems that compares the efficiency and cost effectiveness of the proposed individual wells and a common or community water delivery system.
3. *Proof of Adequate Supply*. Prior to platting, the subdivider shall demonstrate that:
   a. The water rights associated with the property are sufficient to serve the proposed subdivision based on the following standards: Adequacy is cumulative, and applications proposing two or more uses shall demonstrate the adequacy of supply for all those uses cumulatively. For any non-residential development, the County reserves the right to require additional information to verify the water adequacy estimates are accurate.
      (1) Single-family residence: 0.3 acre-feet per single-family residence per year;
      (2) Horse or similar livestock equivalence: 0.01 acre-feet per horse per year or similar livestock equivalent unit. Adequacy is cumulative, and applications proposing livestock equivalences, in addition to other uses, shall demonstrate adequacy of supply for all those uses cumulatively.

(3) Multi-family residential: 0.22 acre-feet per multi-family unit per year.

(4) Commercial Outdoor: 0.04 acre-feet per 1,000 square feet of irrigated area per year.

(5) Medical Facility Indoor: 0.17 acre-feet per 1,000 square feet per year.

(6) Overnight Accommodations Indoor: 0.22 acre-feet per 1,000 square feet per year.

(7) Office Uses Indoor: 0.04 acre-feet per 1,000 square feet per year.

(8) Restaurant Indoor: 0.58 acre-feet per 1,000 square feet per year.

(9) Retail, Repair, Sales & Services (excluding Greenhouses and Plant Nurseries) Indoor: 0.05 acre-feet per 1,000 square feet per year.

(10) Educational Facilities Indoor: 0.06 acre-feet per 1,000 square feet per year.

(11) Other Commercial Indoor: 0.11 acre-feet per 1,000 square feet of building space per year.

(12) Industrial: Site-specific water adequacy calculations based on the anticipated demand of the proposed development.

(13) Alternative Method for Calculation. As an alternative to the above water adequacy standards, an applicant may provide their own site-specific water adequacy calculations based on the anticipated demand of the proposed development, plus a 12% water loss factor, as defined in a site-specific adequacy study subject to the Director of Community and Economic Development's approval, as follows:

a) The study shall include and clearly detail water conservation strategies that lower the overall demand such as the inclusion of high-efficiency fixtures that go beyond standard plumbing code, installation of water-wise landscaping, or use of reclaimed water when applicable.

b) When estimating indoor use, the adequacy study must be stamped by a professional engineer licensed in Colorado, or by a professional geologist or professional hydrologist, and shall include itemized estimates of water use by activities, individual fixtures, or equipment.

c) When estimating outdoor use, the adequacy study must be stamped by a professional engineer, professional geologist, professional hydrologist, or landscape architect and include details on plant type, plant counts, irrigation equipment, and total irrigated area.

d) If available, the study shall provide meter readings from a similar type or size of development in a different location.

e) The County may request additional information from the applicant to evaluate the results of the site-specific adequacy study.

f) In situations of unanticipated or high-water use, the County may require an applicant to submit a site-specific water adequacy study.

b. The subject land is served by a groundwater supply which is sufficient based on its priority date within the Colorado System of Water Rights Administration, the required volume can be extracted from this water right, the capacity of the water supply is sufficient to ensure no water supply shortages will occur due to historical and projected future variations in the hydrologic cycle, the delivery of the water supply to

the development is adequate, and the water supply is dependable in quantity and quality based on a minimum useful life of 300 years. A minimum 300-year useful life means the water supply from both a legally owned volumetric total and a projected future yield that will be viable for a minimum 300-year period. The water availability analysis shall include evaluation of the total volume of water legally available for use on the proposed land or properties that are intended for use. It should also include the estimated annual use appropriate for the proposed subdivision. The projected future yield shall evaluate whether the appropriate water supply is sustainable for 300 years, giving consideration to the location and extent of the aquifer, as well as impacts caused by both current and future pumping by others from the aquifer. This requirement applies to individual wells and special district service plans.

## 5-04-07 On-Site Wastewater Treatment Systems

A. **On-site Wastewater Treatment System**. New onsite wastewater systems (OWTS) for sanitation or other purposes required by the Board of County Commissioners shall be reviewed and approved by the Adams County Health Department.

B. **Expansion of Bedrooms or Home Remodeling**. Prior to issuance of a Building Permit for the construction of additional bedrooms in a home served by an OWTS, the County shall require approval from Adams County Health Department. Proof of adequate maintenance, pumping and/or inspection may be required prior to approval from Adams County Health Department. If the OWTS is malfunctioning, a repair permit may also be required.

C. **Prohibited Areas for Septic Systems.** Refer to the current regulations from Adams County Health Department for required setbacks between OWTS and other features.

## 5-04-08 Water and Sewer Lines

A. **Guidelines for Water Mains and Sanitary Sewers in New Subdivisions**. For developments with existing or new road construction, water and sewer lines shall be stubbed into each lot prior to asphalt/concrete construction.

B. **Water Mains and Sanitary Sewer**. Water mains and sewer trunk lines shall be located in accordance with the Adams County Engineering Design and Construction Standards and Specifications and the specifications of the water and sewer district, where applicable. All water and sewer system components shall be installed prior to the issuance of a Building Permit. An Improvements Agreement and appropriate collateral shall be required for all water mains and sanitary sewer improvements when a subdivision will utilize a public or community system.

## 5-04-09 Monuments

All monuments and reference tags shall be indicated as to their location on the plat of record and shall be so located on the ground. Installation and specifications for monuments shall be as follows:

A. **Colorado Revised Statutes**. All subdivision monuments shall be set pursuant to Colorado Revised Statutes pertaining to monumentation and surveys.

B. **Centerline Control Monuments**.

1. *Location*. Centerline control monuments shall be set on all interior and exterior streets at all angle points and street intersections; at the beginning, end, and point of change of

radius of any circular curve; and at the beginning and end of any spiral curve. All street centerline alignment data shall be shown on the face of the plat.

2. *Identification*. All centerline control monuments shall be identified by a punch mark on the cap of each control point, and shall be tied with a reference tag set in the sidewalk where applicable.

C. **Traffic Areas**. If any monument required by this section falls within the traffic area of a graveled street or highway, the top of the monument shall be placed ½ foot below the finished roadway surface. If such road surface is any form of pavement, the monument shall include an adjustable monument box and cap, the top of which shall be set flush with the finished pavement surface. Adjustable monument boxes shall be at the expense of the developer.

D. **Lot Corners**. All lot corners shall be marked with a monument and durable cap.

E. **Benchmarks**. A Benchmark based on the Adams County High Accuracy Reference Network (HARN) shall be established if no existing benchmark based on the HARN is within 1000 feet of the project. The Benchmark shall be described on the face of the plat and also recorded on a Colorado Land Survey Monument Record and filed with the State Board of Registration for Engineers and Land Surveyors.

F. **Survey Certification**. All monuments shall be in place and the Survey Certification completed prior to Preliminary Acceptance of roadway construction by Adams County Construction Management Section. A copy of the Benchmark shall be turned in along with the Survey Certification.

## 5-04-10 Naming of Roads and Subdivisions

A. **Subdivision Names**. All subdivisions shall be named. No subdivision shall receive approval by the Planning Commission or the Board of County Commissioners if the name duplicates or could be confused with the name of a subdivision of record on file in the office of the Adams County Office of the Clerk and Recorder.

B. **Road Names**. Road names shall not be used that will duplicate or be confused with names of existing roads unless otherwise approved by the Directors of Public Works. All road names shall be subject to the approval of the Director of Public Works. In all cases, road names shall conform to the Denver Metropolitan Grid System. Collectors which provide access to residential, commercial or industrial development may be named to accommodate the theme of the development upon approval by the County.

1. *East-West Roads*. Numbered avenues shall run principally east-west and shall be in numerical sequence. East-west roads located halfway between the numbered avenues should take the name of the proceeding avenue, with the suffix “place.” Roads running east-west connecting with an east-west road should take the name of the connecting avenue with the suffix “drive.” No other street may use the numbered avenue name with a different suffix. In general, the numerical designations shall change every 660 feet from north to south within the designated grid.

2. *North-South Roads*. Named streets, drives, boulevards and ways shall run principally north-south and in general the alphabetical designation shall change every 330 feet from east to west. Roads running halfway between arterials on the established grid may take the name of the proceeding street with the suffix “Court”. Roads running north-south connecting with a north-south road may take the name of the connecting road with the suffix “Way.” No other street may use the arterial road name with a different suffix.

3. *Name Changes on Deflected Roads*. Road name designations shall change from a named road to a numbered road when the road is at an angled deflection of 60 degrees or more unless the road is a loop road or a road which meanders through and serves a single development.
4. *Curvilinear Roads*. Curvilinear roads which cross and run parallel to other roads and result in either alphabetical or numerical road names becoming out of order shall be prohibited.
5. *Intersections*. Intersections shall not have the same street names except in the case of a looped street.
6. *Cul-de-Sac*. Cul-de-sac with six or fewer lots shall be considered part of the street which they abut and shall not be separately named.

## 5-04-11 [Reserved]

## 5-04-12 Waivers

Refer to 13-07-05, *Waiver from Subdivision Design Standards*.

# Div. 5-05 Land Dedication Standards

## 5-05-01 Land Dedication Standards

A. **Purpose**. The purpose of this Section is to ensure adequate land areas and/or funds for the acquisition and development of public sites and open space are made available through the development process to meet the needs of future residents of the County and employees of businesses located in the County. Since the need for public sites is directly proportional to population and employment, and since the County has adopted a policy stating all new development should pay its own way, it is reasonable for those who accommodate population or employment increases through the development of land should provide for the additional need for public sites that the development creates. Public sites and open space needs include parks and recreation facilities, aesthetic natural features, historic sites and structures, school sites and sites for other public buildings, such as fire stations. Land dedication and fee-in-lieu requirements shall be based on current demographic data and levels of service to ensure proportionality between new development and the public facilities required to serve that development. The land dedication quantities detailed in the following section is based on the Land Dedication Technical Memo" prepared for the County by TischlerBise and dated February 7, 2025.

B. **Requirements for Land Dedication and Improvements.**

1. *Dedication and Fee-in-Lieu*. Whenever land is subdivided, the owner of the land shall dedicate land to support new or expanded parks and schools to serve future residents and employees of the proposed subdivision. As an alternative to land dedication, the Board of County Commissioners may require the payment of cash in lieu, or a combination of land and cash in lieu, not to exceed the market value of such land at the time of approval of the subdivision.
2. *Infrastructure*. All lands dedicated shall be served by the required roads, traffic

signalization, utilities, and other public infrastructure necessary to support the use of the dedicated land for parks or schools prior to platting. An Improvements Agreement and appropriate collateral shall be required in lieu of providing the required services prior to platting.

C. **Percentage of Land Dedicated**. Requirements for park and school land dedication shall not exceed 10% of the total gross area of the land within the proposed subdivision except as otherwise provided for by these standards and regulations. If the proposed subdivision is part of a larger subdivision, phased subdivision, or one filing of a series of subdivision filings, the total dedication shall not exceed 10% of the total subdivision area except as otherwise provided for by these standards and regulations. Land dedication may exceed 10% for the specific subdivision phase or filing.

D. **School Land Dedication.**

1. *Type and Size of Parcel to be Dedicated*. Land dedication to the County for schools shall be suitable for construction of school facilities. Dedicated sites shall be a single parcel and be a minimum of 10 acres in size to accommodate an elementary school, 25 acres in size to accommodate a junior high school, and 40 acres in size to accommodate a senior high school. Parcels shall be sufficiently compact in form to be useable for the intended purpose. The dedicated school land shall be centrally located and have public access and road frontage. The land shall be free of hazards that would threaten the safety of using the land. The land area shall be approved for dedication as a school site by the appropriate school district.

2. *Calculation of Dedication Requirement*.

   a. Land shall be dedicated to support the development of elementary, junior high and senior high schools in the school district within which a subdivision is proposed. Land shall be dedicated at a rate equal to the average number of students per acre. Commercial and industrial subdivision lots shall be exempt from the school land dedication requirement. The Director of Community and Economic Development may update the student population per household, without notice, as demographic changes are identified by subsequent U.S. Census Bureau statistics. The current student per dwelling unit multipliers shall be included as part of the subdivision application materials package.

b. The following steps shall be taken in order to determine the public land dedication, or fees in lieu of, for residential development.

(1) Multiply the maximum number of dwelling units by the applicable type of household to determine school acreage need.

(2) Multiply the maximum number of dwelling units by the applicable type of household to determine the neighborhood park acreage need.

(3) Multiply the maximum number of dwelling units by the applicable type of household to determine the regional park acreage need.

(4) The total public land dedication equals the sum of subparagraphs (1), (2), and (3), except the total public land dedication for households on land where the average dwelling unit density of a proposed development is less than one dwelling unit per 10 acres, the total land dedication fee will be equal to the sum of subparagraphs (1) and (3) only.

c. Basis Of Dedication For Residential Development. Table 5-05-01-2, *Average Household Size and Students per Household*, presents the basis for Land Development. The data is taken from the U.S. Census Bureau, 2018-2022 5-Year American Community Survey (Public Use Microdata Sample). If significant changes occur in demographic trends, the assumptions on average household size and student population per household will be changed accordingly.

**Table 5-05-01-1, Average Household Size and Students per Household**

| Context | Housing Type | Average Household Size | Students per Household |
|---|---|---|---|
| Urban | Single-Family, Detached | 2.79 persons per household | 0.463 students |
| | Two-family Dwelling | 2.10 persons per household | 0.262 students |
| | Townhouse Dwelling | 2.10 persons per household | 0.262 students |
| | Live-Work Building | 2.10 persons per household | 0.262 students |
| | Multiplex Dwelling | 2.10 persons per household | 0.262 students |
| | Mixed Use | 1.91 persons per household | 0.260 students |
| | Multi-family | 1.91 persons per household | 0.260 students |
| Rural | Single-Family, Detached | 2.89 persons per household | 0.536 students |
| | Two-family Dwelling | 2.23 persons per household | 0.221 students |
| | Townhouse | 2.23 persons per | 0.221 students |

| | | | |
|---|---|---|---|
| | Dwelling | household | |
| | Live-Work Building | 2.23 persons per household | 0.221 students |
| | Multiplex Dwelling | 2.23 persons per household | 0.221 students |
| | Mixed Use | 1.91 persons per household | 0.217 students |
| | Multi-family | 1.91 persons per household | 0.217 students |

d. Urban and Rural School District Designations. Although Average Household Size and Student Population Per Household is generally similar throughout the County, the Regulations should recognize differences between urban and rural School Districts. Table 5-05-01-3, Urban and Rural School Districts, breaks down the school districts within Adams County that are considered urban and rural.

**Table 5-05-01-2, Urban and Rural School Districts**

| Urban School Districts | Rural School Districts |
|---|---|
| Adams County 14 | Bennett 29J |
| Adams-Arapahoe 28J | Byers 32J |
| Brighton 27J | Deer Trail 26J |
| Mapleton 1 | Weld County RE-3(J) |
| Northglenn-Thornton 12 | Strasburg 31J |
| Westminster 50 | Wiggins RE-50(J) |

e. Land Area Required for Schools Per Student.

(1) Urban Districts. The land area required is 0.0187 acres per student. This is based on the total land required for elementary, junior, and senior high schools divided by the total number of students, or
1,306.1acres divided by 69,869 students.

(2) Rural Districts. The land area required is 0.0238 acres per student. This is based on the total land required for elementary, junior, and senior high schools divided by the total number of students, or
26.6 acres divided by 1,119 students.

**Table 5-05-01-3, Land Area Required for Schools per Household**

| Context | Residential Land Use | Land Area Required |
|---|---|---|
| Urban | Single-Family, Detached | 0.009 acres per household |
| | Two-family Dwelling | 0.005 acres per household |
| | Townhouse Dwelling | 0.005 acres per household |
| | Live-Work Building | 0.005 acres per household |
| | Multiplex Dwelling | 0.005 acres per household |
| | Mixed Use | 0.005 acres per household |
| | Multi-family | 0.005 acres per household |

| | | |
|---|---|---|
| Rural | Single-Family, Detached | 0.013 acres per household |
| | Two-family, Dwelling | 0.0221 acres per household |
| | Townhouse Dwelling | 0.0221 acres per household |
| | Live-Work Building | 0.0221 acres per household |
| | Multiplex Dwelling | 0.0221 acres per household |
| | Mixed Use | 0.005 acres per household |
| | Multi-family | 0.005 acres per household |

3. *Existing Dwellings*. Existing dwellings shall be excluded from the calculation of the school land dedication requirement unless the lot allows for greater density of residential development in which case the dedication requirements shall be calculated based on the maximum potential use of the lot.
4. *Action Concerning Lands Dedicated*. All lands dedicated for schools shall be conveyed to Adams County by warranty deed and clearly identified on the face of the plat document by a legal description. The conveyance of land or payment of cash in lieu shall be required prior to the recording of the first plat document for the subdivision.
5. *Cash-in-Lieu*.
   a. Cash-in-lieu of land dedication shall be required when deemed, by the Board of County Commissioners, to be more appropriate in satisfying the needs of the school district and proposed subdivision. Such cases include small developments not able to meet the minimum school site requirements, developments which are served by adjacent facilities that could be expanded to meet the needs of the proposed subdivision or where due to access and other issues the site is inappropriately located to provide long-term service.
   b. The cash-in-lieu shall be equivalent to the fair market value of the acreage required for school land dedication.
   c. Determination of Fair Market Value.
      (1) The fair market value of the zoned and platted, but unimproved, land at the time of approval of the plat may be calculated as described in (i) and (ii) below:
         i. The fair market value is determined based on the actual value, as of the approval of the plat, as determined by the Adams County Assessor; or
         ii. In the event that the actual value determined by the Adams County Assessor may not be used due to material changes in land areas, zoning, or other conditions that impact the value of the property, as determined by the Director of Community & Economic Development, the fair market value shall be determined based on a recent appraisal of the unimproved land of the property subject to the plat. The appraisal shall have a date of value within 12 months of the approval of the plat, unless extended by the Board of County Commissioners. The appraisal shall be completed by a licensed Colorado Certified General Appraiser that is a member of the Appraiser Institute (M.A.I) or is an Accredited Rural Appraiser (A.R.A). Cost for the

appraisal shall be the responsibility of the developer.

d. As an alternative to payment of the entire amount of the cash in lieu, the Board of County Commissioners may consider phasing the payment according to the following criteria:

(1) If the total payment exceeds $100,000, the fee may be split into two payments. The first payment is due prior to recording the plat and the second payment is due prior to the issuance of a Building Permit which would constitute greater than 50% of the development.

(2) If the total payment exceeds $200,000, the fee may be split into three payments. The first payment is due prior to recording the plat, the second payment is due prior to the issuance of a Building Permit which would constitute greater than 33% of the development, and the third payment is due prior to the issuance of a Building Permit which would constitute greater than 66% of the development.

(3) If the total payment exceeds $300,000, the fee may be split into four payments. The first payment is due prior to recording the plat, the second payment is due prior to the issuance of a Building Permit which would constitute greater than 25% of the development, the third payment is due prior to the issuance of a Building Permit which would constitute greater than 50% of the development, and the fourth payment is due prior to the issuance of a Building Permit which would constitute greater than 75% of the development.

E. **Parkland Dedication Requirements.**

1. *Neighborhood Park Dedication Requirements*.

a. Calculation of Dedication Requirement.

(1) Land for urban neighborhood park sites shall be dedicated at an average rate of 4.24 acres per 1,000 residents generated by the proposed subdivision. Land for rural neighborhood park sites shall be dedicated at an average rate of 3.87 acres per 1,000 residents generated by the proposed subdivision.

(2) Where the average dwelling unit density of a proposed development is less than one dwelling unit per 10 acres, the development shall be exempt from the neighborhood park dedication requirement. In addition, commercial and industrial development shall be exempt from the neighborhood park dedication requirement.

**Table 5-05-01-4, Land Required for Neighborhood Parks per Household**

| Context | Residential Land Use | Land Area Required |
|---|---|---|
| Urban | Single-Family, Detached | 0.012 acres per household |
| | Two-family Dwelling | 0.009 acres per household |
| | Townhouse Dwelling | 0.009 acres per household |
| | Live-Work Building | 0.009 acres per household |
| | Multiplex Dwelling | 0.009 acres per household |
| | Mixed Use | 0.008 acres per household |
| | Multi-family | 0.008 acres per household |

| | | |
|---|---|---|
| Rural | Single-Family, Detached | 0.011 acres per household |
| | Two-family Dwelling | 0.009 acres per household |
| | Townhouse Dwelling | 0.009 acres per household |
| | Live-Work Building | 0.009 acres per household |
| | Multiplex Dwelling | 0.009 acres per household |
| | Mixed Use | 0.007 acres per household |
| | Multi-family | 0.007 acres per household |

b. *Private Parks Counted as Fulfilling Requirement*. Private land dedicated and developed to serve the residents of a subdivision may be credited toward the neighborhood park portion of the land dedication requirement provided provisions are made to maintain and guarantee those amenities are retained for such open space/recreational uses for the life of the subdivision through deed restrictions or other similar mechanisms approved by the Board of County Commissioners.

c. *Type and Size of Parcel to be Dedicated*. Land may be considered for acceptance for neighborhood park dedication requirements if the following criteria are met:

(1) The land for a neighborhood park site shall be a minimum of three acres in size and be accessible to residents within a ½ mile radius.

(2) The land shall contain sufficient flat surface to provide for development of active recreation areas.

(3) The land shall not be accepted if it is in an exclusive utility or other easement, public road right-of-way, pedestrian walkway required under these standards and regulations, or contains topographical or hazardous obstructions which would preclude development as a neighborhood park.

(4) The land should be co-located with school property, if possible.

(5) The land area is approved by the appropriate park district or the Adams County Parks, Open Space & Cultural Arts Department.

d. *Regional Park Dedication Requirements*. Calculation of Dedication Requirement. Land for urban and rural regional park sites shall be dedicated at an average rate of 2.23 acres per 1,000 residents generated by the proposed subdivision. It is anticipated that expanding commercial and industrial development also create additional demand for regional parks. Therefore, commercial and industrial subdivisions shall be required to dedicate five% of their total area to regional parks.

**Table 5-05-01-5, Land Required for Regional Parks per Household**

| Context | Residential Land Use | Land Area Required |
|---|---|---|
| Urban | Single-Family, Detached | 0.0062 acres per household |
| | Two-family Dwelling | 0.0047 acres per household |
| | Townhouse Dwelling | 0.0047 acres per household |
| | Live-Work Building | 0.0047 acres per household |
| | Multiplex Dwelling | 0.0047 acres per household |
| | Mixed Use | 0.0043 acres per household |

| | | |
|---|---|---|
| | Multi-family | 0.0043 acres per household |
| Rural | Single-Family, Detached | 0.0065 acres per household |
| | Two-family Dwelling | 0.0050 acres per household |
| | Townhouse Dwelling | 0.0050 acres per household |
| | Live-Work Building | 0.0050 acres per household |
| | Multiplex Dwelling | 0.0050 acres per household |
| | Mixed Use | 0.0043 acres per household |
| | Multi-family | 0.0043 acres per household |

e. Type and Size of Parcel to be Dedicated. Land may be considered for acceptance for regional park dedication requirements if the following criteria are met:

(1) The land for a regional park site shall be a minimum of 50 acres in size and be accessible to residents within a five-mile radius.

(2) The land dedicated shall offer natural and scenic quality and shall contain sufficient flat surface to provide for development of active recreation areas, as well as passive recreation areas.

(3) The land shall not be accepted if it is in an exclusive utility or other easement, public road right-of-way, pedestrian walkway required under these standards and regulations, or contains topographical or hazardous obstructions that would preclude development as a regional park.

(4) The land should be co-located with other regional parkland, if possible.

(5) The land area is approved by the appropriate park district or the Adams County Parks, Open Space & Cultural Arts Department.

(6) The land dedication shall consider opportunities to expand the site through acquisition of adjacent lands.

(7) The land dedication shall support the protection of natural and historical features, scenic vistas, watersheds, timber, and wildlife for parks.

(8) The land dedication shall support the continuity of open space links, trails and other major components of the open space system for parks.

(9) Lakes, ponds, or reservoirs may be considered provided the area does not exceed 50% of the required dedication and the area is contiguous to other acceptable parkland.

2. *Action Concerning Lands Dedicated*.

a. All lands dedicated for parks shall be conveyed to the County by warranty deed and clearly identified on the face of plat by a legal description.

b. The boundary between urban and rural parks, for the purposes of calculating the required park land dedication, shall be Schumaker Road. All properties located west of Schumaker Road that are subject to park dedications of land or cash shall be based on the urban neighborhood and urban regional park required dedications. All properties located east of Schumaker Road that are subject to park dedication of land or cash shall be based on the rural neighborhood and rural regional park required dedications.

3. *Cash-in-Lieu*.

a. Cash-in-lieu of land dedication shall be required when deemed, by the Board of

County Commissioners, to be more appropriate in satisfying the needs of the present and future residents of the County. No more than two acres of the neighborhood park dedication requirement may be fulfilled by cash-in-lieu of dedication, unless the Board of County Commissioners determines otherwise.

b. The cash-in-lieu shall be equivalent to the fair market value of the acreage required for parkland dedication.

c. Determination of Fair Market Value.

(1) The fair market value of the zoned and platted, but unimproved, land at the time of approval of the plat may be calculated as described in (i) and (ii) below:

i. The fair market value is determined based on the actual value, as of the approval of the plat, as determined by the Adams County Assessor; or

ii. In the event that the actual value determined by the Adams County Assessor may not be used due to material changes in land areas, zoning, or other conditions that impact the value of the property, as determined by the Director of Community & Economic Development, the fair market value shall be determined based on a recent appraisal of the unimproved land of the property subject to the plat. The appraisal shall have a date of value within 12 months of the approval of the plat, unless extended by the Board of County Commissioners. The appraisal shall be completed by a licensed Colorado Certified General Appraiser that is a member of the Appraiser Institute (M.A.I) or is an Accredited Rural Appraiser (A.R.A). Cost for the appraisal shall be the responsibility of the developer.

d. As an alternative to payment of the entire amount of the cash in lieu, the Board of County Commissioners may consider phasing the payment according to the following criteria:

(1) If the total payment exceeds $100,000, the fee may be split into two payments. The first payment is due prior to recording the plat and the second payment is due prior to the issuance of a Building Permit which would constitute greater than 50% of the development.

(2) If the total payment exceeds $200,000, the fee may be split into three payments. The first payment is due prior to recording the plat, the second payment is due prior to the issuance of a Building Permit which would constitute greater than 33% of the development, and the third payment is due prior to the issuance of a Building Permit which would constitute greater than 66% of the development.

(3) If the total payment exceeds $300,000, the fee may be split into four payments. The first payment is due prior to recording the plat, the second payment is due prior to the issuance of a Building Permit which would constitute greater than 25% of the development, the third payment is due prior to the issuance of a Building Permit which would constitute greater than 50% of the development, and the fourth payment is due prior to the

issuance of a Building Permit which would constitute greater than 75% of the development

4. *Additional Land Dedications*. In the event the Board of County Commissioners determine public sites and open space should be provided in excess of the amount to be dedicated as allowed by this section, the excess dedication shall be reserved on the plat for purchase by the appropriate public authority at the time of platting. The public authority shall purchase the property at the fair market value. Fair market value shall be determined as of the time of filing of final plat based upon the unimproved land value in accordance with the following:
   a. The fair market value shall be determined based on a recent appraisal of the unimproved land of the property subject to the plat. The appraisal shall have a date of value within 12 months of the approval of the plat, unless extended by the Board of County Commissioners. The appraisal shall be completed by a licensed Colorado Certified General Appraiser that is a member of the Appraiser Institute (M.A.I) or is an Accredited Rural Appraiser (A.R.A). Cost for the appraisal shall be the responsibility of the developer. The appraiser shall be selected by mutual agreement of the developer and the Adams County Director of Community & Economic Development. The appraiser's determination of fair market value shall be final and binding on all parties.

F. **Use and Distribution of Lands and Cash-in-Lieu.**

1. *Administration and Limitation on Use of Land and Fees*.
   a. The land and cash-in-lieu received under this section shall be used only for the purpose of providing park and recreational facilities, open space, school sites or other public sites, as appropriate. All cash-in-lieu or proceeds from the sale of dedicated land collected by the County shall be kept in three separate accounts: a schools account, a neighborhood parks account, and a regional parks account. School money shall be categorized by individual school districts. Neighborhood park money shall be categorized by park districts, if they exist. If no park district exists at the time of collection, the park fees shall be allocated to the Adams County Parks, Open Space & Cultural Arts Department.
   b. All cash-in-lieu or proceeds from the sale of dedicated land collected by the County shall be used by the County exclusively for the acquisition and development of parks, recreational facilities, schools and other public sites to serve the needs of present and future residents of the County. The eligible uses of cash-in-lieu or proceeds from the sale of dedicated land shall be for site acquisition for new parks or school facilities only.
2. *Eligible Entities for Distribution*. The County may distribute lands or fees-in-lieu to the following entities: School Districts; Metropolitan Districts providing park and recreation services, or Park/Recreation Districts; or the Adams County Parks, Open Space & Cultural Arts Department.
3. *Determination of Need and Distribution of Lands and Fees-in-Lieu*. The County may distribute cash-in-lieu or proceeds from the sale of dedicated land to support the use of the cash or proceeds for eligible projects. The cash and proceeds shall be distributed to an eligible entity based on the following criteria:
   a. The project for which funds are requested is authorized by the school or park

district through a formally adopted plan or a formal resolution.

b. The project for which funds are requested is specific in terms of size, use, location, timing, and cost. A means of funding the entire project is outlined and is reasonable although not all funding has to be in hand at the time of request.

c. If the project consists of site acquisition for or construction of a new facility and the subdivider agrees to submit a Site Plan and associated drainage or traffic studies for county review.

d. The project for which funding is requested is needed to support new development as justified through:

   (1) Demand projections based on existing school enrollment or park use;

   (2) County population projections for the area; or

   (3) Approved zoning within the service area demonstrating densities and uses will create demand for the improvement.

e. The need for planning funds has been demonstrated by submittal of a scope of services request or contract describing a specific, growth-related development study with an estimated cost addressing needs outlined by the local school board.

## 5-05-02 Road Impact Fees

Refer to Div. 4-07, *Road Impact Fees*.

## 5-05-03 Parks and Open Space

Refer to Sec. 5-03-07, *Parks and Open Space*.

## 5-05-04 Subdivision Dedication

Refer to Div. 5-02, *General Development Improvements and Dedications Required for Platting*.

# CHAPTER 6 ROADWAY STANDARDS AND TECHNICAL CRITERIA

This chapter presents standards and technical criteria to be used in the preparation of a roadway design and project plans submitted to Adams County for review and approval. The following information should be viewed as minimum requirements and changes to these standards must receive prior written approval from the Director of the Public Works Department pursuant to Sec. 13-07-06, *Waiver from Public Works Standards*.

**Contents:**

Div. 6-01 Roadway Design and Technical Criteria
Div. 6-02 Roadway Design Standards Based on Context and Function
Div. 6-03 Pavement Design and Technical Criteria
Div. 6-04 Sidewalks, Curb and Gutter, and Driveways
Div. 6-05 Bridges and Major Drainage Structures
Div. 6-06 Trenching and Backfilling
Div. 6-07 Utility Locations
Div. 6-08 Obstruction of Views in ROW

## Div. 6-01 Roadway Design and Technical Criteria

### 6-01-01 General

A. **Street Classification**. The County has adopted a street classification system based on street function, continuity, traffic volumes, access types, and surrounding land use (both existing and future). The listing of the roadway types are shown in Table 6-01-01-1, *Road Functional Classifications and Descriptions* and illustrated in Appendix C, *Roadway Cross-Sections and Roadway Functional Classifications.* Figure 1 entitled "Adams County Roadway Functional Classifications"; Figure 2 entitled "Adams County Area Types"; and Figure 3 entitled "Adams County Area Types-Western Area" of the Functional Roadway Classification Project report prepared for the County by Felsburg Holt & Ullevig dated January 2026 provides the functional classification for the County's major street network within unincorporated Adams County. (Local streets are not depicted on Figure 1.) Figures 1-3 are included as part of Appendix C. Appendix C is incorporated herein by reference and made a part hereof.

| Table 6-01-01-1, Road Functional Classifications and Descriptions | |
|---|---|
| Functional Classification | Description |
| Principal Arterial | Designed to balance mobility and multimodal safety, especially in urban or suburban areas. Access is provided at strategically controlled intersections, such as roundabouts or traffic signals, typically spaced about 0.5 miles apart. Facilities should incorporate curbs and gutters as well as complete streets elements, including curb ramps, sidewalks, protected intersections, and transit accommodations. Priority is placed on reducing conflict points and supporting safer crossing for people walking, biking, or using mobility devices. |
| Rural Principal Arterial | Serves longer-distance trips in lower-density areas with future access typically spaced at 0.25 to 0.5 miles. Shared driveways are encouraged. Accommodations for non-motorized travel (e.g., shoulders, side paths, or trails) should be evaluated based on land use context and travel patterns. Drainage is typically provided by drainage ditches and curbs and gutters are not typically present. |
| Minor Arterial | Provides moderate mobility with greater access to local destinations in urban and suburban areas. Typical access spacing is 0.25 to 0.5 miles. Access is typically provided at strategically controlled intersections, such as roundabouts, traffic signals, or stop signs. Multimodal features such as sidewalks, transit stops, and bicycle facilities are standard. Lower speeds and context-sensitive design help ensure safe access for all users. Drainage is typically provided by curbs and gutters. |
| Rural Arterial | Functions similarly to Minor Arterials but in rural contexts. Posted speeds should be moderated near intersections, curves, or where there are known vulnerable users. Bicycle and pedestrian facilities may be provided via paved shoulders or parallel trails. Safety audits and crash history should inform access and intersection control strategies, though typical controls include roundabouts and stop signs. Drainage is typically provided by drainage ditches and curbs and gutters are not typically present. |
| Collector | Collector roads prioritize access from local streets to the arterial network. They are designed for lower speeds and should emphasize multimodal comfort and safety with elements such as traffic calming, protected midblock crossings, and curb extensions. Future access spacing is typically 1/8th mile. Transit stops, school zone designs, and pedestrian-prioritized intersections should be included where appropriate. |
| Local | Local streets are designed primarily for access, not mobility. Traffic calming, narrow cross-sections, and multimodal priority (e.g., shared streets, raised crossings, sidewalks on both sides) should be used to promote safety and livability. Street design must be appropriate for all travel modes, ages and abilities, with design elements appropriate to residential, industrial, commercial, or mixed-use settings. |

B. **Applicability and Methodology**. The information presented in this section applies to each classification and graphical representation of each roadway type and is shown in the County's

Engineering Road Standards. Appendix C, *Roadway Cross-Sections and Roadway Functional Classifications*, depicts typical cross sections for Adams Countys' functional classification. Waivers of these typical cross sections need to be approved by the Director of Public Works. Additionally, when a corridor improvement plan or study is completed for a roadway, the corridor plan, rather than the typical cross section, illustrates the future conditions of the road. The design methodology outlined in this Chapter is based upon the 2018 AASHTO, A Policy on Geometric Design of Highways and Streets ("Green Book") and existing conditions.

C. **Most Recent Editions**. In the event that there is a revised edition of the AASHTO standards, the most recent edition shall be used. The latest edition of the Colorado Department of Transportation (CDOT) Design Guides may also be used for roadway design, after obtaining approval from the Director of the Public Works Department. It is important to note that Adams County standards may supersede both AASHTO and CDOT design policy/criteria for County-maintained roads.

1. Adams County's roadway classification system includes two additional classifications, Limited Access Highways and Regional Arterials, for which typical cross sections and roadway design standards are not provided in this manual.
2. Limited Access Highways are high-speed corridors designed solely for long-distance regional mobility with no direct parcel access. Access is provided only at grade-separated interchanges. These facilities prioritize separation of modes, and bicycle/pedestrian use is restricted to parallel trail facilities or separate bridges where needed. Safety for all users is ensured by full access control and consistent design standards. Highways may include free, tolled, or managed lanes. Limited Access Highways include freeways and tollways, which are under the jurisdiction of CDOT or the E-470 or Northwest Parkway Public Highway Authority.
3. Regional Arterials are major corridors that provide regional mobility and connect to key centers within and beyond the county. Access is restricted to strategically controlled intersections, such as traffic signals, roundabouts, or grade-separated interchanges with no direct parcel access. Multimodal elements such as bus rapid transit, separated bicycle lanes, or shared-use paths are prioritized along or parallel to these routes. Design considers safe crossing opportunities and speed management through context-sensitive design. Regional Arterials are usually state highways. Corridor improvements are developed through a multi-agency planning process and individual developments are typically subject to State Highway Access Code requirements.

## 6-01-02 Required Design Submittals

A. **Comprehensive Circulation System**. Project Plans submitted to the County for review shall contain a comprehensive circulation system designed in accordance with these criteria and other applicable standards (local, state, and federal). Prior to receiving approval, the Project Plans must be sealed by a Colorado Registered Professional Engineer who has extensive knowledge of the project being submitted for review.

B. **Required Submittal Materials**. Based on the application being submitted, the level of design detail required varies and can be determined by the checklist attached to the application and/or by contacting the County. All required information is to be submitted for County review prior to receiving an approved application or permit. Applicants are encouraged to prepare the required submittals with as much detail as possible to minimize possible confusion and cut down on

overall processing time. Should there be questions regarding the required submittals, please contact the Public Works Department.

## 6-01-03 Design Criteria

A. **Design Factors**. The engineer shall design all local circulation systems recognizing the following factors:

1. Safety – for all roadway users;
2. Performance – efficiency of service for all users;
3. Livability – impacts mitigated by circulation system improvements; and
4. Economy – of construction and use of land.

B. **Design Criteria**. Each of the principles in Table 6-01-03-1, *Roadway Design Criteria*, is an elaboration on one or more of these four factors. The principles are not intended as absolute criteria, since instances may appear where certain principles or existing conditions conflict. The principles should, therefore, be used as guidelines for proper systems layout and for obtaining County approval. Table 6-01-03-2, *Design Requirements*, presents a summary of the minimum roadway design requirements for each of the nine roadway types. Within this table the following characteristics are discussed:

1. Speed Limit;
2. Number of Through Lanes;
3. Right-of-Way;
4. Street Width and Composition of Cross-Section;
5. Type of Curb and Gutter or Drainage Ditch;
6. Sidewalk Width;
7. Traffic Volumes;
8. Continuity;
9. Safety;
10. Traffic Control;
11. Function;
12. Access Conditions; and
13. Planning Characteristics.

| Table 6-01-03-1, Roadway Design Criteria | | |
|---|---|---|
| | Concern | Guide |
| Ensure Multimodal Access | The primary function of local streets is to serve abutting properties. | Street widths, placement of multimodal facilities (e.g. sidewalks, bicycle lanes, transit stops, etc.), patterns of streets and number of intersections are related to safe and efficient access to abutting lands. |
| Minimize Through Trips | Through traffic on local and collector streets potentially increases the average speed and volume, thereby increasing the potential for crashes and reducing residential quality of life. | Through traffic can be discouraged between neighborhoods and higher volume streets by creating a circuitous route, channeling or controlling median crossings along peripheral routes. |
| Control Access to Arterials | Local circulation systems and land development patterns should not detract from the efficiency of peripheral arterial facilities. The local streets that intersect arterial systems will tend to have higher volumes since they tend to be primarily exit points | The number of access points between local circulation systems and adjacent arterial streets should be minimized. Intersections along arterial routes should be properly spaced for efficient signalization and traffic flow. |
| Discourage Speeding | Streets should be designed to discourage moving above the posted speed limit. | Use of curvilinear alignments and contextualized traffic calming elements, such as traffic circles, raised crosswalks and corner extensions etc. The design speed should equal the posted speed, rather than be higher than the posted speed, and will be context sensitive. |
| Minimize vulnerable Road User and Vehicular Conflicts | Pedestrian, bicycle, mobility device travel from within the area to points outside should require a minimal number of street crossings. | Roadways should be designed, and crossings located such that potential conflicts between motor vehicles and vulnerable road users are minimized. While it's understood that residential and collector streets will generally be more accommodating of non-motorized users, all facilities should be designed to minimize the potential for crashes. |
| Minimize Space Devoted to Street Use | It is desirable to minimize local street mileage, therefore reducing construction and maintenance costs as well as to permit the most efficient use of land. Streets should also have an appearance commensurate with their function. | Streets should be designed to complement local character and incorporate Low Impact Development (LID) techniques to disconnect connectivity of impervious areas. |

| Table 6-01-03-1, Roadway Design Criteria | | |
|---|---|---|
| | Concern | Guide |
| Relate Street to Topography | Local streets are more attractive and economical if constructed to closely adhere to topography (minimize cut and fill). | The important role streets play in the overall storm drainage system can be enhanced by closely following existing topography and incorporating Green Infrastructure to mimic natural hydrology. |
| Layout Street to Achieve Optimum Subdivision of Land | The arrangement of streets should allow for economical and practical patterns, shapes and sizes of adjacent parcels. Streets as a function of land use must not unduly hinder the development of land. | Distances between streets, number of streets, and related elements all have a bearing on efficient subdivision of an area. Access to adjoining properties should also be encouraged. |

| Table 6-01-03-2, Roadway Design Requirements (continued) | | | | |
|---|---|---|---|---|
| | | 6-Lane Principal Arterial (Urban or Suburban) | 4-Lane Principal Arterial (Urban or Suburban) | Minor Arterial (Urban or Suburban) |

**TABLE NOTES:**

1. See County for posted speed if the traffic study indicates that a reduced speed is required.
2. ROW for cut/fill conditions may be required,
3. Change in ROW width due to a change in street classification shall be made at intersections to accommodate turn lanes. SF = Single Family Residential; MF = Multi Family Residential; vpd = vehicles per day

## 6-01-03.A Sight Distances

1. Sight distance is the length of roadway clearly visible to the driver and is dependent upon the height of the driver’s eye above the road surface, the specified object height above the road surface, and the height of sight obstructions within the line of sight. The minimum sight distance available on a roadway should be sufficient to enable a vehicle traveling at or near the design speed to stop before reaching a stationary object.
2. In evaluating the overall performance of a roadway, both the horizontal and vertical sight distances should be checked to insure the distance along the major road is sufficient to allow a vehicle the opportunity to safely cross or turn left, whichever is required. For all sight distance calculations, the height of driver’s eye is considered to be 3.50 feet above the road surface.
3. No Access Permit shall be issued for any project which does not include design elements for safe movement of any motorist using and/or passing an access.
4. Minimum Sight Distance requirements for existing access points shall meet the criteria listed in Addendum B of these regulations. Addendum B is reference herein for informational purposes but is not made a part hereof.

### 6-01-03.A.1 Stopping Sight Distance

a. **Stopping Sight Distance Table**. The minimum stopping sight distance is the distance required by the driver of a vehicle traveling at the design speed to bring the vehicle to a stop after an object on the road becomes visible. Stopping sight distance is the sum of the brake reaction time (the interval between the instant the driver recognizes the existence of an object on the roadway and the instant the driver applies the brakes) and the braking distance. The braking distance is related to the initial speed and the coefficient of friction between the tires and the roadway. Because of the lower coefficients of friction on wet pavement as compared with dry, the wet condition governs the stopping distances in design. Refer to Table 6-01-03.A.1-1,

*Stopping Sight Distance for Wet Pavements,* for minimum stopping sight distances. For stopping sight distance calculations, the height of the object is considered to be six inches above the road surface.

**Table 6-01-03.A.1-1, Stopping Sight Distance for Wet Pavements (Adapted from AASHTO "Green Book " Table III – 1)**

| Design Speed | Assumed Speed for Condition (mph) | Brake Reaction | | Coefficient of Friction (f) | Breaking Distance on Level[a] (ft) | Stopping Sight Distance | |
|---|---|---|---|---|---|---|---|
| | | Time (sec) | Distance (ft) | | | Computed[a] (ft) | Rounded for Design (ft) |
| 20 | 20-20 | 2.5 | 73.3-73.3 | 0.40 | 33.3-33.3 | 106.7-106.7 | 125-125 |
| 25 | 24-25 | 2.5 | 88.0-91.7 | 0.38 | 50.5-54.8 | 138.5-146.5 | 150-150 |
| 30 | 28-30 | 2.5 | 102.7-110.0 | 0.35 | 74.7-85.7 | 177.3-195.7 | 200-200 |
| 35 | 32-35 | 2.5 | 117.3-128.3 | 0.34 | 100.4-120.1 | 217.7-248.4 | 225-250 |
| 40 | 36-40 | 2.5 | 132.0-146.7 | 0.32 | 135.0-166.7 | 267.0-313.3 | 275-325 |
| 45 | 40-45 | 2.5 | 146.7-165.0 | 0.31 | 172.0-217.7 | 318.7-382.7 | 325-400 |
| 50 | 44-50 | 2.5 | 161.3-183.3 | 0.30 | 215.1-277.8 | 376.4-461.1 | 400-475 |
| 55 | 48-55 | 2.5 | 176.0-201.7 | 0.30 | 256.0-336.1 | 432.0-537.8 | 450-550 |
| 60 | 52-60 | 2.5 | 190.7-220.0 | 0.29 | 310.8-413.8 | 501.5-633.8 | 525-650 |
| 65 | 55-65 | 2.5 | 201.7-238.3 | 0.29 | 347.7-485.6 | 549.4-724.0 | 550-725 |
| 70 | 58-70 | 2.5 | 212.7-256.7 | 0.28 | 400.5-583.3 | 613.1-840.0 | 625-850 |

[a]*Different values for the same speed result from using unequal coefficients of friction*

b. **Effects of Grade on Stopping.** When a roadway is constructed on a grade steeper than three percent, the braking distance not only to the initial speed and coefficient of friction, but also the percent grade (both up and down). As intuition would lead you to believe, the safe stopping distance on upgrades is shorter and those on downgrades is longer. Refer to Table 6-01-03.A.1-2, *Effect of Grade on Stopping Sight Distance, Wet Conditions,* for effects of upgrades and downgrades on the stopping sight distance in wet conditions.

| Table 6-01-03.A.1-2, Effect of Grade on Stopping Sight Distance, Wet Conditions (Adapted from AASHTO "Green Book" Table III-2) | | | | | | | |
|---|---|---|---|---|---|---|---|
| | Increase for Downgrades | | | | Decrease for Upgrades | | |
| Design Speed (mph) | Correction in Stopping Distance (ft) | | | Assumed Speed for Condition (mph) | Correction in Stopping Distance (ft) | | |
| | 3% | 6% | 9% | | 3% | 6% | 9% |
| 30 | 10 | 20 | 30 | 28 | - | 10 | 20 |
| 40 | 20 | 40 | 70 | 36 | 10 | 20 | 30 |
| 50 | 30 | 70 | - | 44 | 20 | 30 | - |
| 60 | 50 | 110 | - | 52 | 30 | 50 | - |
| 65 | 60 | 130 | - | 55 | 30 | 60 | - |
| 70 | 70 | 160 | - | 58 | 40 | 70 | - |

c. **Decision Sight Distance**. Decision sight distance is defined as the distance it takes for a driver to detect an unexpected or difficult-to-perceive hazard along the roadway which may be visually cluttered, recognize this hazard, select an appropriate speed and path, and complete the required safety maneuver. Therefore, based on this definition, these values tend to be greater than stopping sight distances. Interchanges and intersections, locations where unusual or unexpected maneuvers are required, changes in cross section, and areas of "visual noise" are examples of locations where decision sight distances may be needed. In computing and measuring decision sight distances (refer to Table 6-01-03.A.1-3), the 3.5-foot eye height and 6-inch object height criteria used for stopping sight distance have been used.

| Table 6-01-03.A.1-3, Decision Sight Distance (adapted from AASHTO "Green Book" Table III-3) | | | | | |
|---|---|---|---|---|---|
| Design Speed (mph) | Decision Sight Distance for Avoidance Maneuver (ft) | | | | |
| | A | B | C | D | E |
| 30 | 220 | 500 | 450 | 500 | 625 |
| 40 | 345 | 725 | 600 | 725 | 825 |
| 50 | 500 | 975 | 750 | 900 | 1025 |
| 60 | 680 | 1300 | 1000 | 1150 | 1275 |
| 70 | 900 | 1525 | 1100 | 1300 | 1450 |

- Avoidance Maneuver A: Stop on rural road.
- Avoidance Maneuver B: Stop on urban road.
- Avoidance Maneuver C: Speed/path/direction change on rural road.
- Avoidance Maneuver D: Speed/path/direction change on suburban road.
- Avoidance Maneuver E: Speed/path/direction change on urban road.

## 6-01-03.A.2 Passing Sight Distance for Two-Lane Roads

Passing sight distance is the minimum distance (traveling at the design speed) that must be available to enable the driver of one vehicle to pass another safely and comfortably without interfering with oncoming traffic. Required passing sight distances for given design speeds are given in Table 6-01-03.A.2-1, *Minimum Passing Sight Distance for Design of Two-Lane Highways*. For all sight distance calculations, the height of driver's eye is considered to be 3.50 feet above the road surface. For passing sight distance calculations, the height of the object is considered to be 4.25 feet above the road surface.

**Table 6-01-03.A.2-1, Minimum Passing Sight Distance for Design of Two-Lane Highways (Adapted from AASHTO "Green Book" Table III-5)**

| Design Speed (mph) | Assumed Speeds | | Minimum Passing Sight Distance (Rounded) (ft) |
|---|---|---|---|
| | Passed Vehicle (mph) | Passing Vehicle (mph) | |
| 20 | 20 | 30 | 800 |
| 30 | 26 | 36 | 1100 |
| 40 | 34 | 44 | 1500 |
| 50 | 41 | 51 | 1800 |
| 60 | 47 | 57 | 2100 |
| 65 | 50 | 60 | 2300 |
| 70 | 54 | 64 | 2500 |

## 6-01-03.A.3 Measuring and Recording Sight Distance on Plans

Methods for scaling sight distances are shown in Figure 6-01-03.A.4-1, *Scaling and Recording Sight Distance on Plans*. Both horizontal and vertical sight distances should be measured as well as passing sight distance and stopping sight distance. Sight distance charts such as those in Table 6-01-03.A.2-1, *Minimum Passing Sight Distance for Design of Two-Lane Highways*, through Table 6-01-03.B.1-2, *Design Values for Rate of Superelevation (e) and Minimum Length of Runoff, emax = 0.06,* may be used to establish minimum lengths of vertical curves and charts similar to Figure 6-01-03.B.6-1 and Figure 6-01-03.B.6-2 are useful in determining the degree of horizontal curve necessary for the required sight distance. Refer to AASHTO "Green Book" for further details on scaling and recording sight distances.

## 6-01-03.A.4 Intersection Driveway Sight Distance (Sight Triangle)

a. **Both Approaches and Sides**. There shall be an unobstructed sight distance along both approaches and both sides at an intersection (within the right-of-way) for distances sufficient to allow the operators of vehicles, approaching simultaneously, to see each other in time to prevent collisions at the intersection.

b. **Sight Obstructions**. Any object within the sight triangle more than 30 inches high (such objects include: buildings, cut slopes, hedges, trees, bushes, utility cabinets, or tall crops) above the flowline elevation of the adjacent street shall constitute a sight obstruction, and shall be removed or lowered. In no case shall any permanent object encroach into the "line of sight" of any part of the sight-distance triangle. In addition, parking (except on local streets) shall be eliminated within the sight triangle whether or not the intersection roads are level or on grades. The sight distance shall be measured to the centerline of the closest through lane in both directions.

c. **Street Plans**. All sight-distance triangles (shown in Figure 6-01-03.A.4-2) must be presented on the submitted street plans.

d. **AASHTO Reference**. Refer to the AASHTO "Green Book" for more information on sight distances for intersections.

**Figure 6-01-03.A.4-1, Scaling and Recording Sight Distance on Plans (Adapted from AASHTO "Green Book" Figure III-3)**

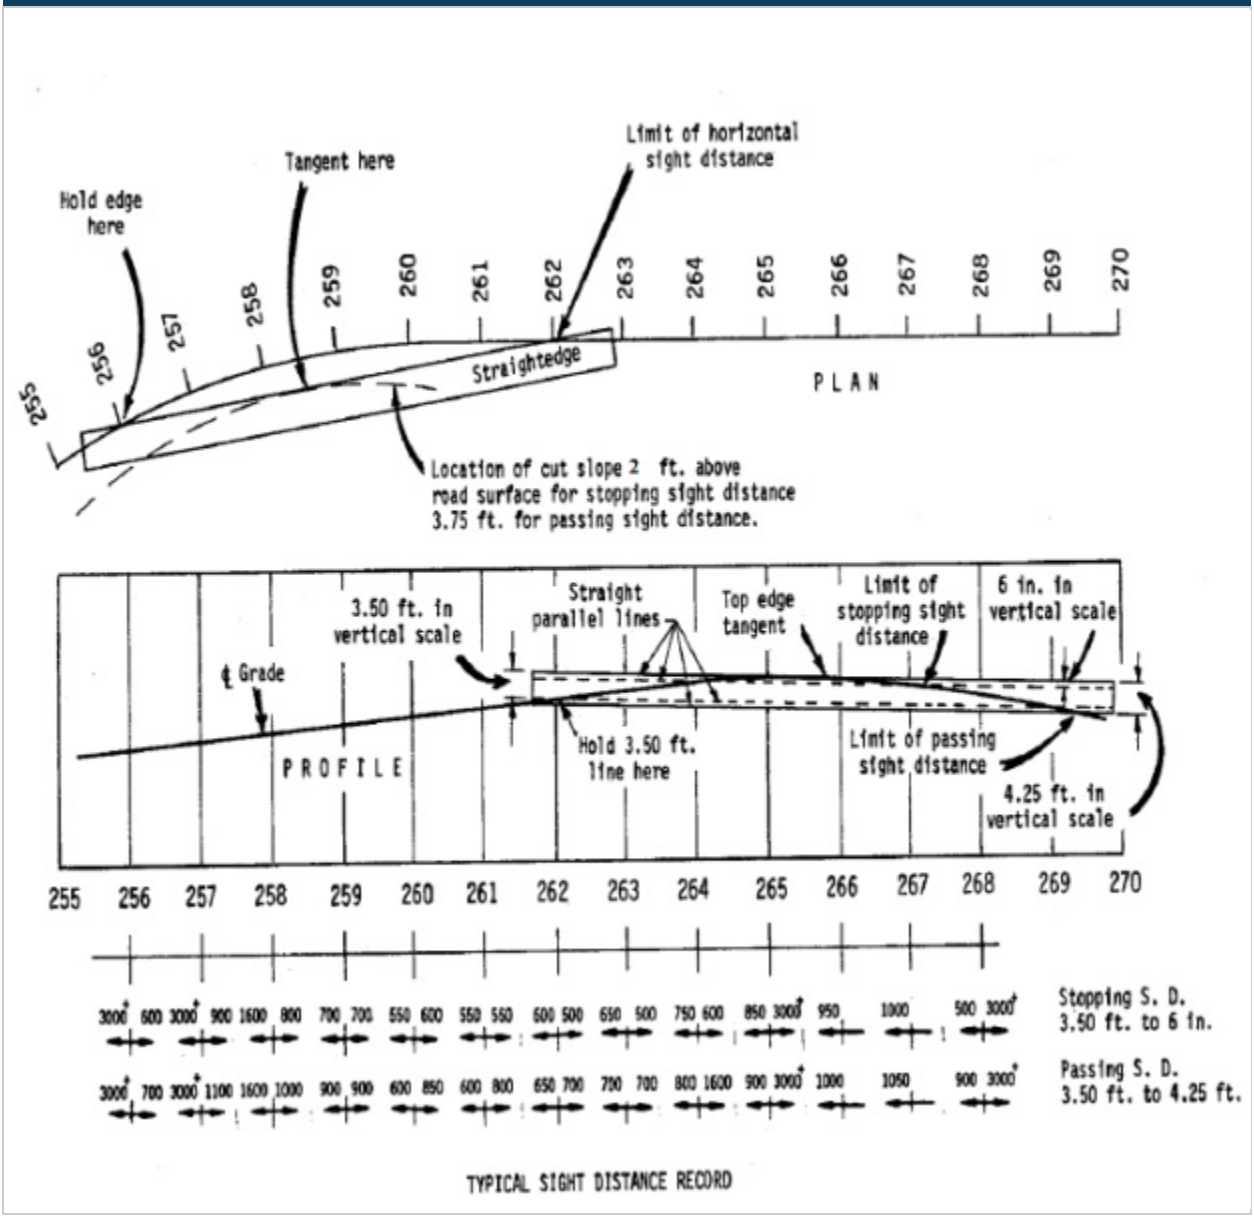

**Figure 6-01-03.A.4-2, Sight Distance at Intersections, Minimum Sight Triangle (adapted from AASHTO "Green Book" Figure IX-32)**

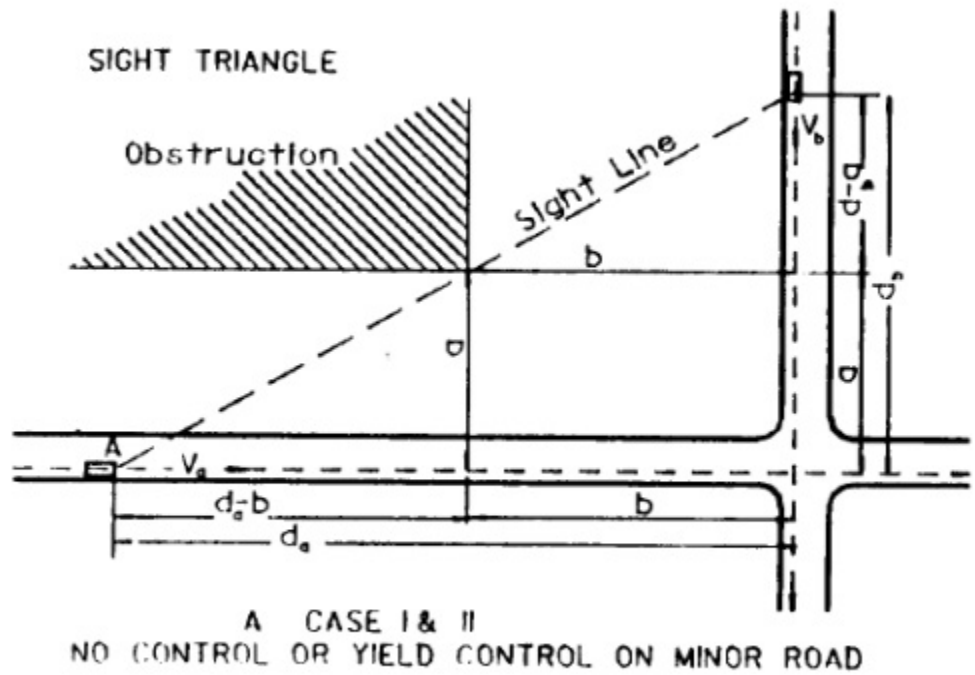

## 6-01-03.B Horizontal Alignment

A. The major considerations in horizontal alignment design are road width, design speed, sight distance, and performance of heavy-duty vehicles. The proper alignment should provide for safe and continuous operation at a uniform design speed. Proposed road layouts shall bear a logical relationship to existing or platted roads in adjacent properties (i.e., not create increased congestion or unsafe intersections) and fit within the overall transportation plan for the County.

B. All new streets must intersect at or nearly at right angles. The minimum allowable intersection flowline radius for any street shall be 15 feet. Modified existing streets must allow for safe operations and proposed orientations reviewed and approved by the County.

C. Superelevation and horizontal curve radii must be in accordance with the recommendations of the AASHTO "Green Book."

### 6-01-03.B.1 Superelevation

a. **Generally**.

(1) *Superelevation Distribution and Side Friction.* It is necessary to determine superelevation rates that are applicable over the range of curvature for each design speed. For a given design speed, the superelevation shall be distributed in such a manner that there is a logical relation between the side friction factor and the applied superelevation rate.

(2) *Maximum Superelevation Rates and Controls.* The maximum rate of superelevation on highways is controlled by factors including climate conditions, terrain conditions, land use

characteristics (rural or urban), and frequency for slow-moving vehicles. For highway curves, several rates shall be recognized in establishing design controls. A rate of 0.040 to 0.060 is a typical rate used for urban areas with little to no constraints (where areas with snow and ice shall require the lower value).

(3) *Approval of Superelevation for Lower-Speed Roadways*. Superelevation shall not be approved for local and/or other roadways classified with a design speed of 50 mph or less without prior approval by the Director of the Public Works Department.

b. **Standards for Superelevation.** The rate of superelevation shall be clearly shown on the project plans along with exaggerated (1”=10’H, 1”=1’ V) profiles of the centerline and both flowlines. The superelevation runout length, crown runout length, and the point at which full superelevation is reached shall be clearly represented and consistent with Table 6-01-03.B.1-1 through Table 6-01-03.B.1-4, the AASHTO “Green Book” and CDOT M & S Standards (M-203-10 through M-203-13).

c. **Urban Street Conditions.** Standard rates of superelevation must be maintained throughout the curve where applicable. Although superelevation is advantageous for highways (design speeds greater than 50 mph), street intersections, established street grades, curbs and adverse drainage conditions may require a reduction in the rate of superelevation, or different rates for each half of the roadbed may be proposed. In areas where pavement warping is required for drainage, adverse superelevation shall be avoided.

## 6-01-03.B.2 Side Friction Factor

Variation in vehicle speeds and curves may result in the development of unbalanced lateral forces, regardless of whether the curve is superelevated. These forces typically result in a tire side thrust counterbalanced by friction between the tires and pavement surface. The coefficient of side friction (*f*) is related to the design speed, superelevation, and radius of curvature.

## 6-01-03.B.3 Design Speed

Horizontal alignment design speed shall be consistent with the requirement for the vertical alignment design speed. The horizontal curve data shown in Table 6-01-03.B.4-1 and Table 6-01-03.B.4-2 shall be used as minimum design guidelines.

## 6-01-03.B.4 Maximum Degree of Curvature and Minimum Radius

The maximum degree of curvature (or minimum radius) is a limiting value of curvature for a given design speed. At a proposed design speed, both the superelevation rate and the assumed value for side friction factor determine the minimum safe radius, R. The radius of curvature may be determined from Equation 6-01-03.B.4-1. The degree of curve is given in Equation 6-01-03.B.4-2.

**Equation 6-01-03.B.4-1**

$$R = \frac{V^2}{15(e+f)}$$

**Equation 6-01-03.B.4-2**

$$D = \frac{85{,}660(e+f)}{V^2}$$

| Where | |
|---|---|
| R = | Radius of curve, ft |
| V = | Vehicle speed, mph |
| e = | Rate of roadway superelevation, ft/ft |
| f = | Friction factor |
| D = | Degree of curve |

Curve Design Criteria and Reference Standards. Table 6-01-03.B.4-1, *Maximum Degree of Curve and Minimum Radius for Rural Highways and High-Speed Urban Areas*, presents maximum degree of curve and minimum radius for rural highways and high-speed urban areas. The minimum radii for limiting values of superelevation and friction for low-speed urban areas are presented in Table 6-01-03.B.4-2, *Minimum Radii for Limiting Values of e and f for Low-Speed Urban Streets*. Refer to AASHTO "Green Book" for other requirements regarding the design of rural highways and high and low speed urban streets.

**Table 6-01-03.B.4-1, Maximum Degree of Curve and Minimum Radius for Rural Highways and High-Speed Urban Areas (adapted from AASHTO Table III-6).**

| Design Speed (mph) | Max. e | Max. F | Rounded Max. Degree of Curve | Min. Radius (ft) |

## 6-01-03.B.5 Effect of Grade

Grade affects the operating speeds of vehicles and shall be recognized as a critical factor in roadway design. Where feasible, roadway design shall accommodate a higher design speed for on the downgrade and a lower design speed on the upgrade. This variation in design speed shall depend on the grade's rate, length, and degrees of curvature, relative to other curves on the roadway section.

## 6-01-03.B.6 Sight Distance on Horizontal Curves

a. **Stopping Distance**. The proposed horizontal alignment must provide for the minimum stopping distance for the design speed at all points along the roadway. In addition, the design must take into account the visibility at intersections as well as around curves and roadside encroachments. Obstructions to the horizontal sight distance such as buildings, hedges, wooded areas, high ground or other topographical features, are to be presented on the project plans.

b. **Middle Ordinates**. Figure 6-01-03.B.6-1, Range Of Lower Values: Relation Between Degree Of Curve and Value Of Middle Ordinate Necessary To Provide Stopping Sight Distance on Horizontal Curves Under Open Road Conditions, and Figure 6-01-03.B.6-2, *Range Of Upper Values: Relation*

*Between Degree Of Curve and Value Of Middle Ordinate Necessary To Provide Stopping Sight Distance on Horizontal Curves Under Open Road Conditions*, are design charts showing the required middle ordinates for clear sight areas to satisfy the lower and upper values of stopping sight distance required for curves of various degrees. These charts utilize the stopping sight distance values in Table 6-01-03.A.1-1, *Stopping Sight Distance for Wet Pavements*. A value at or approaching the upper limit should be used as a minimum wherever conditions permit.

**Figure 6-01-03.B.6-1, Range Of Lower Values: Relation Between Degree Of Curves and Value Of Middle Ordinate Necessary To Provide Stopping Sight Distance on Horizontal Curves Under Open Road Conditions (adapted from AASHTO "Green Book" Figure III-26A)**

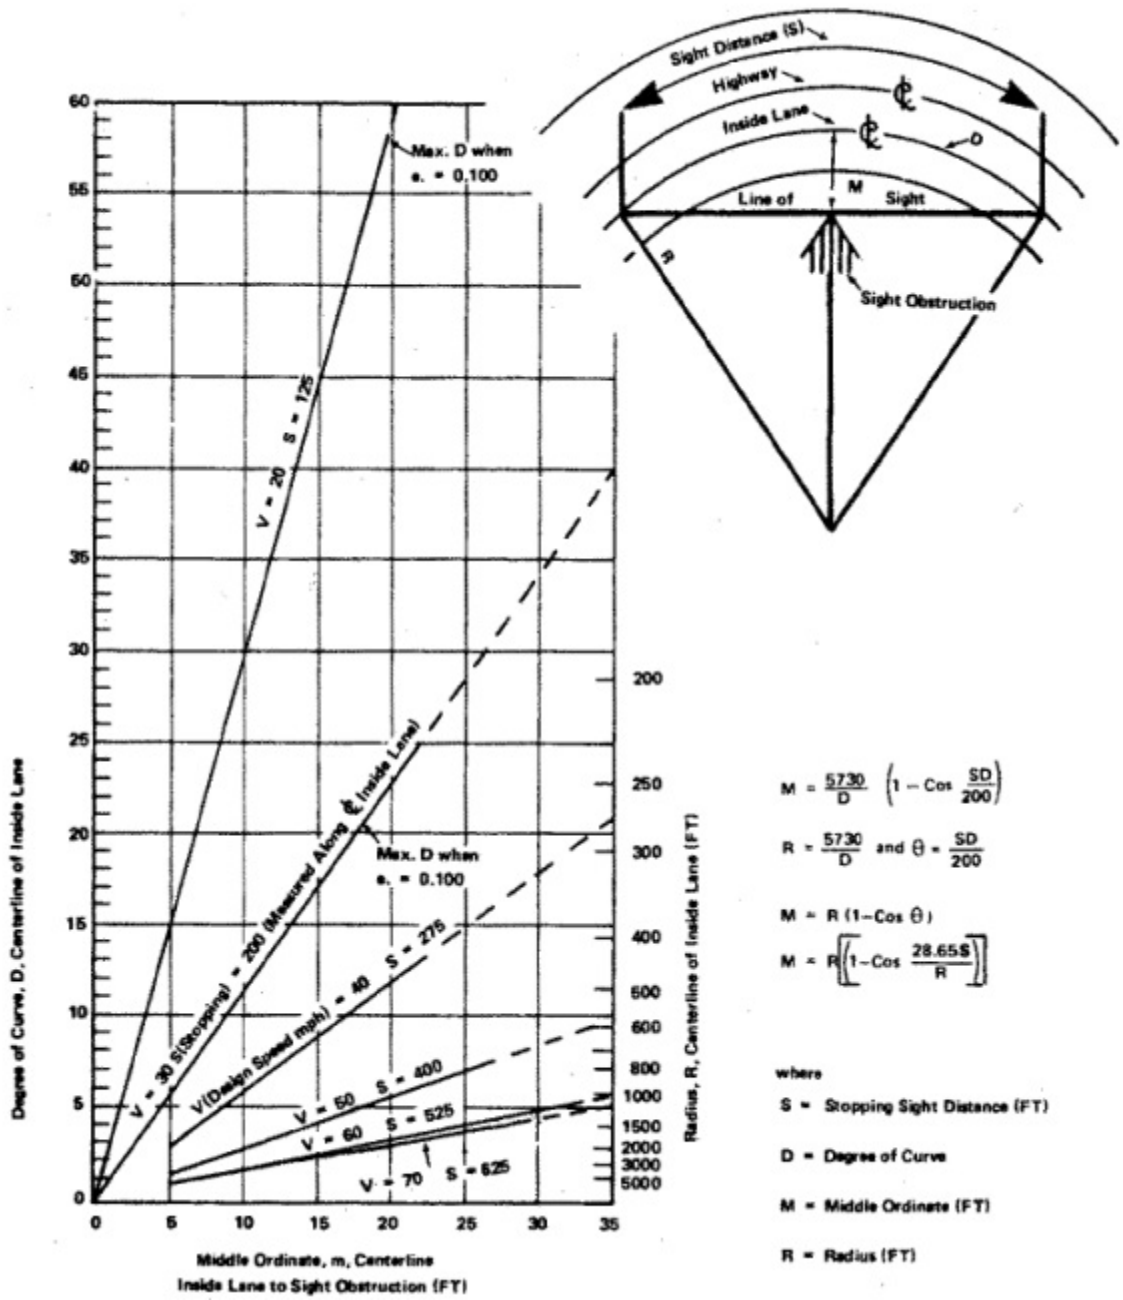

**Figure 6-01-03.B.6-2, Range Of Upper Values: Relation Between Degree Of Curve and Value Of Middle Ordinate Necessary To Provide Stopping Sight Distance on Horizontal Curves Under Open Road Conditions (adapted from AASHTO "Green Book" Figure III-26B**

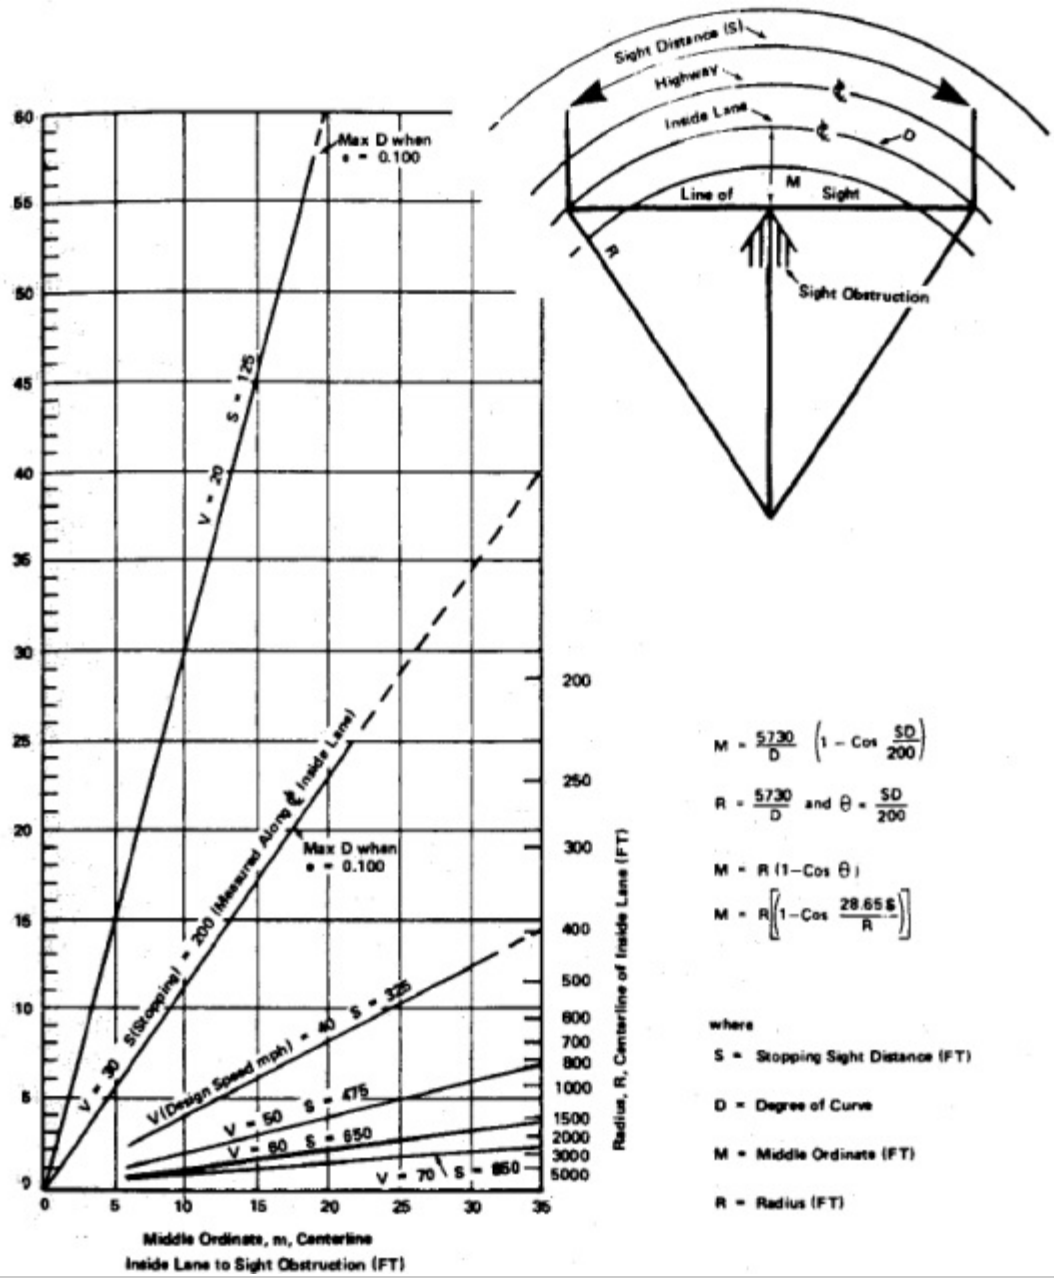

## 6-01-03.B.7 Curb Return Radii

Table 6-01-03.B.7-1, *Minimum Curb Return Radius at Intersection,* presents minimum curb return radius for each of the roadway types at intersections with the applicable through street.

**Table 6-01-03.B.7-1, Minimum Curb Return Radius at Intersection**

| Through Street | Local | Collector | Rural Arterial and Rural Principal Arterial | Principal Arterial |
|---|---|---|---|---|
| Local | 15’ | 25’ | 30’ | 30’ |
| Collector | 25’ | 30’ | 30’ | 35’ |
| Rural Arterial and Rural Principal Arterial | 30’ | 30’ | 35’ | 40’ |
| Principal Arterial | 30’ | 35’ | 40’ | 50’ |

## 6-01-03.C Vertical Alignment

### 6-01-03.C.1 Vertical Curves

a. **Generally**. The major issues for safe operation on a crest vertical curve are the provisions of ample sight and stopping distances for the proposed design speed. Vertical curves may be any one of the crest or sag types depicted in Figure 6-01-03.C.1-1, *Types of Vertical Curves*. The County requires vertical curves on a proposed roadway when the algebraic difference in grades is equal to or greater than 1.0 percent.

b. **Crest Vertical Curves.** When the height of eye and the height of object are 3.50 feet and 6 inches, respectively (used in stopping sight distance), the length of vertical curve (L) is related to the algebraic differences in grades (A) and the estimated sight distance (S). The required lengths of vertical curves for different values of A to provide ranges of stopping sight distances for each design speed are graphically shown in Figure 6-01-03.C.1-2, *Design Controls For Crest Vertical Curves for Stopping Sight Distance And Open Road Conditions, Upper And Lower Range*. The solid lines represent the required lengths based on rounded values of K (defined as L/A). Table 6-01-03.C.1-1, *Design Controls for Crest and Sag Vertical Curves Based on Stopping Sight Distance*, shows the computed K values for lengths of vertical curves as required for the range of values of stopping sight distances for each design speed.

**Figure 6-01-03.C.1-1, Types of Vertical Curves (adapted from AASHTO "Green Book" Figure III-40)**

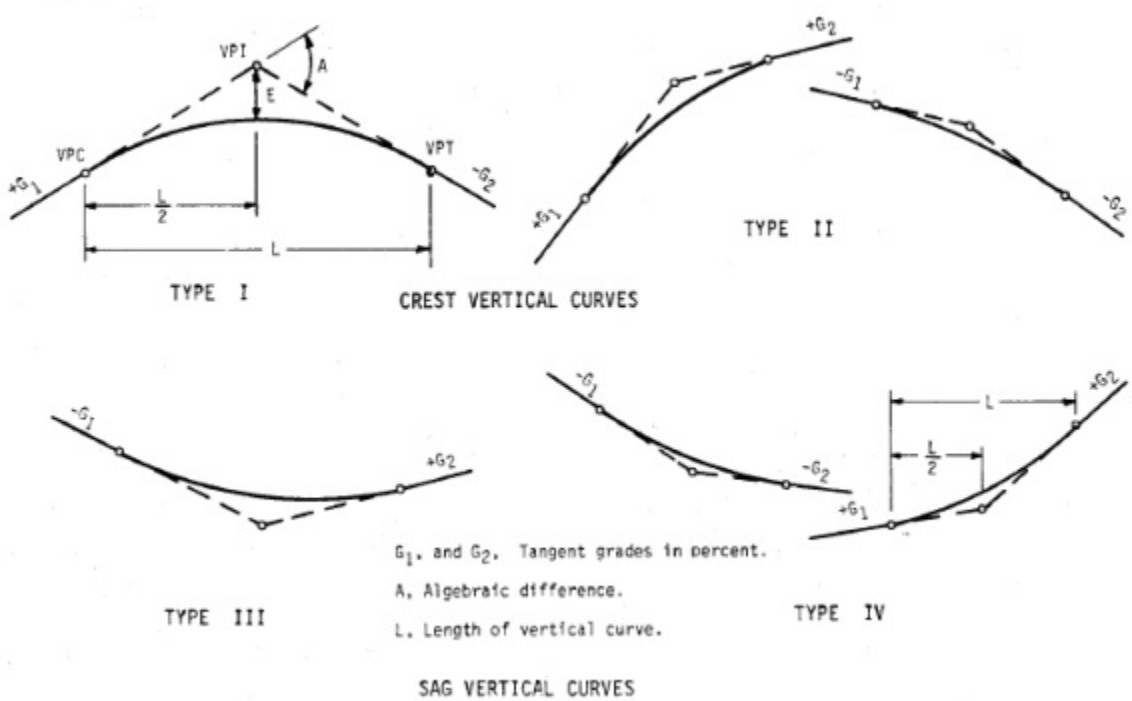

**Figure 6-01-03.C.1-2., Design Controls For Crest Vertical Curves for Stopping Sight Distance And Open Road Conditions, Upper And Lower Range (adapted from AASHTO "Green Book" Figure III-41 and Figure III-42)**

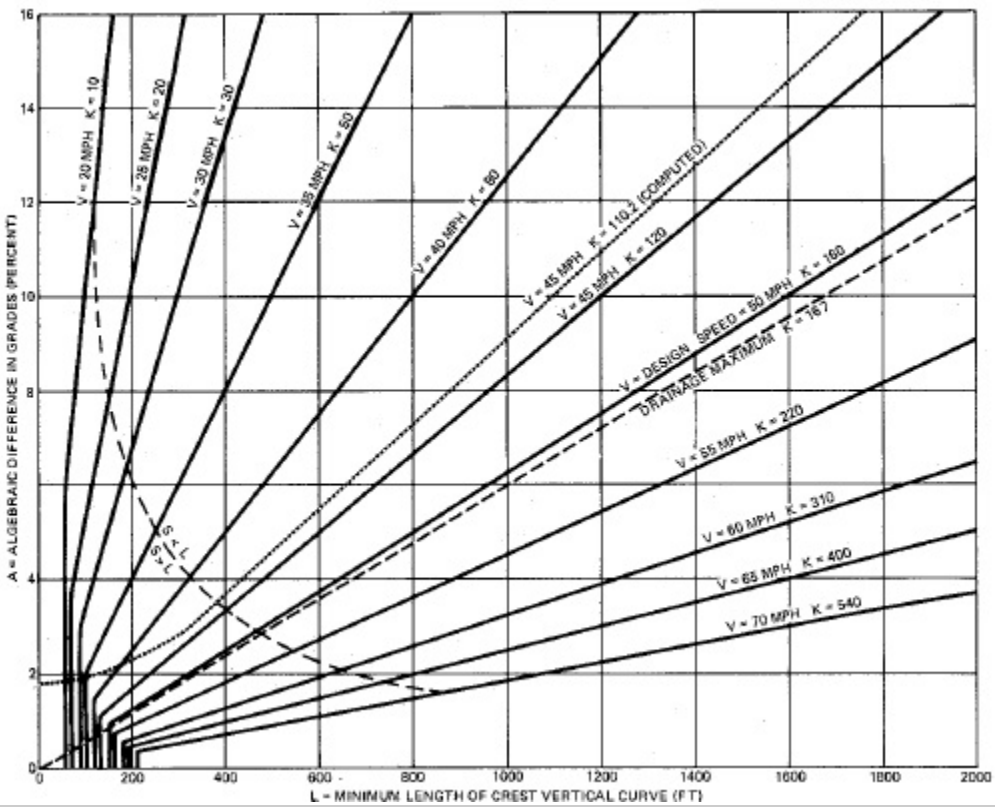

**Figure 6-01-03.C.1-2., Design Controls For Crest Vertical Curves for Stopping Sight Distance And Open Road Conditions, Upper And Lower Range (adapted from AASHTO "Green Book" Figure III-41 and Figure III-42)**

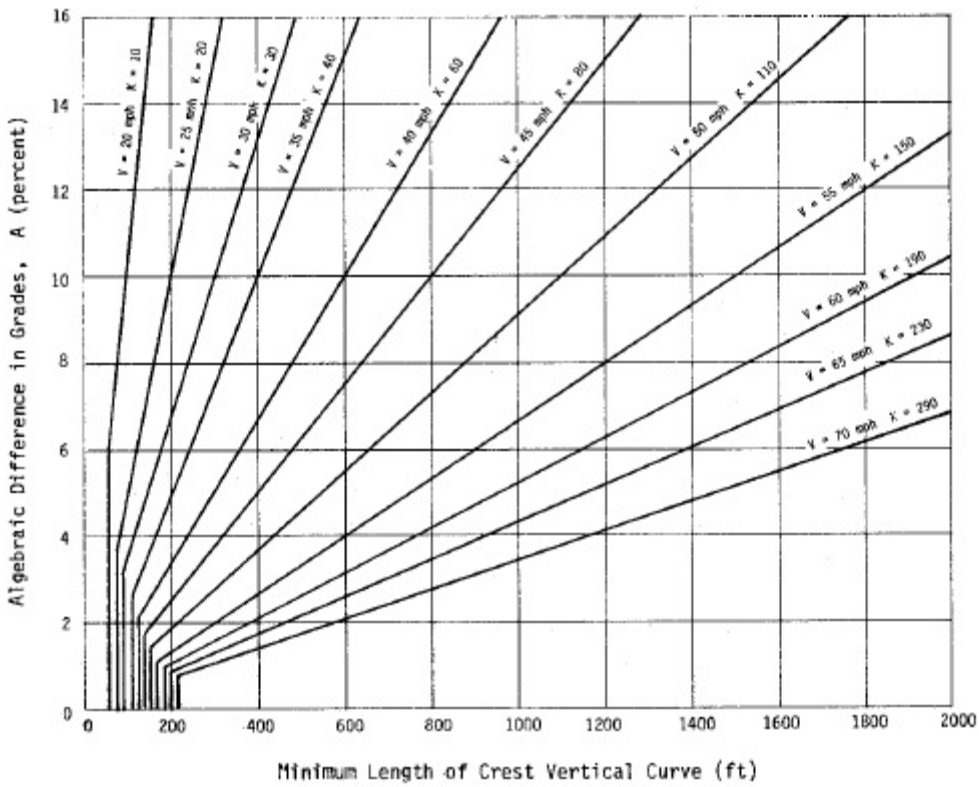

**Table 6-01-03.C.1-1, Design Controls for Crest and Sag Vertical Curves Based on Stopping Sight Distance (Adapted from AASHTO "Green Book" Tables III-40 and III-42)**

| Design Speed (mph) | Assumed Speed for Condition (mph) | Coefficient of Friction (f) | Stopping Sight Distance, Rounded for Design (ft) (refer to Table 6-01-03.A.1-1) | Rate of Vertical Curvature, K $\frac{L(ft)}{A(\%)}$ | | | |
|---|---|---|---|---|---|---|---|
| | | | | Crest Vertical Curve | | Sag Vertical Curve | |
| | | | | Computed[a] | Rounded for Design | Computed[a] | Rounded for Design |
| 20 | 20-20 | 0.40 | 125-125 | 8.6-8.6 | 10-10 | 14.7-14.7 | 20-20 |
| 25 | 24-25 | 0.38 | 150-150 | 14.4-16.1 | 20-20 | 21.7-23.5 | 30-30 |

| 45 | 40-45 | 0.31 | 325-400 | 76.4-110.2 | 80-120 | 67.0-84.2 | 70-90 |
| 50 | 44-50 | 0.30 | 400-475 | 106.6-160.0 | 110-160 | 82.5-105.6 | 90-110 |

**Table 6-01-03.C.1-1, Design Controls for Crest and Sag Vertical Curves Based on Stopping Sight Distance (Adapted from AASHTO "Green Book" Tables III-40 and III-42)**

| Design Speed (mph) | Assumed Speed for Condition (mph) | Coefficient of Friction (f) | Stopping Sight Distance, Rounded for Design (ft) (refer to Table 6-01-03.A.1-1) | Rate of Vertical Curvature, K $\frac{L(ft)}{A(\%)}$ | | | |
|---|---|---|---|---|---|---|---|
| | | | | Crest Vertical Curve | | Sag Vertical Curve | |
| | | | | Computed[a] | Rounded for Design | Computed[a] | Rounded for Design |
| 55 | 48-55 | 0.30 | 450-550 | 140.4-217.6 | 150-220 | 97.6-126.7 | 100-130 |
| 60 | 52-60 | 0.29 | 525-650 | 189.2-302.2 | 190-310 | 116.7-153.4 | 120-160 |
| 65 | 55-65 | 0.29 | 550-725 | 227.1-394.3 | 230-400 | 129.9-178.6 | 130-180 |
| 70 | 58-70 | 0.28 | 625-850 | 282.8-530.9 | 290-540 | 147.7-211.3 | 150-220 |

[a]Using computed values of stopping sight distance

c. **Design Values**. Design values of crest vertical curves for passing sight distance differ from those for stopping sight distance because of the different height criterion (4.25 feet instead of 6 inches). K-values for crest vertical curves based on passing sight distance are shown in Table 6-01-03.C.1-2.

**Table 6-01-03.C.1-2, Design Controls for Crest Vertical Curves Based on Passing Sight Distance (adapted from AASHTO "Green Book" Table III-41)**

| Design Speed (mph) | Minimum Passing Sight Distance (refer to Table 6-01-03.A.2-1) (ft) | Rate of Vertical Curvature, K[a] Rounded for Design $\frac{L(ft)}{A(\%)}$ |
|---|---|---|
| 20 | 800 | 210 |
| 25 | 950 | 300 |
| 30 | 1100 | 400 |
| 35 | 1300 | 550 |
| 40 | 1500 | 730 |
| 45 | 1650 | 890 |
| 50 | 1800 | 1050 |
| 55 | 1950 | 1230 |
| 60 | 2100 | 1430 |
| 65 | 2300 | 1720 |
| 70 | 2500 | 2030 |

[a]Computed from rounded values of minimum passing sight distance

d. **Sag Vertical Curves.** At least four criteria affect the lengths of sag vertical curves. These include headlight sight distance, rider comfort, drainage control, and general appearance. Figure 6-01-

03.C.1-3 and Figure 6-01-03.C.1-4 graphically illustrate the resulting lengths of vertical curves for the upper value of the range of minimum stopping sight distances for each design speed. Table 6-01-03.C.1-1 shows the range of computed values and the rounded values of K (L/A).

**Figure 6-01-03.C.1-3, Design controls for sag vertical curves, open road conditions, upper range**
**(adapted from AASHTO "Green Book" Figure III-43)**

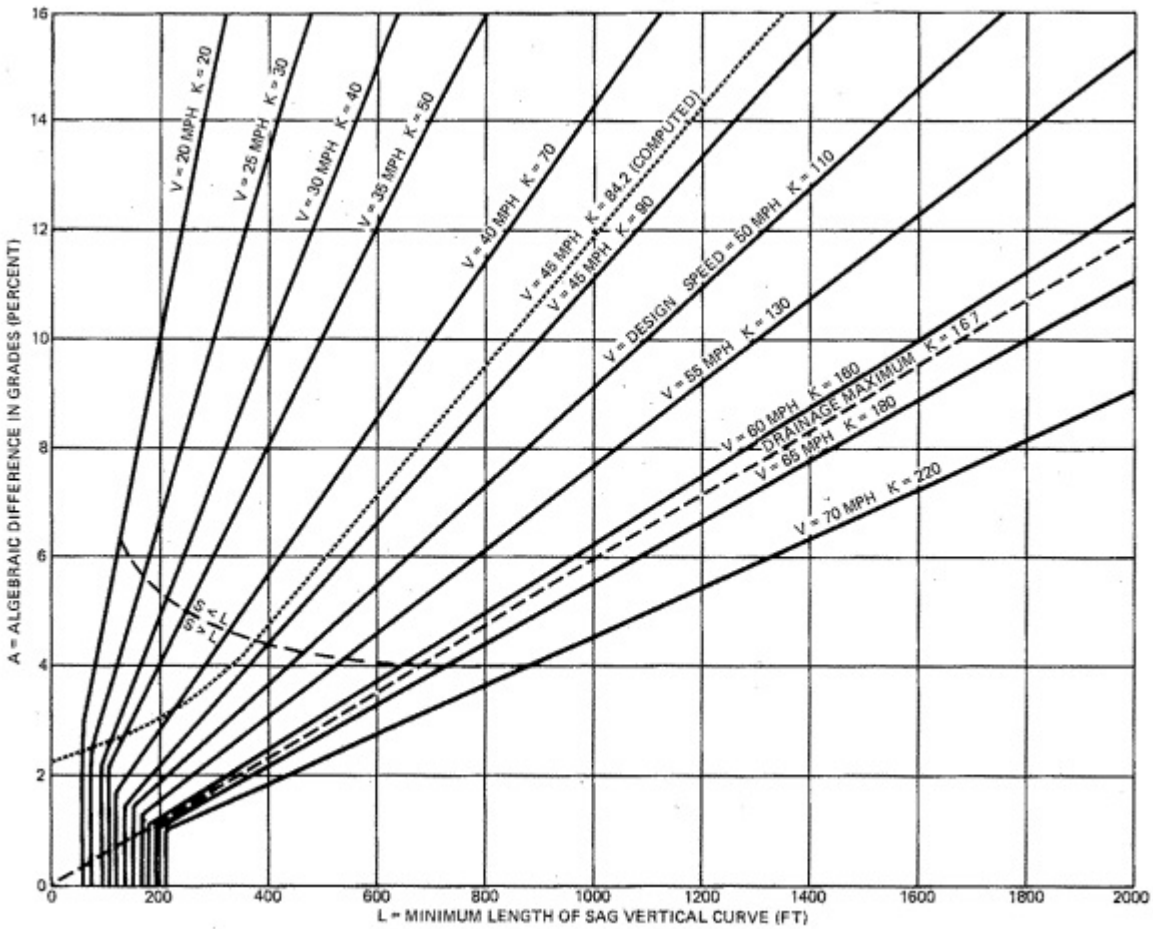

**Figure 6-01-03.C.1-4, Design controls for sag vertical curves, lower range (adapted from AASHTO "Green Book" Figure III-44)**

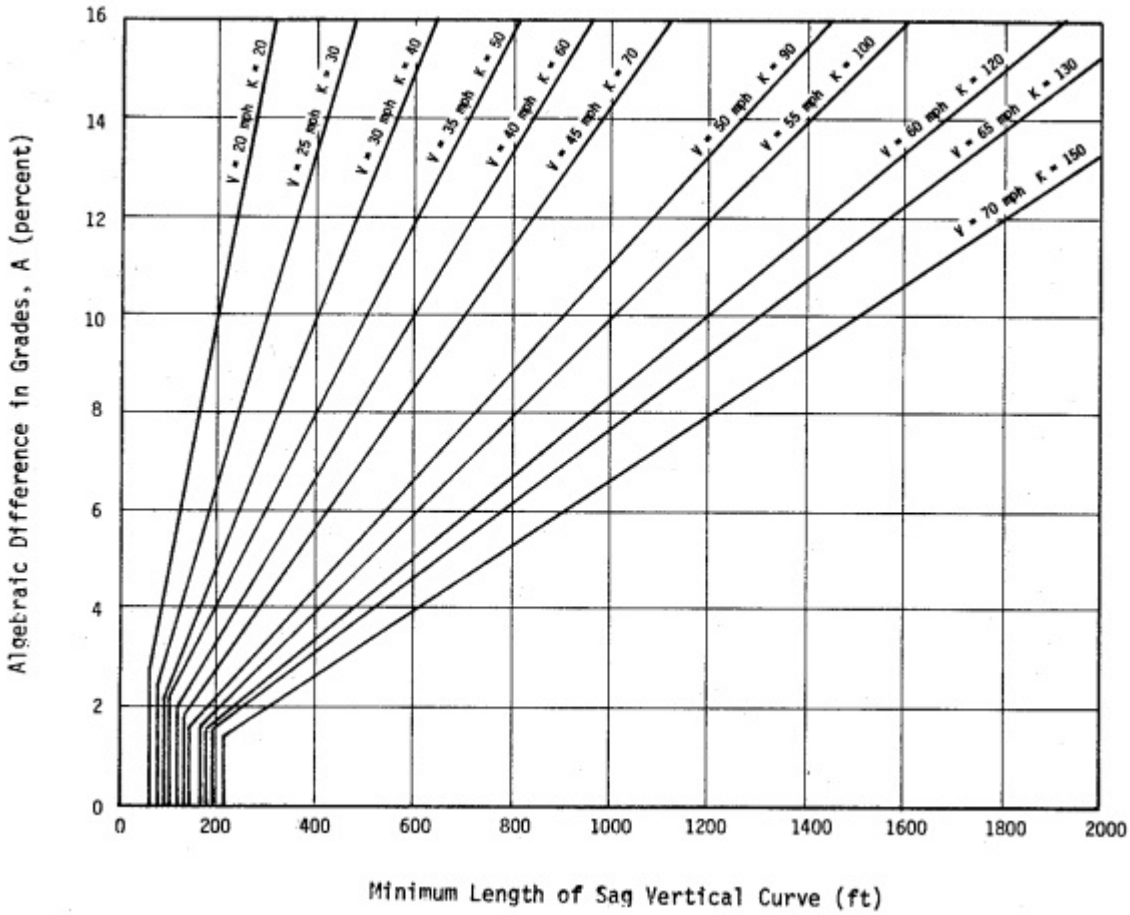


## 6-01-03.C.2 Permissible Design Grades

See Table 6-01-03.E-1, *Permissible Grades*, for permissible design grades on roadways and at intersections.

## 6-01-03.C.3 Grade Changes

Newly proposed roadways must not be designed using grade breaks, unless prior authorization from the County is obtained. Vertical curves meeting minimum criteria outlined in this section are preferred. If conditions arise during modifications to existing roadways that require a grade break instead of vertical curves, and the algebraic difference in grade does not exceed one percent (0.01 ft/ft), the grade break shall be permitted. The maximum permitted ;grade break at the point of tangency at a curb return for local and collector roads shall be two percent.

## 6-01-03.C.4 Cross Fall

Except at intersections or where a superelevation is required, roadways shall be designed to maintain a constant cross slope from top of curb to top of curb, or flowline to flowline. The distance from intersections that 'cross-fall' shall only be permitted on a project-specific basis. The design engineer shall obtain the maximum distance from the Director of the Public Works Department.

## 6-01-03.D Spiral Curves

Spiral curves shall only be designed into rural, rural principal, and principal arterial roadways within the County, excluding State Highways, or with written approval of the Director of the Public Works Department.

## 6-01-03.E Railroad Crossings

All railroad crossings shall be designed in accordance with all Federal Railroad Association (FRA) requirements and with Table 6-01-03.E-1, *Permissible Grades,* below. In addition, project plans must receive prior written approval from the railroad owner before submitting them to the County.

| Table 6-01-03.E-1, Permissible Grades | |
|---|---|
| Local Streets | Minimum longitudinal flowline grade: 0.5%. |
| Curb Returns | Minimum flowline grade: 0.3%. |
| Centerline of Collector and Arterial Streets | Minimum longitudinal grade = 0.5% |
| Permissible Intersection Grades (within Public ROW) | |
| Grades at Intersecting Major and Minor Arterials | Maximum: 2% for 200 feet on either side of the intersection. |
| Grades at All Other Streets | Maximum: 3% for 200 feet |
| Dead End Streets (except cul-de-sacs) | Continue the proposed grade and existing ground lines for 500 feet or to its intersection with another street. |
| Culs-de-sac | Continue the proposed and existing grade lines a minimum of 100 feet past the radius point. |
| Arterial Streets | Continue the proposed grade and existing ground lines 1000 feet. |
| Connection with Existing Streets | Provide smooth transitions and show existing grades for at least 300 feet on each side of the intersection. |
| Private Commercial Driveways with Curb Return Radii | Follow the standard set forth for a local street.<br>The length of the maximum grade: minimum of 50 feet measured from the flowline intersection of the public roadway. |
| Normal crown shall be maintained on the through street, and the intersecting street grade shall be subordinate thereto. | |

## 6-01-03.F Cul-de-sacs

The minimum design criterion for culs-de-sac is included in Table 6-01-03-1, *Roadway Design Criteria*.

### 6-01-03.F.1 Pavement Surface

All new non-rural cul-de-sacs shall be surfaced with concrete pavement in the bubble area.

## 6-01-03.G Intersections

### 6-01-03.G.1 Alignment and Profile

a. **Generally**. Intersections are points of convergence between vehicles, pedestrians, bikes and facilities. The design of the intersecting roads should permit users to pass through the intersection safely and with minimal interference. It should be the intent of the engineer to design an intersection which meets existing demands, and also accommodates the future volumes and traffic mix as determined by an approved Traffic Impact Study.

b. **Roundabouts**. Traditional intersection improvements are preferred for all County roads and should be designed using the criteria outlined in this Chapter. However, modern roundabouts may also be allowed assuming they meet modeled traffic demands and the design is completed by an engineer with prior experience. This experience will require verification by the Director of the Public Works Department prior to receiving written approval.

c. **Right Angles**. For reasons of safety and economics, traditional intersections will be designed with all intersecting roads meeting at or as near to right angles. Roads intersecting at acute angles require extensive ROW and limits visibility and obtuse angles create blind areas.

d. **Substantial Grade Changes**. Substantial grade changes should be avoided at intersections. Adequate sight distance should be provided along both approaching roads and across the corners even if the intersecting roads are on vertical curves.

### 6-01-03.G.2 Sight Distance-Intersection Control

Refer to Table 6-01-03.G.2-1, *Sight Distance*, *Intersection Control,* for simple definitions of the five types of controls which apply to at-grade intersections.

| Table 6-01-03.G.2-1, Sight Distance, Intersection Control | |
|---|---|
| No Intersection Control | • An intersection where a crossing is not controlled by yield signs, stop signs, or traffic signals<br>• The safe stopping distances for intersection design are the same as those used for design in any other section of the road. |
| Yield Control | • Requires the minor roadway be posted with yield signs as it approaches the major roadway.<br>• The sight distance for the driver on the minor road must be sufficient to allow the driver an opportunity to observe a vehicle on the major roadway approaching for the left or the right, and then bring the vehicle to a stop prior to reaching the intersecting road.<br>• Proper adjustments for all distances must be made when any of the approach legs are not on level.<br>• When an obstruction cannot be removed, modifications to the vertices of a sight triangle to points that are less than the design speed's safe stopping sight distance from the intersection, appropriate adjustments must be made for the design speed. Refer to the AASHTO "Green Book" regarding yield control for secondary roads to determine appropriate stopping sight distances or reduced design speeds for this condition. |
| Stop Control | • Requires that the minor road of an intersection be controlled by stop signs.<br>• The driver of the vehicle on the minor road must have sufficient gaps in traffic and adequate sight distances to safely proceed through the intersection from the stopped position.<br>• Refer to AASHTO "Green Book" for sight distance calculations for vehicles intending to cross the intersection, turn left, or turn right. |
| Signal Control | • Requires that all signal-controlled intersections give ample time for drivers to see the control device and allow enough time to perform the required action(s). |
| Modern Roundabout | • Requires ample warning, through signage and striping, be given to drivers to see the intersection and allow enough time to reduce speed and prepare to perform the required action(s).<br>• The approaching drivers must have sufficient sight distance to see vehicles within the roundabout and allow them to yield as they enter the intersection. |

## 6-01-03.G.3 Design Factors

Refer to Table 6-01-03.G.3-1, *Intersection Criteria*, for additional intersection design factors and criteria for local roads, collectors and arterials. Refer to the AASHTO "Green Book" for specific intersection design factors.

| Table 6-01-03.G.3-1, Intersection Criteria |
|---|
| **Criteria** |

| | |
|---|---|
| Precedence at intersections | ● The grade of the "through" street shall take precedence at intersections.<br>● At intersections of roadways with the same classification, the more important roadway, as determined by the Director of the Public Works Department, shall have precedence.<br>● The design shall warp side streets to match through streets with as short a transition as possible. |
| Determination of the elevation of the curb return on the side street and the amount of warp needed on a side street transitioning to a through street | Key criteria are:<br>● Permissible grade in the stop/start lane.<br>● Pavement cross slope at the PCR's on the side street and permissible warp in pavement cross slope.<br>● Normal vertical curve criteria.<br>● Vertical controls within the cub return itself. |
| Elevation at the PCR of the curb return on the through street | Always set by the grade of the through street in conjunction with two percent pavement cross slope. |
| Carrying the crown at a side street into the through street | Permitted only when drainage considerations warrant such a design. |
| Dipping the flowline | ● Dipping of the lip of gutter is not permitted.<br>● Only permitted as specified by Adams County Standard Details concerning curb opening inlets.<br>● Tipping an inlet for the benefit of drainage is also not permitted. |
| Pavement surface | All new intersections of roads classified as collector or higher shall be surfaced with concrete pavement extending 70 feet each direction from the centerline of the intersection. |
| Arterial-arterial intersections | A more detailed review shall be performed to maximize drivability. Few arterial intersections will have a uniform two percent cross slope, the majority of them having one or more sides warped. |
| Intersection sight distances | Shall conform to the requirements of 6-01-03.A.4, *Intersection Driveway Sight Distance (Sight Triangle)*. |
| Effect of Vertical Profiles | The differences in stopping distances on various grades at intersections are the same as those given in Table 6-01-03.A.1-2, *Effect of Grade on Stopping Sight Distance, Wet Conditions*. Grades on an intersection leg shall be limited to 3 percent unless the sight distances are greater than the lower limits for stopping on a level grade, in which case the grades shall not be greater than 6 percent. |
| Stopping Sight Distance at Intersections for Turning Roadways | The values for stopping sight distances apply to turning roadway intersections of the same design speed (refer to Table 6-01-03.A.1-1, *Stopping Sight Distance for Wet Pavements*). The length of vertical curve is determined as it is for open highway conditions (refer to the section regarding Vertical Alignment and Table 6-01-03.C.1-1, *Design Controls for Crest and Sag Vertical Curves Based on Stopping Sight Distance)*. |

| | |
|---|---|
| Superelevation for Curves at Intersections | The general factors that control the maximum rates of superelevation for road conditions also apply to intersection curves. |

## 6-01-03.G.4 Curb Returns

The minimum fall around curb returns along the flowline shall be 0.3 percent. The minimum grade around curb returns, designed to facilitate water flow, shall be 1.27 percent or greater. Label high point elevation and distance from P.C.R. Label station and elevation of upstream flow line intersection when a cross pan is required. The longitudinal sidewalk grade within this inside curb shall not exceed five percent.

## 6-01-03.G.5 Curb Return Profiles

Curb return profiles are required for radii equal to or greater than 30 feet within the public ROW. A midpoint elevation along the arc length of the curb return shall be shown in plan view for radii equal to or greater than 25 feet. Curb return design shall be set in accordance with the following design procedure. Refer to Table 6-01-03.G.5-1, *General Standards for Flowline Control and Profiles Within Curb Return.*

| Table 6-01-03.G.5-1, General Standards for Flowline Control and Profiles Within Curb Return | |
|---|---|
| Point of Tangency at Each Curb Return | Determine by the projected tangent grade beginning at the point of intersection (PI) of the flowlines. |
| Arc Length and External Distance of the Curb Return | Compute and indicate on the drawing. |
| Roadways Beyond PCR | Show the corresponding flowline (or top of curb) grade. |
| Design of the Flowline of the Curb Return | Maximum slope along the flowline: do not exceed more than8%. |
| Maximum Grade Breaks at the PCR's | 2% for local and collector streets<br>1% for arterials. |
| Maximum Vertical Curves | Equals the arc length of the curb return. |
| The Elevation and Location of the High or Low Point within the Return | If applicable, call out in the profile. |
| Vertical Difference in Elevation across the Street at the PCR | No more than 1'. |
| Scale for the Curb Return Profile | 1" = 10' horizontally<br>1" = 1' vertically. |
| Curb Return | Show existing and proposed. |

## 6-01-03.G.6 Connection with Existing Roadways

Refer to Table 6-01-03.G.6-1, *Connection with Existing Roadways*.

| Table 6-01-03.G.6-1, Connection with Existing Roadways | |
|---|---|
| Transitions | Shall be smooth conforming to normal vertical curve criteria if the algebraic difference in grade between the existing and proposed grade exceeds 0.5%. |
| Vertical Curve | If a vertical curve is used for the transition , it shall:<br>● Be fully completed prior to connecting with the existing improvement.<br>● Comply with the grade requirements at intersection approaches. |
| Existing Grade | Existing grade shall be shown for at least 300 feet, supported by field-verified as-built surveys with stations and elevations recorded at 25-foot intervals. For connections involving an existing intersection, these as-builts shall cover a 300-foot radius from the intersection. This information must be included in the plan and profile displaying the proposed roadway. |
| Limits and Characteristics of the Existing Improvement | These are the primary concern in the plan view include horizontal alignment, off-site intersections, limits of the improvement, and similar factors. |
| Previously Approved Designs for the Existing Improvement | Shall not be used as a basis for establishing existing grades but shall be referenced on the construction plan. |
| The Basis of the As-built Elevations | Elevations shall match the design elevations for both flowlines or both top of curbs, whichever is applicable, when feasible. |

## 6-01-03.H Off-Site Design

### 6-01-03.H.1 General

The design grade of all roadways that terminate due to project phasing, subdivision boundaries, or similar conditions, shall be extended in the same plan and profile as the previously proposed design for a minimum of 500 feet or to the nearest intersection. For arterial roadways, the extension shall be increased up to 1,000 feet.

### 6-01-03.H.2 Transition

If the off-site roadway, adjacent to the proposed development is not fully improved to the required County section, the developer is responsible for the design and construction of a transition for the safe conveyance of traffic from the improved section to the existing roadway. The following formula, Equation 6-01-03.H.2-1, shall be applied to the taper of lane change necessary for this transition. The Director of the Public Works Department should be contacted in order to receive written approval of unusual transitions. This contact is the responsibility of the applicant.

| Equation 6-01-03.H.2-1 | |
|---|---|
| $$L = \frac{WS^2}{60}$$ | |
| Where | |
| L = | Length of transition in feet |

| | |
|---|---|
| W = | Width of offset in feet |
| S = | Speed limit or 85th percentile speed (mph) |

## 6-01-03.I Acceleration/Deceleration Lanes

### 6-01-03.I.1 General

The long-term performance of an arterial street system greatly depends upon the proper control of access to the roadway from adjacent properties. The location and design of access points must minimize traffic hazards and interference to through traffic movements. Acceleration/Deceleration lanes shall be designed using Chapter 7, *Access Design and Traffic Requirements*. The warrant for acceleration or deceleration lanes shall be based upon the approved Traffic Impact Study for the final plat or final development plan.

## 6-01-03.J Bus Pullout Lanes

### 6-01-03.J.1 General

If recommended by the Regional Transportation District, bus pullout lanes shall be designed according to the criteria in Table 6-01-03.J.2-1 and constructed by the adjacent developer.

### 6-01-03.J.2 Design

a. **Generally**. Refer to Table 6-01-03.J.2-1, *Bus Pullout Lanes*, for lead-in and lead-out lengths based on roadway speed for bus pullout lanes. The applicant must consult with the Regional Transportation District to obtain further design requirements prior to submitting to the County for review and approval.

**Table 6-01-03.J.2-1, Bus Pullout Lanes**

| Speed Limit, (mph) | Lead-In Length, (feet) | Lead-Out Length, (feet) |
|---|---|---|
| 35 & under | 60 | 60 |
| 40 | 100 | 70 |
| 45 | 150 | 80 |
| 50 | 200 | 90 |
| 55 | 250 | 100 |

b. **Placement**. Bus pullouts shall be constructed with no less than 50 feet between an intersection curb return curve (PC) and the beginning of the lead-in taper.

## 6-01-03.K Entry Streets

### 6-01-03.K.1 General

a. **Generally**. "Entry Streets" are generally short, with a minimum length of 160 feet, extending one block or the first intersection maximum, and shall have no driveway access. Entry Streets shall be designed to allow a reduction in the separation between an arterial street and the first local street intersection, or to accommodate more than 40 dwelling-units with a single

access point. Table 6-01-03.K.1-1, *Entry Streets*, summarizes the posted speed limit and minimum flowline-flowline dimensions.

| Table 6-01-03.K.1-1, Entry Streets | | |
|---|---|---|
| | | Value |
| Posted Speed Limit | | 25 MPH. |
| Minimum flowline-flowline dimension | Off of arterial | 40’ |
| | Off of arterial with median island | 20’ min. both sides. |
| | Off of collector | 38’ |
| | Off of collector with median island | 20’ min. both sides |

b. **Driveways**. If an “Entry Street” off of a collector has a FL-FL dimension of 40 feet, driveways may be allowed on one side of the “Entry Street.” Entry Streets shall be posted as “No Parking.”

c. **Placement**. An “Entry Street” is classified as a lower tier than a collector street but higher than a local street. For example, “Entry Street” criteria for separation between intersections along a collector shall not be used to place collector street within 160 feet of another intersection.

## 6-01-04 Inspection, Testing Procedures, and Construction Guidelines

During construction of new circulation systems, the developer or contractor shall notify the County Inspector a minimum of 24 hours prior to initiation, any significant changes to existing conditions, and upon completion. As-built drawings shall be submitted to the County prior to final acceptance.

# Div. 6-02 Roadway Design Standards Based on Context and Function

## 6-02-01 General

A. **Purpose**. The purpose of these standards is to ensure that all roadways are designed to prioritize safety and reflect the specific context of the community and surrounding land uses. These standards introduce design criteria aimed at reducing and managing vehicle speeds, improving safety on streets that serve neighborhood or community functions and reducing conflicts between different transportation modes. Although functional classification defines the fundamental cross-section and roadway design parameters, this section incorporates community and longitudinal corridor context to guide the application of context-sensitive traffic calming measures and can be used to supplement the functional classification roadway design standards.

B. **Applicability.**

1. *Generally*. These standards apply to the geometric design and alignment of roadways in all new developments or redevelopments where streets function primarily as neighborhood-serving or community-serving roads, especially in residential, mixed-use, or transitional areas.

2. *Context-Based Application*. Traffic calming measures shall be applied based on the street's context and function within the community, with consideration given to adjacent land uses, pedestrian and cyclist volumes, and potential cut-through traffic.

## 6-02-02 Design Flexibility for Special Contexts

A. **Purpose.** In areas where streets are expected to serve both local and broader community functions (e.g., transitional areas between residential and commercial zones), roadway design should provide flexibility to apply both geometric and traffic calming measures based on the specific context.

B. **Design Considerations.**

1. *Street Design in Transitional Areas*. In areas where streets classified as collectors or arterials serve neighborhood functions, the following additional design standards shall apply:
2. Use of raised medians or islands to control access and reduce vehicle speeds
3. Lane narrowing in certain segments to visually signal a reduction in speed
4. Incorporation of crosswalk enhancements such as pedestrian refuge islands or advanced stop lines

C. **Functional Context Over Classification.** The functional context of the street (e.g., whether it serves local, community, or regional needs) shall take precedence over its official classification in determining the necessary safety and design standards.

## 6-02-03 Monitoring and Adjustments

A. **Post-Construction Monitoring.** Roadways designed and constructed in accordance with these standards shall be subject to post-construction safety audits, particularly in areas where traffic calming measures have been implemented. This audit shall evaluate:

1. The effectiveness of the traffic calming devices in reducing vehicle speeds
2. The safety impacts on pedestrians, cyclists, and other vulnerable road users
3. Compliance with the design standards outlined in this section

B. **Design Adjustments**. Should the post-construction audit identify deficiencies or areas where traffic calming measures are insufficient to meet the intended safety outcomes, adjustments to the roadway design or additional traffic calming measures shall be required.

## 6-02-04 References

This section is based on best practices from *AASHTO's Green Book,* the *ITE Traffic Calming Guidelines,* and *FHWA Proven Safety Countermeasures* for reducing speeding and improving safety on roadways that serve neighborhood and community functions.

## 6-02-05 Implementation and Compliance

These design standards shall be incorporated into all new roadway designs and applicable redevelopment projects within Adams County. Compliance with these standards is mandatory, and developers must ensure that all traffic calming measures and context-based design features are implemented before final project approval.

# Div. 6-03 Pavement Design and Technical Criteria

## 6-03-01 General

A. **Generally**. This Section presents pavement design standards based on methodologies outlined in the "Pavement Design Standards and Construction Specifications, " first published by the Metropolitan Government Pavement Engineers Council (MGPEC) in April of 1998. The intent of these design standards is to develop pavement sections that considers not only the roadway classification, but also factors such as subgrade characteristics, traffic volumes based on local land uses, pavement materials, life-cycle costs, future maintenance, and special considerations including swelling soils, slope instabilities, and frost susceptible soils.

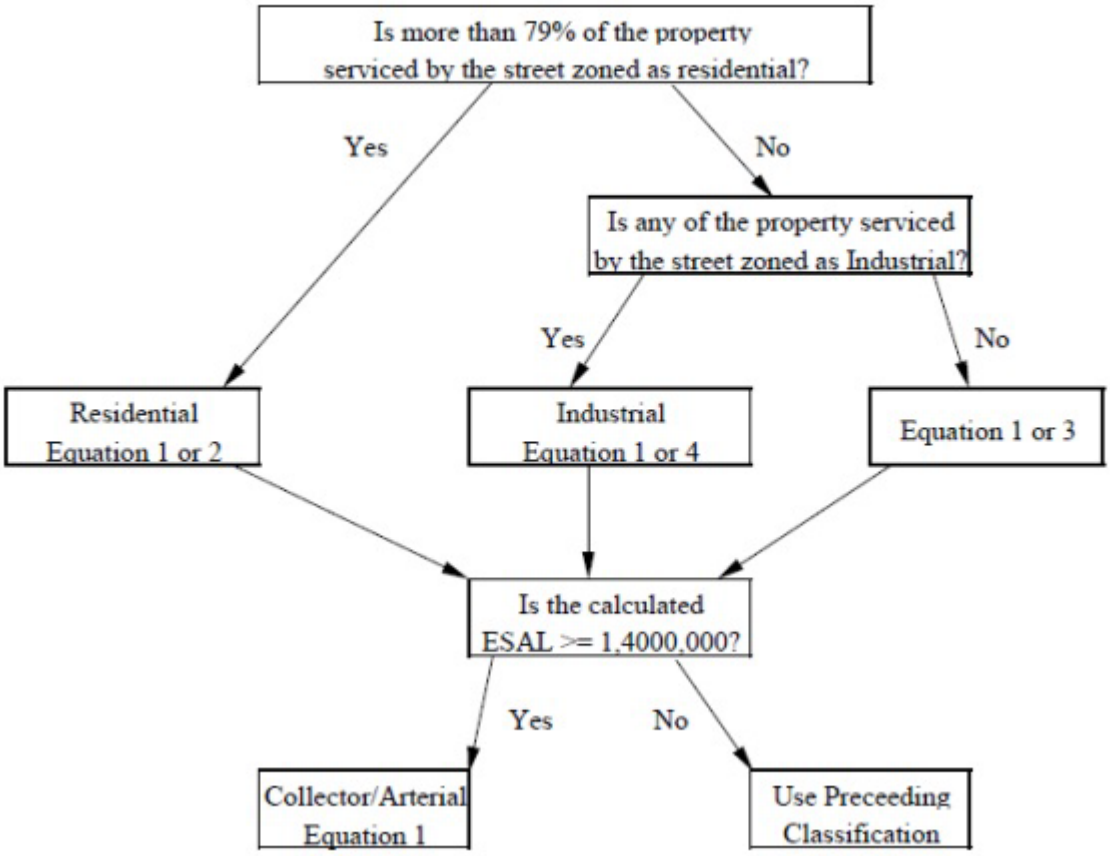
B. **Methodology**. This methodology adapts existing AASHTO design parameters to reflect typical County subgrade soils and pavement materials, ensuring that pavement sections achieve equal design life based on fatigue criteria. Designs following this procedure shall provide equivalent life and serviceability, provided that minimum material specifications are met, construction recommendations are followed, and appropriate maintenance is carried out.

C. **MGPEC Manual**. All requirements within this Section shall conform to the latest published version of the MGPEC manual.

## 6-03-02 Required Design Submittals

As outlined in the "Pavement Design Standards and Construction Specifications" published by MGPEC; three design report options were developed for obtaining County approval. Two of these reports shall be submitted for County review and approval prior to being submitted for County review and approval prior to

**Figure 6-03-03.A-1, Roadway Land Use Classification Flowchart**



issuance of a construction permit.

# 6-03-03 Design Criteria

## 6-03-03.A Traffic Loading

1. **Roadway Classification**. It is the responsibility of the applicant's engineer to determine roadway classifications (based upon criteria outlined in Sec. 6-01-01, *General*) and confirm this classification with the County prior to initiating the design. More importantly, understanding the adjacent land use and its impacts on traffic loading will enable the engineer to develop the most appropriate pavement section.
2. **Pavement Design**. For the purpose of pavement design only, the roadway land use classifications are divided into four basic service descriptions: residential, commercial, industrial, and collector/arterial. These classifications are defined by the projected roadway

land use of the land accessed by the street (Figure 6-03-03.A-1, *Roadway Land Use Classification Flowchart*). Refer to the MGPEC standards and specifications for equation definitions.

3. **20-Year Design ESAL**. The 20-year design ESAL (Equivalent Single Axle Load) shall be determined using data obtained from a Pavement Design Traffic Study or use of default equations for residential, commercial, and industrial streets. Refer to MGPEC standards and specifications for the equations to be used in development of the 20-year design ESAL.

## 6-03-03.A.1 Pavement Design Traffic Studies

Equation 1 of the MGPEC standards and specifications requires estimates of average daily traffic volumes and distribution of traffic including a break-down of traffic by types (i.e. trucks and buses).

## 6-03-03.A.2 Residential, Commercial, Industrial Traffic Loads

Refer to Table 6-03-03.A.2-1, *Equations for Residential, Commercial, and Industrial Streets*, for references to equations for residential, commercial, and industrial streets.

**Table 6-03-03.A.2-1, Equations for Residential, Commercial, and Industrial Streets**

| | Residential | Commercial | Industrial |
|---|---|---|---|
| Traffic Loads | If a Pavement Design Traffic Study is not available, use Equation 2. | • If Pavement Design Traffic Studies are not available, use Equation 3.<br>• This equation should not be used for commercial properties larger than 10 acres; Equation 1 should be used for those cases | • If a Pavement Design Traffic Study is not required, use Equation 4.<br>• This equation should not be used for industrial properties larger than 10 acres; Equation 1 should be used for those cases. |
| Purpose | | This equation is used for commercial streets that provide access to retail stores, businesses, offices, and other commercial areas. | Streets having property zoned for industrial use (manufacturing, distribution, warehousing, etc.) |
| Type of Traffic | | Large mix of residential traffic along with trash services and delivery trucks. | Many trucks with heavy loads.<br>Some commercial and residential traffic. |

| Table 6-03-03.A.2-1, Equations for Residential, Commercial, and Industrial Streets | | | |
|---|---|---|---|
| | Residential | Commercial | Industrial |
| Considerations for Design | The number of residential units must include both those actually located on the street and all other residential units which use the street including adjacent existing or planned subdivisions. | In calculating ESAL's for commercial streets, future development and zoning in areas served by the street should be considered as part of the design. | Heavy truckloads. |

**TABLE NOTES:**

- Equation 3 is also applicable for mix use streets having both commercial and residential traffic.
- All equations are defined in "Pavement Design Standards and Construction Specifications" published by MGPEC.

## 6-03-03.B Subgrade Characterization

Subgrade characterization consists of determining swell movement potential and strength values. This swell potential is used to determine the depth of moisture treatment necessary to reduce the heave at the surface. The support value is expressed in the form of Resilient Modulus as determined from unconfined strength or R-value testing.

### 6-03-03.B.1 Swelling Subgrade

a. **Averaging**. Tests performed for each of the soil groups shall be averaged to determine the swell potential. The highest average swell will be used to determine the depth of moisture treatment in accordance with MGPEC standards and specifications.

b. **Moisture**. Moisture treatment operations will proceed until the soil moisture content is between 1 and 3 percent over optimum moisture content as determined by AASHTO T 99, and recompacted to 95 percent of Standard Proctor density.

### 6-03-03.B.2 Subgrade Stabilization

Soils requiring moisture treatment may also require subgrade stabilization operations due to the moisture contents normally causing the soils to be soft and yielding. Chemical stabilization of at least the upper 12 inches (8 inches for residential streets) may be required. Recommended chemical stabilizing agents are lime, lime/fly ash, and Portland cement. Other agents can be used with prior approval by the County and provided the mix design requirements are satisfied. Laboratory mix designs shall meet the criteria listed in the MGPEC standards and specifications.

### 6-03-03.B.3 Resilient Modulus

Subgrade support characteristics for AASHTO and MGPEC Designs are measured using Resilient Modulus. Due to cost and time constraints associated with determining the Resilient Modulus, a series of correlations and alternative equations have been developed. The equations relate the R-value for sand subgrades to the modified unconfined compressive strength procedure for clay subgrades. The strength values are to be determined by laboratory testing, and converted into Resilient Modulus (Mr) using Equations 5 through 9 in the MGPEC standards and specifications. Resilient modulus values obtained from these equations shall be reduced by 25 percent unless one of the following apply:

1. A subdrain system is provided and properly maintained.
2. The subgrade is permeable (k > 1,000 ft. Per year).
3. Rural pavement with designed drainage ditches.
4. Subgrade is gneiss or granite in nature.

## 6-03-03.C Pavement Section

The pavement section being proposed will be determined using the traffic ESAL's, the Resilient Modulus, and the depth of moisture treatment and stabilization. Tire stresses and wheel loads used in the calculations will be 130 psi and 6,000 pounds (minimum).

### 6-03-03.C.1 Portland Cement Concrete Pavement (PCCP)

a. **Swells Over Four Percent**. PCCP is not recommended where swells exceed four percent (two percent for speed limits > 35 mph). The design shall be calculated using Equation 10 in the MGPEC standards and specifications.

b. **Joint Design**. Joint spacing, doweling and tie bars will be in accordance with Portland Cement Association recommendations contained in "Joint Design for Concrete Highway and Street Pavements." Dowels are required for Industrial and arterial streets for longitudinal and expansion joints.

### 6-03-03.C.2 Asphalt Cement Concrete Pavement (ACCP)

The design shall be calculated using Equation 11 in the MGPEC standards and specifications.

### 6-03-03.C.3 Combination Sections

Refer to MGPEC standards and specifications for a presentation of equivalent fatigue Combination sections for ACCP.

### 6-03-03.C.4 Pavement Thickness

a. **Finite Element Method**. The design of collector or arterial streets will be confirmed using Finite Element Method or Elastic Layer Analysis. The Asphalt Institute DAMA program is preferred, but other programs such as CHEVPC, TTIPAVE, or MICHPAVE will be allowed. Trial thickness designs can be obtained using the design equations. Thickness design for PCCP shall be performed according to Equation 10 in MGPEC standards and specifications. No Finite Elastic Method or Elastic Layer Analysis is required for PCCP.

b. **Minimum Pavement Thickness**. Refer to MGPEC standards and specifications for minimum pavement thickness.

### 6-03-03.C.5 Resilient Modulus and Poisson's Ratio

Values shall be according to MGPEC standards and specifications.

## 6-03-03.D Life Cycle Cost Analyses

1. **Generally**. A Life Cycle Cost Analyses (using a present worth method) may be required for pavement design approval. The discount rate will be fixed at 4 percent and the analysis period shall be 30 years. Initial and maintenance costs will be based upon "Colorado Department of Transportation Cost Data" or County supplied cost data. The maintenance schedules presented in Table 6-03-03.D-1, *Scheduled Maintenance for Asphalt Cement Concrete Pavements,* and Table 6-03-03.D-2, *Scheduled Maintenance for Portland Cement Concrete Pavement*, are for life cycle cost analysis only.

**Table 6-03-03.D-1, Scheduled Maintenance for Asphalt Cement Concrete Pavements**

| Year | Residential | Commercial, Industrial, Collector, and Arterial |
|---|---|---|
| 1 | Fog Seal | Fog Seal |
| 3 | --- | Crack Sealing |
| 5 | Crack Sealing, Fog Seal | --- |
| 6 | --- | Crack Sealing, Fog Seal |
| 10 | Crack Sealing, Slurry/Chip Seal | 2-inch Overlay |
| 13 | --- | Crack Sealing |
| 15 | 2-inch Overlay | --- |
| 16 | --- | Crack Sealing, Fog Seal |
| 20 | Crack Sealing, Fog Seal | 4-inch Planing, 3-inch Overlay |
| 23 | --- | Crack Sealing |
| 25 | Crack Sealing, Slurry/Chip Seal | --- |
| 26 | --- | Crack Sealing, Fog Seal |
| 30 | 3.5-inch Planing, 2.5-inch Overlay | 2-inch Overlay |
| 1-30 | Annual Maintenance | Annual Maintenance |

**Table 6-03-03.D-2, Scheduled Maintenance for Portland Cement Concrete Pavement**

| Year | Residential | Commercial, Industrial, Collector and Arterial |
|---|---|---|
| 5 | --- | Clean & Seal Cracks and Joints |
| 7 | Clean & Seal Cracks and Joints | --- |
| 10 | --- | Clean & Seal Cracks and Joints |
| 14 | Clean & Seal Cracks and Joints | --- |
| 15 | --- | Clean & Seal Cracks and Joints |
| 20 | Grind ½ inch as necessary (25%) | Grind ½ inch as necessary (25%) |
| 25 | --- | Clean & Seal Cracks and Joints |
| 27 | Clean & Seal Cracks and Joints | --- |
| 30 | --- | Clean & Seal Cracks and Joints,<br>Grind ½ inch as necessary (25%) |

| Table 6-03-03.D-2, Scheduled Maintenance for Portland Cement Concrete Pavement | | |
|---|---|---|
| Year | Residential | Commercial, Industrial, Collector and Arterial |
| 1-30 | Annual Maintenance | Annual Maintenance |

2. **Maintenance**. Scheduled maintenance for heavy industrial areas having distribution centers or large truck traffic volumes and collector/arterial level roadways will be based upon a rational analysis of expected pavement distress for each site, and present in the report. The County should be consulted to determine the minimum level of maintenance required for the analysis.
3. **Alternatives**. Life cycle costs, which are within 10 percent, will be judged to be equal and alternatives should be presented. The Director of Public Works has final decision authority on the alternate to be constructed.

# Div. 6-04 Sidewalks, Curb and Gutter, and Driveways

## 6-04-01 General

Design of sidewalks, curb and gutter, and driveways shall meet criterion specified in this Section, the County's Engineering Road Standards, and applicable federal and state standards.

## 6-04-02 Required Design Submittals

Design details to be included as part of the Site Plan are outlined in the Submittals checklists. These include, but not limited to, locations, typical sidewalk, curb and gutter and driveway section(s), flowline grading and major intersection layouts. The County may require more or less detail depending on the project size and its location. Contact the Director of the Transportation Department or request a pre-application conference to determine the level most appropriate for the subject project.

## 6-04-03 Design Criteria

### 6-04-03.A Minimum Sidewalk Width

New sidewalks shall have a minimum width of five and one-half feet measured from the flowline. Expanded widths may be required in areas of heavy pedestrian traffic. In case of repair, match existing sidewalk width.

### 6-04-03.B Combination Curb, Gutter and Walk

Combination curb, gutter and walk shall be restricted to use on Local Residential streets. Vertical curb and gutter sections shall be used for all other streets.

### 6-04-03.C Handicap Ramps

State law requires handicap ramps be installed at all intersections and at certain mid-block locations for all new construction or reconstruction of curb and sidewalks (C.R.S. 43-2-107[2]). These ramps shall be constructed in accordance with the County's Engineering Road Standards. Handicap ramps shall be shown at all curb returns or called out by a general note on the development plans, but must be shown (located) at all "T" intersections directly opposite either curb return. Where sidewalk is not continuous around a curb return, the handicap ramp shall be constructed, and curb and gutter shall be constructed to the radius point of the adjoining street.

### 6-04-03.D Curb Cuts and Driveways

1. **Sidewalks**. Concentrated storm water runoff must not be discharged across the sidewalk where curb cuts or downspouts in industrial and commercial areas are located but must be directed to a sidewalk chase. The top of curb elevation shall be the same on both sides of a street, except at intersections or where superelevation is required.
2. **Construction Standards**. Curb cuts and driveways shall be constructed in accordance with the County's Engineering Road Standards and meet access requirements outlined in Chapter 7, *Access Design and Traffic Requirements*. Radius returns and a crosspan must be used if this is not possible due to grading restraints.
3. **Radius Returns**. Radius returns are required when the number of parking spaces serviced by the driveway exceeds ten. Minimum fall around curb returns shall be 0.3 percent. Desirable fall shall be 0.5 percent. See Table 6-01-03.B.7-1, *Minimum Curb Return Radius*, at intersection for curb return radii.

### 6-04-03.E Under-pass/Over-pass Pedestrian Crossings

Under-pass or over-pass pedestrian crossings may be required for regional/neighborhood trails on County collectors and arterials as determined by the Parks Department.

## 6-04-04 Median Islands

### 6-04-04.A Permanent Structures

Permanent structures (trees, poles, large rocks, etc.) shall not be placed in any location that would obstruct the sight distance.

### 6-04-04.B Nose

The nose of the median shall not extend past the curb return at the intersection.

### 6-04-04.C Landscaping

Shall have a mature height of 24 inches or less above the traveled way in areas around intersections to facilitate adequate sight distance and will preferably be dry land or native vegetation. If irrigation is planned for a median island, mitigation will be provided to protect the subgrade under the pavement form being saturated.

### 6-04-04.D Flowline

A minimum flowline-flowline dimension of 20 feet must be maintained on both sides of all median islands.

# Div. 6-05 Bridges and Major Drainage Structures

## 6-05-01 General

All bridges and major drainage structures will be designed considering factors such as loads, drainage capacities, future maintenance and safety. All culvert pipe, box culverts, guard rails, and bridges which will ultimately be maintained by County shall conform to:

1. CDOT, "Bridge Manual, Volume I and Volume II," latest edition.
2. CDOT, "Standard Specifications for Road and Bridge Construction," latest edition.
3. AASHTO "Standard Specifications for Highway Bridges," latest edition and applicable interim.

## 6-05-02 Required Design Submittals

A. **Plan Submittal**. A complete set of project plans, analysis and specifications related to the design of any bridge and/or major drainage structure shall be submitted to the County for review and approval. The plans are to be certified by a Colorado registered Structural Engineer who is competent to perform such designs. The County may require more or less detail depending on the scope of the project. Contact the Director of the Public Works Department or request a pre-application conference to determine the level of detail most appropriate for the subject project.

B. **Structure Identification Number**. New structures will be assigned a structure identification number by the County which shall be used on all design plans and specifications submitted for review.

## 6-05-03 Clear Width & Span

A. **Clear Width**. Bridges and major drainage structures will be designed with a clear width equal to the width of the approach roadway including full shoulder width and any future pedestrian crossing(s) identified in the ultimate road cross section.

B. **Ultimate Roadway Section**. The clear span for structures crossing a roadway shall be equal to or greater than the ultimate roadway section. For structures crossing drainageways, channels or other non-roadway features, the clear span shall be approved by the agency having jurisdiction over the feature being crossed.

## 6-05-04 Structure Design Loading

All major structures being proposed within the County, must be designed to meet HS-25 loading or as required by the Director of the Public Works Department and/or CDOT.

## 6-05-05 Drainage Capacity

Bridges and major drainage structures shall be designed to conform to the parameters of this Chapter.

## 6-05-06 Erosion Control

Where appropriate, the design will include measures to control erosion as per requirements and policies outlined in Chapter 10.

## 6-05-07 Structural and Inspection Requirements

The complete requirements and criteria to be used for testing and inspection of Bridges are detailed in the Colorado Department of Highways Standard Specifications for Road and Bridge Construction. The design structural engineer, familiar with assumptions inherent in the structure design, shall review the construction in sufficient detail to confirm the construction is appropriate. Qualified technical personnel experienced in the inspection of similar structures shall provide inspection of construction, as frequently as necessary to confirm the construction conforms to County approved plans and specifications. A written log or report of all work shall be furnished to the County at or prior to the request for probationary acceptance of the bridge or major drainage structure.

# Div. 6-06 Trenching and Backfilling

## 6-06-01 General

Trenching operations within the County ROW will only be permitted after obtaining a Right of Way Construction Permit from the County. This section briefly outlines general requirements for obtaining this approval and presents standards to be used in a trench design.

## 6-06-02 Required Design Submittals

As part of the overall project Site Plan, the location(s), depth and utility description shall be submitted for County review and approval.

## 6-06-03 Design Criteria

### 6-06-03.A Trenching

Table 6-06-05-1, *Design Criteria for Trenching*, presents general requirements for trenching operations within the County ROW. Refer to the County's Engineering Road Standards for typical trench sections with varying surface materials.

### 6-06-03.B Backfilling

Refer to Table 6-06-05-2, *Backfilling*, for general requirements for backfilling open trenches.

### 6-06-03.C Subbase

Refer to Table 6-06-05-3, *Subbase for Trenching Operations*, for requirements on conformity, material, deviations, and procedure for subbase placement.

#### 6-06-03.C.1 Trench Cover

Refer to Table 6-06-05-4, *General Requirements for Temporary and Permanent Trench Cover*, on general requirements for temporary and permanent trench cover.

### 6-06-03.C.2 Repair to Gravel Roads and Shoulders

Refer to Table 6-06-05-5, *Repair to Gravel Roads and Shoulders, Restoration of Unpaved Areas,* on requirements for restoration of unpaved areas.

## 6-06-04 Maintenance Period

A. **Permittee Responsibility**. The permittee shall be responsible for the condition of the backfilled trench and permanent patching of the roadway surface for a period of one year upon acceptance by the County of the completed work identified on the permit. Permanent patching shall include restoration of gravel surfaced roadways and shoulders. Upon notification by the County, the permittee shall immediately repair to the County's satisfaction any of the said patches which become settled, cracked, broken, or otherwise faulty at the expense of the permittee. If test results do not meet the standards for compaction as set forth in this section the permittee shall be responsible for repairs or replacement to meet these standards. Settlement of 3/8 inch or greater with a 6 foot straight edge will be cause for replacement.

B. **Written Notification**. The permittee shall notify the County in writing upon completion of work accomplished under the provisions of the permit.

## 6-06-05 Bonding Requirements

A Maintenance Bond for trenching operations performed within the County's ROW will be required in the amount approved by the County shall be submitted as specified by the Public Works Director.

**Table 6-06-05-1, Design Criteria for Trenching**

| | |
|---|---|
| Existing Pavement | ● Saw cut to full depth so the joint line between existing and replacement pavement is straight and neat – i.e. within 5 of vertical and free from horizontal irregularities.<br>● Concrete removal shall be by full panel only, per existing control joints. |
| Removed Pavement | Haul away and dispose of in a proper manner (recycle or waste facility). |
| Base Course Material | Remove and stockpile off of the road surface area for reuse during backfilling if it meets specifications. If not, haul away from the R.O.W. and dispose of in a proper manner. |
| Sub-base Material | Stockpile parallel to the trench alignment, in such a manner that encroachment upon the non-disturbed portion of the roadway and/or pedestrian walkways and private properties is kept to a minimum. |

| Table 6-06-05-1, Design Criteria for Trenching | |
|---|---|
| Trench | ● Maintain safety standards relating to the shoring and stabilization of trench sidewalls as prescribed by appropriate safety regulatory agencies (OSHA, State of Colorado). All excavations to be left over night will be backfilled if not properly barricaded. Type IV Barricades will be required if construction area is in or within 10 feet of the roadway.<br>● Do not open the trench for such construction for a distance of more than 300 feet at any one time, unless specifically authorized by the County.<br>● Confine the trench width to those minimum dimensions, which will permit proper installation and acceptable pipe loading, as established by current acceptable engineering practices and all OSHA requirements. |
| Street Cuts and Trenching Operations in Public Roadways | ● Do not leave street cuts in an open condition overnight, except for the portion necessary to commence work the following morning.<br>● Warning signs, barricades and flashing lights, all in conformance with the latest edition of the Manual of Uniform Traffic Control Devices (MUTCD), shall be used in areas where trenching operations are in public roadways.<br>● Type IV barricades will be required in or within 10 feet of the traffic area. |
| Trenched Roadway | ● In trenching across the road, do not close more than one-half of the traveled way to traffic at one time, which requires the use of a traffic signal or flaggers unless approved by the Adams County Public Works Department.<br>● Completely backfill the trenched roadway and restore a suitable driving surface before trenching the other half of the road.<br>● Final pavement restoration can be accomplished at one time when the utility installation or repair work is complete within a maximum of five working days for the permanent surface replacement. |
| | |
| Street, Road Approaches and Other Access Points | ● Total Street Closure will not be permitted unless approved by the Adams County Public Works Department.<br>● Upon trenching across such facilities, steel running plates, planks or other safe methods shall be used to provide for traffic to enter or leave the road or adjacent property. |
| Access | ● Access to private property will be maintained at all times.<br>● Provide free access at all times to fire hydrants. |
| Excavation in County Easements | ● All excavation within the County's ROW will require an approved permit prior to initiating construction.<br>● Take precautions to limit the removal of or damage to existing pavements, sidewalks, curbs, lawns, shrubbery, trees, hedges, walls, fences, buildings, or other existing improvements to the least practicable amounts and replace or restore such improvements to their original location and condition after the excavation has been backfilled and compacted. |
| Conditions Contained in Private Easements | Appraise all conditions contained in private easements and perform all work in accordance with the stipulations contained therein. |

| | |
|---|---|
| Trenching Excavation within the Roadway Surface | Where trenching excavation occurs within the roadway surface, the minimum allowable remaining pavement sections shall not be less than 4 feet (not including the curb and gutter or concrete pavement) unless it is part of a monolithic concrete pavement section, which shall be full panel or stone. |
| Road Closures | The Director of the Public Works Department must approve all scheduled and emergency road closures. |

| Table 6-06-05-2, Backfilling | |
|---|---|
| Trench Backfill Date | • The permittee shall simultaneously notify the County of the trench backfill and construction dates. A minimum of 24 hours advance notification is required.<br>• Backfill will take place on the same day of trenching; if this is not the case, the County must be given the same prior notice as required for the initial trenching. |
| Foundation | • Prepare the bottom of the trench to provide a firm foundation for the pipe or facility in accordance with the bedding conditions specified by the geotechnical engineer for the type of pipe or facility to be installed.<br>• The foundation shall be stable and the subgrade of the trench shall be kept free of standing water. |
| Backfill Depth | • Place backfill so that the pipe will not be displaced or damaged. |
| Approved Backfill Material | • Immediately after the utility authorized by the permit has been placed in the trench, backfill the trench with approved material. This material cannot include debris of any kind, frozen material, clods, or stones. Fill with approved material to an elevation which will allow placing the pavement base and wearing surface according to the Standard Drawings.<br>• Compaction test reports shall be required daily and all fill over one foot in elevation shall require a tester on site during backfill operation.<br>• If the excavated material is unsuitable for backfill it shall be hauled away and satisfactory granular backfill material shall be used. |
| Completed Surface and Trench Compaction | • The subgrade shall conform to the lines, grades, and cross-sections as shown on the approved plans. Compact the backfill material in successive layers not to exceed 8 inches thick and finish and maintain in a smooth compacted condition. The completed surfaces shall be free from rutting or other objectionable irregularities.<br>• Within the roadway area, trench compaction shall be in accordance with AASHTO T99 or T180 as required by the CDOT Standard Specifications. Compaction tests must be performed by a Geotechnical Engineer and shall be a minimum of every 250 feet along the trench and every one foot in elevation. |
| Low Slump Material | Use of an approved controlled low slump material (flowfill, shrink-crete, flashfill or equivalent) for backfill of trenches is required under all roadways or as approved by the Director of the Public Works Department. All controlled low slump material (CLSM) must have a 28-day strength of 60-100 psi, and a maximum slump of 7-10 inches. |

| Table 6-06-05-3, Subbase for Trenching Operations | | |
|---|---|---|
| | **Subbase** | **Foundation For Base Course** |
| Conformity | Shall conform to the lines, grades, cross-sections and thickness shown on the approved plans and shall be finished and maintained in an acceptable condition at least one day's progress in advance of base construction or placing prime coat (foundation for base course). | |
| Material | When placed and compacted will result in a firm, dense, unyielding foundation. | |
| | Subbase material shall be well mixed, free of organic matter and lumps or balls of clay, and shall consist of sound aggregate particles and suitable filler or binding materials. | |
| Deviations | Deviations from the gradation limits may be permitted by the Director of the Public Works Department for unpaved roads provided it can be unequivocally demonstrated that the subbase material is not conducive to rutting, raveling or forming a soft yielding surface in the presence of moisture (it is adequately demonstrated that the proposed subbase material can fulfill the intent of these specifications). | |
| Procedure | Material shall be deposited and spread, without particle segregation in loose layers not to exceed 6 inches in depth. Wetting or aerating and rolling of the material shall be required when ordered by the County following review of all field test results. Subbase or base course shall not be placed on soft, spongy, or frozen subgrade, other subgrade, or subbase, the stability of which is unsuitable. | |
| | Each layer shall be thoroughly and individually compacted to 100% of proctor (AASHTO T 99) density for soils classified as A-1 through A-2-5 and 95% proctor (AASHTO T 99) density for all other classifications (AASHTO M 145). | |

| Table 6-06-05-4, General Requirements for Temporary and Permanent Trench Cover | |
|---|---|
| | **Temporary** |
| Temporary Trench Cover | ● Provide all trenches across traffic lanes where it becomes necessary to remove any existing surfacing or pavement with temporary trench cover for vehicle and pedestrian safety and to control sediment tracking.<br>● Stockpile temporary trench cover surfacing material on the job site and place within six hours after completion of trench backfill and compaction.<br>● Maintain temporary trench cover until permanent trench cover is placed.<br>● Trench covered with temporary surfacing will be considered as open to traffic.<br>● The surface of the temporary repaving shall be smooth and at the same level as the adjacent undisturbed paved area. |

| Table 6-06-05-4, General Requirements for Temporary and Permanent Trench Cover | | |
|---|---|---|
| Pavement Surface Cuts Immediately After Backfilling | | When permanent pavement-patching material is not available, a temporary patch of cold mix asphalt will be required on all pavement surface cuts immediately after backfilling has been completed and removed at the time a permanent patch is made. |
| Minimum Requirements | | Minimum requirements for temporary trench cover shall be well compacted surfacing material conforming to "Road Mixed Asphalt Surfacing Material" of the CDOT Standard Specifications and shall match the existing asphalt or Concrete thickness, but shall not be less than 4 inches thick. The mineral aggregate shall, with a tolerance of 5 percent, conform to the grading specified for 3/8 inch maximum aggregate. Bituminous binder to be mixed with the mineral aggregate shall be liquid asphalt, Grade MC-3000 and shall be between 5 ½ percent and 6 percent by weight of the dry mineral aggregate. |
| **Permanent** | | |
| Unless otherwise specified, the replacement of pavement shall be as follows: | | |
| In areas where wearing surface is: | Asphalt Concrete | Minimum patch thickness will be 5" on residential streets, 7" on collector streets, and 9" on arterials. In all cases, the patch will extend one foot beyond the existing pavement. If the permittee or their engineer does not agree to these standards, a paving design will be submitted for review and approval by the Adams County Public Works Department. A sample of this pavement will also be submitted to the Adams County Public Works Department to ensure that the pavement sample will match the submitted design. |
| | Portland Cement Concrete | Replace the pavement with concrete pavement conforming to the requirements of the County. Said concrete pavement replacement shall be of the same depth as the original pavement, but not less than six inches thick on alleys or residential streets, nor less than eight inches on major or secondary streets and highways. |
| | Other | Replace the pavement and base in kind. Said surface replacement shall be of materials and thickness conforming to the requirements of the County. |

| Table 6-06-05-5, Repair to Gravel Roads and Shoulders, Restoration of Unpaved Areas | |
|---|---|
| Where the original wearing surface and foundation materials was crushed rock or gravel | Use Class 6 aggregate base course as replacement material. Place to a compacted thickness minimum of 8 inches or the thickness of the removed material plus 2 inches, whichever is greater. |
| Compaction | In the area from the ROW line (fence line/property line) to a point 5 feet outside of the roadside ditch flowline, backfill all trenches with excavated material and compact to 90% standard compaction, or to the density of the existing ground, whichever is greater. |
| | Other areas including the gravel road, the shoulders and the roadside ditch to a point 5 feet outside of the flowline, all trench compaction shall be in conformance with Figure 7.21 of these standards. |
| Erosion Control | During construction and after the trench is backfilled and compacted, erosion protection shall be provided per Chapter 10. |

# Div. 6-07 Utility Locations

## 6-07-01 General

A. **Repairs**. Repairs being made to County roadways or other properties, must be performed under an approved permit. At the completion of these repairs, the roadway or other properties must be returned to a condition equal to or better than the original. In addition, these repairs must be accomplished in the least possible time and with the least disturbance to the normal functioning of the street or other adjacent properties.

B. **Backfill**. All backfill material, compaction, and resurfacing of any excavation made in the County ROW will be done in accordance with specifications and standards in Div. 6-06, *Trenching and Backfilling*.

## 6-07-02 Road Closings

A. **Lane Widths**. Only one side of a street may be blocked at any given time. Traffic must be provided a minimum lane width of 10 feet in the construction area. Any plan for traffic control during construction that indicates a complete closure must show detour routes, and must be approved by the Director of the Public Works Department at least 24 hours prior to issuance of permit.

B. **Written Permission**. The applicant must get written permission from the Department of the Public Works Department to temporarily close a public road.

## 6-07-03 Location

See Table 6-07-04.E-1, *General Utility Location Requirements*, and Figure 6-07-04.E-1, *For Utility Location Requirements and Standard Drawing Typical Details*, through Figure 6-07-04.E-2, *Utility Location Requirements and Standard Drawing Typical Details*, for utility location requirements and the County's Engineering Road Standards for typical details.

## 6-07-04 Inspection, Testing Procedures, and Construction Guidelines

### 6-07-04.A General

Table 6-07-04.E-2, *Testing Requirements for Utility Installations*, presents general testing requirements for installations.

### 6-07-04.B Specifications

Road construction for new development shall conform to the latest edition of the Colorado Department of Transportation (CDOT) Standard Specifications for Road and Bridge Construction. Adams County criteria may supersede CDOT standards.

### 6-07-04.C Erosion Protection

1. **Stormwater Management**. Erosion and sediment control measures, per requirements and policies outlined in Chapter 10, *Stormwater Management*, are essential during construction to mitigate adverse impacts to adjacent properties resulting from development. Due to both the dynamic nature of construction, and federal/state water quality guidelines, construction activity in Adams County shall require erosion protection.
2. **Enforcement**. Adams County field inspection personnel shall be able to mandate corrective action to be taken by the developer and/or contractor in the event that one of the following situations occur:
   a. Construction plans lack sufficient detail for erosion protection
   b. It has been determined that the submitted erosion control measures are not applicable to actual field conditions
   c. installed erosion & sediment controls are non-functional

## 6-07-04.D Contractor Responsibilities

1. **Erosion and Sediment Control**. The contractor must install and maintain erosion and sediment control measures to protect water quality per requirements and policies outlined in Chapter 10, *Stormwater Management*. The contractor is responsible for the cleanliness and safety of all roadways adjacent to construction sites. If at any time, these roadways are found to be dangerous or not passable due to debris or mud, the Adams County Public Works Department will shut down the project, until the roadway conditions have been improved by the contractor, and are deemed acceptable by the County. If the contractor/applicant fails to keep the adjacent roadways clean and free from debris, the Public Works Department has the option to do the required clean up and bill the charges directly to the contractor.
2. **Inlet Protection**. Erosion and sediment control with inlet protection will be required for the storm drainage conveyance systems adjacent to construction sites. Dirt and other construction debris cannot be washed into the County's storm drainage facilities. The contractor will be held responsible to ensure that storm drainage facilities are protected during construction activity. If debris from construction activity is being washed into storm drainage facilities, the Adams County Public Works Department will shut down the project, until the contractor cleans the affected storm drainage facility. If the contractor fails to keep the adjacent storm sewer free from debris, the Public Works Department has the option to do the required clean up and bill the charges directly to the contractor.

## 6-07-04.E Damaged Infrastructure

The contractor shall be responsible for repairing or replacing County infrastructure that was damaged as a result of construction activity.

**Table 6-07-04.E-1, General Utility Location Requirements**

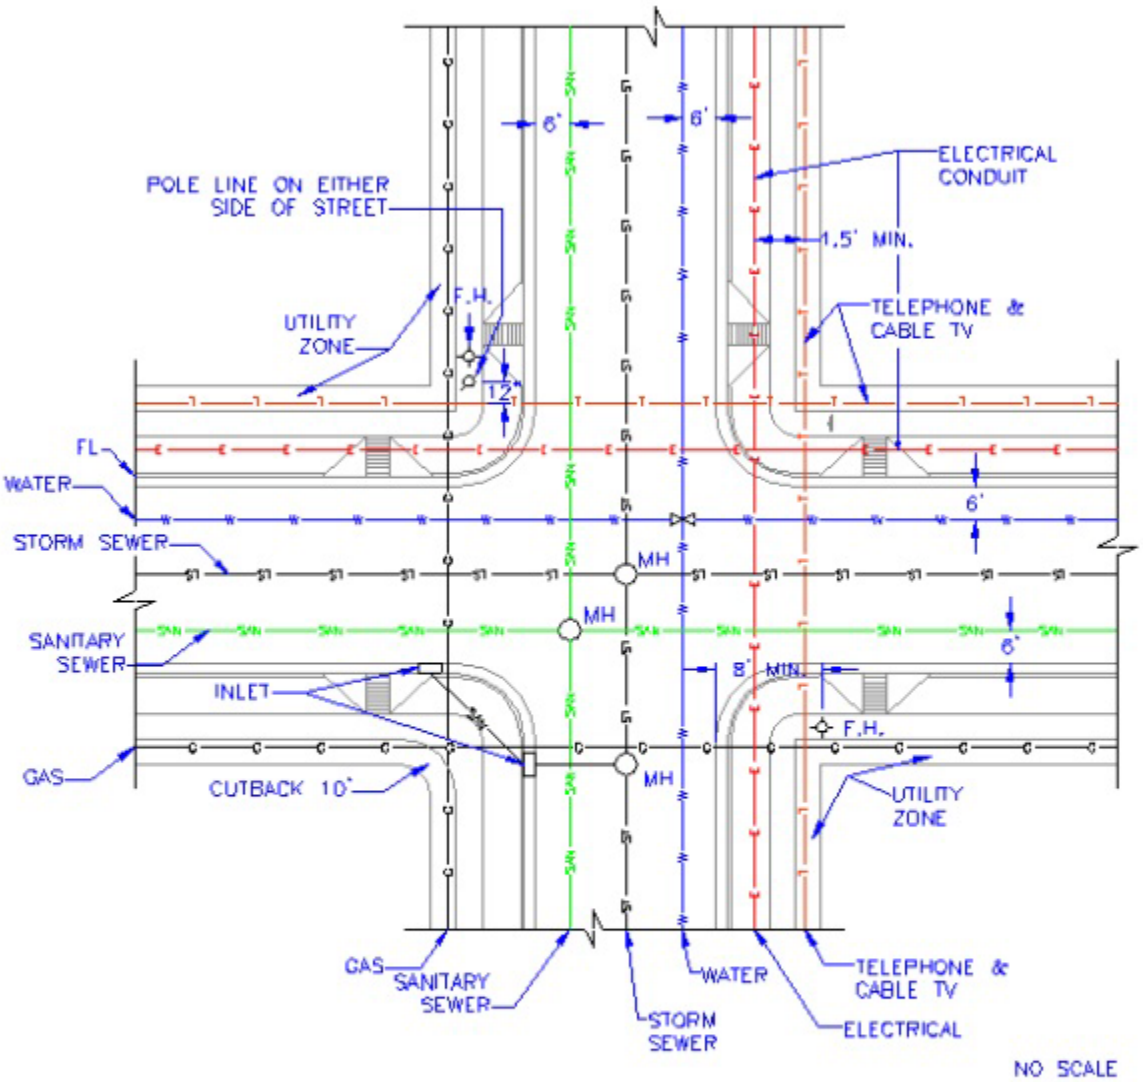
| | Location |
|---|---|
| Water Main | North and East Sides of streets. Provide min. 10' horizontal separation from sanitary sewer or as required by the appropriate water district. |
| Fire hydrant | 3' min. from back of curb, 1' min. from back of attached walk, or<br>10' minimum from edge of pavement if no curb is present |
| Sanitary Sewer | South and West of sides of streets |

| Table 6-07-04.E-1, General Utility Location Requirements | |
|---|---|
| Storm Sewer | Street centerline or 3' either side of centerline for adequate utility separation. Other locations may be considered if given written approval by Director of the Public Works Department. |
| Natural Gas | Either within ROW or in an adjacent easement on the South and West sides of the street or 3' either side of centerline for adequate utility separation.[1] |
| Power and Telephone | North and East sides of the street either within the ROW or in an adjacent easement.[1, 2] |
| Cable TV, Fiber optics | North and East sides of the street either within the ROW or in an adjacent easement.[1] |
| Poles, signs and any other above-ground streetscape | No poles, signs, or any other above-ground streetscaping should be allowed within the public right of way not directly related to any utility that is not regulated by the Public Utilities Commission, local franchise agreement, or quasi-governmental agency such as a local water and sewer district. Exceptions will only be made by Variance procedure of the County or granted specifically by the Adams County Board of Commissioners. |
| Light Poles | Min. 2' behind a vertical curb line or 6" behind the sidewalk for attached sidewalk conditions with prior written approval by the County. Poles placed within County ROW having a posted speed limit of 40 mph or higher may be required to be breakaway, per CDOT Design Manual, Section 1002.6. Specifications for all poles within County ROW must be accepted by the Public Works Department prior to the permit application for installation. |
| Landscaping | Caution: Trees or large shrubs shall not be planted over buried utilities, within the sight distance triangle at intersections or accesses, or within 10' of the flowline of the public street. On low speed (posted 30 mph or less) minor collectors and local streets, trees may be planted to within 6' of the flowline (except within 150' in either direction from an intersection, where the trees must be a minimum of 10' back from the flowline). In no case shall landscaping over 30" above the adjacent flowline be allowed to encroach into the sight-distance triangle. |
| Overhead | A minimum ground clearance of 18.5' shall be provided where overhead utility lines cross public roads and streets. The clearance shall be measured at the lowest point where the line crosses the traveled portion of the roadway. |

1. For utility companies that wish to run double mains, the requirement of north and east/south and west may be waived by the Public Works Department.
2. Or as directed by the National Electrical Safety Code.

| Table 6-07-04.E-2, Testing Requirements for Utility Installations | |
|---|---|
| Materials, Placement and Compaction | Place all utility trenches within the ROW and compact in accordance with the project specifications. |
| Testing | ● Field moisture-density testing: perform during backfill operations beginning one foot above the top of the pipe and extending to the finished subgrade elevation.<br>● Minimum number of tests: one test within n foot of manholes, water valves or other obstacles. A sufficient number of tests shall be taken at various depths to confirm backfill compaction and moisture content specifications are met.<br>● Perform testing in accordance with project specifications.<br>● Trench Compaction within the roadway area: in accordance with AASHTO T-99 or T-180. |
| Bond | A bond (based on size of project) in an amount designated by the County will be required until final acceptance is received. |
| Acceptance | The results of field density tests shall be submitted to and reviewed by the County. Provided all tests are acceptable, the two-year probationary period may begin. If no failures of the trenches are evident after 1 year, the County will assume maintenance obligations. Any failures must be corrected in accordance County specifications. |

**Figure 6-07-04.E-1, For Utility Location Requirements And Standard Drawing Typical Details**

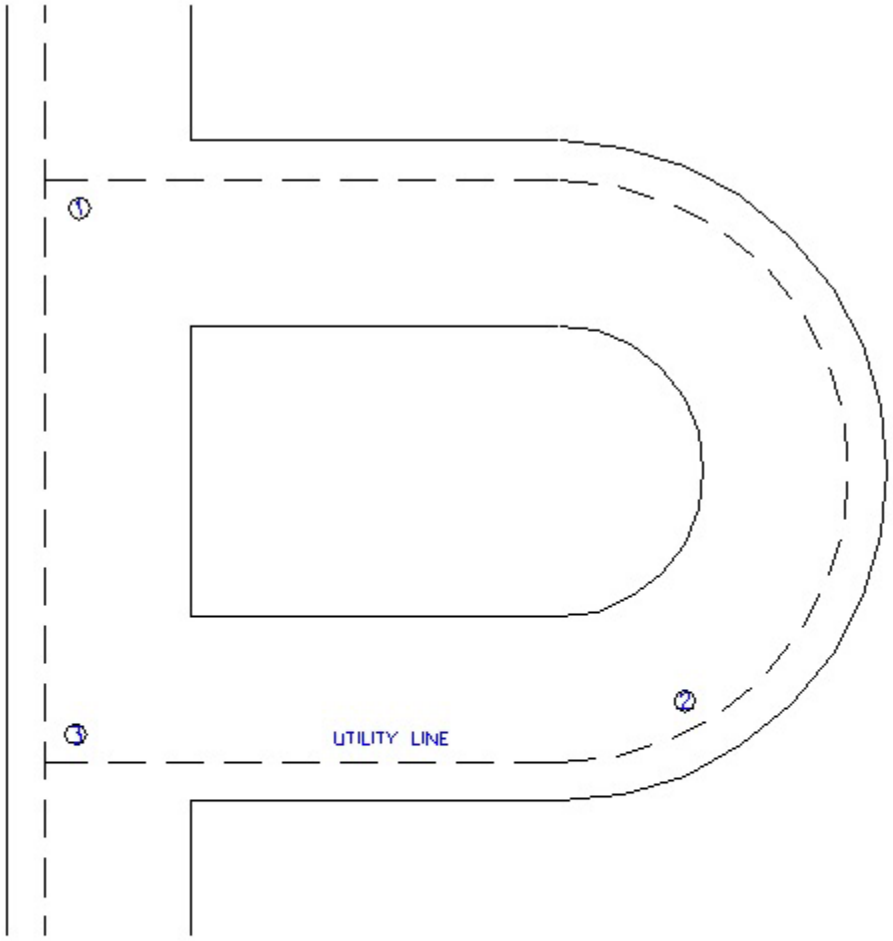


NOTES:

① THIS STANDARD IS A GUIDE ONLY AND DEVIATIONS MAY BE ACCEPTABLE WHERE THE CONDITIONS DICTATE. DIMENSIONS SHOWN ARE DESIREABLE BUT DO NOT GOVERN. THE INTENTION IS TO SHOW THE RELATIVE POSITION OF ALL UTILITIES. THIS DOES NOT PRECLUDE THE USE OF UTILITIES IN EASEMENTS IN OTHER LOCATIONS (IE BACK LOT LINES).

② UTILITY ZONE EASEMENT IF REQUIRED

**Figure 6-07-04.E-2, Utility Location Requirements And Standard Drawing Typical Details**



NOTES:

EXAMPLE OF A UTILITY RELOCATION
TO A NORMAL POSITION AT AN INTERSECTION

1. CARRY UTILITY AROUND CORNER
2. STAY ON SAME SIDE OF STREET.
3. RETURN UTILITY TO NORMAL SIDE OF STREET AT INTERSECTION

# Div. 6-08 Obstruction of Views in ROW

The erection of any fence, tree, shrub, hedge, or any object, which obstructs the view of traffic, authorized traffic control devices, or otherwise constitutes a hazard to drivers or pedestrians is prohibited.

# CHAPTER 7 ACCESS DESIGN AND TRAFFIC REQUIREMENTS

This Chapter presents minimum requirements and technical criteria for the analysis and design of access locations to and from county roadways with the intent of providing a safe, orderly, and continuous traffic/multiomodal movement. Traffic is a regional feature that affects all governmental jurisdictions and all parcels of property. All applications submitted to the County for land being developed commercially, industrially, or as a subdivision, and/or as part of an existing subdivision desiring access to a county roadway will require some form of access and traffic analysis and appropriate design. The level of detail and specific requirements for each of these submittals will be outlined within this Chapter.

**Contents:**

Div. 7-01 Access Requirements and Criteria
Div. 7-02 Guidelines for Traffic Impact Studies
Div. 7-03 Developer Responsibility for Safety and Traffic Calming Improvements

## Div. 7-01 Access Requirements and Criteria

### 7-01-01 General

A. **Design Standards and Criteria**. The County's adopted design standards and criteria for traffic management and should be used in the analysis and design of all new or modified access point locations. The County reserves the right to issue and enforce more stringent criteria should adverse or unsafe conditions exist.

B. **Waiver Authority**. If minimum standards presented in this Chapter are either inappropriate or cannot be justified economically, the County may issue a Waiver pursuant to Sec. 13-07-06, *Waiver from Public Work Standards*. Designs that vary from the standards and criteria in this Chapter shall obtain approval from the County prior to completing construction plans or Traffic Impact Study (TIS).

1. *Referenced Standards*. Standards and technical criteria not specifically addressed in this Chapter shall follow the appropriate provisions outlined in the following: (1) 2019 AASHTO, *A Policy on Geometric Design of Highways and Streets* ("Green Book"); and (2) Colorado State Highway Access Code.
2. *Standard Precedence.* It is important to note that County Standards may supersede the AASHTO criteria.
3. *Updated Standards.* In the event that the AASHTO criteria are revised, the latest edition shall be used.

### 7-01-02 Required Design Submittals

A. **Analysis and Design**. Project Plans and TIS submitted to the County for review shall contain a detailed analysis and comprehensive circulation design in accordance with these criteria and other applicable standards (local, state, and federal). Prior to receiving approval, the Project Plans and TIS must be sealed by a Colorado Registered Professional Engineer who has extensive knowledge of the project being submitted for review. Documents submitted without being sealed or by a party not responsible for the work, will not be reviewed.

B. **Traffic Impact Study**. Div. 7-02, *Guidelines for Traffic Impact Studies*, presents the minimum level of TIS to be prepared and submitted to the County for approval. Based on the application and the size of project being submitted, the level of analysis and design detail required varies and can be determined by the checklist attached to the application and/or by contacting the County. All required information is to be submitted for County review prior to receiving an approved application or permit. Applicants are encouraged to prepare the required submittals with as much detail as possible to minimize possible confusion and cut down on overall processing time.

**Table 7-01-02-1, General Access Issues**

| | |
|---|---|
| Objective | Criteria outlined in this chapter should be viewed as the minimum requirements for the design of entrances and exits and determining the proper location of access point(s) onto any of the existing or proposed county roads. |
| Quality | All work done under this permit shall be performed to the satisfaction of the County. |
| Factors Reviewed | The factors reviewed with each access application include: speed of the roadway or street, sight distance, existing or potential safety concerns, existing multimodal traffic volumes on the roadway or street, intersection spacing and the projected vehicular use of the site. |
| Traffic Impact Study (TIS) | ● In reviewing a site, the County may require an applicant to prepare a Traffic Impact Study (TIS) for review and approval by the County to determine the impact the development may have on the adjacent road systems.<br>● The TIS should address the impact of the additional traffic generated by the development and propose appropriate improvements to mitigate that impact.<br>● Guidelines for the preparation of the TIS are included as part of the applicable Permit Application. |
| Hydraulic Impact | ● The engineer may need to submit the information for review by the County to determine the hydraulic impact to the existing roadway drainage system.<br>● Based on the submitted information, the engineer may be required to supply additional hydraulic computations for review and approval by the County.<br>● A proper Storm Drainage Study (including project plans) must be reviewed and approved by the County and implemented by the Permittee.<br>● Standards and technical criteria are included in Chapter 9 of this document. |
| Implementation | ● No person shall construct any access providing direct movement to or from any county maintained roadway without obtaining approval from the County.<br>● County approval and the appropriate permits necessary for construction shall be issued only in compliance with the policies outlined in this chapter. Under no circumstances shall access be allowed or permitted if it is detrimental to the public health, welfare, and safety. |

| | |
|---|---|
| | • Vehicular access to or from property adjoining a county roadway shall be provided to the general street system, unless, such access has been acquired by a public authority. Police, fire, ambulance, and other emergency stations shall have a right to direct access to county roadways. Direct access from a development project to the roadway shall be permitted only if the proposed access meets the purpose and requirements of this chapter. |

# 7-01-03 Criteria for Access onto Adams County Roadways

A. **Compliance Standard**s. All new or modified access locations in Adams County shall meet the requirements of:
   1. The Colorado Department of Transportation; and
   2. Information presented in this Chapter.

B. **Additional Compliance Requirements**. Where feasible, the access shall comply with the requirements of the Denver Regional Council of Governments.

C. **Access Criteria Tables**. See Table 7-01-03-1, *Criteria For Access Onto Principal Arterials*; Table 7-01-03-2, Criteria for Access onto Rural Arterials and Rural Principal Arterials; and Table 7-01-03-3, *Criteria For Access Onto Collectors And Local Streets*, for access criteria.

**Table 7-01-03-1, Criteria for Access onto Principal Arterials**

| | | |
|---|---|---|
| Private Direct Access | • Shall not be allowed unless a TIS has been submitted and approved (including a signal progression plan).<br><br>No direct private access is permitted on County maintained arterial roadways unless the property in question has no other access to the general street system, or when denial of direct access to the principal arterial and alternative direct access to another roadway would cause unacceptable traffic operation and safety problems to the overall traffic flow of the general street system. | |
| Considerations When Private Access Must be Provided | • Such access shall continue only until such time that some other reasonable access to a lower function category street is available and permitted. The Access Permit should specify the future reasonable access location(s), if known, and under what circumstances, what changes will be required.<br>• Shared access between property owner and developments shall be promoted where applicable. | |
| Considerations When Private Access Must be Provided Public Direct Access | • No more than one access shall be provided to an individual parcel or to contiguous parcels under the same ownership unless it can be shown that: | |
| | An access shall be limited to right turns only, unless | • Allowing only one access conflicts with safety regulations (e.g., fire access), or<br>• Additional access would significantly benefit safety and operation of the highway or street and is necessary for the safe and efficient use of the property. |
| | • Where full movement is to be permitted spacing criteria must be met. | • It is an approved full movement access intersection, and |

| | |
|---|---|
| | ● Those that do not meet these requirements shall be limited to right turns only, unless they meet the requirements above.<br><br>No local streets shall be permitted to intersect minor or principal arterials.<br>● Left turns would not create unreasonable congestion or safety problems and lower the level of service, and<br>● Alternatives to the left turns would not cause unacceptable traffic operation and safety problems to the general street system. |
| Spacing and Signalization Criteria | ● In general terms, full access to principal arterials shall be limited to ½ mile intervals approximately 200 feet, in order to achieve good speed, capacity, and optimum signal progression.<br>● However, to provide flexibility for both existing and future conditions, an approved signal progression analysis shall be made to properly locate proposed access that may require signalization. The specifics of this analysis are detailed in this chapter.<br>● Mid-block signals between access points (e.g. HAWK) signals shall be considered in locations where known safety concerns exist as a result of vulnerable road users crossing in unprotected locations. |

| Table 7-01-03-2, Criteria for Access onto Rural Arterials and Rural Principal Arterials | |
|---|---|
| Private Direct Access | Generally, shall not be allowed onto a rural arterial and rural principal arterial. Private direct access onto a rural arterial and rural principal arterial may be permitted:<br>● If it does not have the potential for signalization.<br>● If it has the potential for signalization, if it meets the signal spacing requirements for intersection public streets stated below and does not interfere with the location, planning, and operation of the general street system and access to nearby properties.<br>● If no more than one access is provided to an individual parcel or to contiguous parcels under the same ownership unless it can be shown that additional access would be beneficial to the safety and operation of the highway and to the safety of public.<br><br>Access may continue until such time that some other reasonable access to a lower functional category street or highway is available. A traffic circulation plan, and/or street construction plans with phasing should specify under what circumstances the changes will be required. Subdivisions should be designed to provide for alternative access at a future date. |
| Public Direct Access | ● Where left turns are to be permitted must meet the signal spacing criteria.<br>● Those that do not meet these requirements shall be limited to right turns only, unless they meet the requirements stated in Table 7-01-03-1.<br>● No local streets shall be permitted to intersect minor or principal arterials. |

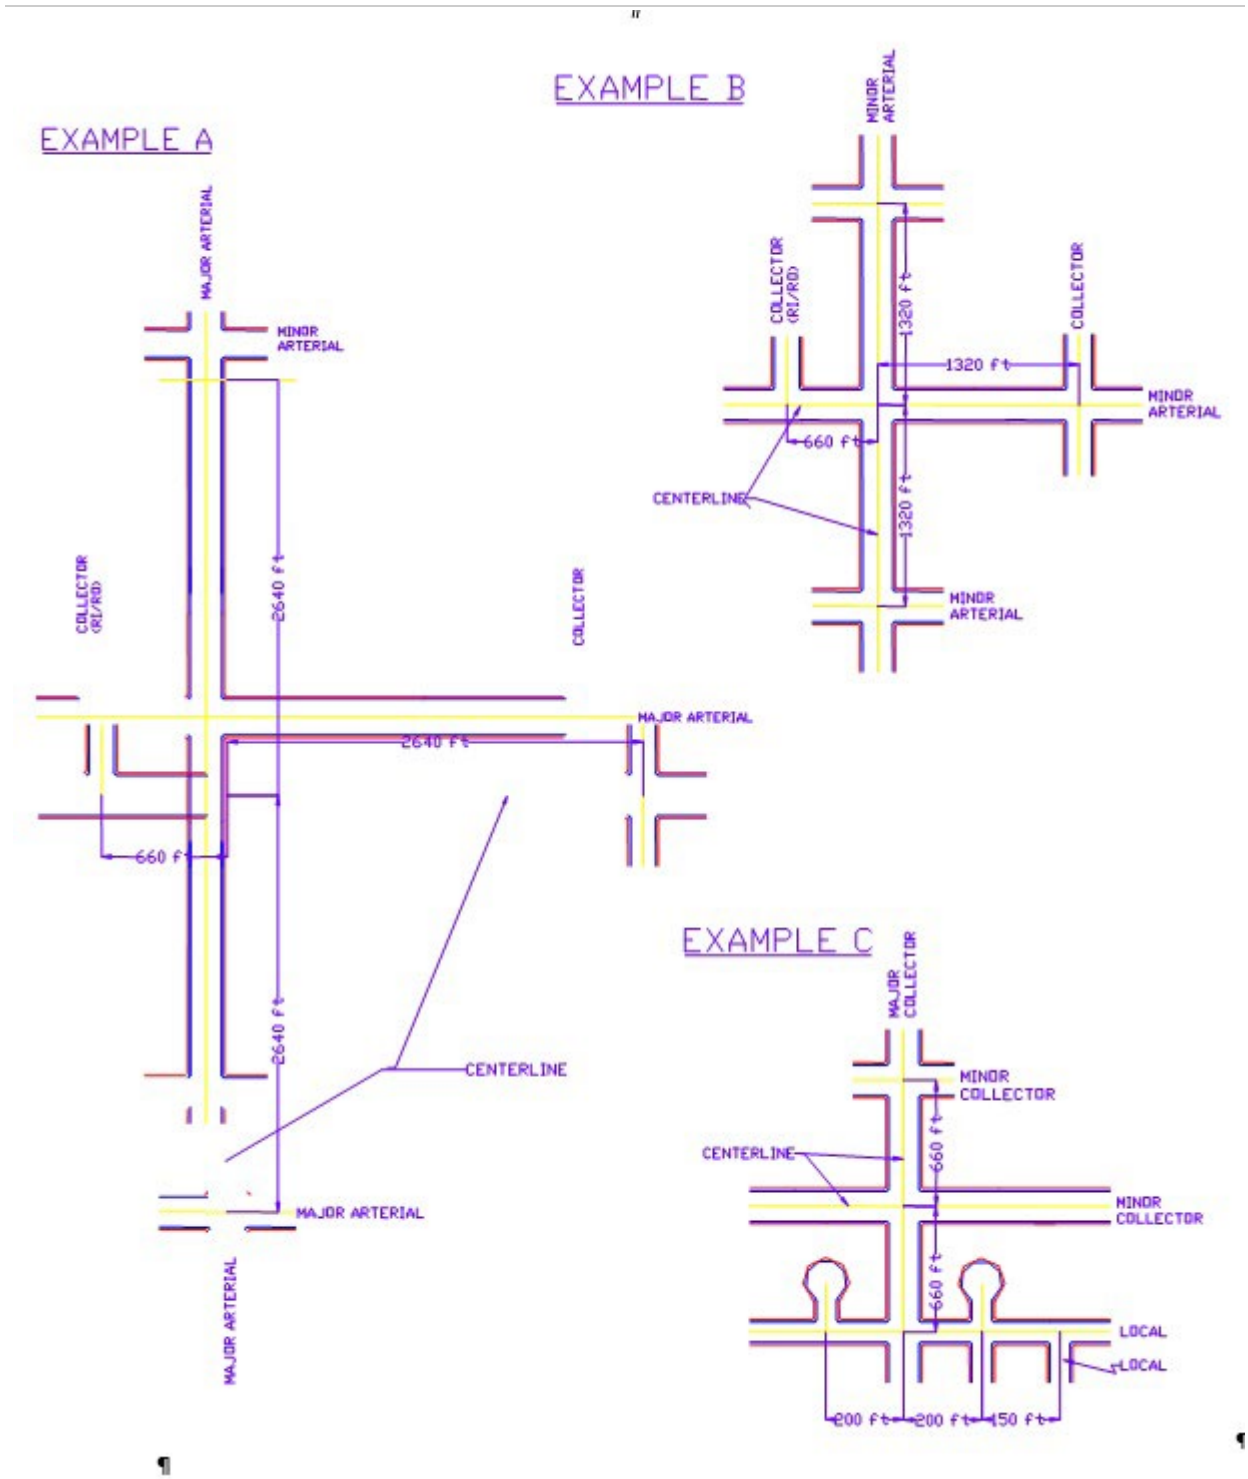
| | |
|---|---|
| Spacing and Signalization Criteria | ● In general terms, full access to rural arterials and rural principal arterials shall be limited to one-quarter mile intervals, approximately 100 feet, in order to achieve good speed, capacity, and optimum signal progression<br>● In urban areas and developing areas where higher traffic volumes are present, a spacing of one-half mile (200 feet for rural arterial sections) for all accesses should be maintained. This spacing is desirable to achieve good speed, roadway capacity and optimum turning progression.<br>● However, to provide flexibility for both existing and future conditions, an approved signal progression analysis shall be made to properly locate proposed access that may require signalization. The specifics of this analysis are detailed in this chapter. |

**Table 7-01-03-3, Criteria for Access onto Collectors and Local Streets**

| | Collectors | Local Streets |
|---|---|---|
| | Shall be governed by the Curb Opening and Driveway Criteria in Sec. 7-01-06 | |
| Private Access | ● Single-family detached residence and business access to collectors is not permitted unless access to a lower function category street is not available.<br>● Access shall not be provided to an individual or to contiguous parcels under the same ownership unless it can be shown that additional access would not be detrimental the safety and operation of the highway, or allowing only one access would be in conflict with local safety regulations, and the additional access would not be detrimental to public health, safety and welfare. | Direct access will be provided to each parcel or to contiguous parcels when there will not be any significant safety or operational problems and the spacing meets the access spacing requirements of this policy. |
| Public Streets | ● Shall intersect collector not closer than<br><br>330 feet (collector) and 660 feet (minor arterial) from each other (centerline to centerline)<br>● The closest street intersection to an arterial shall be<br><br>330 feet (collector) and 660 feet (minor arterial) from the arterial (ROW line of arterial to centerline of local street)<br>● On collectors with an ultimate projected traffic volume of less than 2500 vpd, intersection spacing may be 250 feet (centerline to centerline) (for first intersection from an arterial; 210' centerline to ROW of arterial). | ● Should not intersect local streets closer than 150 feet from each other (centerline to centerline).<br>● On a local street, the closest intersection to a collector street shall be at least 200 feet (centerline to centerline)<br>● To an arterial street, the closest intersection shall be 200 feet (arterial ROW line to local street centerline)<br>● See Figure 7-01-03-1. |

| | | |
|---|---|---|
| Spacing | ● In urban and developing areas where higher traffic volumes are present or growth is expected in the future, (and for rural arterials and rural principal arterials) access spacing shall be at the 1700-foot intervals.<br>● Spacing of all major intersecting public streets, roads, highways and other major accesses should be on a minimum of 600-foot intervals. | ● For those rural arterial and rural principal arterial sections, spacing of all major intersecting public streets, roads, highways and other major accesses should be on a minimum of 300-foot intervals.<br>● Public access in urban growth areas spacing shall be to city specifications and may be less than 300 feet.<br>● Other accesses shall use lot lines for spacing requirements. |

**Figure 7-01-03-1, Intersection Separations**



## 7-01-04 Sight Distance

Sight distance for curb openings to private property shall consist of a sight triangle conforming to the requirements of Chapter 6, *Roadway Standards and Technical Criteria*.

# 7-01-05 Number of Openings

A. **Approval Requirements**. All additional access points to properties shall be approved by the Director of Public Works.

B. **Submittal Requirements**. The applicant shall provide the Department of Public Works with a scaled Site Plan showing:
   1. The proposed location of the new access point;
   2. The proposed width of the access point; and
   3. The distance of the access point from the property boundary lines; and
   4. Any existing access location.

C. **Access Point Limitations**. Table 7-01-05-1, *Number of Access Points*, establishes the maximum number of access points for specific property types.

**Table 7-01-05-1, Number of Access Points**

| | | |
|---|---|---|
| Residential | Single and Multiple-Family Dwellings | Shall be allowed a maximum of two access points for the roadway of primary frontage and, one additional access point onto any additional 'local' roadways adjacent to the property. * |
| Commercial and Mixed-Use | Less than 150' of frontage and located mid-block | Limited to one access point per property owner. Shared access among adjacent property owners is strongly encouraged. An exception may be granted where a building is constructed in the middle of a lot and parking is provided for on each side of the building. |
| | More than 150' of frontage | A second access point may be allowed where there is sufficient frontage to provide for min. and max. design requirements. * |
| | Located on a corner | One access to each street may be permitted * |
| Service Station | Located on a corner | One access to each street may be permitted * |
| Industrial | | Access shall be determined on a case-by-case basis. The county shall consider good traffic engineering practice and the information provided by the applicant in the TIS accompanying the submittal. |

* Additional access may not be permitted for roads classified as collectors or arterials. Only one access point is permitted on any roadway classified as a collector or arterial.

# 7-01-06 Criteria for Curb Openings and Driveways

A. **Minimum and Maximum Dimensions**. Certain control values for curb openings and driveways require minimum dimensions in some instances and maximum values for other dimensions. The design of curb openings and driveways within the range of these dimensions will provide for good service on the part of the motorist using the driveway while minimizing the interference to the traffic using the street.

B. **Motorist Safety Considerations**. By controlling the location and width of openings or driveways along the street, it will be possible to avoid or eliminate long open stretches where motorists can indiscriminately drive onto the street.

C. **Width Standards**. The width of opening established in this chapter is based on studies, which indicate the various width openings will accommodate vehicles of maximum size authorized on county streets and roadways.

D. **Conflict Resolution**. In case of conflict between requirements in the various sections of this chapter, the more restrictive condition will normally apply.

E. **Design and Planning Principals**. Refer to Table 7-01-06-2, *Principles for Curb Openings and Driveways*, for general design and planning principles regarding curb openings/driveway width, sight distance, public-improvements, driveway approaches, rural road access from private property, and access to roadways with no curb and gutter, and maintenance.

F. **Maintenance Responsibility**. Maintenance of the access and drainage improvements within County right-of-way shall be the responsibility of the adjacent property owner.

G. **Number of Access Points**. Refer to Table 7-01-05-1, *Number of Access Points*, for other general requirements regarding number of curb openings permitted, entrance angle, minimum space between openings, joint entrance, access approaches, parcel of land with direct access, use of an existing access to county ROW changes or change in the use of the property.

H. **Driveway Criteria**. Refer to Table 7-01-06-1, *Driveway Criteria*, for other driveway criteria.

**Table 7-01-06-1, Driveway Criteria**

| Category | Roadway Class | Residential | | Multiple Dwelling | Commercial/Industrial |
|---|---|---|---|---|---|
| | | **Minimum** | **Maximum** | **Maximum** | **Maximum** |
| Driveway Throat Width* | Arterial | - | - | 20-feet | 35 feet |
| | Collector | 10 feet | 20 feet | 24 feet | 30 feet |
| | Local | 10 feet | 20 feet | 24 feet | 24 feet |
| Driveway Radius | Arterial | - | | 15 feet | 20 feet |
| | Collector | - | | 15 feet | 20 feet |
| | Local | - | | 15 feet | 20 feet |
| Minimum Centerline Driveway Spacing | Arterial | 250 feet | | 350 feet | 500 feet |
| | Collector | 100 feet | | 200 feet | 250 feet |
| Driveway Distance From Intersections | Local-Collector Intersection | 50 feet | | 100 feet | 150 feet |
| | Collector-Arterial Intersection | 75 feet | | 150 feet | 200 feet |
| | Arterial-Arterial Intersection | 100 feet | | 200 feet | 250 feet |

* Variations in driveway width may be granted by the Director of the Public Works Department. For single-family detached residential lots located on a rural roadway, the maximum allowable driveway throat width allowed by the Director shall be 30-feet.

**Table 7-01-06-2, Principles for Curb Openings and Driveways**

| | |
|---|---|
| Opening or Driveway Width | ● The opening should handle the anticipated traffic volume and character of traffic, as well as being within the limits specified for the type of property development.<br>● Total curb opening length on a street for accesses to a commercial or industrial property shall not exceed 40% of the property frontage. Individual curb opening not to exceed those given in Table 7-01-06-1, *Driveway Criteria*.<br>● The controls established for curb openings and driveways shall apply to existing and new streets. |
| Sight Distance | ● All openings for driveways shall be located at the point of optimum sight distance along the street.<br>● For openings and driveways to commercial establishments and service stations, the required visibility triangle shall be maintained and clear of obstructions to allow drivers entering the property sufficient sight distance for proper and safe movements.<br>● Entrance angles for all driveway approaches shall be 90□ □ 10□ to the centerline of the street.<br>● The profile of a driveway approach and the grading of the adjacent area shall allow a driver in a vehicle located on the driveway outside the traveled portion of the street to see a sufficient distance in both directions to avoid a hazardous traffic situation when entering the street. Within the ROW, maximum grades shall be limited to 8% for single-family detached residential access. All other access shall be limited to a maximum of 2% grade. |
| Public Improvements | ● Any adjustments which must be made to utility poles, street light standards, fire hydrants, catch basins or intakes, traffic signs and signals, or other public-improvements or installations which are necessary as the result of the curb openings or driveways shall be accomplished without any cost to the County.<br>● Any curb opening or driveway, which has been abandoned, shall be restored by the property owner except where such abandonment or closure has been made at the request of, or for the convenience of the County. Restoration shall include, as applicable: removing driveway pavement; removing driveway apron(s); removing any culverts and restoring the ditch or drainage swale; removing gates or access fixtures; and reconstructing the curb, parkway, and adjacent areas to match surrounding conditions.<br>● The property owner shall perform maintenance for driveways. |
| Entrance/Exit Driveway Approaches | ● Shall be appropriately signed by, and at the expense of, the property owner.<br>● The property owner will be required to provide some means of ensuring that the motorists will use the driveway either as an entrance only or an exit only, but not both. |
| Access Surfacing | ● Asphalt surfacing of the access shall be required when the roadway is paved.<br>● Accesses shall be paved from edge of pavement to the ROW line. Surface material adjacent to the ROW, within private property, shall not create sediment tracking onto public roads.<br>● Surfacing materials shall be specified according to county standard presented in Chapter 7 and the conditions and future use of the access and abutting roadway. |
| Rural Road Access from | ● New driveway accesses from private property to an existing graveled county road shall be required to install a minimum of 6” of compacted Class 6 aggregate base |

| | |
|---|---|
| Private Property | course or equivalent material from the ROW line to the edge of the traveled roadway.<br>● The minimum width of the driveway within the ROW shall be as presented in Table 7-01-03-1, *Criteria for Access onto Principal Arterials*.<br>● Based on drainage analysis, a properly sized culvert with flared end sections shall be required at the established ditch flowline. A culvert permit application must be submitted (see Chapter 9 for Storm Drainage design requirements).<br>● Culverts are to be installed as necessary for residential and commercial driveways to ensure positive drainage is maintained. |
| Access to Roadways with No Curb and Gutter | Private drive access to local, collector or arterial roadways that have no curb and/or gutter improvements shall be constructed to meet the following requirements:<br>● Drive shall extend from ROW line to edge of existing driving surface and shall be constructed to meet minimum roadway pavement design.<br>● Driveway width shall conform to Table 7-01-06-1.<br>● A properly sized culvert pipe shall be installed at the established roadside ditch flowline beneath the private drive access (see Chapter 9 for Storm Drainage design requirements). |
| Maintenance | Maintenance of the access and drainage improvements within county ROW shall be the responsibility of the adjacent property owner. |

# 7-01-07 Auxiliary Lanes

A. **Generally**. Auxiliary lanes, also called speed change lanes, are useful in maintaining the safety, traffic flow and operations of the roadway and access.

B. **Applicant Responsibility**. When auxiliary lanes are required by the County or as warranted by information obtained during the development of the TIS, the applicant is responsible for:
   1. Design;
   2. Installation; and
   3. Purchase of right-of-way to accommodate the required lane width.

# 7-01-08 Criteria for Auxiliary Lanes

Auxiliary lanes are required as described within each category of roadway in Table 7-01-08.B-1 In addition, auxiliary lanes may also be required where any of the following subsections apply.

A. **Right Turn Acceleration**. If necessary for specifically identified and documented safety and operation reasons, a right turn acceleration lane may be required when:
   1. For any access where a high traffic volume on the highway or using the access and the lack of acceptable gaps in traffic make use of an acceleration lane necessary for vehicles to safely and efficiently enter the highway traffic flow through the use of available short gaps in traffic, or;
   2. Where necessary for public safety and traffic operations based upon site and roadway specific conditions such as horizontal and vertical curves, or
   3. The posted speed is greater than 40 MPH.

B. **Left Turn Acceleration**. If necessary for specifically~~,~~ identified and documented safety and operation reasons, a left turn acceleration lane may be required when unique location factors such as; highway speed and traffic density, access volume, the volume of commercial trucks, the influence of nearby access, existing highway auxiliary lanes close to the access, nearby traffic

control devices, available stopping sight distance, and where other topographic and highway design factors exist that determine the need.

C. **High Truck Traffic**. For those access locations having a high percentage of trucks using the access, each auxiliary lane may be required to be built to full length and width according to the transition taper length shall extend beyond the full length

D. **Waiver**. The auxiliary lanes required in the category design standards may be waived when the 20th year predicted roadway volumes conflicting with the turning vehicle are below the following minimum volume threshold. The right turn deceleration lane may be dropped if the volume in the travel lane is predicated to be below 150 DHV. The left turn deceleration lane may be stopped if the opposing travel lane is predicted to be below 100 DHV. The right turn acceleration lane may be dropped if the adjacent traveled lane is predicted to be below 120 DHV. The left turn acceleration lane may be dropped if the volume in the inside lane in the direction of travel is predicted to be below 120 DHV.

## 7-01-08.A Collectors, Minor and Principal Arterials

### 7-01-08.A.1 Functional Characteristics and Category Assignment Criteria

This shall be assigned only to roadways that are designated as collector and arterial where there is no intended purpose of providing for long distance traffic movements. This category may be assigned for high-speed rural frontage roads. Access needs will take priority over through traffic movements without compromising the public health, welfare, or safety. Providing reasonable and safe access to abutting property is the primary purpose of this access category. At the request of the local authority, the County may in accordance with, assign any frontage or service road to a higher access category when desirable to meet local transportation plans and needs.

### 7-01-08.A.2 Access Granting Criteria Including Category Related Access Location, Operation and Design Standards

a. **One Access**. When application is made, one access shall be granted to each parcel if it does not create a significant safety problem or significantly degrade operation. The access may operate as full-movement unsignalized access unless there is an established restrictive medial, or a safety or operations problems is identified. The location shall also be consistent with current signal progression efficiency and cause no degradation.

b. **Additional Access**. Additional access will be granted if the additional access would not knowingly cause a hardship to an adjacent property or interfere with the location, planning, and operation of the general street system, and would be in compliance with Chapter 6 design standards. Additional access will be granted if the size or trip generation potential of the parcel of land requires additional access to maintain good design.

## 7-01-08.B Auxiliary Lane Requirements

Auxiliary turn lanes shall be installed on collector and arterial roadways according to the criteria below:

1. A left turn lane with storage length plus taper length is required for any access with a projected peak hour left ingress turning volume greater than 25 vph. If the posted speed is greater than 40 mph, a deceleration lane and taper is required for any access with a projected peak hour left ingress turning volume greater than 10 vph. The taper length will be included within the deceleration length.
2. A right turn lane with storage length plus taper length is required for any access with a projected peak hour right ingress turning volume greater than 50 vph. If the posted speed is greater than 40 mph, a right turn deceleration lane with taper is required for any access with a projected peak hour right ingress turning volume greater than 25 vph. The taper length will be included within the deceleration length.
3. A right turn acceleration lane with taper is required for any access with a projected peak hour right turning volume greater than 50 vph when the posted speed on the highway is greater than 40 mph and the highway has only one lane for through traffic in the direction of the right turn. A right turn acceleration lane is not required on multi-lane highways of this category. The taper length will be included within the required acceleration length.
4. A left turn acceleration lane with transition taper may be required if it would be a benefit to the safety and operation of the roadway. A left turn acceleration lane is generally not required where: the posted speed is less than 45 mph, or the intersection is signalized, or the acceleration lane would interfere with the left turn ingress movements to any other access. Where required, any transition taper shall be considered part of the acceleration-lane design.
5. Where the end of the frontage road will proceed directly into the property or public way, auxiliary lanes may not be necessary. If the frontage road proceeds into private property, the applicant may be required to provide a cul-de-sac or similar design function that will provide for the safe and convenient u-turns or vehicles within public right-of way.
6. Minimum spacing between traffic signals shall be necessary for the safe operation, capacity, and proper design of the signal and adjacent accesses. Preference in traffic signal location, timing and operation shall be given to highways and cross streets of a higher access category or function. No traffic signal shall be authorized without the completion of an analysis of traffic signal system operation, design, and safety as well as meeting M.U.T.C.D. signal warrants.

**Table 7-01-08.B-1, Roadway Improvements Thresholds**

| Roadway Type | Right Turn Ingress Lane Requirement | Left Turn Ingress Treatment Requirement | Right Turn Egress Lane Requirement | Left Turn Egress Lane Requirement | Additional Lane Requirement | Other improvements |
|---|---|---|---|---|---|---|
| **Local Residential** | N/A | N/A | N/A | N/A | N/A | Multimodal accommodations (i.e., sidewalks, bicycle paths, etc.), traffic calming techniques |
| | | | | | | |
| **Collector** | Required for accesses with projected peak hour | Required for accesses with projected peak hour | Required when projected peak hour right-turn | May be required if it would benefit roadway | Additional lanes are required when trips generated | Same as local. |

| | | | | | | |
|---|---|---|---|---|---|---|
| | right ingress volume greater than 50 vph. If posted speed is greater than 40 mph, a right-turn deceleration lane with taper is required for accesses with a projected peak hour right ingress volume greater than 25 vph. | left ingress volume greater than 25 vph. If posted speed is greater than 40 mph, a left-turn deceleration lane with taper is required for accesses with a projected peak hour left ingress volume greater than 10 vph.~~.~~ | volume is greater than 50 vph, posted speed is greater than 40 mph, and the roadway has only one through lane in the direction of the turn. Not required on multilane highways. | safety and operations. Generally not required where the posted speed is less than 45 mph, the intersection is signalized, or the acceleration lane would interfere with other left-turn ingress movements. | from new development exceed 12,000 vpd or the need is identified in a traffic study. Additional lane constructed from trip generating development to closest intersection | |
| **Rural arterial/Rural Principal Arterial** | Same as collector. | Same as collector. | Same as collector. | Same as collector. | Same as collector. | Same as local. |

**Table 7-01-08.B-1, Roadway Improvements Threshold (continued)**

| Roadway Type | Right turn lanes | Left turn lanes | Acceleration lanes | Deceleration lanes | Additional Lane | Other improvements |
|---|---|---|---|---|---|---|
| **Principal Arterial** | Same as collector. | Same as collector. | Same as collector. | Same as collector. | Same as collector. | Same as local. |

7. In addition to the above chart, auxiliary lanes are required to mitigate specifically identified and documented locations with safety and operation issues. These would include, a) for any access where a high traffic volume on the roadway or using the access and the lack of acceptable gaps in traffic make use of an auxiliary lane necessary for vehicles to safely and efficiently enter or exit the roadway traffic flow through the use of available short gaps in traffic, or b) where necessary for public safety and traffic operations based upon site and roadway specific conditions such as horizontal and vertical curves and other sight obstructions that cannot be removed.

## 7-01-08.C Design Components

Auxiliary lanes typically consist of one or a combination of a transition taper, full width auxiliary lane and storage length. The use of these components varies based on the type of access, through street classification, and site-specific conditions (grades). The minimum components for auxiliary lane lengths onto major and collectors and rural and principal arterials are summarized in Table 7-01-08.C-1. See 7-01-

08.B for additional requirements. The County reserves the right to require additional components should the access create high traffic volumes and/or geometric safety problems.

**Table 7-01-08.C-1, Components of Speed Change Lane Length**

| Through Street Classification | Left Turn Ingress Lane | Right Turn Ingress Lane | Right Turn Egress Lane | Left turn Egress Lane |
|---|---|---|---|---|
| **Collector** | Taper Length + Storage Length | Taper Length + Storage Length | Acceleration Length | As required by engineering study |
| **Minor Arterial** | Deceleration Length + Taper | Deceleration Length + Taper | Acceleration Length | |
| **Rural Arterial & Rural Principal Arterial** | Deceleration Length + Storage Length | Deceleration Length | Acceleration Length | As required by engineering study |
| **Principal Arterial** | Deceleration Length + Storage Length | Deceleration Length | Acceleration Length | As required by engineering study |

**Table 7-01-08.C-2, Warrants for Auxiliary Lanes**

| Access Category | Left Turn Deceleration Lane | Right Turn Deceleration Lane | Right Turn Acceleration Lane | Left Turn Acceleration Lane |
|---|---|---|---|---|
| **Collector** | Needed if volume is > 25 VPH; no deceleration lane, just storage and taper | Needed if volume is > 50 VPH; no deceleration lane, just storage and taper | N/A | N/A |
| | If posted speed is > 40 MPH, needed if volume is > 10 VPH; deceleration lane needed. | If posted speed is > 40 MPH, needed if volume is 25 VPH; deceleration lane needed. | | |
| **Rural Arterial and Rural Principal Arterial** | Needed if volume is > 25 VPH; no deceleration lane, just storage and taper | Needed if volume is > 50 VPH; no deceleration lane, just storage and taper | N/A[1] | N/A |
| | If posted speed is > 40 MPH, needed if volume is > 10 VPH; deceleration lane needed. | If posted speed is > 40 MPH, needed if volume is 25 VPH; deceleration lane needed. | | |
| **Principal Arterial** | Needed if volume is > 25 VPH; no deceleration lane, just storage and taper | Needed if volume is > 50 VPH; no deceleration lane, just storage and taper | N/A[1] | N/A |

| | |
|---|---|
| If posted speed is > 40 MPH, needed if volume is > 10 VPH; deceleration lane needed. | If posted speed is > 40 MPH, needed if volume is 25 VPH; deceleration lane needed. |

**TABLE NOTES:** Taper lengths shall be included within the deceleration lengths when applicable.
[1] Applicable if required by County to correct or prevent operational or safety condition.
[2] Not applicable when speed is < 45 mph, intersection is signalized, or interference would result from installation.

## 7-01-08.D Deceleration and Acceleration Design Criteria

1. To determine the required acceleration and deceleration lane and transition taper length, see design criteria presented in Table 7-01-08.D-1. The length of the required transition taper is determined by multiplying the width of the speed change lane by the transition taper ratio value associated with the posted speed in Table 7-01-08.D-1. The beginning and ending point of all tapers shall be rounded.

**Table 7-01-08.D-1, Acceleration/Deceleration Lane Design Criteria**

| Posted Speed Limit (MPH) | 25 | 30 | 35 | 40 | 45 | 50 | 55 |
|---|---|---|---|---|---|---|---|
| Deceleration Length (Feet) | 180 | 250 | 310 | 370 | 435 | 500 | 600 |
| Acceleration Length (Feet) | N/A | 190 | 270 | 380 | 550 | 760 | 960 |
| Transition Taper (Ratio) | 7.5:1 | 8:1 | 10:1 | 12:1 | 13.5:1 | 15:1 | 18.5:1 |
| Straight Taper (Ratio) | 15:1 | 15:1 | 20:1 | 35:1 | 45:1 | 50:1 | 55:1 |

2. It is recommended bay tapers used (asymmetrical reverse curves) for deceleration transition tapers and straight transition tapers be avoided at speeds above 40. Where a vertical cresting, or horizontal curve is present, substituting an immediate bay taper and auxiliary lane striping to reduce drifting of the through vehicles into the deceleration lane. Where horizontal or crest vertical curves exist, the County may require the deceleration transition taper to begin with an immediate asymmetrical reverse curve bay taper of 1/3L then 2/3L with the remaining required transition taper length at full lane width.
3. Partial tangent transition tapers, symmetrical reverse curve tapers, or asymmetrical reverse curve tapers may be used for transition taper design provided a radius of at least 150 feet is used in curve calculations.
4. Where it is necessary to establish a left turn lane or median island, or otherwise redirect the vehicles on the traveled way, redirect tapers required for redirecting through travel lanes shall be installed according to Table 7-01-08.C-2, *Warrants for Auxiliary Lanes*. If the use of Table 7-01-08.C-2 would create a horizontal curve design deficiency for the through movement, the horizontal curve shall be corrected in addition to the use of redirect tapers. A redirect taper should normally be a straight taper with the beginning and ending points rounded.
5. Grade adjustments to be used with the auxiliary lane design criteria presented above are presented in Table 7-01-08.D-2 and Table 7-01-08.D-3. These adjustment factors will either increase or decrease the lengths (for safety) based on the grade of the through street.

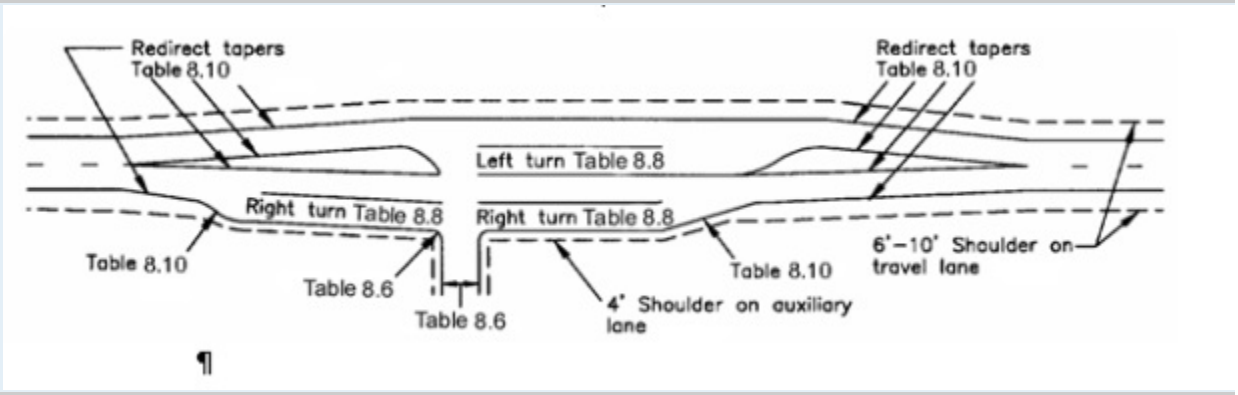
**Table 7-01-08.D-2, Grade Adjustments for Acceleration Lanes**

| Posted Speed Limit (MPH) | 25 to 45 | 50 | 55 |
|---|---|---|---|
| 3% to 4.9% Upgrade | 1.3 | 1.4 | 1.5 |
| 5% to 7% Upgrade | 1.5 | 1.8 | 2.0 |

| | | | |
|---|---|---|---|
| 3% to 4.9% Downgrade | 0.7 | 0.65 | 0.65 |
| 5% to 7% Downgrade | 0.6 | 0.55 | 0.55 |

| Table 7-01-08.D-3, Grade Adjustments for Deceleration Lanes | |
|---|---|
| 3% to 4.9% Upgrade – 0.9 | 3% to 4.9% Downgrade – 1.2 |
| 5% to 7% Upgrade – 0.8 | 5% to 7% Downgrade – 1.35 |

**Figure 7-01-08.D-1, Information Guide to Basic Auxiliary Lane Elements**



## 7-01-08.E Storage Lengths

The storage length for an auxiliary lane may be determined using the information summarized in Table 7-01-08.E-1. The lengths in Table 7-01-08.E-1 shall be used in the absence of project-specific traffic analysis. Where a traffic analysis provides storage length or queue length estimates for the subject movement, the greater of the table value or the project-specific storage or queue length shall be required. Storage lengths for buses, larger trucks, and recreational vehicles shall be determined separately and submitted for County review.

| Table 7-01-08.E-1 Auxiliary Lane Storage Lengths | | | | |
|---|---|---|---|---|
| Turning Vehicles Per Hour | <30 | 30 | 60 | 100 |
| Require Storage Length (Feet) | 25 | 40 | 50 | 100 |

## 7-01-08.F Additional Auxiliary Lane Design Standards

The following presents additional standards for auxiliary lane design:

1. No driveway should be permitted within the transition area of any auxiliary lane.
2. In the event a portion of an auxiliary lane extends across one or more adjacent properties, the County may require the applicant to obtain any necessary right-of -way. If unable to obtain the right-of-way, the applicant may request the County's participation for right-of-way acquisition in accordance with Sec. 5-03-05.A.8, *Alignment of Roads*.

3. In the event an auxiliary lane is constructed within 100 feet of an arterial-arterial intersection, the applicant is responsible for the design, acquisition of required right-of-way, relocation of utilities, and construction of the lane to such intersection.

## 7-01-09 Bypass Lanes

Where vehicles are stopped in the through travel lane waiting for a left-turn movement, and right-of-way is not available for construction of a left turn lane, the applicant is responsible to construct a paved bypass lane to mitigate congestion.

## 7-01-10 Unpermitted Access

Any access, driveway, or curb-cut which is constructed within the Public ROW without an Access or Construction Permit being issued by the County shall be subject to a "Stop Work" order and shall be removed immediately. Failure to remove the unpermitted access may result in the removal of said access by the County (the cost for removal shall be charged to the property owner from which the access originates). Failure to obey the "Stop Work" order may result in the prosecution of violators.

## 7-01-11 Obstruction of Views in ROW

The erection of any fence, tree, shrub, hedge, or any object, that obstructs the view of traffic, authorized traffic control devices, or otherwise constitutes a hazard to drivers or pedestrians is prohibited.

# Div. 7-02 Guidelines for Traffic Impact Studies

## 7-02-01 General

A. **General**. This Division contains guidelines for conducting and preparing a Traffic Impact Study (TIS) for submittal to the County.
B. **Purpose.** The traffic impact study is used to assess the short-term and long-term effects of a proposed development project on the local and regional transportation system . These guidelines are required to ensure consistent and proper traffic planning and engineering practices when land use actions are being considered within the County. These guidelines provide for a standard process, set of assumptions, set of analytic techniques, and presentation format to be used in the preparation of such traffic impact studies. Project proposals shall maintain the transportation principles and objectives outlined in the County Transportation Plan.

## 7-02-02 Requirements for Traffic Impact Studies

Applicants shall prepare a TIS as required by the trip generation thresholds in Table 7-02-02-1,*Traffic Impact Study Requirement*. Variations from these limits shall require prior written County approval. All study levels contain the same analysis elements; the difference is the geographic extent of analysis:

A. Level 1 extends approximately one-quarter mile beyond the project limits;
B. Level 2 extends approximately one mile beyond the project limits; and
C. Level 3 extends beyond the project limits.

| Table 7-02-02-1, Traffic Impact Study Requirement | | |
|---|---|---|
| Type of Application | Expected Trip Generation[2] | Level of Traffic Impact Study (TIS) |
| Rezoning[1] | 20-50 vpd | Level 1 TIS |
| | 50-500 vpd | Level 2 TIS |
| | >500 vpd | Level 3 TIS |
| Residential Plats | 20-50 vpd | Level 1 TIS |
| | 50-250 vpd | Level 2 TIS |
| | >250 vpd | Level 3 TIS |
| All Other Plats | 20-50 vpd | Level 1 TIS |
| | 50-500 vpd | Level 2 TIS |
| | >500 vpd | Level 3 TIS |
| Conditional and Temporary Use[1] | >250 vpd<br>>40 ingress truck trips | Level 3 TIS |
| Multi-year Buildout Developments | >100 vpd each phase | ▪ Develop a Master TIS for the original land use<br>▪ Updated during each filing for specific use |
| Building Permit or Change in Use Application | 20-50 vpd | Level 1 TIS |
| | 50-500 vpd | ▪ Level 2 TIS with Driveway Volume and Capacity Analysis |
| | >500 vpd | ▪ Driveway Volume and Capacity Analysis<br>▪ Level 3 TIS |

**TABLE NOTES:**

1. A limited or Full TIS may be required if one or more of the following conditions are found:
   a. Traffic generated from a non-residential development will significantly impact adjacent residential neighborhoods.
   b. Traffic operational impacts are anticipated including problems with access, left or right turns, signal timing, median openings, or sight distance. In such cases, the TIS will only be required to answer questions related to the specific issues.
   c. Existing traffic operational problems on adjacent streets are expected to be substantially disrupted by traffic generated by the new development.
   d. Significant citizen opposition is expected for traffic impact and safety reasons.
   e. Cases where the internal street or access system is not anticipated to accommodate the expected traffic generations.
   f. Records show a concentration of crashes, regardless of severity, within the study area.
   g. Significant operational safety impacts on other modes of transportation.
2. Based on the most recent Institute of Transportation Engineers (ITE) Trip Generation Manual. Alternative data may be used if accompanied by acceptable supporting documentation.

# 7-02-03 Preliminary Scoping Meeting

A. **Criteria**. If the criteria in 7-02-02, *Requirements for Traffic Impact Studies*, determine a Level 2 or Level 3 TIS is required, a preliminary scoping meeting may be held with the County. The purpose of the meeting is to discuss site-specific information, the project scope and requirements of the TIS.

B. **Applicant Role**. It is the responsibility of the applicant to initiate this meeting as they see fit.

C. **Topics for Discussion**. The following topics should be covered during the meeting:

1. Study Area
2. Available traffic and accident data
3. Plans for roadway improvements in the study area
4. Traffic count availability and/or necessary
5. Preliminary traffic distribution and assignment
6. Possible impacted intersections
7. Proposed access and relationship to adjacent properties
8. Preliminary estimates and projected traffic volumes at buildout
9. Phasing plan
10. Need for special analysis
11. Project's relationship to adopted local transportation study/plan and/or regional transportation study/plan.

B. **County Response**. The County will complete a summary of decisions made at the meeting, which will be a consolidated response from the Community and Economic Development Department and the Public Works Department. A copy will be given to the applicant within one week. The response shall include all of the minimum requirements for the traffic study and the County agrees not to expand the scope of the traffic study greater than requested in the initial letter. However, the County reserves the right to make substantive comments during the specified 21-day review and referral period, which may warrant submittal of additional data for the study.

C. **Waiver**. The County may determine, at its sole discretion, that a Traffic Impact Study is not required for the proposed development. The decision to waive this requirement shall be jointly agreed upon by the Community and Economic Development Department and the Public Works Department and may be based on some, but not necessarily all, of the following issues:

1. Information from cities in the immediate area and/or the Colorado Department of Transportation.
2. Capital Improvement Projects (CIP) in the vicinity of the project;
3. Right-of-way acquisition requirements adjacent to the subject site;
4. Roads currently constructed in the vicinity of the project;
5. Intersections within one mile of the subject site; and
6. Improvements subject to reimbursement to the County or other property owners under an Improvements Agreement.

## 7-02-04 Responsibilities for Traffic Impact Studies

A. **Applicant Role**. The applicant shall prepare a TIS meeting all requirements in this chapter.

B. **Engineer Qualifications**. Level 2 and Level 3 TIS shall be prepared under the supervision of, and sealed by, a Colorado-licensed Professional Engineer.

## 7-02-05 Planning Horizons and Roadway Network Assumptions

A. Each traffic impact study shall present an analysis of the traffic conditions without and with the proposed project at two planning year horizons: short term and long term. The intent of the first planning horizon is to investigate the immediate impact of the proposed project on the short-term roadway network. The short-term horizon year is defined as five years after

occupancy of the project. If the project is proposed to occur over multiple phases, each phase shall be evaluated five years after phase occupancy.

B. The second planning horizon shall be based on the most current Adams County Transportation Plan 20 to 25-year planning horizon. The intent of the second planning horizon is to evaluate implications of the proposed project on the long-range traffic condition.

C. The baseline surface transportation network (without the proposed project improvements) assumed for the first planning horizon should reflect existing facilities plus any firmly committed improvements by the County and other developments within the study area. All DRCOG, Adams County Transportation Plan, or other state and/or locally funded "planned" surface transportation facilities within the study area may be included for the baseline assumptions for the long-term planning horizon network analysis.

D. Each planning horizon analysis shall identify the required facilities needed to bring the Level of Service (LOS) of the affected facilities up to the County established standards. If the established standards are currently exceeded, the study needs to identify:
   1. What improvements are necessary to reach established standards and what portion of those improvements are caused by the project, and
   2. What improvements are needed to mitigate project impacts.

E. The ultimate network will identify the on-site roadways, site-adjacent improvements, and the potential off-site improvements required and proposed by the project.

# 7-02-06 TIS Report Requirements

The information contained in this section outlines the highest level of detail required for all traffic impact studies submitted to the County for review and approval (see Application Package for specific requirements). Maps required in individual sections shall be placed in the TIS as well. The TIS report shall be typed and bound. It shall contain a table of contents and lists of figures and tables.

## 7-02-06.A Summary

The Summary section shall be prepared utilizing the "Summary of Traffic Impact" sheets included with this section (see end of chapter). Additional maps and tables may be required to provide clarity to individual sections of the report. The Summary shall be provided as a condensed, stand alone document. It is incumbent on the applicant that all of the required data and information clearly identified in the appropriate sections of the report be produced. The information contained in the TIS and associated Appendices are accurate and complete prior to submitting it to the County.

### *7*-02-06.A.1 Project Overview

This section will provide answers to the question of why a traffic analysis is required for the proposed project, and describe the approval request. The overview section shall also contain a discussion of the horizon years and findings/recommendations.

### 7-02-06.A.2 Site Location and Study Area Boundaries

a. A vicinity map will be provided illustrating the site, study area, and the surrounding transportation network. A brief description of the location of the site within the County and the region shall be included.

b. The limits of the study area should be based on the size and extent of the proposed development, and an understanding of existing and future land use and traffic conditions at and

around the site. The reasons for selecting the study area will be described in sufficient detail so that the reviewer can understand the reasoning.

c. At a minimum, the study area shall contain:
   (6) Adjacent streets,
   (6) Nearest arterial/arterial intersection(s),
   (6) Site driveways,
   (6) Internal roads,
   (6) All major signalized or potentially future signalized intersections, either current or future years, where:
      (B) The project contributes a 5 percent impact (during either the a.m. or p.m. peak hour) to any approach leg of the intersection where the intersection is operating at an acceptable level of service, or
      (B) The project contributes a 2 percent impact (during either the a.m. or p.m. peak hour) to any approach leg of the intersection where the intersection is operating at an unacceptable level of service.
   (6) Any roadway, street, or intersection where multimodal traffic safety may be impacted due to the proposed development.

## 7-02-06.A.3 Description of Site

a. A brief description of the site shall be provided and include, as a minimum, a description of its size, general terrain features, existing zoning and use, and proposed zoning and use.
b. A map shall be included showing buildout conditions of the subject property including the following:
   (8) The site street system,
   (8) Roadway classifications,
   (8) Number of travel lanes,
   (8) Street width,
   (8) Existing and proposed ROW dimensions,
   (8) Existing and proposed driveways and accesses (with turning movements),
   (8) Map of curb and gutter, and
   (8) Map of existing and proposed multimodal facilities including but not limited to sidewalk, shared use paths, on or off street bicycle paths, and transit stops.
c. Similar information for adjacent property shall be provided as well, if available, on the same map. The data presented in this TIS report shall be identical in every respect to the Site Plan submitted for development approval.
d. For situations where a Site Plan does not exist, a prototypical site roadway and access system should be assumed for purposes of the study. Subsequent update will be necessary when a Site Plan becomes available.

## 7-02-06.A.4 Existing and Proposed Uses in Vicinity of Site

The identification of existing and anticipated land uses in the general vicinity of the site must be performed in order to understand other influences to area traffic patterns. Specific attention should be paid to property adjacent to the site and any undeveloped land in the study area. A map shall be prepared for the project vicinity that graphically depicts the location of approved or proposed developments. Projects within the study area but in other jurisdictions shall also be identified on the map and documented. Proposed projects, which may impact adjacent jurisdictions, will be referred to those jurisdictions for consideration.

### 7-02-06.A.5 Existing and Committed Transportation Network

a. A map showing the "planned" transportation network for the short term and long term planning horizons must be prepared and submitted for review. Committed/funded improvements by the County and previously approved developments shall be identified for the short and long term horizon years. Source of funds shall also be identified.

b. The long term improvements shall be those documented in the Adams County Transportation Master Plan and any other long term improvements adopted through special studies sponsored by the County, including but not limited to, the Countywide Comprehensive Safety Action Plan.

c. The improvements (at either planning year) of other local jurisdictions, agencies, and developments within the study area shall be identified. The nature of their improvement projects, their extent, implementation schedule, funding source, and responsible party shall be identified.

## 7-02-06.B Existing Traffic Conditions

1. A description and plan of the existing multimodal traffic conditions within the study area shall be prepared, which presents a minimum of three hours each of a.m. and p.m. peak and daily multimodal traffic volumes, including motorized and non-motorized modes. These volumes shall be no more than two years old. If the project is in a high growth area they shall be less than one year. The source of existing traffic volume information should be explicitly stated (CDOT counts, new counts developed for the project, County counts, etc.) Summaries of current traffic counts shall be included in the appendix. A map of the existing roadway network shall be prepared that presents lane geometrics, traffic control, existing access, speed limits, and any other notable features.

2. Existing a.m. and p.m. peak hour intersection levels of service shall be determined for signalized and unsignalized intersections within the study area based on procedures described in the latest edition of the Highway Capacity Manual. The existing arterials shall also be analyzed based on a daily volume/capacity ratio analysis where the threshold capacities are defined by arterial designation per Table 7-02-06.B-1. Volume/capacity ratios which exceed 1.00 shall be identified. It should be noted these are general thresholds for planning purposes only, and a supplementary peak hour analysis should be considered. These daily volume/capacity ratios shall be recorded on the existing volume map.

**Table 7-02-06.B-1, Threshold Capacity**

| Facility Type | Lanes | A.D.T Threshold Capacity |
|---|---|---|
| Local-Residential | 2 | 1,500 |
| Local-Commercial/Industrial | 2 | 2,500 |
| Collector | 2 | 12,000 |
| Minor Arterial | 4 | 24,000 |
| Rural Arterial & Rural Principal Arterial | 4 | 32,000 |
| Principal Arterial | 4 min. | 48,000 |

## 7-02-06.C Future Traffic Conditions Without Proposed Development

1. Long term a.m. and p.m. peak hour planning horizon traffic forecasts shall be based on the most recent Transportation Plan traffic forecasts. Long term peak hour estimates shall be provided in sufficient detail to understand the recommended forecasts. It should be noted the forecasts are based on future year population and employment projections, which reflect a regional perspective on growth and development. The applicant and consultant shall investigate those land use assumptions as they apply to their project study area and make forecast adjustments as necessary.
2. A short and long term planning horizon traffic forecast shall be prepared for the project. The short term planning horizon is five years after project occupancy. The short term planning horizon traffic forecast shall be the sum of existing traffic volumes plus cumulative development traffic plus ambient growth. The short term planning horizon traffic forecasts should also include cumulative development traffic from other jurisdictions within the study area. The short term planning horizon year ambient growth rate traffic forecasts shall be based on:
   a. Proportion between existing traffic volumes and buildout regional model forecasts,
   b. Extrapolation from historical traffic counts to current counts, and/or
   c. Planning analysis which considers trends in the areas circulation system through either a proportion or extrapolation estimate.
3. Whatever method is used to develop the annual growth rate for determining ambient traffic, it is important the method be documented with sufficient detail to replicate the findings.
4. The map of the committed and funded improvements (for each planning horizon) as required shall be used as a base for determining short term and long term planning horizon levels of service. The identification of improvements that would mitigate unacceptable levels of service under the traffic conditions (without the proposed project) must be developed. In addition to what improvements are needed, it is also important to identify when these improvements are needed. The time when improvements are necessary could be defined by when a traffic threshold is reached, or by year.

## 7-02-06.D Proposed Project Traffic

Project traffic will be developed based on the traditional trip generation, distribution, and assignment process described as follows.

### 7-02-06.D.1 Trip Generation

A completed "Traffic Generation Summary Sheet" (Table 7-02-06.D.1-1), listing each type of land use within the site at build-out, the size involved, the average trip generation rates used (total daily traffic and a.m./p.m. peaks), and the resultant total trips generated shall be submitted as part of the project TIS. Build-out land uses and generation shall be for both the short term and long term planning horizons. If, however, the land use action is of a type that build-out in the short-term is not feasible due to the size of development, interim phases, such as 2-year increments, shall be developed.

**Table 7-02-06.D.1-1, Traffic Generation Summary Sheet**

| LAND USE | | UNIT TYPE | TRIP GENERATION RATES (per unit) | | | | | TOTAL TRIPS GENERATED | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Type | Size | | 24 hr | AM Peak Hour | | PM Peak Hour | | 24 hr | AM Peak Hour | | PM Peak Hour | |
| | | | | Enter | Exit | Enter | Exit | | Enter | Exit | Enter | Exit |

Trip generation should be calculated from the latest data contained within the Institute of Transportation Engineers' Trip Generation report or other industry publications such as the ITE Journal. Data limitations, data age, choice of peak hour or adjacent street traffic, choice of independent variable and choice of average rate versus statistical significant modification shall be presented and discussed. In the event data is not available for a proposed land use, a local trip generation study following procedures prescribed in the ITE Trip Generation manual must be completed to provide sufficient justification for the proposed generation rate. This rate must be acceptable to the County.

## 7-02-06.D.2 Adjustments to Trip Generation Rates

a. After first generating trips at full ITE rates, trip-making reduction factors may be used. These factors fall into two categories: those which reassign some portion of generated trips to the background stream of traffic, and those which “remove” or “move” generated trips. In all cases, the underlying assumptions of the ITE Trip Generation rates must be recognized and considered before any reductions are claimed.
b. The first category is when trips to the proposed development currently exist as part of the background traffic stream, referred to as a passby trip. Passby percentages identified in the ITE Trip Generation manual or other industry publications may be used.
c. This traffic must continue to be assigned to site driveways and access points, but is not additive to the background stream of traffic. A technical appendix that illustrates the rediversion of passby trips is recommended.

d. The second category for adjustments is for internal site trips, transit use, and TDM (transportation demand management) actions. In general, reductions are not recommended. However, if reductions are claimed, analytic support to show how the figures were derived must be provided. Optimistic assumptions regarding transit use and TDM actions will not be acceptable unless accompanied by specific implementation proposals that will become a condition of approval. Such implementation proposals must have a reasonable expectation of realization within a 5-year period after project initiation.

## 7-02-06.D.3 Trip Generation Budget

a. Major concerns arise when the TIS identifies a trip generation rate less than what ultimately is experienced once the development is built and occupied. The impacts on the community due to underestimating these trip generations may become great. It is recognized the trip generation process is ultimately dependent on a number of market and social factors; however, it is imperative the TIS be sufficiently conservative to account for full impact of the proposed development.
b. To assure the public and the County the traffic impact analysis adequately addresses the full impact of the development, the trip generation of the proposed development will establish the maximum amount of trips permitted from the development. If a future traffic impact is experienced which was not addressed in the traffic study, and determined a part to a project's trip generation exceeding the trip generation assumed in the traffic study, the County may require the development to either 1) make additional improvements to reduce the project traffic volumes to the amount estimated in the traffic study, or 2) provide for additional mitigations to the project traffic. This requirement will become a condition of all development approvals requiring a traffic study.
c. Two specific situations will be closely reviewed. The first is when the traffic study assumes rates where the collection of mixed uses, such as at a shopping center, result in lower peak hour trips than when applying individual rates to each land use. The second is when reductions in the trip generation rates are assumed based on reductions due to travel demand management.
d. If the trip budget is reached prior to full occupancy, the County reserves the right to request supplemental traffic analyses and/or additional mitigations prior to granting full occupancy permits. If the project is fully occupied and it is determined the development traffic exceeds that which was included in the traffic study, then the property owner may be requested to conduct additional traffic analysis and provide additional mitigation.

## 7-02-06.D.4 Trip Distribution

Trip distribution may be based on the County and/or DRCOG traffic forecasts, market analysis, existing traffic flows, applied census data, and professional judgment. Regardless of the estimates, the procedures and logic for estimating the trip distributions must be well documented. The trip distribution patterns must be presented for each phase if changes in roadway network, access or land uses are proposed. The distribution percentages shall be noted on the Summary of Traffic Impacts sheet.

## 7-02-06.D.5 Project Trip Assignment

This Section shall present the forecast project traffic assignment based on the project's trip generation estimates and project trip distribution. The traffic forecasts shall be graphically presented and include: a.m. peak hour, p.m. peak hour, and total daily site-generated traffic. If trip generation is different for the short term and long term planning horizons, both should be shown on separate graphics. "Pass-by" traffic should be included at driveways and access points.

## 7-02-06.E Future Traffic Forecasts With the Proposed Development

A graphical summary of the short term and long term horizon year traffic plus the proposed project traffic for the four hours of a.m. peak, four hours of p.m. peak, and daily conditions shall be completed. These volumes shall include turn movements at the key intersections. The base map for this exhibit shall reflect the respective transportation network by planning horizons.

## 7-02-06.F Project Impacts

The key elements of the project impact analysis include:

1. Generalized daily traffic volume level of service
2. A peak hour intersection level of service
3. The appropriateness of access locations and the need for future intersection control
4. Turn lane storage requirements
5. Sight distance
6. Appropriateness of acceleration or deceleration lanes
7. Impacts to traffic safety in the project area (Div. 7-03)
8. The requirements for evaluations of key elements one through six from above are as follows.

### 7-02-06.F.1 Generalized Daily Traffic Volume Level of Service

Using the daily traffic volumes forecast and general daily level of service thresholds, a general evaluation should be made of the arterial street system for the short term and long term horizon years. Incremental differences attributable to the land use action should be identified. A map showing generalized levels of service should be presented for each design year.

### 7-02-06.F.2 Peak Hour Intersection Level of Service

a. An a.m. and p.m. peak hour intersection level of service analysis shall be conducted for each intersection, based on procedures specified in the most recent release of the Highway Capacity Manual. All level of service analysis worksheets shall be included in the Appendix.
b. The principal objective of the intersection level of service traffic impact analysis is to identify whether the traffic from the proposed project when added to the existing plus short and long term planning horizon traffic will result in a significant impact and an unacceptable level of service. For definitional purposes, the threshold for acceptable level of service is C during off-peak hours and not less than level of service D for peak hours.
c. Significance is defined as: 1) when the added project traffic causes the level of service to exceed the established threshold, or 2) when the short term or long term horizon year traffic without

the project exceeds the established threshold, and the project traffic causes a 2 percent increase in the volume/capacity ratio or delay.

## 7-02-06.F.3 Intersection Control and Access Locations

The following ensure that proposed access locations and intersection controls are appropriate, safe, and consistent with corridor operations using an Intersection Control Evaluation (ICE) grounded in evidence-based and context-sensitive traffic safety principles.

**a. Applicability.**

(5) Applies to all new or modified full-access intersections and driveways on arterial facilities associated with a land use action.

(5) Applies to partial-access locations where changes may materially affect corridor operations or safety.

**b. Access Location and Type.**

(5) The proponent shall demonstrate that the location and type of access meet County access management standards and do not create unacceptable operational or safety impacts.

(5) Distances (centerline-to-centerline) to existing and planned controlled intersections along the corridor shall be shown.

**c. Intersection Control Evaluation (ICE).**

(5) An ICE is required for each design year (e.g., opening year and horizon year).

(5) At a minimum, the ICE shall screen and compare:

(D) Unsignalized control (e.g., side-street stop, all-way stop where applicable),

(D) Roundabout control,

(D) Signal control, and

(D) Other context-appropriate alternatives if warranted (e.g., restricted crossing U-turn).

(5) Roundabout-first Policy. Roundabouts shall be treated as the default alternative to be evaluated first. Selection of a different control must demonstrate that it provides equal or better safety and operational performance (including for people walking, bicycling, using mobility devices, accessing transit, and freight/emergency operations) and is feasible within right-of-way and context constraints.

(5) The ICE shall include, as appropriate: safety performance estimates (CMFs or conflict analysis), operations (delay/LOS, v/c, queues), multimodal performance, access/driveway interactions, context/land use, right-of-way and constructability, lifecycle costs, maintenance and snow operations, and implementation phasing.

(5) The ICE shall culminate in a transparent decision matrix and recommendation for each location and design year.

d. **Requirements When a Traffic Signal Is the Selected Alternative**. If and only if the ICE identifies a traffic signal as the recommended control for a design year:

(5) Provide a MUTCD signal warrant analysis for each applicable design year.

(5) Provide a signal progression (time–space) analysis demonstrating compatibility with the corridor for a distance of at least one mile in each direction of the proposed signal, considering existing controlled intersections and any reasonably foreseeable future signal locations.

(5) Progression assumptions (when testing signal alternatives):

(5) Cycle length: 80–120 seconds, to be selected in coordination with County staff.

(5) Travel speeds for progression modeling: 45 mph on principal arterials and 35 mph on minor arterials, unless the posted speed is lower (in which case use the posted speed).

(5) Bandwidth targets: 50 percent on the principal arterial and 40 percent on the minor arterial are desirable; target these where feasible and justify any deviations based on corridor constraints and multimodal safety.

(5) Where a corridor includes intersections that are currently unsignalized but reasonably expected to be signalized within the design horizon, a preliminary 60 percent mainline / 40 percent cross-street split may be assumed for scoping progression scenarios; alternative splits may be used where turning-movement projections provide more precise information.

(5) Deliverables for signal alternatives: time–space diagrams, offset/cycle assumptions, intersection spacing exhibits, and summary of expected impacts to corridor travel times and queues. Include signal progression worksheets in the Appendix.

e. **Access Management Implications**.

(5) Any proposed access that would materially reduce achievable corridor performance (e.g., materially diminish desirable bandwidth where signals are proposed) or degrade safety shall remain unsignalized and may require turn restrictions or median/channelization—unless the ICE demonstrates that such restrictions would produce worse safety or operational outcomes.

(5) Driveway design shall limit turning movements as needed to preserve corridor function and safety, consistent with the ICE findings.

f. **Submittals**.

(5) ICE report and decision matrix for each location and design year.

(5) Warrant analyses (where a signal is recommended).

(5) Corridor exhibits showing existing/planned controlled intersections and centerline spacing.

(5) Time–space diagrams and worksheets (only where a signal alternative is carried forward).

(5) All modeling files and assumptions (e.g., HCM/SIDRA/RODEL/Synchro) sufficient for County review.

## 7-02-06.F.4 Turn Lane Storage Requirements

Turn lane storage needs shall be identified for the “necessary” situation, based on projected turning volumes and AASHTO analytic techniques. Appropriate documentation of the calculations must be provided.

## 7-02-06.F.5 Sight Distance

The identification of project sight distance at the project entrances and all internal streets shall be conducted. Line of sight triangles for determining sight distances and landscape restrictions shall be prepared and submitted in accordance with information presented in Chapter 7.

## 7-02-06.F.6 Acceleration or Deceleration Lanes

All proposed project entrances on arterials shall be evaluated as to whether they require acceleration lanes or deceleration lanes per the most recent release of the Colorado Department of Transportation State Highway Access Code.

## 7-02-06.G Special Analysis/Issues

This Section provides the County with opportunities to request specific focused traffic analyses relevant to the proposed development. These could include access control, access spacing, crash/safety concerns, cut through traffic and residential quality of life, truck estimates and pavement design, crash history, vulnerable road user safety, safe routes to schools, emergency routes, etc. This section would also contain environmental and regional air quality conformity analysis as necessary.

## 7-02-06.H Mitigation Measures/Recommendations

This section shall describe the location, nature, and extent of all transportation improvements the applicant recommends to yield reasonable operating conditions in each horizon year with the land use action approved as requested. For this discussion, the following terms apply:

1. Planned - Improvements planned having committed funding, including those identified in short term capital improvement programs by County, district, or other agency.
2. Background Committed - Improvements committed to by previously approved development.
3. Applicant Committed - There are two conditions where improvements need to be identified:
    a. When existing plus cumulative traffic with planned and background improvements exceed established levels of service, the applicant shall identify mitigation to offset project impacts.
    b. When existing plus cumulative traffic with planned and background improvements do not exceed established levels of service, the applicant shall identify mitigation to achieve established levels of service.
4. Necessary - Improvements required to mitigate background plus applicant traffic to established levels of service, regardless of project contribution.
    a. The reason "necessary" improvements must be explored is often the "background committed" or "planned" improvements plus the improvements the applicant typically understands and commits to are not adequate to provide the established level of service. In addition, the assurance all-practical solutions have been considered when developing the list of "necessary" improvements, so the resulting operating conditions are made to approach the established level of service must be performed.
    b. For purposes of identifying improvement possibilities (either by the applicant or by the County or state) "necessary" to yield an acceptable level of service, the cost of the improvements shall not be considered a limiting constraint within the context of the traffic impact study. However, the goal of the evaluation is to identify cost-effective solutions that yield a reasonable level of service. Extremely high-cost solutions may not be cost-effective, but it is important to at least identify solutions so decision-makers are cognizant of existing options.
    c. Table 7-02-07-2, *Recommended Improvements Summary Sheet*, is a summary sheet of recommendations being proposed for the subject project. One sheet may be used for both design years if all the improvements can be conveniently described thereon. If not, one or more sheets should be completed for each design year.
    d. All recommended improvements should be identified on the Summary Sheet, including "planned," "background committed," "applicant committed," and "necessary." Each project should be briefly described as to its location, the type of project, flow line and right-of-way needs (for roadways), signal or turn lane improvements (for intersections), and, at

a sketch planning level, cost of the improvement. Also, commitment to the improvement should be identified, either by local governments, districts, or by the applicant himself (this may include both the "applicant committed" and "necessary" projects). Identification of a project as "not currently committed" may be an appropriate description for many needed projects, including some of those that are "planned." However, the goal of the recommendations should be to identify a firm program of improvements that will support the proposed land use action and background traffic in each design year.

e. It is further required all geometric improvements such as pavement markings, signs, adding through or turn lanes, adding project access and assorted turn lanes, acceleration lanes, and changes in medians, shall be presented in a schematic scaled drawing, preferably on a current aerial map. Sufficient dimensions shall be identified to facilitate review. Right-of-way needs shall also be identified on the plan.

## 7-02-07 Requirements for Updating Existing Traffic Impact Studies

The following are three scenarios that will require the preparation of an update (or amendment) to a previous study, or the preparation of an entirely new study which meets these guidelines.

1. When time or circumstances of the original study fall within the parameters presented in Table 7-02-07-1, the applicant shall prepare the appropriate documentation according to the following specific requirements.

**Table 7-02-07-1, Requirements for Updating an Existing TIS**

| | Changes to the Original Proposed Development | |
|---|---|---|
| Original Report Is | Access Changed* or Trip Generation Increased by 15% | Access Not Changed and Trip Generation Increased by 15% |
| < 2 Years Old | Letter Amendment Required: Identify and discuss only items that changed. | Letter Documenting Change (No other reports required) |
| > 2 Years Old | New Study | Letter Amendment Required:<br>● New local ground counts.<br>● New Trip Generation<br>● New LOS Analysis<br>● Meet all current requirements of this TIS Guideline |
| *Changed access includes proposed new access or refinement of general access locations not specifically addressed in original proposed development. | | |

2. When the original study was prepared for a large, complex, or phased project and was designed, organized, and written to function as a "base" or master plan document for future development applications, it must include updates to the master plan study. (These types of studies require special arrangements with the County prior to their preparation.)
3. Where a traffic impact study was never prepared and the site fails to continue meet the conditions of a waiver, a new study is required.

**Table 7-02-07-2, Recommended Improvements Summary Sheet**

[1]Describe improvement type, number of lanes, functional classification, flowline and R.O.W. needs, and planning level cost

[2]Describe project implementation requirements and identify project sponsor and type of funding. (i.e., explain whether the improvement is to be funded by the developer, improvement district, or other source.

[3]Describe improvement type and identify planning level cost.

# Div. 7-03 Developer Responsibility for Safety and Traffic Calming Improvements

## 7-03-01 General

A. **Purpose**. The purpose of these standards is to ensure that all roadways, are designed to prioritize safety and reflect the specific context of the community and surrounding land uses. These standards introduce design criteria aimed at reducing and managing vehicle speeds

improving safety on streets that serve neighborhood or community functions and reducing conflicts between different transportation modes. Although functional classification defines the fundamental cross-section and roadway design parameters, this section incorporates community and longitudinal corridor context to guide the application of context-sensitive traffic calming measures and can be used to supplement the functional classification roadway design standards.

B. **Applicability.** These standards apply to the geometric design and alignment of roadways in all new developments or redevelopments where streets function primarily as neighborhood-serving or community-serving roads, especially in residential, mixed-use, or transitional areas.
   1. *Context-Based Application.* Traffic calming measures shall be applied based on the street's context and function within the community, with consideration given to adjacent land uses, pedestrian and cyclist volumes, and potential cut-through traffic.

## 7-03-02 Context-Based Traffic Calming and Safety Measures

A. **General Requirements.** Developers shall implement traffic calming measures on streets that, regardless of their official classification, function as neighborhood or community-serving streets. Traffic calming shall be applied where the street characteristics, traffic volumes, and pedestrian or cyclist activity create an increased risk for speeding or other safety concerns. This includes streets that:
   1. Serve as primary access routes within residential or mixed-use areas;
   2. Experience significant pedestrian or cyclist traffic;
   3. Are adjacent to schools, parks, or community centers; and
   4. Have long, uninterrupted straight sections that could encourage speeding.

B. **Traffic Calming for Straight Roads.** For any proposed development that includes a street with a straight section longer than 500 feet, the following traffic calming measures shall be implemented, regardless of the street's official classification, to mitigate speeding:
   1. Speed cushions or speed humps;
   2. Bulb-outs or curb extensions;
   3. Chicanes or lane shifts; or
   4. Raised crosswalks.

C. **Purpose**. These measures are designed to reduce vehicle speeds and improve safety for pedestrians and cyclists in areas where streets, regardless of classification, serve primarily residential or community-focused uses.

## 7-03-03 Evaluating Street Function and Context

A. **Contextual Evaluation for Traffic Calming.** In determining the need for traffic calming measures, developers shall work with the county to evaluate the context and function of the streets in question, taking into account:
   1. The primary users of the roadway (e.g., residential traffic, cut-through traffic, pedestrian and cyclist activity).
   2. The land uses adjacent to the street, such as schools, parks, retail areas, and residential neighborhoods.
   3. The design characteristics of the street, including road width, the presence of sidewalks, on-street parking, and street connectivity.
   4. The expected traffic volumes and speeds relative to the surrounding environment.

5. The potential for streets to function as local or community-serving roads, even if officially classified as collectors or arterials.

B. **Implementation**. Based on this evaluation, traffic calming measures shall be implemented where the street functions as a neighborhood-serving road and where traffic calming is necessary to ensure the safety of all users.

## 7-03-04 Complete Streets and Multimodal Safety

A. **General Requirements.** Developers shall ensure that streets within or adjacent to the development are designed to serve all users, including pedestrians, cyclists, and transit riders, in accordance with Complete Streets principles. This applies regardless of the street's classification.

B. **Multimodal Safety Enhancements**. The following safety enhancements shall be implemented based on the contextual function of the street:
   1. *Sidewalks.* Provision of wide, ADA-compliant sidewalks on both sides of the street, especially in areas with significant pedestrian activity.
   2. *Crosswalks*. Installation of raised or enhanced crosswalks, including high-visibility markings and pedestrian signals where needed.
   3. *Bike Lanes.* Protected or buffered bike lanes shall be provided where cyclist activity is expected or where streets connect to larger bicycle networks.

## 7-03-05 Safety and Traffic Calming in Rural and Transitional Areas

A. **General Requirements.** In rural or transitional areas where streets may serve both rural and suburban traffic, traffic calming and safety measures shall be contextually applied. Developers shall implement these measures based on the function and use of the streets, with a focus on mitigating speeding and improving safety for non-motorized users.

B. **Traffic Calming for Long, Straight Roads.** For rural and transitional streets that have long, straight sections, traffic calming measures such as the following shall be implemented:
   1. Speed humps or cushions;
   2. Lane narrowing or road diets;
   3. Chicanes or subtle lane shifts to reduce the likelihood of speeding; or
   4. Visual narrowing through landscaping, street trees, or roadway markings

C. **Application**. These measures shall be applied based on the function of the street within the broader community, ensuring that rural and transitional areas maintain safety while accommodating local traffic needs.

## 7-03-06 Hazard Assessment and Mitigation Requirements

A. **General Requirements**. Developers shall conduct a Hazard Assessment as part of any required Traffic Impact Study (TIS). The assessment must evaluate the safety impacts of the proposed development on the streets within and surrounding the development, with a focus on the function of each street in serving the local community.

B. **Hazard Assessment Criteria.** The Hazard Assessment shall include:

1. *Crash Data*. A review of crash data for streets and intersections within half a mile of the development, with a focus on streets that serve pedestrian, cyclist, or community-oriented uses.
2. *Evaluation*. An evaluation of street function, traffic volumes, and design characteristics to identify potential safety hazards.
3. *Identification*. Identification of any areas where speeding, unsafe crossings, or other safety concerns may arise due to the context of the road's use.

## 7-03-07 Developer Contributions to Off-Site Safety Improvements

Developers may be required to contribute to off-site safety enhancements if their development significantly impacts streets that, regardless of classification, serve a local or community function. Contributions may include:

A. **Improvements**. Off-site pedestrian and cyclist infrastructure improvements, such as sidewalk extensions, bike lanes, or crosswalk upgrades;
B. **Funding**. Funding for intersection improvements or traffic control devices (e.g., signals, stop signs); or
C. **Transit**. Transit stop enhancements, advanced warning signs, or intersection safety improvements.

## 7-03-08 Monitoring and Compliance

Developers are responsible for ensuring that all safety and traffic calming improvements are implemented before final project approval or certificate of occupancy. A post-construction safety audit shall be conducted to verify compliance, with a particular focus on streets serving the local community, regardless of their official classification.

## 7-03-09 Design Flexibility for Special Contexts

A. **Purpose**. In areas where streets are expected to serve both local and broader community functions (e.g., transitional areas between residential and commercial zones), roadway design should provide flexibility to apply both geometric and traffic calming measures based on the specific context.

**B. Design Considerations.**

1. *Street Design in Transitional Areas*. In areas where streets classified as collectors or arterials serve neighborhood functions, the following additional design standards shall apply:
    a. Use of raised medians or islands to control access and reduce vehicle speeds
    b. Lane narrowing in certain segments to visually signal a reduction in speed
    c. Incorporation of crosswalk enhancements such as pedestrian refuge islands or advanced stop lines

2. *Functional Context Over Classification***.** The functional context of the street (e.g., whether it serves local, community, or regional needs) shall take precedence over its official classification in determining the necessary safety and design standards.

# 7-03-10 Monitoring and Adjustments

A. P**ost-Construction Monitoring.** Roadways designed and constructed in accordance with these standards shall be subject to post-construction safety audits, particularly in areas where traffic calming measures have been implemented. This audit shall evaluate:
   1. The effectiveness of the traffic calming devices in reducing vehicle speeds
   2. The safety impacts on pedestrians, cyclists, and other vulnerable road users
   3. Compliance with the design standards outlined in this section
B. **Design Adjustments.** Should the post-construction audit identify deficiencies or areas where traffic calming measures are insufficient to meet the intended safety outcomes, adjustments to the roadway design or additional traffic calming measures shall be required.

# 7-03-12 References

This section is based on best practices from AASHTO's Green Book, the ITE Traffic Calming Guidelines, and FHWA Proven Safety Countermeasures for reducing speeding and improving safety on roadways that serve neighborhood and community functions.

# 7-03-13 Implementation and Compliance

These design standards shall be incorporated into all new roadway designs and applicable redevelopment projects within Adams County. Compliance with these standards is mandatory, and developers must ensure that all traffic calming measures and context-based design features are implemented before final project approval.

# CHAPTER 8 SPECIAL SERVICE DISTRICTS

**Contents:**

Div. 8-01 Special Service District Guidelines and Regulations

## Div. 8-01 Special Service District Guidelines and Regulations

A. **Purpose.** This Chapter establishes the requirements for submittals and procedures for review of Special District service plans in unincorporated Adams County.

B. **Applicability.** These standards and regulations apply to all service plans for Special Districts that propose to have any portion of the District located in unincorporated Adams County.

C. **Relationship to Colorado Revised Statutes.** These standards and regulations correspond to C.R.S. §§ 32-1-201 through 208, and are designed to be used in conjunction with and as an addition to the Colorado Revised Statutes.

D. **Policies.** The following policies provide the foundation for these Special District standards and regulations:

1. *Existing Service Provider Investigation.* Before any service plan for the creation of a Title 32 District shall be reviewed by the County, service provision from all existing service providers shall be investigated to examine whether the proposed services are available from other service providers.
2. *Service Provider Selection Priority.* If land development occurs in an unincorporated area, Adams County encourages service provision be acquired through an existing service provider by agreement or inclusion. The County recognizes that in certain circumstances a new Special District may be the most logical and economical alternative for service. If this is the case, the County advocates the formation of a Metropolitan District.
3. *Complete Service Plan Requirement.* Adams County shall only consider in public hearing complete service plans as defined in these standards and regulations.
4. *Coordination with Planned Unit Development*. When a new Special District is proposed in partnership with a Planned Unit Development, the proposed District formation shall be coordinated with the Planned Unit Development application.

E. **Submittal and Review Process**. The submittal and review process shall comply with C.R.S. § 32-1-202(1) and include:

1. *Submission of Service Plan Required.* Service plans shall be submitted to each affected county that contains land within the boundaries of the proposed Special District prior to filing for the District's organization in District Court.
2. *Review of Service Plan.*
   a. Review Authority. The Board of County Commissioners has authority in review of a service plan according to C.R.S. § 32-1-203.
   b. Review Criteria.
      (1) Required Findings. The service plan may be denied unless satisfactory evidence for each of the following:

(A) There is sufficient existing and projected need for organized service in the area to be serviced by the proposed District;

(B) The existing service in the area are adequate for present and projected needs;

(C) The proposed Special District is capable of providing economical and sufficient service to the area within its proposed boundaries; and

(D) The proposed Special District has, or will have, the financial capacity to discharge the proposed indebtedness on a reasonable basis.

(2) Discretionary Findings. The service plan may be denied if lacking evidence for any of the following:

(A) Adequate service is not, or will not be, available to the area through the County, other existing municipal or quasi-municipal corporations, including existing Special Districts, within a reasonable time and on a comparable basis;

(B) The facility and service standards of the proposed Special District are compatible with the facility and service standards of each county within which the proposed District is to be located and each municipality which is an interested party under C.R.S. § 32-1-204(1);

(C) The proposal is in compliance with a master plan adopted pursuant to C.R.S. § 30-28-106;

(D) The proposal is in compliance with any duly adopted county, regional, or state long-range water quality management plan for the area; and

(E) The creation of the proposed District will be in the best interest of the area proposed to be served.

3. *Review Process*. The service plan submittal and review process shall follow these steps:

a. Pre-Application Conference. Persons proposing the formation of a Special District (the Applicant) shall contact the Director of Community and Economic Development in the early stages of the proposal for a pre-application conference. This conference identifies any concerns early in the process and evaluates the feasibility of the proposed service plan.

(1) Pre-Application Submittal. The Applicant shall submit the following prior to the pre-application conference:

(A) A pre-application form;

(B) A pre-application fee;

(C) A map and/or sketch at an easily readable scale showing the boundaries of the proposed special district and relationship of the special district to surrounding topographic and cultural features such as roads, streams, and existing governmental or quasi-governmental entities; and

(2) A draft service plan in the format of the County's Model Service Plan provided for in the application materials. A copy of the County's Model Service Plan is set forth in **Addendum C**. Addendum C is referenced herein for informational purposes but is not made a part hereof.

(3) Pre-Application Review. The County shall review the draft service plan for consistency with the Colorado Revised Statutes and these standards and

regulations. The County shall forward any comments to the Applicant within 30 days after the Pre-application Conference. These comments may include suggested changes concerning format, content, and adherence to the state statutes and County regulations.

b. Application Submittal. After reviewing the comments, the Applicant shall submit one copy of the service plan to the Office of the Adams County Clerk and Recorder and a copy of the service plan and the required application fee to the Director of Community and Economic Development.

(1) Review. The County shall review the service plan to ensure it meets the requirements outlined in the County regulations as well as the requirements of the Colorado Revised Statutes. The service plan and associated financing plan may be referred to an Independent Financial Advisor for review in accordance with Sec. E.4.d.

(2) Referral. The Director of Community and Economic Development shall refer the service plan to all municipalities and existing Special Districts within a radius of three miles from the boundaries of the proposed District. In addition, in support of Adams County's policy to coordinate land development planning, the service plan shall be referred to any municipality whose Intergovernmental Agreement with the County includes any part of the area proposed to be in the District, and to the appropriate School District or Districts for information and comment. The District Review Team shall review the service plan and shall submit all comments, findings, and recommendations, including those from referral agencies, in the form of a staff report to the applicant, the Planning Commission, and the Board of County Commissioners.

c. Public Hearing.

(1) Planning Commission. A hearing shall be scheduled before the Planning Commission at which the Planning Commission shall consider the service plan and recommend denial, conditional approval, or approval to the Board of County Commissioners. The Planning Commission shall forward a recommendation to the Board of County Commissioners within thirty (30) days after the service plan was heard. A proposed health service district or health assurance district shall not be referred to the Planning Commission and shall instead be heard by only the Board of County Commissioners.

(2) Board of County Commissioners. The Board of County Commissioners shall consider the service plan at public hearing and shall deny, conditionally approve, or approve the service plan. If the Board of County Commissioners finds sufficient information has not been presented at the scheduled hearing, the Board may continue the hearing on the service plan for a period not to exceed 30 days unless the proponents of the special district and the Board of County Commissioners agree to continue the hearing for a longer period.

4. *Contents of the Service Plan*. The county requirements include each of the items listed in C.R.S. § 32-1-202(2), and the further specifications stated in these standards and regulations.

a. Relationship Between Submittal Requirements and Review Criteria. To assist the Applicant in the preparation of the service plan, the County offers some examples of

how it may review the criteria from the state statutes. The applicant shall understand the relationship between the submittal requirements and the review criteria:

(1) Projected need for the District may be determined by the zoning and by reasonable market projections;

(2) The map of the proposed District and the explanation of services may be used to review the criterion to determine if the existing service to the area is inadequate;

(3) Sufficient service may be evaluated through an examination of the Site Plan and the description of the facilities, including standards and cost estimates. Economical service may be evaluated through an examination of the financial plan and the cost estimates;

(4) The financial abilities of the District may be evaluated by examining the financial plan and by determining if the financial plan includes reliable and reasonable projections of market performance. For Districts of certain size and impact, a market study may be the appropriate vehicle to demonstrate the validity of the District's development assumptions;

(5) In evaluating the criterion that adequate service will not be available through other means, the County may take into consideration the distance of the proposed District from existing service providers and the expansion and/or master plans of those providers in examining the provision of service in a "reasonable time." Also important in the evaluation of this criterion is the information concerning the investigation of all service provision alternatives. In evaluating services on a "comparable basis," the review may be similar to that for the review of "economical and sufficient service";

(6) The detailed explanation of the facilities and improvements may be used to review the criterion to determine if the proposed standards of the District are compatible with existing standards. The applicant shall demonstrate that the planned improvements the District proposes to make, such as roads and water and sewer lines, meet the specifications of the County, existing Special Districts, and any interested party;

(7) If proposed Districts are to be located in areas included in an Intergovernmental Agreement between Adams County and one of the municipalities in the County, the service plan shall be evaluated in terms of said agreement;

(8) Adams County uses the current Clean Water Plan prepared through the Denver Regional Council of Governments and adopted by the Water Quality Control Commission as the official long-range water quality management plan for Adams County to satisfy this criterion;

(9) The County may evaluate "best interest" by reviewing the service plan and comparing it to other viable alternative means of providing the proposed services. This review may take into consideration the master plans of the municipalities in the area, the plans for existing Special Districts, and the plans for any water user associations or other providers.

b. *State Requirements*. The service plan shall include all requirements as stated in C.R.S. § 32-1-202(2).

c. *County Requirements*. Standards of Preparation. In addition to its contents, the service plan shall meet the standards required of a professionally prepared document. The narrative shall be presented clearly; any maps or other graphics shall be legible and contain explanatory legends, titles, and text. The plan shall contain a table of contents, be well organized, and clearly demonstrate it meets the requirements as stated in the state statutes and in these regulations.

d. *County Submittals.*

(1) Description of the District. The plan shall include an explanation of the proposed services and a discussion of the criteria, such as buildout rate or market conditions, which would be used to determine when and if certain services are to be supplied. This requirement is similar to the requirement of the financial plan, which asks for a description of any phasing plans.

(2) The Financial Plan. All figures shall be in constant dollars. The County may, at the discretion of the Director of Community and Economic Development, refer the service plan to the County's Independent Financial Advisor. The County shall assess a fee in accordance with the County's fee schedule if the service plan is referred to the County's Independent Financial Advisor. The financial plan shall contain but is not limited to:

(A) A letter from the person or organization responsible for the financial plan evaluating the financial and economic presentation and identifying sources and methods used in estimating interest rates, buildout rates, mill levy, and other data included in the plan;

(B) A development anticipation section, which describes development projections in amount, time, type, and value. These projections shall be supported by a market research report and an opinion letter from a market analyst acceptable to Adams County;

(C) A pro forma with a year by year listing for the period of expected indebtedness beginning with the expected date of District formation. The pro forma shall include a detailed description of all funding mechanisms to be employed by the District. This pro forma shall list individual yearly totals for bond issues, debt service, operating and maintenance expenses, legal and administrative expenses, capital expenses, buildout rate, assessed valuation, mill levy, facility fees, other fees, and all other costs and revenues. Any extraordinary or one-time expenses shall be explained;

(D) Maximum bonded indebtedness proposed to be incurred by the District and justification for said amount of indebtedness. Because the issuance of bonds by one entity may adversely affect the bond rating of another entity due to overlapping debt, the plan shall contain a list of indebtedness for all cities, counties, and Special Districts within which the proposed District will be included;

(E) A description of the scheduling and phasing of improvements and their relationship to the financial stability of the District;

(F) If the financial plan identifies any contributions by the developer to the District, any agreement between the developer and the proposed District explaining the developer's financial participation shall be included;

(G) A description of the flexibility which has been built into the financial plan, including alternative means of repaying the debt if the estimated revenue stream is not realized; (VIII) A description of the total cost of improvements proposed in the development and the percentage of those improvements to be financed by the proposed District;

(H) A list of mill levies and other fees for Districts supplying similar services for a similar market located in the region;

(I) The maximum mill levy proposed by the District; and

(J) The total of all mill levies currently imposed on property within the proposed District.

(3) Site Plan. This plan shall show the entire boundary of the proposed District and clearly delineate the location of any current improvements within the proposed District boundaries, any improvements planned by the District, and any development currently built or planned to be built within the District:

(A) The sheet size shall be 18" vertical by 24" horizontal with a scale of one inch = 200' or other scale as approved by the Director of Community and Economic Development; and

(B) Noted on the plan shall be the date of preparation and last revision, clear identification of the location of proposed services and/or improvements, and the names of abutting subdivisions (in the case of unplatted land, the word "unplatted" shall appear).

(4) Map of the Proposed District. There shall be included in the service plan a map of the proposed District and the surrounding area:

(A) The map shall be legible, shall contain explanatory legends, titles and text and shall show the District boundaries and the relationship of the proposed District to the surrounding area within a three mile radius. The map shall identify all municipalities and existing Special Districts within said radius. Also identified on this map or on a separate map shall be the existing zoning within the proposed District and the zoning for properties within a three mile radius; and

(B) A list of the services proposed to be supplied by the District provided by each of the municipalities and Special Districts shown on the map.

(5) A Complete Description of any Facilities to be Constructed. Though the construction costs are summarized in the financial plan, under this requirement detailed descriptions and cost estimates for all the facilities and improvements shall be included. All materials and labor costs for each planned facility shall be estimated and the facilities shall be shown to be compatible with the standards of Adams County and each interested party as defined in C.R.S. § 32-1-203(2)(e).

(6) Service Agreements. The applicant shall provide a copy of any signed, proposed, or promised service agreements between the District and any municipality, District, or other existing or proposed service provider, and shall contact all service providers in a three mile radius by certified mail in a form to be approved by the District Review Team.

(7) Additional Information.

(A) If the proposed Special District is being formed in partnership with a Planned Unit Development, the service plan review process and the Planned Unit Development review process shall be coordinated. The review processes shall occur concurrently and the proposed District shall be identified as a service provider in the Planned Unit Development application;

(B) An explanation of the proposed District's policy for inclusion which provides objective procedures for the determination of costs, standards and criteria to allow the orderly extension of services to developable adjacent lands;

(C) A list of the persons or organizations responsible for each section of the service plan to include the name and telephone numbers of the engineer, the legal counsel, the developer, and the financial analyst;

(D) A legal description of the area to be included in the proposed Special District;

(E) A list of all persons, corporations, and other private or public entities involved in the formation of this District and an explanation of the role played by each of those involved, and a discussion of the entities' previous work in Adams County or the region related to District and land development;

(F) A list of owners of real property within and adjacent to the proposed District; and

(G) Proof of ownership of all property within the District. If the proposed District includes any property owned by someone other than the petitioners, evidence of such owners' consent to the formation of the District shall be provided in a form acceptable to Adams County.

(8) Special Review Fee. In addition to the processing fee, the applicant shall make a deposit with the County for payment of reasonable direct fees for special review of the service plan in the amount provided for by C.R.S. § 32-1-202(3).

F. **Annual Report**. This report shall take the form of a survey mailed out to each of the Districts by the Director of Community and Economic Development not later than April 1st of each year and returned by the Districts to the Director of Community and Economic Development by June 1st of each year. The District shall be responsible for checking existing information and for filling in new information. Adams County shall coordinate information gathering with the State Division of Local Government. C.R.S. § 32-1-207(3)(c) provides the authorization for requiring annual reports, stating that a Board of County Commissioners may request any Special District located wholly or partially within the County's unincorporated area to file, not more than once a year, a Special District annual report.

# CHAPTER 9 NATURAL, AGRICULTURAL, AND CULTURAL RESOURCE PROTECTION STANDARDS

**Contents:**

Div. 9-01 Purpose and Overview
Div. 9-02 Resources Assessment
Div. 9-03 Individual Protected Resources and NRCO District
Div. 9-04 Agricultural Resources Preservation
Div. 9-05 Cultural Resources Preservation

## Div. 9-01 Purpose and Overview

### 9-01-01 Purpose

A. **Resource Protection**. Provide for the protection of natural, wildlife, agricultural, and cultural resources, which are an essential component of the community's economic base and establish the character of the community; and

A. **Quality of Life**. Preserve and enhance the quality of life County residents enjoy.

### 9-01-02 Overview

A. **Divisions**. There are six Divisions to accomplish the purpose of this Chapter.

B. **Resources Assessment**.

1. *Purpose*. The purpose of Div. 9-02 is to coordinate the application of all resource protection standards, the standards of the Natural Resources Conservation Overlay (NRCO), as established in 2-08-14, and agricultural and cultural resources preservation objectives.
2. *Methodology*. This Division specifies the types of projects for which a Resources Assessment must be performed, the content of the Resources Assessment, and the procedure by which projects requiring a Resources Assessment are processed.

C. **Individual Protected Resources**.

1. *Purpose*. The purpose of Div. 9-03 is to protect the following individual natural resources:
   a. Waterbodies;
   b. One Hundred (100) Year Floodplains; and
   c. Wetlands.
2. *Methodology*. The above-listed resources and their subcategories are specifically defined by these standards and regulations. The Division specifies the mechanisms used to protect the identified resources.

D. **Natural Resources Conservation Overlay (NRCO) District**.

1. *Purpose*. Refer to 2-01-02, *Zoning Districts and Purpose Statements*.
2. *Methodology*. The NRCO District specifies the mechanisms used to protect the identified resources. Specifically, the standards are established to help assure natural resources are identified, sufficient resource protection is maintained, and adequate mitigation is implemented in association with development to assure the long-term protection of important habitat for wildlife as a cohesive and functional system throughout the County. Development is to be designed to protect the areas wildlife needs to survive; therefore, development is to be kept outside of the NRCO, as much as possible.
3. *Mapping*. The areas within the NRCO District are shown on the Adams County Zoning Map, which has been adopted as part of these standards and regulations. These boundaries are approximate due both to the scale of the map and the difficulty in identifying vegetation and other land characteristics for a large area.

E. **Agricultural Preservation**.

1. *Purpose*. The purpose of Div. 9-04 is to identify the mechanisms in these standards and regulations and otherwise utilized by Adams County for the purpose of promoting agricultural preservation.
2. *Methodology*. This Division describes the following mechanisms and their objective of agricultural preservation. These mechanisms include agricultural district zoning, conservation district zoning, land uses permitted in agricultural zone districts, exemptions for regulations for agricultural uses, and open space subdivision standards.

F. **Cultural Resources Preservation**.

1. *Purpose*. The purpose of Div. 9-05 is to identify and protect important cultural resources in association with proposed development.
2. *Methodology*. This subsection describes what cultural resources are significant and a series of mechanisms and their objective of cultural resources protection.

# Div. 9-02 Resources Assessment

## 9-02-01 Purpose

This Division establishes a Resources Assessment to coordinate the application of all resource protection standards, the standards of the Natural Resources Conservation Overlay District (NRCO), and agricultural and cultural resource preservation objectives. This Division further defines the methodology and standards for conducting the Resources Assessment. The assessment shall identify the natural, scenic, cultural, and agricultural resources defined in these standards and regulations, and describe how the proposed development will be designed in order to preserve these resources and to meet the standards of this Division.

## 9-02-02 Applicability

All development proposals subject to the provisions of the NRCO District, and any activity, including subdivisions, which disturb an area of one acre or more, shall comply with the provisions of this subsection unless specifically exempted below.

# 9-02-03 Exemptions

The following activities and development shall be exempt from this Division.

A. **Agriculture**. Activities conducted for agricultural purposes.

B. **Development within an Approved Project**. All development pursuant to a project approval already received from Adams County.

C. **Single-Family Detached Dwelling**. Development of a single-family detached dwelling provided:

1. *Location*. The location proposed for the single-family detached dwelling is not within the NRCO;
2. *Density*. The single-family detached dwelling is the only residence on the individual lot or parcel or the density on the site is less than or equal to one dwelling unit per 35 acres of base site area; and
3. *Other Standards*. The development application demonstrates compliance with all setback and buffer standards specified in the Individual Protected Resources and NRCO District subsections of these standards and regulations.

D. **Expansion**. Expansion of an existing building or the addition of an accessory structure to a single-family detached dwelling or lot.

# 9-02-04 Methodology

A. **General Content**. A Resources Assessment shall describe the existing conditions of the property, describe the development proposal and the rationale for the location of proposed open space, if applicable, and a description of how the proposal meets all the applicable standards and objectives of this Section and the Adams County Comprehensive Plan.

B. **Site Specific Content**. A Resources Assessment for all proposed developments not otherwise exempted, shall contain the following components, as applicable to the property proposed for development and the proposed project.

1. *Individual Protected Resources Component*. The Resources Assessment for property containing protected resources shall contain an individual protected resources component including maps and/or plans depicting the location of water bodies, 100-year floodplains, and wetlands, and measurements for each resource. This component also shall describe the total amount of resource protection land acreage to be kept in open space, the level to which all resources are either conserved or developed, depict the setbacks/buffers of all resources for which setbacks/buffers are required, and contain a mitigation plan, if applicable.
2. *NRCO Component*. A Resources Assessment shall contain a NRCO component including a site-specific assessment identifying the location of areas used by wildlife as habitat or migration routes, areas designated as High Priority Habitat by Colorado Parks and Wildlife (CPW) and any area protected by the NRCO District. The Resources Assessment shall include identifying how the proposed development on the land complies with the standards of the NRCO District.
3. *Cultural Resources Component*. A Resources Assessment shall contain a cultural resources component including a written review of the proposed development, depicts the locations of all cultural resources and includes plans identifying how the proposed development on the land complies with the standards of the Cultural Resources subsection.

4. *Agricultural Component.* A Resources Assessment shall contain an agricultural component identifying the location of agricultural land and describes related agricultural operations, such as irrigation practices, occurring on the land.

C. **Recommendations**. A Resources Assessment shall contain recommendations for avoiding, minimizing, or mitigating any negative impacts of the proposed development on the natural, cultural and agricultural resources. The assessment also shall contain recommendations for resolving conflicting objectives when the Resources Assessment identifies areas where such conflicts exist.

D. **Priorities**. In reviewing and approving, approving with conditions, or denying an application containing lands regulated by more than one resource category, the Standards for Development in the NRCO District shall be achieved to the maximum extent practical first. The requirements of the individual protected resources shall generally receive second priority but may receive first priority in instances where the individual protected resource would be greatly damaged by development and the damage can be avoided by a change in development design creating a minimal impact to the NRCO.

E. **Professional Consultant(s) Required**. The Resources Assessment shall be prepared by one or more professionals who have been certified as "qualified" by the Director of Community and Economic Development. Individuals may be certified to prepare one or more components of a Resources Assessment depending upon their qualifications. Each professional shall be deemed qualified by the Department of Community and Economic Development, based on education, professional certifications, experience in the field, and their understanding of these standards and regulations, and the Adams County Comprehensive Plan.

F. **Selection of Consultant(s)**. The Community and Economic Development Department shall maintain a list of qualified professional consultants. The developer of a project requiring a Resources Assessment shall select one or more individuals from the list of certified consultants to prepare the assessment. The Director can also select a consultant from the same list to review the work of the developer's consultant. In these instances, the Director's consultant shall be paid by the County.

## 9-02-05 Procedure

The Resources Assessment shall be consolidated and considered with the assessment necessary to obtain the first development permit for the proposed development for which the assessment is conducted.

# Div. 9-03 Individual Protected Resources and NRCO District

## 9-03-01 Purpose

The purposes of this Division are to define critical resources, and establish protection standards for waterbodies, floodplains, and wetlands. Waterbodies and wetlands provide critical functions in controlling flood waters, providing wildlife habitat, cleansing water resources, and contributing to the special scenic quality of Adams County. Reserving the 100-year floodplain protects against the loss of life and property during flood events.

# 9-03-02 Individual Protected Resources (Waterbodies, 100-Year Floodplains, and Wetlands)

A. **Purpose**. This Section establishes the protection standards for waterbodies, floodplains, and wetlands, in order to protect the community as a whole from potential negative impacts caused by development which may affect these resources or their functions. This Section prohibits development on and within a certain distance of these resources.

B. **Resource Definitions.** (See Div. 16-02, *General Terms Defined*.)

C. **Development Prohibited**. Development in waterbodies, the 100-year floodplain, wetlands, and significant wildlife habitat is prohibited except for essential facilities as specified below.

1. *Setback/Buffers Required.* Setbacks shall be measured from the Ordinary-high water or top of bank, whichever is farthest from the thread of the watercourse or the center of the waterbody.
2. *Setback/Buffer Definitions.* The area protected by the setback is the "buffer" and shall remain free from development, parking, open storage of vehicles, refuse, or any other material. Terrain disturbance for bona fide agricultural purposes, flood protection, wildlife habitat enhancement, or pathways are permitted in the buffer upon receipt of applicable permits.

D. **Minimum Setback/Buffer Required**. All development is required to be setback from specified resources as follows.

1. *Rivers*. Minimum 150 feet.
2. *Streams.* Along streams, development shall be located out of the riparian plant community, but in no case shall the required setback be less than 50 feet nor more than 150 feet.
3. *Natural Lake/Pond.* Adjacent to natural lakes or ponds, development shall be located out of the riparian plant community, but in no case shall the required setback be less than 50 feet nor more than 150 feet.
4. *Manmade Lake or Reservoir.* Minimum 50 feet.
5. *Wetlands*. Minimum 300 feet.
6. *Colorado Parks and Wildlife (CPW) Mapped Aquatic High-Priority Habitat*. Minimum 500 feet.

# 9-03-03 Development of Essential Facilities

A. **Essential Facilities in or Adjacent to Waterbodies and Floodplains**. Certain water-dependent uses must be located in or adjacent to waterbodies and/or in floodplains. These may be permitted provided all structures meet the following requirements:

1. *Flood Control, Irrigation, or Essential Crossings*. Only structures, that are essential to flood control, irrigation or essential road or utility crossings, shall be permitted.
2. *Not for Human Habitation*. Structures in the floodplain shall not be intended or designed for human habitation.
3. *Elevation of Structures and Utilities*. Any generally horizontal element not part of the support structure shall be at least one foot above the 100-year flood elevation. All service and utility connections, such as electrical and heating equipment, water, sewer, electric, or gas, shall be similarly located.

4. *Floodway*. Except for crossings for access, no structures shall intrude into the floodway.
5. *Minimum Obstruction of Flood Waters*. Structures constructed in the flood fringe shall not cause any rise more than one-half foot in the 100-year water surface elevation and structures constructed in the floodway shall cause zero feet of rise. Should a development cause more rise than allowed, a Conditional Letter of Map Revision (CLOMR) shall be submitted. Any increase in flood height shall be confined to the subject property and shall cause no increase in the flood height on adjacent properties.
6. *Compliance with Floodplain Overlay District*. All development within the floodplain shall comply with the Adams County Floodplain Overlay District standards. In the event of a discrepancy between the Floodplain Overlay District standards and these standards, the more stringent standard shall control.
7. *Minimize Negative Impacts on Wildlife*. All development shall be designed to minimize negative impacts on wildlife.
8. *Fill in Floodplains*. Fills or deposition of materials in floodplains may be allowed provided the following standards are met:
    a. Fill shall be allowed only for essential crossings, water-dependent uses, or flood control.
    b. No fill shall be in the floodway or within 20 feet of the floodway.
    c. Fill or other materials shall be protected against erosion by riprap, vegetative cover, sheet piling, or bulkhead sufficient to prevent erosion.
    d. Fill shall be clean and compacted to minimize erosion potential.

B. **Essential Facilities in or Adjacent to Wetlands**. Wetlands may be developed under the following circumstances. Notwithstanding, receipt of a local permit for developing wetlands does not absolve a developer from obtaining all other State or Federal permits necessary to develop wetlands.

1. *High-Intensity Use Degrades Wetland/Wetland Agriculture-Induced*. Where the intensity of adjoining uses causes the retained wetlands to become degraded habitats and the wetland area is suitable for development due to planning, location, and other factors, or where the wetland is induced by agricultural irrigation, a wetland may be developed.
2. *Necessary to Reshape Wetland to Provide Building Site*. Where, due to parcel shape and interaction with topography, it is necessary to reshape the wetland boundary to provide a building envelope, a wetland may be redeveloped. Filling up to five percent of the wetland on the parcel, not to exceed one acre, is permitted.
3. *No Alternate Site*. Development shall be permitted only where it is demonstrated the proposed activity cannot be practically located at an alternative, non-wetland site.
4. *Practical Measures to Reduce Impact*. It shall be demonstrated reasonable project modification measures have been taken to reduce wetland loss and degradation.
5. *On-Site Mitigation Wherever Possible*. On-site mitigation shall be provided wherever possible. On-site mitigation shall be at a ratio of one and one-half acres of new wetland for every one acre of wetland filled. All off-site mitigation shall be at a ratio of two and one-half acres of new wetland for every one acre filled. It shall also be demonstrated these new wetlands will restore lost wetland functions and values.

6. *Wetland Replanting*. The new wetland area shall be planted with a hydric-tolerant mix of seeds in suitable areas, wetland plants, and suitable seed bank soils. A wetlands biologist, or other professional with experience in wetland creation, shall certify the planting plan.
7. *Persistence*. It shall be demonstrated the created or restored wetland will be at least as persistent as the impacted wetland system it replaces.
8. *Buffers*. Buffers shall be provided around wetlands created pursuant to this subsection.

# Div. 9-04 Agricultural Resources Preservation

## 9-04-01 Purpose

Ranching and farming are agricultural uses, which formed the original basis for the communities in Adams County. In all areas of the County, the agricultural industry is threatened by residential development and urbanization. Paradoxically, much of the attraction for residents of Adams County is the open space created by agricultural operations, the very operations threatened by increasing urbanization. The purpose of this Section is to identify the mechanisms in these standards and regulations, which have been adopted for the purpose of promoting agricultural preservation.

## 9-04-02 Summary of Mechanisms to Promote Agricultural Preservation

The following mechanisms are available through application of these standards and regulations as incentives for land in Adams County to be maintained in agricultural production.

A. **Agricultural Assessment**. By Colorado Statute, agricultural uses in Adams County do not pay property taxes on the market value of land upon which they are located. If they did, agriculture in Adams County would have disappeared long ago. Agricultural assessments are a conscious decision in order to retain agriculture for as long as possible.

B. **Open Space Subdivisions and PUDs**. Developments in the Agricultural Districts may cluster homes and provide amenity space in accordance with the requirements of 2-07-02, *Agricultural and Residential District Dimensional Standards*. If the property proposed for development has an existing agricultural operation, or a landowner wishes to establish an agricultural operation on the portion of the property proposed as amenity space, agriculture is an accepted and encouraged use of the required amenity space subject to the standards in Div. 2-04, *Designated Amenity Space Types*.

C. **Agricultural Zoning Density**. Developments in the Agricultural Districts are kept at a low density. Residential development and agriculture are generally incompatible. The more the permitted form of development can either prevent or mitigate such conflicts, the more likely it is that agricultural operations can continue. Low development densities can help to mitigate some conflicts.

D. **Agricultural Land Uses**. Certain uses generally compatible with agricultural uses have been permitted in the Agricultural Districts in order to provide opportunities for agricultural families to diversify their income base yet retain their primary way of life--agriculture. Refer to Div. 2-06, *Principal Use Table*.

## 9-04-03 Standards

Any conversion of agricultural land shall comply with the following standards.

A. **Site Evaluation**. Farm and ranch lands shall be assessed according to the USDA Agricultural Soil Capability Classifications. The site shall be mapped and the soils with the lowest classifications shall be developed first.

B. **Agricultural Connectivity and Efficiency**. Agricultural lands or operations proposed for development shall be reviewed to determine what impacts the proposed development will have on the continued agricultural use of the undeveloped portions of the tract. Development shall be located so as to ensure the agricultural continuity is maintained and the remaining agricultural tracts are able to be used efficiently.

# Div. 9-05 Cultural Resources Preservation

## 9-05-01 Purpose

The purpose of this subsection is to identify, document, and protect important cultural resources that may be affected by proposed development.

## 9-05-02 Methodology

A survey for important cultural and historic resources meeting the criteria of the Colorado State Historic Preservation Office (SHPO) shall be conducted in all cases where more than one acre will be disturbed. The survey shall meet the requirements of the SHPO and be conducted by a professional permitted to conduct cultural resource surveys in the State of Colorado .

## 9-05-03 Standards

A. **No Development or Setbacks/Buffers Required**. Due to the risk of negative impacts to cultural resources from development, and the necessity to protect cultural resources for future generations, development that would degrade the cultural integrity of these resources is prohibited in most cases and a setback/buffer is required.

B. **Development Prohibited**. Development of a site, which would result in the destruction of a cultural resource, is prohibited except as specified below.

   1. *Use Degrades Value*. Where the intensity of adjoining uses causes the retained resource to be placed at significant risk or to become degraded, the resource may be relocated or excavated pursuant to a plan approved by the SHPO.

   2. *Necessary to Reshape the Land to Provide Building Site*. Where, due to parcel shape and interaction with topography, it is necessary to remove the resource in order to develop the remainder of the site, the resource may be relocated or excavated pursuant to a plan approved by the SHPO.

   3. *Practical Measures to Reduce Impact*. It shall be demonstrated all reasonable project modification measures have been taken to reduce the chance of loss and degradation.

C. **Setback/Buffers Required**. A setback from all identified resources shall be provided.

1. *Measurement*. Setbacks shall be measured from the boundaries of the resource identified.
2. *Minimum Setback/Buffer Required*. All development is required to be setback from identified cultural resources by at least 100 feet unless an alternative setback is justified by the Resource Review Recommendations and without the need for a Variance if such a justification exists.

# CHAPTER 10 STORM DRAINAGE DESIGN AND STORMWATER QUALITY CONTROL REGULATIONS

This Chapter presents the storm drainage design and technical criteria for storm drainage facilities. Applications for various types of land use applications such as subdivision plats, conditional use permits that include development, phased multi-year build outs, and commercial/industrial building permits submitted for County approval will require storm drainage system analysis, downstream conveyance system analysis, and appropriate drainage system design. The following regulations should be interpreted as the minimum requirements.

**Contents:**

# Div. 10-01 Storm Drainage Design and Technical Criteria

## 10-01-01 General

The County adopted the following design standards, criteria, and policies for all storm drainage management and should be used in the design and analysis of all storm drainage facilities. The County reserves the right to issue and enforce more stringent criteria should adverse conditions exist. All designs that vary from the standards and criteria presented in this Chapter shall obtain approval from the Director of the Community and Economic Development, or their designee, prior to completing construction plans and/or analysis reports.

The provisions for adequate drainage are necessary to preserve and promote the general health, welfare, and economic wellbeing of the region. Drainage is a regional feature that affects all governmental jurisdictions and all parcels of property. When planning drainage facilities, the following policies and criteria are to be used in directing your effort.

Standards and technical criteria not specifically addressed in this Section shall follow the provisions of the Mile High Flood District (MHFD) (formerly Urban Drainage and Flood Control District - UDFCD) "Urban Storm Drainage Criteria Manual," as amended. In addition, the engineer should refer to the Colorado Department of Transportation Standard Plans (M&S Standards), as amended, for additional design details not covered in this Chapter.

## 10-01-02 Required Design Submittals

Drainage Plans submitted to the County for review shall contain a detailed hydrologic analysis and comprehensive drainage design in accordance with these criteria and other applicable standards (local, state, and federal). Prior to receiving approval, the final Drainage Plans must be sealed and signed by a registered Colorado Professional Engineer. Drawings submitted without being signed and sealed will not be reviewed.

All preliminary and final drainage plans and reports shall include certification statements regarding engineered plans and construction. Copies of these certification statements are included in Addendum A-9 to this DSR. Addendum A is referenced herein for informational purposes but is not made a part hereof.

Table 10.1 presents the minimum level of Drainage Report & Plan to be prepared and submitted to the County for approval. Based on the application and size of the project being submitted, the level of analysis and design detail required varies and can be determined by consulting Addendum A-3, Addendum A-4, Addendum A-5, and Addendum A-6, and/or by contacting the County. All required information is to be submitted for County review prior to receiving an approved application or permit.

| Table 10.1—Level of Drainage Report & Plan | | |
|---|---|---|
| Type of Application | *Expected Increase in Impervious Area or Re-development of Existing Impervious Area | Level of Drainage Report & Plan (DRP) |
| Individual Site Development with No Master Drainage Report | <3,000 square feet | Drainage analysis letter showing no negative effects to surrounding properties |
| Preliminary Plats, Preliminary Development Plans, Site Plan Review | Any Increase in Impervious Area* | Preliminary DRP |
| Commercial/Industrial Building Permits, Apartment/Condominium/Town home Complexes | 3,000-10,000 square feet | Final DRP |
| | >10,000 square feet | Final DRP |
| Residential Plats and/or Planned Unit Developments | 500-3,000 square feet | Preliminary DRP |
| | 3,000-10,000 square feet | Final DRP |
| | >10,000 square feet | Final DRP |
| All Other Plats and/or Planned Unit Developments | 3,000-10,000 square feet | Final DRP |
| | >10,000 square feet | Final DRP |
| Multi-year build out developments | N/A | Multiple Filings: Develop a Master DRP for the full build out and updated with individual Final DRP prior to each filing |
| | | Individual lots within a development: Provide drainage conformance letter |
| The County may require a DRP (also referred to as a Grading and Drainage Plan) for any type of application if it is determined the new drainage will have significant impacts on adjacent properties.<br><br>*An "increase in impervious area" refers to an increase in new impervious area above historic, undeveloped conditions, as well as impervious area proposed due to re-development of existing impervious areas that do not meet current drainage detention and water quality standards. No credit is to be given for existing impervious surfaces/areas. | | |

# 10-01-03 Policies and General Requirements

## 10-01-03.A Space Planning

Stormwater drainage facilities serve conveyance, water quality and storage functions for management of stormwater. The County will require the submission of all appropriate information to ensure:

A. Adequate space is properly allocated for drainage facilities,

B. There are no conflicts with other land uses that result in downstream water damage or impairment of runoff from upstream properties,

C. There is no impairment with the functionality of other drainage systems.

## 10-01-03.B Water Rights

The Developer is responsible to ensuring that water rights are not impacted because of a proposed project and all drainage systems are in compliance with current Colorado Revised Statutes.

## 10-01-03.C Registration of Storm Drainage Facilities

All flood control drainage facilities that detain stormwater must be registered on the State-wide Stormwater Facility Notification Portal (SFNP). It is the responsibility of the Engineer of Record to register the drainage facility on the SFNP. The drainage facility must be registered on the SFNP when the facility becomes operational and prior to the Engineer of Record submitting the final facility's drainage certification to the County. The County is required by the State of Colorado to verify the registration of the drainage facility within 30 days of posting for compliance with C.R.S. § 37-92-602(8)(b)(I)(A), as may be amended.

## 10-01-03.D Irrigation Ditch Crossings

Various privately owned irrigation ditches and canals traverse the County. It is the policy of the County that irrigation ditches are not acceptable as drainage recipient outfalls or as part of a drainage plan.

## 10-01-03.E Jurisdictional Boundaries

Since drainage considerations and problems are regional in nature, and do not respect jurisdictional boundaries, the County will emphasize regional cooperation in all submitted designs.

## 10-01-03.F Basin Transfer

Colorado drainage law recognizes the difficulties of transferring the burden of managing storm drainage from one location or property to another. Liability questions may also arise when the historic drainage is altered. Therefore, during the review process and prior to approval, the County will discourage the diversion of storm runoff from one basin to another unless specific and/or prudent reasons justify such a transfer. In such cases, the proponent will need to demonstrate and provide facilities to insure no increase in flood damage potential from any level of runoff event. All basin transfers must be approved by the Colorado Water Conservation Board.

## 10-01-03.G Master Drainage Plans

Drainage patterns are driven by precipitation, topography, and land cover, whether natural or manmade. For this reason, drainage is regional in character and requires intra-jurisdictional cooperation to create cohesive drainage systems that reduce flood risk for the community. Adams County partners with neighboring jurisdictions and Mile High Flood District (MHFD) to develop basin wide drainage master plans, including Major Drainageway Planning (MDP) and Outfall Systems Planning (OSP) studies. These studies are essential to identify regional flood risks, water quality, and infrastructure needs. All new development and redevelopment projects must integrate County sponsored MDP and OSP studies into their drainage reports and design plans to ensure stormwater management aligns with regional infrastructure.

Master drainage plans are high level design documents. Development proposals shall evaluate MDP and OSP studies and incorporate improvements that fulfill the intent of the study's recommendations to accommodate and/or mitigate regional drainage needs. Proposals are expected to be tailored to an individual project site through detailed drainage analysis and design plans. Development proposals must further evaluate impacts on adjacent infrastructure and participate in recommended infrastructure upgrades that support the development as it is situated in the broader drainage basin.

In situations where the County determines construction of MDP and OSP improvements would not provide substantial benefit at the time of development, the development proposal must preserve and dedicate necessary right-of-way or easements for future regional stormwater infrastructure identified in the studies. Cash-in-lieu of dedication for regional drainage infrastructure improvements may be considered in rare circumstances and at the discretion of Adams County Director of Public Works.

## 10-01-03.H Public Improvements

During the review process and prior to approval, the County may require that new development and redevelopment projects participate in public improvements proposed in developed drainage reports and construction plans, direct flow areas, Outfall Systems Plans, and Major Drainageway Plans for both local drainage systems (i.e., curb and gutter, inlets and storm sewers, culverts, bridges, swales, ditches, channels, detention areas, and other drainage facilities within the development) and major drainageway systems (i.e., channels, storm sewers, bridges, detention areas, and other facilities serving more than the subdivision or property in question).

## 10-01-03.I Floodplain Management

These regulations are primarily presented in Chapter 2 of this DSR. It is the responsibility of the designer to comply with the most current floodplain regulations**.**

## 10-01-03.J Retention

Retention and “detention by infiltration” are not allowed in unincorporated Adams County.

## 10-01-03.K Detention and Water Quality

The County considers storm runoff detention to be a viable method for reducing overall (construction and maintenance) urban drainage degradation. Temporarily detaining a stormwater runoff can significantly reduce downstream flood hazards as well as pipe and channel requirements in urban areas. In addition, the storage of runoff provides for sediment and debris collection, which enhances downstream water quality. However, all benefits can only be obtained through consistent administration of detention and water quality policies. Therefore, during the review process and prior to approval, the County will require all new applicable development and/or redevelopment projects to include onsite detention and water quality treatment. The minimum capacity and maximum release rates for the 5-year and 100-year recurrence interval storms will be determined by procedures and criteria presented in this Chapter.

The County does not allow the use of parking lots as detention facilities.

The water quality treatment from surface runoff is required by Div. 10-04, *Post-Construction Stormwater Management,* as well as in regulations by federal and state agencies. Developers shall meet the minimum design standards listed in Div. 10-04 by calculating the Water Quality Capture Volume as set forth in MHFD's Urban Storm Drainage Criteria Manual, as amended.

## 10-01-03.L Permanent Post-Construction Stormwater Quality Treatment Facilities

In accordance with Adams County's Municipal Separate Storm Sewer (MS4) Permit, Adams County is mandated to require that development and redevelopment sites that disturbs one (1) acre or greater within unincorporated Adams County MS4 Area, or sites that disturbs less than one (1) acre but are part of a larger common plan of development, shall implement an allowed form of permanent detention and stormwater quality treatment facilities to treat and reduce stormwater pollutants that leaves such site. Refer to Div. 10-04, *Post-Construction Stormwater Management*.

## 10-01-03.M Low Impact Development (LID) Standards and Requirements

All construction projects shall reduce drainage impacts to the maximum extent practicable. Development and re-development projects shall incorporate the four (4)-step-design process described in MHFD's Urban Storm Drainage Criteria Manual, and implement practices such as:

A. On-site structural and non-structural BMPs to promote infiltration, evapo-transpiration or use of stormwater,

B. Minimization of Directly Connected Impervious Area (MDCIA),

C. Green Infrastructure (GI),

D. LID techniques,

E. Preservation of natural drainage systems that result in the infiltration, evapo-transpiration or use of stormwater in order to protect water quality and aquatic habitat.

F. Use of vegetation, soils, and roots to slow and filter stormwater runoff.

G. Management of stormwater as a resource rather than a waste product by creating functional, attractive, and environmentally friendly developments.

H. Treatment of stormwater flows as close to the impervious area as possible.

I. Other measures to reduce runoff volume and protect water quality.

Examples:

- Bioretention/rain gardens
- Pervious pavers
- Green roofs
- Detached sidewalks/walkways
- Dry wells to promote groundwater infiltration
- Disconnection of roof downspouts
- Above or ground-level infiltration planters
- Street bump-outs infiltration planters
- Below ground cistern or above ground rain barrels to harvest rainwater from residential single-family home's roof tops. Not to exceed storage capacity of 110 gallons due to water right regulations.
- Residential green driveways
- Tree trench/pit
- Tree canopy increase
- Green alleys
- Green street gutters
- Street bump-outs/pocket parks
- Low-water and native landscaping.

- Natural soil berms or vegetated screening materials other than walls.
- Green landscaping island and medians
- Cascade infiltration/dispersion stormwater outfall design.

For non-residential projects, LID BMPs shall be allowed to be incorporated into the landscaping and buffer areas. All developments shall include at least two (2) LID features as part of the site development to cover at least 25% of the area of the project. LID within the required drainage detention and water quality facility does not count towards this LID requirement.

LID shall be designed and maintained to meet standards of this DSR; the MHFD's Urban Storm Drainage Criteria Manual; or equivalent criteria for arid areas. These manuals may be updated and expanded from time to time, at the discretion of the County, based on improvements in engineering, science, monitoring and local maintenance experience.

All proposed LID techniques shall be described in the Drainage Report & Plan and incorporated into the Construction Plans.

## 10-01-03.N Storm Drainage Structures Ownership

Adams County owns and maintains the public storm drainage system in the public right-of-way and on County owned land. Unless otherwise noted in approved plans, written agreements or recorded documents, the delineation between the public and private storm drainage systems is typically the public right-of way or County property. The private system may extend up to the connection to the main public storm sewer line. Storm culvert pipes installed under driveway access to a property are considered private.

## 10-01-03.O Storm Drainage System Operations and Maintenance

Maintenance of any type of drainage feature on private property is the responsibility of the property owner.

Routine maintenance of the access culvert pipe, roadside ditch, and private drainage improvements within County ROW shall be the responsibility of the adjacent property owner. The adjacent property owner maintenance responsibility includes debris and trash removal, mowing, vegetation management, erosion and sediment control, sediment removal to maintain original grades, and cleaning private drainage structures such as access culverts or outfall pipes. In order to ensure proper system operations and maintenance of private drainage infrastructure, the County may perform periodic inspections of all drainage facilities and conveyance structures. The County may perform roadside ditch maintenance activities to support roadway maintenance programs. Typically, these activities include shoulder restoration and localized grading to restore proper function of public culverts. Routine roadside ditch maintenance is the primary responsibility of the adjacent property owner.

Any landscaping placed in roadside ditches shall require an encroachment agreement. Any landscaping invert shall match the invert of the existing ditch and cause no pooling of water from the upstream side. The application of herbicides within the public right of way or roadside ditch slope and drainage easement is prohibited. Vegetation is critical for stabilizing slopes, preventing erosion, and maintaining the integrity of the roadway shoulder and adjacent drainage infrastructure.

Refer to Div. 10-04, *Post-Construction Stormwater Management*, for maintenance requirements of the storm drainage system.

## 10-01-03.P Stream Corridor in Private Property

The property owner is responsible for maintenance of the natural stream corridor on either side of a stream or dry watercourse within private property, including, but not limited to, the stream bed and all existing and future bank stabilization measures, in order to ensure that all such facilities remain in proper working condition. A permanent storm drainage easement along the banks for the stream or dry watercourse shall be dedicated to the County during development review, at no cost to the County, to allow access to the area for inspection and enforcement purposes, regardless of a planned trail system or not. The County may require the permanent storm drainage easement extend up to 10-feet outside of the 100-year floodplain boundary(s).

# 10-01-04 Storm Design and Volume Control Criteria

In addition to land use, all drainage systems being designed within the County shall take into account both the minor (5 to 10-year) and the major (100-year) storm. The objectives of drainage system planning for the minor storm are to allow for the proper design of minor drainage systems (i.e. curb and gutters, storm sewers, open channels and detention ponds) while minimizing minor damage and maintenance costs. The objectives of drainage planning for the major storm are to allow for proper design of major drainage systems (i.e. bridges, storm sewers, open channels and detention ponds) while minimizing the possibility of major damage and/or loss of life. (Refer to Table 10.2 - Return Periods.) It is the responsibility of the design engineer to develop, justify, and submit values used in the preparation of drainage plans prepared for County review and approval.

## 10-01-04.A.1 Onsite Flow Analysis

When determining design storm flows, the engineer shall follow appropriate criteria and guidelines such as MHFD's Urban Storm Drainage Criteria Manual, Volumes 1, 2, and 3, to assure that minimum design standards and a regional based drainage solution are developed. The information presented below shall be used by the engineer in the development of design storm runoff for both onsite and offsite flows**.**

When performing analysis on the onsite basin to determine peak volumes and time of concentrations, the engineer shall use the proposed fully developed land use plan to determine runoff coefficients and consider changes in flow patterns (from the undeveloped site conditions) caused by the proposed plan (including street alignments). When evaluating the estimated time of concentrations, the proposed lot grading shall be used to calculate the time of concentration. The proposed project shall in no way change historic runoff values, cause downstream damage, or adversely impact adjacent properties. In addition, phased or partial development analysis will not be accepted. The entire subdivision or development shall be analyzed for full build-out in order to properly site and size detention areas and conveyance systems. The drainage facility must be constructed entirely in the first phase, when phasing construction projects.

Different levels of onsite analysis may be required depending on the size of project or as directed by the County.

## 10-01-04.A.2 Offsite Flow Analysis

The analysis of offsite runoff is dependent on regional drainage characteristics (whether or not the tributary offsite area lies within a major drainage basin) and the existing/proposed land use and topographic features. If an existing Storm Drainage Master Plan has been adopted by resolution for the region being developed, the engineer shall use this as a baseline document (prior approval from the County on the Master Plan is required) and update it with proposed information. However, should no offsite information be available for fully developed flows (5-, 10- and 100-year), the engineer must perform a regional analysis to ensure the proposed development does not change historic runoff values, cause downstream damage, or adversely impact adjacent properties.

Different levels of offsite analysis may be required depending on the size of project or as directed by the County. Refer to the Adams County Submittal Checklist website for a copy of the Application Package for analysis requirements.

## 10-01-04.B Storm Return Period

The minor and major storm return period shall not be less than those found in Table 10.2 for all vital drainage structures or critical points of surface water flow.

**Table 10.2—Return Periods**

| Land Use | Return Period (Yrs) for Minor Drainage Systems | Return Period (Yrs) for Major Drainage Systems |
|---|---|---|
| Residential-Urban | 5 | 100 |
| Residential-Rural | 10[a] | 100 |
| Commercial | 5 | 100 |
| Industrial | 5 | 100 |

[a] All roadside ditches and culverts shall be sized to carry the 10-year peak runoff.

## 10-01-04.C Rainfall

Presented in this Section are guidelines for the development of rainfall data to be used in preparing a hydrological analysis (storm runoff) for a proposed development within the County.

The rainfall intensity information published by the National Oceanic and Atmospheric Administration (NOAA) in the "Precipitation-Frequency Atlas of the Western United States" was used to develop incremental rainfall distributions presented in Table 10.5. The incremental rainfall distributions presented in this table are based on procedures developed by the MHFD. However, refinements have been made to closely match conditions within the County.

## 10-05-01.D Time-Intensity-Frequency Curves

A time-intensity-frequency curve was developed for the County by using one-hour point rainfall values (see Table 10.3) and factors for durations of less than one hour (see Table 10.4); both obtained from the NOAA Atlas. The outcomes of this distribution are point values that were then converted to intensities and plotted as Figure 10.1. Rainfall data from the Mile High Flood District (MHFD) may be used as an alternative (*see* MHFD's Urban Storm Drainage Criteria).

**Table 10.3—One-Hour Point Rainfall (inches)**

| 2-Year | 5-Year | 10-Year | 50-Year | 100-Year |
|---|---|---|---|---|
| 1.00 | 1.42 | 1.68 | 2.35 | 2.71 |

**Table 10.4—Factors for Durations of Less than One Hour**

| Duration (minutes) | 5 | 10 | 15 | 30 |
|---|---|---|---|---|
| Ratio to 1-hour depth | 0.29 | 0.45 | 0.57 | 0.79 |

| Table 10.5—Incremental Rainfall Depths | | | | | | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | Incremental Rainfall Depth (Inches) | | | | | | | | | | | | | | |
| Time (min) | Basins <5 SQ. Miles | | | | | Basins between 5 and 10 SQ. Miles | | | | | Basins between 10 and 20 SQ. Miles | | | | |
| | Return Period (Yr.) | | | | | Return Period (Yr.) | | | | | Return Period (Yr.) | | | | |

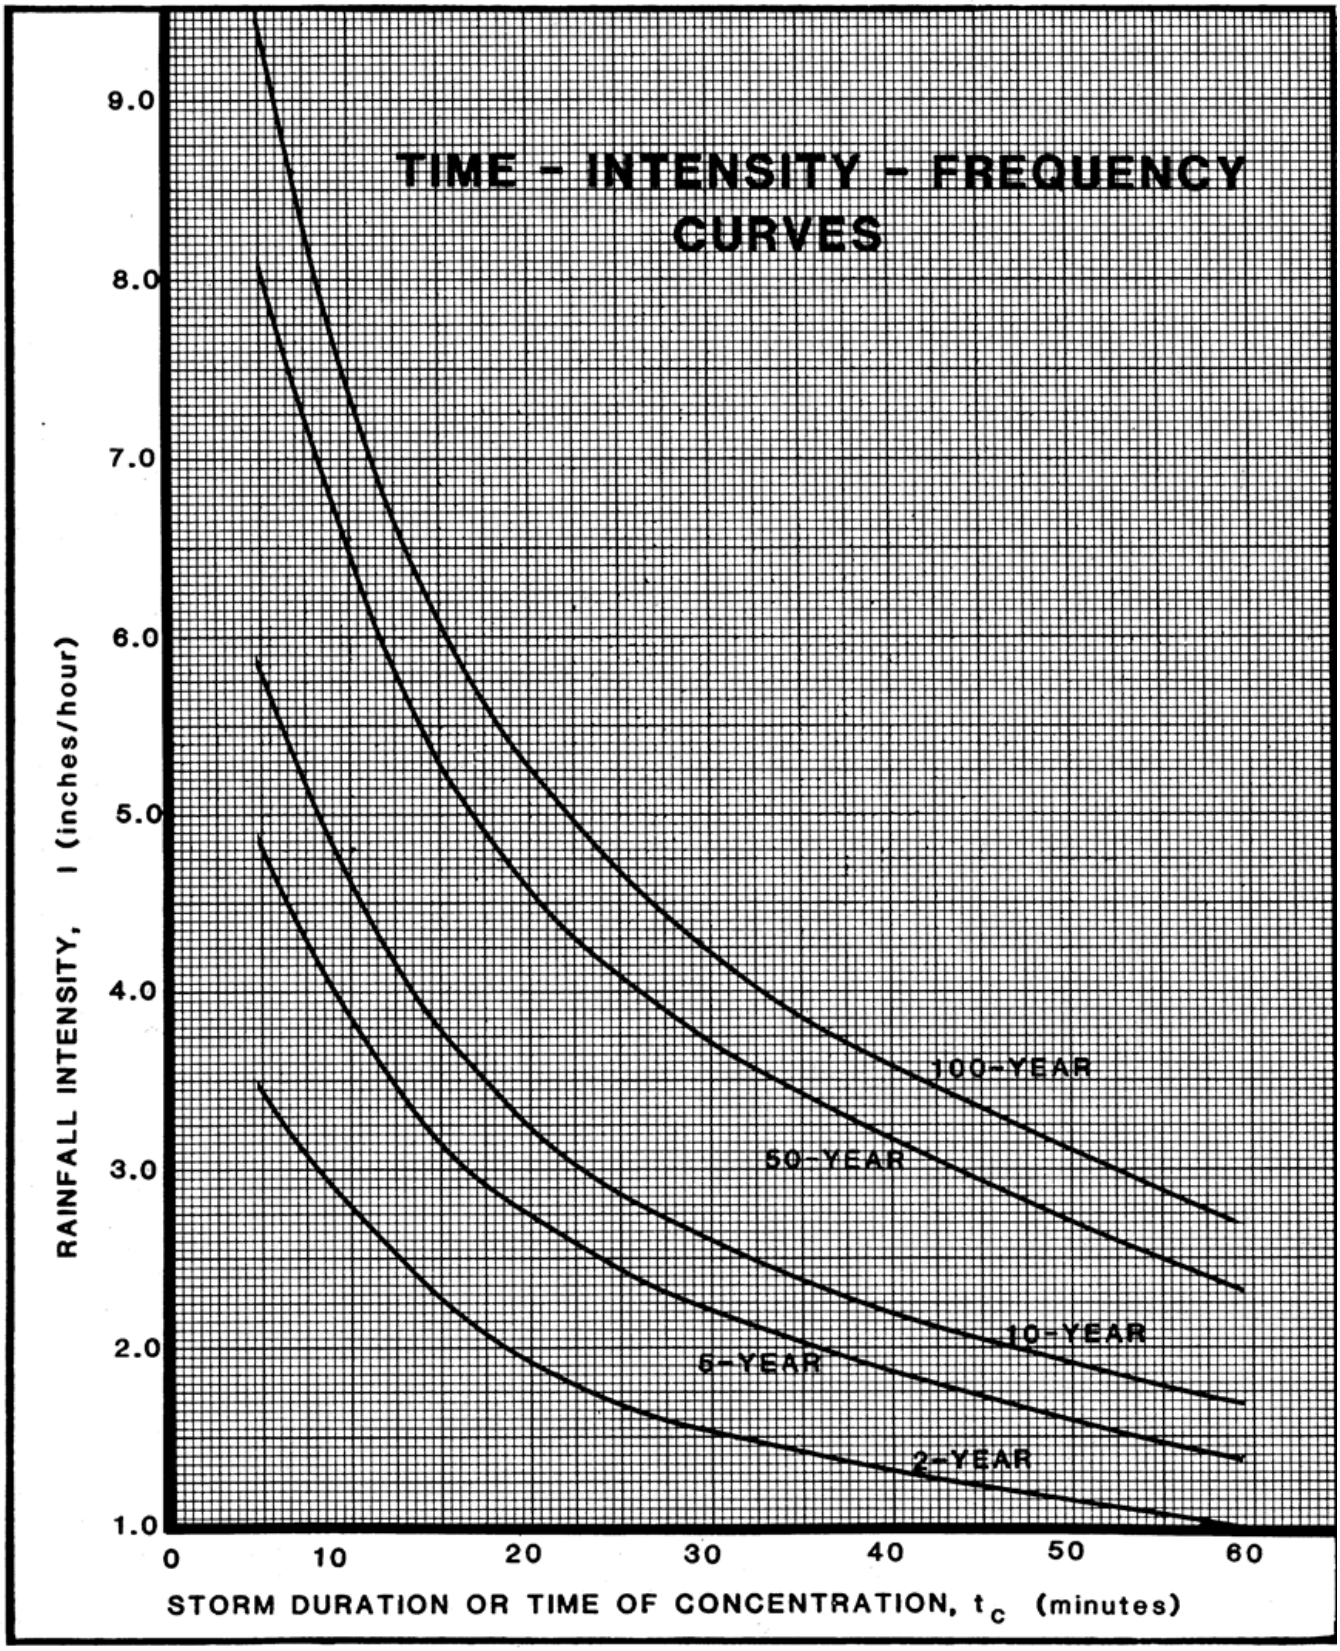
**Figure 10.1—Time-Intensity-Frequency Curves**



## 10-01-04.E Runoff Coefficients

The runoff coefficients to be used within the Rational Method, Colorado Urban Hydrograph Procedure (CUHP) or approved hydrologic models are to be determined based on existing and/or proposed land use and surface characteristics. When using the Rational Method and/or CUHP, the County requires the use of runoff coefficients presented in MHFD's Urban Storm Drainage Criteria Manual, Volume 1, as amended.

## 10-01-04.F Time of Concentration

In order to determine the rate of runoff at a designated outfall, the time of concentration must be determined. The time of concentration is the time it takes for water to flow from the most remote part of the drainage basin to the outfall of the study area. For the Rational Method, a separate time of concentration is necessary for the overall basin and each sub-basin. The time of concentration ($T_c$) is composed of the sheet or overland flow time ($t_{ov}$) and channel flow time ($t_t$). The time of concentration formula shall be as described in MHFD's Urban Storm Drainage Criteria Manual, Volume 1 for this Section.

## 10-01-04.G Storm Flow Analysis

The engineer shall use the Rational Method for basins less than 90 acres. CUHP or other approved hydrologic models shall be used for basins larger than 160 acres. Basins between 90 acres and 160 acres in area may use either method, with County approval.

### 10-01-04.G.1 Rational Method Equation

| Equation<br>Q=CIA | |
|---|---|
| **Where** | |
| **Q =** | **Flow Rate, cfs** |
| **A =** | **Total Area of Basin, acres** |
| **C =** | **Runoff Coefficient (refer to Sec.** 10-05-04.E) |
| **I =** | **Rainfall Intensity, inches per hour (refer to Sec.** 10-05-04.D) |

### 10-01-04.G.2 Computer Aided Hydrologic Models

For analyzing larger basins (greater than 90 acres), the engineer may either use the CUHP latest revision. (information detailed in MHFD's Urban Storm Drainage Criteria Manual) or another appropriate hydrology/hydraulics model. When using other hydrology/hydraulics models, the engineer will be required to develop unit, flood, routing and combination hydrographs for use in determining peak flows and time of concentrations at vital drainage structures or critical points of surface water runoff. A unit hydrograph is defined as the direct runoff hydrograph that results from 1-inch of rainfall excess uniformly distributed throughout the basin over a specified duration. From this unit hydrograph, direct runoff hydrographs must be developed for a design storm by creating flood hydrographs. In addition, where surfaces (pervious and impervious) within the basin vary in characteristics, weighted or composite coefficients for each basin must be used in development of the unit and flood hydrographs. This is typically accomplished by breaking each basin into the appropriate number of sub-basins and using the corresponding surface coefficients. Each computer-aided model has default parameters for typical surface characteristics and soil types; the selection of these parameters is the key to a successful analysis and therefore must be submitted with the Drainage Report & Plan.

# 10-01-05 Open Channels

In many instances, special design or evaluation techniques will be required for stormwater conveyance. With exceptions as modified herein, all open channel criteria shall be in accordance with MHFD's Urban Storm Drainage Criteria Manual, Volumes 1 and 2.

For the purpose of design in this Section, all drainageways (major and minor) shall be designed using MHFD's Urban Storm Drainage Criteria Manual, Volumes 1 and 2. Due to the complexities of open channels, there is a wide range of design options available to the engineer. The exact method of analysis and design shall be clearly documented and submitted as part of the Drainage Report & Plan.

Flood control channels for major drainageways shall include a low-flow channel with a capacity to convey the average annual flow rate, or other appropriate flow rate as determined through a sediment transport and channel stability analysis, without excessive erosion or channel migration, with an adjacent overbank floodplain to convey the remainder of the 100-year flow. The channel improvement shall not cause increased velocities or erosive forces upstream or downstream of the improvement.

# 10-01-06 Storm Sewers

Storm sewers are to be viewed as an integral part of all Minor Drainage Systems. The installation of storm sewer systems is required when the other parts of the minor system (i.e. curb, gutter and roadside ditches) no longer have capacity to accommodate the runoff from the minor storm or spread widths exceed those requirements presented in this Section.

Except as modified herein, the design of storm sewers shall be in accordance with MHFD's Urban Storm Drainage Criteria Manual Section on "Storm Sewers." The engineer is referred to the Manual and other references cited for additional discussion and basic design concepts.

The use of computer programs in the design of storm sewer systems will be permitted provided the model input and justifications are submitted to the County for review and approval.

## 10-01-06.A Location of Storm Drainage System Related to Other Pollution Sources

The storm sewer system shall not be extended through an area that is a real or potential source of contamination to stormwater, unless approved protection is provided.

If corrosive soils are present, or pipe is being proposed in a potential contaminated area such as, but not limited to a Brownfield or historic landfill, the designer shall incorporate appropriate measures to protect the pipe from damage and infiltration of pollutants into the storm drainage system such as continuous lining of the pipes.

The minimum horizontal distances between the storm drainage system and bodies of water to On-Site Wastewater Treatment Systems (OWTS) are determined by Adams County Public Health Department Regulations.

All surface drainage must be diverted around the perimeter of the field, and the field must be sufficiently crowned to provide good runoff.

A diversion ditch or berm shall be provided on the uphill side(s) of the bed to deflect precipitation and other outside water away from the evapo-transpiration system.

## 10-01-06.B Electronically Locatable Storm Drainage System

All new underground drainage facilities, including laterals up to the structure or building being served, installed on or after August 8, 2018 must be electronically locatable when installed, per C.R.S. § 9-1.5-101, as may be amended.

Public and private drainage structures must be provided with a tracer wire or alternative approved method according to detail shown in Addendum B. Addendum B is referenced herein for informational purposes but is not made a part hereof.

## 10-01-06.C Construction Materials

All storm sewers within the County right-of-way shall be constructed using reinforced concrete pipe class III (RCP class III) and/or reinforced concrete box culverts (RCBC). If a pipe is installed by boring & jacking, RCP class V or equivalent shall be used. The required pipe strength shall be determined from the actual depth of cover, true load, and proposed field conditions. Typical design strength calculations shall be submitted as part of the Drainage Report & Plan.

Pipe joints shall be watertight and flexible gasket joints, both between pipe joints and for all pipe-structure connections. Pipe joints shall consist of resilient connections complying with the requirements of ASTM C-443 or ASTM C-923, as appropriate.

## 10-01-06.D Hydraulic Design

Storm sewers within the County right-of-way shall be designed to convey the minor storm runoff peaks without surcharging the sewer. To ensure this objective is achieved, the hydraulic and energy grade lines shall be computed by calculating both the major and minor losses (i.e. friction, expansion, contraction, bend, and junction losses) and included on storm sewer profiles. The methods for estimating these losses are presented in MHFD's Urban Storm Drainage Criteria Manual. The minor energy grade line shall be at or below the proposed ground surface.

## 10-01-06.E Pipe Friction Losses

Manning n-values to be used in the calculation of storm sewer capacity and velocity are to be based on the material being proposed. *See* MHFD's Urban Storm Drainage Criteria Manual, Volume 1 for Manning's *n* values.

## 10-01-06.F Pipe Form Losses

Generally, between the inlet and outlet the flow encounters a variety of configurations in the flow passageway (i.e. changes in pipe size, branches, bends, junctions, expansions, and contractions). These variations of configuration impose losses in addition to those resulting from pipe friction. These form loss values shall be submitted, with full justification for the values chosen, as part of the Drainage Report & Plan.

## 10-01-06.G Vertical Alignment

The storm sewer grade shall be such that a minimum cover is maintained to withstand a live load conforming to AASHTO HS-20 (or as designated by the County) loading on the pipe. The minimum cover depends upon the pipe size, type and class, and soil bedding condition.

The minimum vertical clearance between the storm sewer and a sanitary sewer shall be 18 inches, or that as required by the sanitation district who owns the utility, whichever is more stringent. In addition, when a sanitary sewer main lies above a storm sewer, the sanitary sewer (or storm sewer) shall have an impervious concrete, steel or ductile iron encasement for a minimum of 5-feet on each side of the crossing centerline and this casing pipe shall be sealed to prevent intrusion at both ends.

A minimum vertical clearance of 18 inches is required between a storm sewer and a water main, or that as required by the water district that owns the utility. The minimum clearances shall occur from outer pipe diameter to outer pipe diameters. Clearances shall also be in accordance with the appropriate Water and Sanitation District and as discussed in Div. 7-06.

## 10-01-06.H Horizontal Alignment

The storm sewer alignment may be curvilinear for pipe with diameters of 48-inches or greater but only when approved by the County. The applicant must demonstrate the need for a curvilinear alignment. The limitations on the radius for pulled-joint pipe are dependent on the pipe length and diameter, and amount of opening permitted in the joint. The maximum allowable joint pull shall be 3/4 inch. The minimum parameters for radius type pipe are shown in Table 10.9. The radius requirement for pipe bends is dependent upon the manufacturer's specifications.

The County requires a minimum clearance of 10-feet between the storm sewer and a water line or sanitary sewer line. Clearance shall occur from the outer pie diameter to the outer pipe diameter.

## 10-01-06.I Private Connections to the Public Drainage System

All storm drain connections shall be subject to approval of the County and shall be in accordance with applicable standards and specifications. Permits shall be required to connect to the public storm drainage system. Cross connections between sanitary and storm systems are prohibited. Underground drains from fire hydrants, pits, or underground structures (valve pits, meter pits) shall not be directly connected to storm drains without County approval. Roof downspouts, roof drains, or roof drainage piping shall discharge onto the ground and shall not be directly connected to the public or private storm drainage system.

The discharge pipe of sump pumps discharging only uncontaminated groundwater must daylight without creating soil erosion, per C.R.S. § 37-87-105, as may be amended.

**Table 10.9—Storm Sewer Alignment and Size Criteria**

| Vertical Dimension Of Pipe (inches) | Maximum Allowable Distance Between Manholes and/or Cleanouts |
|---|---|
| 18 to 36 | 400 ft |
| 42 and larger | 500 ft |

| **Minimum Pipe Diameter** | | |
|---|---|---|
| **Type** | **Minimum Equivalent Pipe Diameter** | **Minimum Cross-Sectional Area** |
| Main Trunk | 18 in | 1.77 sf |
| *Lateral from inlet | 18 in | 1.77 sf |
| ***Minimum size of lateral shall also be based upon a water surface inside the inlet with a minimum distance of 1 ft below the grate or throat.** | | |
| **Manning n-Value** | | |
| **Sewer Type** | **Capacity Calculation** | **Velocity Calculation** |
| Concrete (newer pipe) | 0.013 | 0.011 |
| Concrete (older pipe) | 0.015 | 0.012 |
| Concrete (preliminary sizing) | 0.015 | 0.012 |

| | | |
|---|---|---|
| Plastic | 0.011 | 0.009 |
| **Reference: Manual** | | |

## 10-01-06.J Pipe Size

The minimum allowable pipe size for storm sewers is dependent upon the estimated flows and a practical diameter from a maintenance perspective. In addition, the length of the sewer affects the maintenance and, therefore, the minimum diameter. Table 10.9 presents the minimum pipe size for storm sewers located in the County right-of-way.

## 10-01-06.K Manholes and Manhole Covers

Manholes or maintenance access ports will be required whenever there is a change in size, direction, elevation, grade, or where there is a junction of two or more conduits. Manholes are also required along long straight sections of pipe for maintenance purposes, with the distance between manholes dependent on pipe size, but not more than 400 feet.

Blind connections to storm sewer pipes shall not be allowed. In addition, a manhole may be required at the beginning and/or at the end of the curved section of storm sewer. The maximum spacing between manholes for various pipe sizes shall be in accordance with Table 10.9. Refer to Table 10.10 for the required manhole size.

**Table 10.10—Manhole Size**

| Sewer Diameter | Minimum Manhole Inside Diameter |
|---|---|
| 18” | 4’ |
| 21” to 42’ | 5’ |
| 48” | 6’ |
| 54” and larger | As approved by the County |

Larger manhole diameters or a junction structure may be required when sewer alignments are not straight, or more than one (1) sewer line goes through the manhole. Manhole diameter may be increased should conditions require such.

The invert of a pipe leaving a manhole should be at least 0.1 foot lower than the incoming pipe to ensure positive low flows through the manhole.

Whenever possible, match the pipe soffit elevations when the downstream pipe is larger to minimize backwater effects on the upstream pipe. Additional manholes may be necessary to “step down” a steep grade, allowing pipe slopes to be much flatter than the slope of the street above. This is done to prevent velocities in storm drain pipes from exceeding the recommended maximum velocity of 20 ft/sec.

All publicly owned storm sewer manhole lids/covers shall have the Adams County manhole cover design. Refer to Addendum B for this detail.

All privately owned storm sewer manhole lids/covers shall be permanently imprinted with the image of a fish and must incorporate the County’s approved educational message. The message must include the following (or equivalent) statement:

| | | |
|---|---|---|
| | **STORM SEWER** | |
| **NO DUMPING** | | **FLOWS TO RIVER** |

Storm sewer manhole cover requirement also applies to public and private manholes placed to access storm sewer inlets concrete boxes. Refer to Addendum B for detail drawing.

# 10-01-07 Storm Sewer Inlets

Presented in the following Subsection is a discussion on the criteria and methodology for design and evaluation of storm sewer inlets in the County**.**

## 10-01-07.A Standard Inlets

The standard inlets permitted for uses in the County are presented in Table 10.11. Other inlet types may be considered on a case-by-case basis, as approved by the County. All open pipe inlets shall be provided with trash racks.

All public and private curb inlets and iron grates shall be permanently imprinted with the image of a fish and must incorporate the County's approved educational message. The message must include the following (or equivalent) statement:

| | | |
|---|---|---|
| | **STORM SEWER** | |
| **NO DUMPING** | | **FLOWS TO RIVER** |

Refer to Addendum B for detail drawing.

**Table 10.11—Inlet Types**

| Inlet Type | Permitted Use |
|---|---|
| Curb Opening Inlet Type R | All street types |
| Grated Inlet<br>Type C or D | All streets with a roadside or median ditch |
| Grated Inlet<br>Type 13 | Alleys or private drives with a valley gutter (private areas only) |
| Combination Inlet<br>Types 13 and 16 | All street types |
| *See* standard detail drawings in Addendum B | |

## 10-01-07.B Inlet Hydraulics

The procedures and basic data to define the capacities of the standard inlets under various flow conditions shall be calculated or obtained from MHFD's Urban Storm Drainage Criteria Manual, Volume 1, in the Section on "Storm Inlets," as amended. The engineer shall submit assumptions, and calculated inlet capacities as part of the Drainage Report & Plan.

Inlet types and grates shall be selected to be appropriate for the intended use and location.

# 10-01-08 Streets

Urban and rural streets, specifically the curb and gutter or the roadside ditches, should be viewed as an integral part of a Minor Drainage System. When the drainage in the street exceeds allowable limits, a storm sewer system or an open channel is required to convey the design flows. In addition, streets may be viewed as a critical part (subject to certain limitations) of the Major Drainage System when it conveys nuisance flows (flows less than minor events) quickly and efficiently to the storm sewer or open channel drainage without interfering with traffic movement.

Design criteria for the collection and conveyance of surface runoff on public streets is based on a reasonable frequency and magnitude of traffic interference (see Table 10.12 through Table 10.14). That is, depending on the classification of the street, certain traffic lanes can be fully inundated during a major storm event. However, during lesser intense storms, runoff will also inundate traffic lanes, but to a lesser degree. The streets in the County are classified for drainage according to the average daily traffic (ADT) for which the street is designed. The larger the ADT, the more restrictive the allowable drainage encroachment into the driving lanes will be. The limits of storm runoff encroachment for each Drainage Classification and storm condition are presented in Table 10.12.

**Table 10.12—Theoretical Design of Streets for Minor Storm Runoff**

| Drainage Classification | Maximum Theoretical Street Encroachment |
|---|---|
| Urban Industrial and Local Residential | No curb overtopping, but flow may spread to crown of street (flow may spread to back of sidewalk). |
| Collector | No curb overtopping and flow spread must leave at least one 10-foot lane free of water (5-feet on each side of the street crown). |
| Major Arterial and Minor Arterial | No curb overtopping and flow spread must leave at least two 10-foot lanes free of water (10-feet each side of the street crown or median). |

**Table 10.13—Allowable Use of Streets for Major Storm Runoff**

| Drainage Classification | Maximum Theoretical Depth |
|---|---|
| Local Industrial, Local Residential, and Collector | Building structures shall not be inundated at the ground line. The depth of water at street crown shall not exceed 6-inches. |
| Major Arterial and Minor Arterial | Building structures shall not be inundated at the ground line. To allow for emergency vehicles, the depth of water shall not exceed the street crown and 12-inches at the gutter flow line, whichever is more restrictive. |

**Table 10.14—Allowable Cross Street Flow**

| Drainage Classification | Minor Storm Maximum Depth | Major Storm Maximum Depth |
|---|---|---|
| Local Industrial and Local Residential | 6-inches of depth in cross pan or at gutter flow line. | 12-inches of depth in cross pan or at gutter flow line. |
| Collector | 6-inches of depth at gutter flow line. | 12-inches of depth at gutter flow line. |
| Major Arterial and Minor Arterial | None | 6” |
| Cross street flow can occur in an urban drainage system under three conditions. One condition occurs when the runoff in a gutter spreads across the street crowns to the opposite gutter. The second is when cross-pans are used. The third condition occurs when the flow in a drainageway exceeds the capacity of a road culvert and subsequently overtops the crown of the street. | | |

## 10-01-09 Culverts

A culvert is defined as a conduit that conveys, by gravity, surface drainage runoff under a road, highway, railroad, canal, or other embankment (except detention outlets). For County roads serving new development, culverts shall be constructed using reinforced concrete pipe and/or reinforced concrete box culverts (RCBC) with flared end sections. All roadway culverts shall be designed to a minimum AASHTO HS-20 loading criteria. Private driveway culverts with flared end sections for residential properties may be allowed to use corrugated metal pipe and different loadings upon approval from the County since maintenance and replacement of these culverts are the property owner's responsibility. Plastic pipes are not allowed for the conveyance of stormwater in Adams County.

## 10-01-09.A Culvert Hydraulics

The procedures and basic data to be used for the hydraulic evaluation of culverts being proposed for installation in the County shall be in accordance with MHFD's Urban Storm Drainage Criteria Manual, Volume 2 for this Section, as amended, except as modified herein.

The use of computer programs developed for the design of culverts will be permitted, provided the model input, justifications and related calculations are submitted to the County as part of the Drainage Report & Plan.

## 10-01-09.B Inlet and Outlet Configuration

All culverts are to be designed with headwalls and wing walls, or with flared-end sections at the inlet and outlet. Flared-end sections are only allowed on pipes with a diameter of 42 inches (or equivalent) or less. Additional protection at the outlet may be required to minimize the potential of channel erosion. Refer to Div. 10-03 Construction Stormwater Management for erosion protection design guidelines.

## 10-01-09.C Hydraulic Data

The design and evaluation of the capacity for a culvert shall be calculated using the appropriate methods. The computed culvert capacities must never exceed manufacturer's recommendations or best engineering practices. The assumptions and model input shall be submitted as part of the Drainage Report & Plan.

## 10-01-09.D Velocity Considerations

In designing culverts, both the minimum and maximum velocities must be considered. A flow velocity greater than approximately 3-fps is required to assure self-cleaning conditions exist and therefore reducing long-term maintenance costs. In addition, a velocity less than approximately 12-fps to minimize possible culvert damage due to scouring and downstream channel erosion.

## 10-01-09.E Culvert Sizing Considerations

The sizing of a culvert is dependent upon two factors, the street classification and the limits of allowable culvert overtopping. Limits for the various street classifications are presented in Table 10.15. The minimum culvert diameter shall be 18 inches. If the applicant wishes to install a different size culvert, they will need to submit culvert sizing calculations for review and approval. Calculations must be stamped and signed by a registered Colorado Professional Engineer (PE).

| Table 10.15—Allowable Maximum Culvert Overtopping | | |
|---|---|---|
| Drainage Classification | Minor Drainage System Maximum Depth | Major Drainage System Maximum Depth |
| Local Industrial, Local Residential and Collector | No Overtopping | 12-inches of depth at the gutter flowline (6-inches of depth at street crown for streets without gutters) |
| Major Arterial and Minor Arterial | No Overtopping | No Overtopping (H/D ≤ 1.5) |
| The maximum headwater (H/D) for the 100-year design flows shall be 1.5 times the culvert diameter, or 1.5 times the culvert rise dimension for shapes other than round. Driveway culverts shall be designed using criteria outlined in Tables 10.12, 10.13, and 10.14. | | |

### 10-01-09.F Structural Design

At a minimum, all culverts shall be designed to withstand an HS-20 loading (unless designated differently by the County in accordance with the design procedures of AASHTO, "Standard Specifications for Highway Bridges", and with the pipe manufacturer's recommendation. Using this loading requirement, calculations shall be submitted to confirm the estimated depth of cover and bearing load on the selected culvert.

## 10-01-10 Bridges

The hydraulic and hydrologic design of bridges within the County shall be in accordance with MHFD's Urban Storm Drainage Criteria Manual Volume 2, Chapter 11, Section 7.0 ("Bridges"), as may be amended. The Federal Highway Administration "Hydraulics of Bridge Waterways" or other County-approved resources shall also be used to determine the possible impacts on the drainageway (both upstream and downstream), scour potential and mitigation techniques for a proposed bridge structure.

All new and replacement bridges shall comply with the floodplain regulations. Therefore, the engineer is encouraged to communicate with the County prior to proposing the placement of a bridge structure within the County to obtain written approval.

Bridge plans shall require a separate review by a registered Colorado Professional Engineer who specializes in structural design. The structural consultant will need to have County approval prior to review. The developer/applicant will be responsible for all costs associated with the structural consultant. The County may also mandate inspection services by the structural consultant.

## 10-01-11 Detention

Onsite detention is required for all development or redevelopment projects. Requirements for detention storage of storm runoff shall be based on the location of the development within its major drainage basin as determined by hydrological modeling and surface characteristics. The detention storage facility shall be sized to hold the 5-year or 10 year and the 100-year runoff, and water quality capture volumes. Refer to Div. 10-04, *Post-Construction Stormwater Management,* for additional water quality design criteria and treatment requirements for applicable projects within the County's MS4 Permitted area (urbanized area). Post-development release rates from the site cannot be greater than the pre-development flows. Surface water shall not be released from the development at rates greater than provided for in MHFD's Urban Storm Drainage Criteria Manual Volume 2, Chapter 12 ("Storage"), as may be amended.

Exemptions from flood control detention requirements may be granted by the County based upon the following criteria:

1. The total change in impervious area covers 10,000 square feet or less; or
2. Rural residential subdivisions that consist of a lot split without the construction of roadways; or
3. Onsite flood control detention requirements for the control of runoff rates may be exempted where regional detention facilities are sized and constructed with the capacity to accommodate 100-year storm event flows from a fully developed basin and are publicly owned and maintained.
4. Public Road improvements that are not within the limits of the development or subdivision.
5. Developments of one-half (1/2) acre or less.
6. The total impervious area on the site is less than 5% of the parcel.

A flood control detention exemption does not grant a water quality treatment exemption. Water quality treatment must still be provided regardless of the size or location of the development. Detention relief shall be based upon technical justification, sealed by a registered Colorado Professional Engineer, submitted with the DRP. Such relief does not include installation of water quality treatment facilities, as required under Div. 10-04, *Post-Construction Stormwater Management*.

The flood control exemptions listed above may be granted only if:

1. Low impact development techniques are incorporated in the design to reduce a minimum of 50% of the proposed runoff volume, or to cover at least 50% of the development area; and
2. Water quality facilities are being maintained properly, drainage facility components meet current design standards, and a drainage easement is recorded.

## 10-01-11.A Volume and Release Rates

The methods to be used in calculating the required detention volumes and maximum release rates are presented in the following Section. These methods include equations, tables, the CUHP method, or other computer aided models approved by the County. Early communication with the County is encouraged for the determination of the appropriate method and the level of detail required for submission.

### 10-01-11.A.1 Volume Estimates

The volume available for detention storage for tributary catchments of 90 acres or less shall be based on MHFD's Urban Storm Drainage Criteria Manual methodology. For larger catchments a CUHP hydrograph shall be generated, and hydrologic routing shall be used for site detention. The maximum release rates for detention design provided for in MHFD's Urban Storm Drainage Criteria Manual Volume 2, Chapter 12 ("Storage"), as may be amended, shall not be exceeded.

Adams County requires the Water Quality Control Volume (WQCV) be added to the minor detention volume. Adams County also requires that 50% of the WQCV be added to the calculated 100-year Volume.

An additional one (1)-foot of depth must be added to the overall volume to accommodate for freeboard. Administrative relief for exemptions or reductions in freeboard requirements may be granted by the County on a case-by-case basis as supported by sufficient technical justification. For basins larger than 90 acres, the CUHP computer model may be used to more accurately represent site conditions.

### 10-01-11.A.2 Volume Estimates (Computer Aided Method)

Using a computer aided hydrology/hydraulics model the engineer can develop hydrographs that route flows to and away from the proposed detention facility. The routed or inflow hydrograph will represent the total volume of runoff from that particular rain event(s) while the outflow hydrograph represents the maximum allowable release rate. From this volume information plus the required freeboard, the design of the proposed facility may be performed. Using this method, the typical basin and outlet are designed from a detailed comparison of existing and proposed topographic information and downstream conditions. Although the County has helped to fund the UDPOND model for the design of detention and subscribes to its use, it recognizes many different computer models are available for this type of design. It will be the responsibility of the engineer to document and justify their use and the input and output parameters. These parameters and a detailed discussion on the method used for this design will be submitted as part of the Drainage Report & Plan. The computer model must be approved by the County prior to review.

## 10-01-11.B Maximum Allowable Release Rate

The maximum allowable release rates for the corresponding storm events (minor and major) shall be calculated per MHFD's Urban Storm Drainage Criteria Manual, Volume 1, and shall be equal to or less than the undeveloped conditions.

When using the MHFD Urban Storm Drainage Criteria Manual, Volume 1 methodology or a composite CUHP method, the predominate soil group for the total basin area contributing runoff to the detention facility will be used in determining the allowable release rate. However, when designing a facility using another type of computer aided model, the engineer shall select the soil group that best represents the surface characteristics of each sub-basin. The selected soil group(s) will be submitted as part of the Drainage Report & Plan. In the event that the local drainage system lacks capacity to accommodate the minor release rate, a smaller release rate may be required by the County.

## 10-01-11.C Detention Basin Outlet/Outfall

Selecting the most appropriate outlet configuration requires a detailed design, which ensures the maximum release rate meets the requirements of the project and includes proper provisions for maintenance and reliability. In addition, care shall be taken as to ensure the designed outlet will not cause downstream erosion or damage during the storm events less than or equal to the major storm. The following lists five typical outlet structures for use in the design of a detention facility depending on the conditions, storage structure design and discharge rates:

1. Circular Culverts
2. Rectangular Culverts
3. Orifices
4. Weirs
5. Orifice Plates

Details of each of these outlet structures are presented in MHFD's Urban Storm Drainage Criteria Manual, Volume I, in the Section on "Outlet Structures" as amended. The engineer shall select the preferred outlet structure based on criteria presented in this Section or other references and will present back up information in the Drainage Report.

The engineer shall maximize the distance between the inlet and the outlet inside the detention basin.

The outlet shall be designed to minimize unauthorized modifications which affect proper function. To assist in this effort, a sign with a minimum area of 0.75 square feet shall be attached to the outlet or posted nearby with the following message:

**"WARNING**
**Unauthorized modification of this structure is a code violation and subject to penalties as provided by law."**

Detention basins must outfall to an existing drainage way or storm sewer system. Detention basins shall not be allowed to directly outfall to a public roadway, unless approved by the County. Discharges towards private property are only allowed with written authorization of the adjacent property owner.

## 10-01-11.C.1 Design Standards for Detention

These provisions present additional design standards (depth of freeboard, location planning, grading, and revegetation) for an open space detention facility. The location, size and landscaping should be properly coordinated with the proposed project and surrounding areas.

The planning of a detention facility is very critical in assuring the facility meets the volume requirements for the proposed project and is properly located for long term operations and maintenance. The facility should be constructed in an area that best fits the existing and proposed topography, facilitates the coordination with other regional facilities and where the building of habitat structures downstream is easily prohibited.

As part of the submitted project plans, the engineer shall accurately represent the location of the facility including limits of grading, approximate embankment slopes, and invert elevations for the outlet. In addition, a larger scale or regional map shall be supplied to show where the facility will discharge and how it interacts with existing or proposed regional facilities.

**Depth of Freeboard.** The minimum required freeboard for open space detention facilities is (1) one-foot above the computed 100-year water surface elevation.

**Grading.** Detention basin grading shall not be steeper than (4) four horizontal and (1) one vertical for side slopes. Any berm constructed for the purpose of storing water or having a surface area, volume, or berm height as specified in Colorado Revised Statues 37-87-105, shall be designated as a dam and require the approval (in writing) of the State Engineer's Office prior to submission to the County. All detention facility embankments shall be protected from catastrophic failure due to overtopping. Overtopping can occur when the pond outlets become obstructed or when an event larger than 100-year storm occurs. Failure protection for the embankment, downstream of the emergency spillway, shall be provided in the form of a buried heavy riprap layer on the entire downstream face of the embankment or a separate emergency outfall. The emergency spillway, or emergency outfall, shall have a minimum capacity of twice the pond inflow rate for the 100-year developed storm. The emergency spillway, or emergency outfall, shall be clearly depicted on the plans. It is the Engineer of Record's responsibility to ensure downstream properties are not adversely affected by drainage and the assessment shall be reflected in the Drainage Report & Plan. The proposed flow path for the discharge from the emergency spillway, or emergency outfall shall be directed into public right of way or into major drainageway and shall be clearly depicted on the plans and constructed as approved by the County. Structures shall not be permitted in the path of the emergency spillway or emergency outfall, as defined by MHFD's Urban Storm Drainage Criteria Manual, Volume 2. The minimum required freeboard for open space detention facilities shall be at least (1) one-foot above the computed weir flow water surface elevation at the emergency spillway, or the emergency outfall.

Depending on site conditions and characteristics, the County may grant administrative relief on slope requirements. The Applicant shall submit good and sufficient documentation sealed by a registered Colorado Professional Engineer describing the site conditions that necessitate the need for relief and that the proposed slopes are stable and not susceptible to erosion in order to be considered for relief.

**Trickle Channel.** Concrete trickle channels shall be used by the design engineer when appropriate and is preferred. Design of trickle channels shall be in accordance with Volume 1 of MHFD's Urban Storm Drainage Criteria Manual, as amended.

**Emergency Spillway.** An overflow section shall be provided for the detention facility that will protect embankments from overflow resulting from a 100-year storm assuming the detention basin is full, and the tributary area is fully developed.

**Revegetation.** All detention facilities shall be revegetated with irrigated sod, natural dry-land grasses, or equivalent. In addition, erosion control blankets may be required by the County to maintain the slopes prior to vegetation maturation. The engineer shall submit an Erosion Control Plan with the proposed revegetation to the County.

**Maintenance Access**. Access to the detention basin shall be provided from the public right-of-way. A minimum 10ft wide designated maintenance access around the perimeter and down into the basin shall be provided. Maintenance access into the bottom of the basin must be constructed of a stabilized, clean, angular rock material, with a maximum 10% slope.

**Access and Maintenance Easements**. A drainage maintenance easement shall be granted to the County for emergency maintenance and access to keep the detention drainage facility operable. A separate access easement may be required by the County to ensure access to detention drainage facilities from the public right-of-way.

## 10-01-11.C.2 Parking Lot Detention

Parking lot detention is not allowed.

## 10-01-11.C.3 Underground Detention

Underground detention is generally discouraged and will only be allowed when all other options have been proven to be insufficient. However, if a property owner must use this technique, additional LID and pre-treatment is required, and the owner will be responsible for long-term maintenance. The facility will be allowed if approval to do so is obtained in advance and the facility is designed according to the criteria outlined in this Section or as specified by the County.

**Configuration**. Structural fill/gravel backfill for underground detention facilities shall be designed with a porosity not to exceed 30%, unless approved by the County. The design volume of an underground detention system shall not include void space in gravel backfill as part of the required pond detention volume. Permanent buildings or structures shall not be placed directly above the underground detention. All proposed underground detention facilities will be reviewed and, the design allowed to proceed on a case by case basis. The County reserves the right to refuse approval to any underground detention system that does not meet the following criteria:

1. System must be fully inspectable and maintainable.
2. System must provide required volume plus an additional 6” from 100-year water surface elevation to inside top of structure.
3. System must meet MHFD criteria.
4. System must provide one (1) foot of freeboard at the outfall spill location as defined by MHFD’s Urban Storm Drainage Criteria Manual, Volume 2.
5. System must provide a spillway and spillway path.

**Materials**. The engineer shall design the underground detention facility using the appropriate materials. The required pipe strength shall be determined from the actual depth of cover, true load, and proposed field conditions. Typical design strength calculations for an HS-25 loading condition shall be submitted as part of the Drainage Report & Plan.

**Maintenance Access.** Access to the underground detention facility shall be provided in accordance with this Section. To facilitate cleaning of the pipe segments, 3-feet diameter maintenance access ports shall be placed according to the schedule in Table 10.16. In addition, 18-inch inspection ports are required to facilitate routine inspections or take water samples.

| Table 10.16—Underground Detention - Maintenance Access Requirements | | |
|---|---|---|
| Detention Pipe Size | Maximum Spacing | Minimum Frequency |
| 36” to 54” | 50’ | Every pipe segment |
| 60” to 66” | 75’ | Every other pipe segment |
| >66” | 100’ | One at each end of the battery of pipes |

**Flood Hazard Warning**. In addition, all underground detention areas shall have a sign posted identifying the underground detention area. The signs shall have a minimum area of 1.5 square feet and contain the following message:

**“Warning**
**There is an underground detention basin in this area.**
**Caution, digging in this area could cause damage.”**

**Access and Maintenance Easements**. A drainage maintenance easement shall be granted to the County for emergency maintenance and access to keep the underground detention facility operable. A separate access easement may be required by the County to ensure access to the underground facility from the public right-of-way.

# Div. 10-02 Stormwater Quality Regulations

A. **Purpose and Intent**. Protecting the quality of stormwater runoff is a priority to Adams County and is required by Colorado Discharge Permit System (CDPS) Regulations. The Colorado Department of Public Health and Environment (CDPHE), Water Quality Control Division (WQCD), through the Municipal Separate Storm Sewer System (MS4) Phase II permit issued to Adams County, requires Adams County to control and reduce the discharge of pollutants to protect stormwater quality and to satisfy the appropriate water quality requirements of the Colorado Water Quality Control Act (C.R.S. § 25-8-101 *et seq*.) and the Colorado Discharge Permit Regulations (Colorado Regulation No. 61). It is the intent of these Stormwater Quality Regulations to implement an effective Construction Stormwater Management Program (Div. 10-03), Post-Construction Stormwater Management Program (Div. 10-04), and an Illicit Discharge and Detection Program (Div. 10-05) to establish uniform criteria to minimize stormwater pollution to the maximum extent practicable from certain development and redevelopment sites, to improve flood control, protect the environment, and enhance the health and safety of County residents.

B. **Additional Enforcement Mechanisms**. In addition to all remedies and enforcement powers available under Chapter 15, the following administrative remedies are available to implement and enforce the Construction Stormwater Management Program (Div. 10-03), Post-Construction Stormwater Management Program (Div. 10-04), and Illicit Discharge and Detection Program (Div. 10-05):

1. *Payment for Additional Inspections*: A person or landowner may be charged inspection fees for more than one regular follow-up regulatory inspection or any inspection triggered by a Notice of Violation in accordance with the Annual Fee Schedule adopted by the Board of County Commissioners.
2. *Stormwater Inspection Frequency*: Permittees/landowners may be required to conduct stormwater inspections on a more stringent and/or frequent basis if the Permittee/landowner is non-responsive after a Notice of Violation or is a systematic/chronic violator of the Stormwater Quality Regulations.
3. *Financial Guarantee Draw*: The County may, after notifying the SWQ Permittee of the required maintenance and/or BMP removal, and such person’s failure to perform the maintenance and/or

BMP removal within ten (10) business days thereafter, enter upon the private property and perform or cause to be performed the required work, and assess the reasonable costs and expenses of such work against such person. At such time, if any assessment for work performed by the County has not been paid by the SWQ Permittee, the County shall draw on the SWQ Permit Financial Guarantee. For required maintenance and/or BMP removal within the County's ROW, the notification process may be accelerated with a minimum of 24-hour notification.

# Div. 10-03 Construction Stormwater Management

## 10-03-01 General Requirements

A. Any person who undertakes or causes to be undertaken any construction activity within unincorporated Adams County that involves disturbance of the land surfaces, regardless of the size or location of the construction project, shall ensure that soil erosion, sedimentation, pollutant loads and changes to water flow characteristics resulting from their activities are controlled so as to minimize stormwater pollution and protect receiving waters.

B. The following are unincorporated Adams County minimum requirements (note that additional requirements apply within the current Adams County MS4 Permitted Area):

1. All construction projects disturbing one (1) or more acres, or less than one (1) acre but belonging to a larger common plan of development or sale larger than one (1) acre, shall comply with the Colorado Discharge Permit System (CDPS) Stormwater Discharge Permit for Construction Activities when applying for a County Permit. Compliance with CDPS Stormwater Discharge Permit's terms and conditions throughout construction is required.
2. All construction sites, proposing to disturb 3,000 sq ft or more of land, shall submit an Erosion Control (EC) Plan with their applicable County Permit application. The EC Plan, is a civil drawing depicting the project site with the location of all construction's Best Management Practices (BMPs), also known as Control Measures (CMs), including the associated BMP details, that will be installed and maintained during construction and final stabilization practices.
3. Landowners shall be responsible for ensuring that any temporary and/or permanent construction BMPs installed prior to purchase of a lot, parcel or site from a developer, previous landowner, or builder as part of the implementation of the EC Plan or State's CDPS Stormwater Discharge Permit for Construction Activities are properly maintained and remain in good working order. If not installed prior to individual lot acquisition, all temporary and/or permanent BMPs required by the EC Plan, State's CDPS Stormwater Discharge Permit for Construction Activities or other written requirements of the County shall be installed by the landowner immediately and maintained until final stabilization is reached. All temporary BMPs shall be removed after work on the site has been completed, final stabilization has been reached, and measures are no longer needed.
4. If the County determines there are non-compliance issues, the County may, in writing, direct the landowner, developer, builder, or Stormwater Quality (SWQ) Permittee, as the case may be, to repair, replace and/or install any stormwater pollution prevention construction BMPs as required by the site's EC Plan, Erosion and Sediment Control Plan (ESCP), Stormwater Management Plan (SWMP); or require additional measures be installed if deemed necessary by the County, in order to minimize said stormwater pollution. It shall be a violation of these regulations for any landowner, developer, builder or SWQ Permittee to fail to undertake all reasonable and necessary measures to comply with such written directives.

C. Plan Submittal. Applicable sites shall submit to the County the following information for review and approval prior to development or redevelopment of the site:

1. Site plan, including design details for all structural permanent water quality treatment BMPs or drainage facilities.
2. Drainage Report & Plan, including
    a. A narrative for all non-structural BMPs for the site that include measures to prevent or reduce pollutants being introduced to stormwater, or that prevent or reduce the generation of runoff (such as LID techniques) or illicit discharges according to Sec. 10-04-11, *Source Control BMPs*.
    b. Documentation and confirmation the post-construction water quality treatment BMP or drainage facility was designed according to Sec. 10-04-04, *Minimum Water Quality Design Standards*.
3. Operation and Maintenance (O&M) Plan describing procedures to ensure long-term function and integrity of the water quality treatment BMP or drainage facilities.
4. Recorded Drainage and Access Easement or other legal means to allow the County's access to the permanent post-construction water quality treatment BMPs or drainage facility.
5. If any modification is proposed to the approved site plan, the site plan must be re-submitted for approval prior to construction or modification of the proposed changes.

## 10-03-02 Technical Standards and Specifications

All construction stormwater pollution prevention BMPs shall be designed and maintained to meet standards of these Stormwater Quality Regulations; the MHFD's Urban Storm Drainage Criteria Manual, Volume 3; or the Colorado Department of Transportation (CDOT) Construction Specifications as the same may be amended from time to time. These manuals may be updated and expanded from time to time, at the discretion of the County, based on improvements in engineering, science, monitoring and local maintenance experience.

## 10-03-03 Stormwater Quality (SWQ) Permit Applicability

Refer to Sec. 13-05-04, *Stormwater Quality Permit*.

## 10-03-04 Exemptions

Refer to Sec. 13-05-04, *Stormwater Quality Permit*.

## 10-03-05 SWQ Permit Application

Refer to Sec. 13-05-04, *Stormwater Quality Permit*.

## 10-03-06 SWQ Permit Fees

Refer to Sec. 13-05-04, *Stormwater Quality Permit*.

## 10-03-07 SWQ Permit Financial Guarantee

Refer to Sec. 13-05-04, *Stormwater Quality Permit*.

## 10-03-08 Erosion and Sediment Control Plan (ESCP)

The Permittee shall develop and implement a site-specific Erosion and Sediment Control Plan (ESCP), utilizing Adams County's ESCP Template as outlined in Addendum A, Colorado Department of Transportation current SWMP Template, or equivalent. The ESCP shall comply, at a minimum, with the SWMP requirements established by the State of Colorado CDPS Stormwater Discharge Permit for Construction Activities, as amended. Additionally, the ESCP shall be prepared in accordance with good engineering and hydrologic pollution control practices by a registered Colorado Professional Engineer, or individual who holds and provides evidence of a current certification in development of Stormwater Management Plans, or Certified Professional in Erosion and Sediment Control.

The ESCP shall be implemented from start of land disturbance until final stabilization and permanent stormwater quality BMPs (if applicable) are effectively in place.

Adams County ESCP review and conditional acceptance process only intends to verify that minimum ESCP requirements set by the State of Colorado CDPS Stormwater Discharge Permit for Construction Activities, and the Adams County Stormwater Quality Regulations in this Chapter are met. The acceptance of the ESCP by the County is granted with the condition that the ESCP is considered a living document and may change to address unforeseen issues or if the submitted plan does not function as intended. Revisions and updates of the ESCP shall be conducted regularly by the Permittee during construction. Additional or revised BMPs will be required should inspections indicate the ESCP is not adequately controlling erosion, capturing sediment, or preventing contact of stormwater runoff from potential pollutant sources.

The main purpose of the ESCP is to reduce pollutants in stormwater discharges from construction sites. The ESCP describes implementation, maintenance and inspection of stormwater pollution prevention BMPs during construction.

The ESCP is a detailed written plan that shall include:

1. Identification of all potential pollutant sources which may reasonably be expected to affect the quality of stormwater discharges associated with the following construction activities:
    a. Land disturbance and storage of soils.
    b. Vehicle tracking
    c. Loading and unloading operations
    d. Outdoor storage of construction site materials, building materials, fertilizers, and chemicals
    e. Bulk storage of materials.
    f. Vehicle and equipment maintenance and fueling
    g. Significant dust or particulate generating processes
    h. Routine maintenance activities involving fertilizers, pesticides, detergents, fuels, solvents and oils.
    i. Concrete truck/equipment washing, including the concrete truck chute and associated fixtures and equipment.
    j. Dedicated asphalt and concrete batch plants
    k. Other areas or operations where spills can occur.
    l. Other non-stormwater discharges, including construction dewatering not covered under the CDPHE Construction Dewatering Discharges general permit and processed water discharges.
2. Description of the construction stormwater pollution prevention BMPs (erosion control, sediment control and waste management control), designed and selected for the potential pollutant sources listed above, which will be installed during each phase of construction (initial, interim and final). These can be temporary or permanent, structural or non-structural construction BMPs.
3. Erosion Control (EC) Plan, which is a site plan(s) including, but not limited to:
    a. Construction site boundary line or limits of construction,

b. All areas of ground surface disturbance,
c. Areas of cut and fill,
d. Areas used for storage of building materials, equipment, soil or waste,
e. Location of dedicated asphalt or concrete batch plants,
f. Location of all structural BMPs for each phase of the construction project (initial, interim and final),
g. Location of all non-structural BMPs as applicable for each phase of the construction project (initial, interim and final); and
h. Location of springs, streams, wetlands and other surface waters.
i. Any other requirements according to the State of Colorado CDPS Stormwater Permits, as amended.

4. Construction BMP details, which shall include information regarding appropriate uses, design, installation, maintenance and removal information.

## 10-03-08.A Erosion Control BMPs

A Permittee must control erosion during construction. Erosion control means reducing the movement of soil by keeping the disturbed ground in place. Five (5) examples of effective erosion controls:

1. Minimize disturbed area and protect natural features and soil.
2. Phase construction activity and seeding.
3. Control stormwater flowing onto and through the project.
4. Stabilize soils promptly.
5. Protect slopes.

## 10-03-08.B Sediment Control BMPs

A Permittee must control the transportation of sediment during construction. To control the transportation of sediment is to control eroded sediment from leaving the disturbed area, i.e. the second line of defense. Four (4) examples of effective sediment control BMPs:

1. Protect storm drain inlets.
2. Establish perimeter controls.
3. Retain sediment on-site.
4. Establish stabilized construction entrances/exits.

## 10-03-08.C Waste Management Controls

Waste management controls shall be included in the Erosion and Sediment Control Plan (ESCP) for solid and liquid waste, sanitary waste, chemical waste, contaminated groundwater or soils, etc. Waste management controls include, stockpile management, spill prevention, good housekeeping, proper vehicle maintenance, fueling and storage areas, adequate use of pesticides, herbicides and fertilizers, regular street sweeping, concrete/grout/paint washout area, and storm sewer system cleaning/vacuum and jetting.

Waste materials, such as discarded building materials and solid waste from construction activities, shall be contained and disposed of properly in a timely manner and removed from the construction site.

Waste materials shall not be buried, dumped or left at the permitted construction site. Waste materials shall not be temporarily placed or stored in the street, alley, or other public right-of-way with the exception of construction located within the public right-of-way.

All materials stored on-site shall be stored in a neat and orderly manner, in their original containers, with original manufacturer's labels. Materials shall not be stored in a location where they may be carried by stormwater runoff into the County's MS4 or State Waters.

### 10-03-08.D ESCP Field Changes

The ESCP shall be kept at the construction site and shall be updated by the Permittee as construction progresses and field conditions change.

If major changes to the ESCP are needed related to hydrology, then the ESCP must be resubmitted to the County.

Minor changes such as BMP substitutions needed after initial submittal to the County can be made directly at the site by the Permittee. Documentation of the changes must be available to the County upon request.

The ESCP shall be revised as soon as practicable, following the BMP installation or implementation and according to the SWMP requirements of the State of Colorado CDPS Stormwater Discharge Permit for Construction Activities, as amended. A notation shall be included in the ESCP with the initials and date of the change(s). If the ESCP is not up to date, or the Permittee fails to conduct a mandated stormwater inspection, it shall be deemed inadequate resulting in a SWQ permit violation.

## 10-03-09 Selection, Installation and Maintenance of Construction BMPs

Adequate construction BMPs must be installed prior to the start of construction activity. BMPs must control potential pollutants (such as sediment, construction site waste, trash, concrete truck washout, chemicals, sanitary waste and contaminated soils) during each phase of construction, and must be maintained until final stabilization is reached. The Permittee must ensure that all BMPs are appropriate for the selected application, installed and maintained according to the conditionally accepted ESCP and BMP detail drawings and in effective working condition to function as designed.

### 10-03-09.A Proprietary and Alternative Construction BMPs

The technology of construction stormwater pollution prevention BMPs is constantly changing. New innovations are developed and existing technologies are refined to be more effective. The BMPs included in these Stormwater Quality Regulations are not meant to be comprehensive. Should the owner or engineer desire to use other BMPs, it will be necessary to provide documentation that adequately demonstrates an alternative BMP option can effectively control stormwater runoff quality. Proprietary or alternative BMP options will be reviewed on a case-by-case basis by the County.

## 10-03-10 Stormwater Inspection Frequency

Refer to Sec. 13-05-04, *Stormwater Quality Permit*.

### 10-03-10.A Stormwater Inspection Report

Refer to Sec. 13-05-04, *Stormwater Quality Permit*.

## 10-03-11 Final Construction Site Stabilization

Final Construction Site Stabilization occurs when all ground disturbing activities are complete, and all disturbed areas have either been built on, paved over or a uniform vegetative cover has been established per conditionally accepted ESCP.

Prior to SWQ Permit closeout, all items listed below must be completed in order for the construction site to be considered to have final stabilization:

1. The site has a uniform vegetative cover with a density of at least seventy percent (70%) compared to the original undisturbed site. Vegetative cover shall be established with the approved seed mix, sod or a combination thereof.
2. If applicable, proper installation and maintenance of all approved permanent post-construction water quality treatment BMP or drainage facility.
3. Removal of all stockpiles of soil, construction material/debris, construction equipment, etc. from the construction site.
4. Streets, parking lots and other surrounding paved surfaces are clean and free of any sediment or debris.
5. Removal of sediment and debris within the private or adjacent public storm drainage system.
6. Restoration and stabilization of any damaged public infrastructure caused by the Permittee's construction activities.

Any acceptance of installed vegetative cover shall not be construed to relieve the property owner of the duty to warrant and maintain the installed vegetative measures as aforementioned.

## 10-03-12 SWQ Permit Closeout

Refer to Sec. 13-05-04, *Stormwater Quality Permit*.

## 10-03-13 Release of Financial Guarantee

Refer to Sec. 13-05-04, *Stormwater Quality Permit*.

## 10-03-14 Adams County Regulatory Inspections

All Adams County SWQ Permits may be inspected regularly during construction by the County to ensure compliance with the County's Stormwater Quality Regulations, SWQ Permit and/or ESCP.

Adams County reserves the right to request, at any time, submittals of the documents associated with the SWQ Permit, including; the Permittee's stormwater site inspection logs, the current ESCP, etc. The County will identify a time frame that specifies the date the Permittee must submit the requested documentation. If the Permittee fails to provide the requested documentation, a violation will be have been committted. Adams County Regulatory Inspections shall not be used in place of the Permittee's stormwater inspections as required under Sec. 10-03-10, *Stormwater Inspection Frequency*.

## 10-03-15 Right of Entry

Refer to Chapter 15 of this DSR for the County's general authority to enter onto private property within unincorporated Adams County for inspection purposes.

Additionally, the landowner, developer, builder, or SWQ Permittee must allow County staff the right-of-entry for the following purposes:

1. To enter upon the construction project premises where a regulated facility or activity is located or in which records are required to be kept under the terms and conditions of the Adams County Stormwater Quality Regulations or Adams County SWQ Permit.
2. To have access to the construction project premises to request copies of any records, stormwater inspection reports, plans or documentation required to be kept under the terms and conditions of the Adams County Stormwater Quality Regulations.
3. To enter upon the construction project premises to investigate, within reason, any actual, suspected, or potential source of water pollution, or violation of these regulations. The investigation may include, but is not limited to, the following: sampling of any discharge or process waters, the taking of photographs, interviewing associated personnel on alleged violations, and access to any and all facilities or areas within the project premises that may have any effect on the discharge, permit, or alleged violations.

## 10-03-16 Permittee/Landowner Ultimate Responsibility

A. **Permittee Responsibility**. Adams County Stormwater Quality Regulations are to be interpreted as minimum standards and regulations. These regulations may not be adequate to comply with the requirements of the State of Colorado CDPS Stormwater Discharge Permit for Construction Activities. The Permittee is ultimately responsible for ensuring compliance with the State of Colorado CDPS Stormwater Discharge Permit for Construction Activities.

   These Stormwater Quality Regulations do not intend or imply that compliance by the Permittee will ensure there will be no contamination, pollution or unauthorized discharge of pollutants. These Stormwater Quality Regulations shall not be construed as implying County liability for any noncompliance by a Permittee or any other person, nor for any damage or injury to third persons.

B. **Landowner Responsibility**. The County considers the owner of the land the ultimate responsible party for all construction activities. It is ultimately the responsibility of the landowner to take all necessary measures to ensure the site is in compliance with County, State and federal statutes, regulations, ordinances and permits. The County endeavors to encourage compliance with the Stormwater Quality Regulations by working with the landowner, developer, builder, or SWQ Permittee during construction.

   Corrections requested by the County shall be completed immediately, or an alternative additional BMP must be installed. The County may allow the landowner, developer, builder, or SWQ Permittee a reasonable amount of time to re-inspect the site to ensure necessary measures have been completed to bring a construction site into compliance prior to formal enforcement.

## 10-03-17 Construction Stormwater Violations

The following is a non-exhaustive list of violations of the Stormwater Quality Regulations and/or Stormwater Quality (SWQ) Permit:

1. Conducting a permit covered activity without a County SWQ Permit.
2. Failure to prepare an Erosion and Sediment Control Plan (ESCP).
3. Failure to prepare an Erosion Control (EC) Plan.
4. Conducting a permit covered activity without Adams County review and conditional acceptance of the ESCP.
5. Conducting a permit activity without a State of Colorado CDPS Stormwater Discharge Permit for Construction Activities.
6. Failure to renew the SWQ Permit.

7. Failure to renew the SWQ Permit's financial guarantee.
8. Deficient ESCP.
9. Failure to implement the ESCP or EC Plan.
10. Failure to update the ESCP adequately to reflect current site conditions.
11. Failure to install, maintain or properly select Best Management Practices (BMP).
12. Failure to correct findings from previous Adams County Regulatory Inspections.
13. Failure to perform stormwater inspections of the permitted construction site.
14. Failure to submit documentation requested by the County.
15. Failure to adequately respond to the County's written directives.
16. Failure to install permanent post-construction water quality treatment BMP or drainage facilities (if applicable).
17. Lack of good housekeeping practices.
18. Pollution, contamination or degradation of stormwater quality.
19. An illicit discharge into the County's Municipal Separate Storm Sewer System (MS4**).**

# Div. 10-04 Post-Construction Stormwater Management

The purpose and intent of this Section is to establish minimum post-construction stormwater management requirements and controls to protect and enhance the water quality of receiving waters and to provide for the health, safety and general welfare of the residents of unincorporated Adams County.

The objectives are:

1. To require the implementation of post-construction practices and promote Low-Impact Development (LID) techniques to control stormwater runoff from development and redevelopment sites in order to prevent flooding, erosion and stormwater pollution;
2. To protect surface water resources from degradation by guiding the development of the community away from sensitive areas;
3. To preserve the natural infiltration of groundwater and to protect the quantity and quality of groundwater resources;
4. To ensure adequate long-term operation and maintenance of post-construction stormwater management practices; and
5. To enable the County to comply with the State of Colorado MS4 Permit and other applicable federal and state regulations.

## 10-04-01 Applicability

The following construction projects shall comply with Post-Construction Stormwater Management requirements, unless excluded under Sec. 10-04-02, *Exemptions*:

1. All development or redevelopment construction sites located within unincorporated Adams County's MS4 Permitted Area that disturb an area of one (1) acre or greater.
2. All development or redevelopment construction sites located within unincorporated Adams County's MS4 Permitted Area that disturb less than one (1) acre, which are part of a larger common plan of development disturbing (1) or more acres of land even though multiple, separate and distinct development activities may take place at different times on different schedules.

3. Any permanent post-construction water quality treatment BMP or drainage facility constructed outside Adams County MS4 Permitted Area, which were installed to fulfill the requirements of this Section for parcels that do not have sufficient space to install the post-construction BMP within the MS4 Permitted Area boundary.

In the case where an applicable permanent post-construction water quality treatment BMP or drainage facility is part of future phasing, then a temporary equivalent measure must be constructed to meet one of the Minimum Water Quality Treatment Design Standards in Sec. 10-04-04.

## 10-04-02 Exemptions

The following exemptions apply:

1. Any new development or redevelopment site, regardless of the size of the project, located outside Adams County MS4 Permitted Area, provided this exemption does not exclude long-term maintenance responsibilities of drainage structures as set forth in Sec. 10-04-14, *Operation and Maintenance of Water Quality Treatment or Drainage Facilities*.
2. Any development or redevelopment, regardless of the size or location (inside or outside the MS4 Permitted Area), approved by the County prior to the initial effective date of the implementation of the County's MS4 Permit Post-Construction Stormwater Management requirements, provided this exemption does not exclude long-term maintenance responsibilities of existing drainage structures as set forth in Sec. 10-04-14, *Operation and Maintenance of Water Quality Treatment or Drainage Facilities*.
3. Activities that are exclusively for agricultural land use, regardless of the size or location (in or outside the MS4 Permitted Area).
4. Routine maintenance and repair to any permanent post-construction water quality treatment BMP or drainage facility, regardless of the size or location (inside or outside the MS4 Permitted Area), deemed necessary to maintain original grade, hydraulic capacity or original purpose of drainage structures.
5. Pavement management sites or portions of sites, for the rehabilitation, maintenance, and top layer reconstruction of roadway pavement, which includes roadway re-surfacing, mill and overlay, white topping, black topping, curb and gutter replacement, concrete panel replacement, and pothole repair. This exemption does not include full-depth pavement nor full-depth concrete re-construction activities that will expose native soils during construction. The purpose of the site must be to provide additional years of service life and optimize service and safety. The site must also be limited to the repair and replacement of pavement in a manner that does not result in an increased impervious area nor the infrastructure substantially change. The types of sites covered under this exclusion include day-to-day maintenance activities, rehabilitation, and reconstruction of pavement. Roadways include roads and bridges that are improved, designed or ordinarily used for vehicular travel and contiguous areas improved, designed or ordinarily used for pedestrian or bicycle traffic, drainage for the roadway, and/or parking along the roadway. Areas primarily used for parking or access to parking are not roadways.
6. Excluded roadway redevelopment sites for existing roadways, when one of the following criteria is met:
   a. The site adds less than 1 acre of paved area per mile of roadway to an existing roadway, or
   b. The site does not add more than 8.25 feet of paved width at any location to the existing roadway.
7. Redevelopment site exclusion of only the area of the existing roadway when the site does not increase the width by two (2) times or more, on average, of the original roadways area. The entire site is not excluded from being considered an applicable development site for this exclusion, the area of the site that is part of the added new roadway area is still an applicable development site.
8. Activities for installation or maintenance of aboveground and underground utilities or infrastructure that do not permanently alter the terrain, ground cover, or drainage patterns from those present prior to the

construction activity. This exclusion includes, but is not limited to, activities to install, replace or maintain utilities under roadways or other paved areas that return the surface to the same condition.

9. Single-family residential lot, or agriculturally zoned lands, greater than or equal to 2.5 acres in size per dwelling and having a total lot impervious area of less than ten percent (10%). A total lot imperviousness greater than ten percent (10%) is allowed when a study specific to the watershed and/or MS4 shows expected soil and vegetation conditions are suitable for infiltration/filtration of the WQCV for a typical site, and the County accepts such study as applicable within its MS4 boundaries. The maximum total lot impervious covered under this exclusion shall be twenty percent (20%).
10. Non-residential and non-commercial sites for which post-development surface conditions do not result in concentrated stormwater flow during the 80th percentile stormwater runoff event, as defined in Chapter 16 under the WQCV term. In addition, post-development surface conditions must not be projected to result in a surface water discharge from the 80th percentile stormwater runoff events. Specifically, the 80th percentile event must be infiltrated and not discharged as concentrated flow. For this exclusion to apply, a study specific to the site, watershed and/or MS4 must be conducted. The study must show rainfall and soil conditions present within the applicable site; and the County must accept such study as Applicable within its MS4 boundaries. This exclusion does not apply to residential or commercial sites.
11. Sites with land disturbance to undeveloped land that will remain undeveloped (land with no human-made structures such as buildings or pavement).
12. Stream stabilization sites.
13. Pedestrian or bike trails detached from roadway projects. Bike lanes for roadways are not included in this exclusion, unless attached to a roadway that qualifies under another exclusion in this Section.
14. Facilities associated with oil and gas exploration, production, processing, or treatment operations, or transmission facilities, including activities necessary to prepare a site for drilling and for the movement and placement of drilling equipment, whether or not such field activities or operations may be considered to be an applicable construction activity.
15. In the event the project is located within Adams County Growth Area according to Adams County's MS4 Permit, as amended, the following is excluded:
    a. Agricultural facilities and structures on agriculturally zoned lands (e.g., barn, stables).
    b. Residential development site or larger common plans of development for which associated construction activities result in a land disturbance of less than or equal to 10 acres and have a proposed density of less than 1,000 people per square mile.
    c. Commercial or industrial development site or larger common plans of development for which associated construction activities results in a land disturbance of less than or equal to 10 acres.

## 10-04-03 General Requirements

All applicable development or redevelopment projects shall incorporate in the design permanent post-construction water quality treatment BMP or drainage facility, and source control BMPs or pre-treatment to control and prevent illicit discharges into the storm sewer system. Requirements must be met prior to receiving approval from the County to proceed with construction of the development or redevelopment.

Water Quality Treatment shall:

1. Be designed considering existing site conditions, site operations and potential pollution sources.

2. Be designed to minimize regular maintenance, facilitate the performance of required maintenance and repair tasks, ensure proper functioning and reduce the potential for extensive, difficult and costly remedial or emergency maintenance efforts.
3. Be strong, durable and corrosion-resistant.
4. Incorporate safety measures.
5. Include design features to prevent accumulation or discharge of trash and debris in drainage systems.
6. Include source control BMPs to prevent and/or contain spills at industrial or commercial developments.
7. Avoid adverse effects on water quality and quantity, or harm or damage to persons and property.

## 10-04-04 Minimum Water Quality Treatment Design Standards

Permanent post-construction water quality treatment BMPs or drainage facilities for applicable development and redevelopment sites shall meet one of the following base water quality design standards listed below within the County's MS4 Permitted Area:

1. Water Quality Capture Volume (WQCV) Standard: The permanent post-construction water quality treatment BMP or drainage facility shall be designed to provide treatment and/or infiltration of the WQCV and:
   a. 100% of the applicable development site is captured, except the County may allow exclusion up to 20%, not to exceed one (1) acre, of the applicable development site area when the Developer has determined that it is not practicable to capture runoff from portions of the proposed site that will not drainintо any water quality treatment drainage facility. In addition, the Developer must also determine the implementation of a separate water quality treatment facility for that portion of the site is not practicable. (for example: driveway access that drains directly to the street); and
   b. Evaluation of the minimum drain time shall be based on the pollutant removal mechanism and functionality of the water quality treatment drainage facility implemented. Consideration of drain time shall include maintaining vegetation necessary for operation of the water quality treatment drainage facility (for example: wetland vegetation).
2. Pollutant Removal Standard: The permanent post-construction water quality treatment BMP or drainage facility is designed to treat at a minimum the 80th percentile storm event. The drainage facility shall be designed to treat stormwater runoff in a manner expected to reduce the event mean concentration of total suspended solids (TSS) to a median value of 30 mg/l or less.
   a. 100% of the applicable development site is captured, except the County may allow exclusion up to 20% not to exceed one (1) acre of the applicable site area when the Developer has determined that it is not practicable to capture runoff from portions of the site that will not drain towards a permanent post-construction water quality treatment BMP or drainage facility. In addition, the Developer must also determine the implementation of a separate permanent post-construction water quality treatment BMP or drainage facility for that portion of the site is not practicable (for example: driveway access that drains directly to street).
3. Runoff Reduction Standard: The permanent post-construction water quality treatment BMP(s) or facility is designed to infiltrate into the ground where site geology permits, evaporate, or evapotranspire a quantity of water equal to 60% of what the calculated WQCV would be if all impervious area of the applicable site discharged without infiltration. This base design standard can be met through practices such as Green Infrastructure (GI). Green infrastructure generally refers to control measures that use vegetation, soils, and natural processes to mimic natural processes to manage stormwater.

4. Applicable Site Draining to a Regional WQCV Control Measure: The regional WQCV control measure must be designed to accept the drainage from the applicable site. Stormwater from the site must not discharge to Waters of the State before being discharged to the regional WQCV control measure. The regional WQCV control measure must meet the requirements of Sec. 10-04-04(1), *Water Quality Capture Volume (WQCV) Standard*.
5. Applicable Site Draining to a Regional WQCV Facility: The regional WQCV facility is designed to accept drainage from the applicable site. Stormwater from the site may discharge to Waters of the State before being discharged to the regional WQCV facility. Before discharging to Waters of the State, at least 20% of the upstream imperviousness of the applicable site must be disconnected from the storm drainage system and drain through a receiving pervious area control measure comprising a footprint of at least 10% of the upstream disconnected impervious area of the applicable site. The control measure must be designed in accordance with MHFD's Urban Storm Drainage Criteria Manual, Volume 3 as amended and/or equivalent criteria. In addition, the stream channel between the discharge point of the applicable site and the regional WQCV facility must be stabilized. The regional WQCV facility must meet the following requirements:
    a. The regional WQCV facility must be implemented, functional and maintained following good engineering practices, hydrologic and pollution control practices.
    b. The regional WQCV facility must be designed and maintained for 100% WQCV for its entire drainage area.
    c. The regional WQCV facility must have a capacity to accommodate the drainage from the applicable development site.
    d. The regional WQCV facility must be designed and built to comply with all assumptions for the development activities planned by the County within its drainage area.
    e. Evaluation of the minimum drain time shall be based on the pollutant removal mechanism and functionality of the facility. Consideration of drain time shall include maintaining vegetation necessary for operation of the facility (for example: wetland vegetation).
    f. The regional WQCV facility must meet the requirements under Sec. 10-03-01, *General Requirements*, and Sec. 10-04-13, *Inspections*.
    g. The regional WQCV facility must be subject to the County's regulatory authority, or ownership.
    h. Regional WQCV facilities must be designed and implemented with flood control or water quality as the primary use. Recreational ponds and reservoirs may not be considered regional facilities for the purpose of this Section. Water bodies listed by name in surface water quality classifications and standards regulations (5 CCR 1002-32 through 5CCR 1002-38) may not be considered regional facilities.

## 10-04-05 Minimum Water Quality Treatment Design Standards for Constrained Redevelopment Sites

This Section applies to applicable redevelopment sites that meet the following criteria:

1. The applicable redevelopment site is for a site that is greater than 75% impervious area, and
2. The Developer has determined it is not practicable to meet any of the minimum design standards listed under Sec. 10-04-04, *Minimum Water Quality Design Standards*. The Developer's determination shall include an evaluation of the applicable redevelopment site's ability to install a permanent post-construction water quality treatment BMP or drainage facility without reducing surface area covered with the structures.

Permanent post-construction water quality treatment BMP or drainage facility shall be designed to meet one (1) of the following:

1. Provide treatment of the WQCV for the area captured. The captured area shall be 50% or more of the impervious area of the applicable redevelopment site. Evaluation of the minimum drain time shall be based on the pollutant removal mechanism and functionality of the permanent post-construction water quality treatment BMP or drainage facility implemented; or
2. The post-construction water quality treatment BMP or drainage facility is designed to provide for treatment of the 80th percentile storm event. The post-construction BMP shall be designed to treat stormwater runoff in a manner expected to reduce the event mean concentration of total suspended solids (TSS) to a median value of 30 mg/l or less. A minimum of 50% of the applicable redevelopment area including 50% or more of the impervious area of the applicable redevelopment area shall drain to the permanent post-construction water quality treatment BMP or drainage facility. This standard does not require that 100% of the applicable redevelopment site area be directed into the post-construction water quality treatment BMP(s) or drainage facility as long as the overall removal goal is met or exceeded (for example: providing increased removal for a smaller area); or
3. Infiltrate, evaporate, or evapotranspiration, through practices such as Green Infrastructure, a quantity of water equal to 30% of what the calculated WQCV would be if all impervious area for the applicable redevelopment site discharged without infiltration.

## 10-04-06 Total Maximum Daily Load (TMDL) Requirements

The County reserves the right to impose additional requirements during Development Review, if a stormwater-based TMDL has been adopted for the stream segment or lake into which the proposed development will directly or indirectly discharge. Additional requirements may include pollution source controls, buffer zones, runoff treatment of a specific pollutant, selection of post-construction BMP according to the TMDL's pollutant removal goals, etc.

## 10-04-07 Acceptable Post-Construction Water Quality Treatment BMPs

All permanent post-construction water quality treatment BMPs or drainage facilities within unincorporated Adams County shall be designed and maintained to meet erosion control, groundwater recharge and stormwater runoff quantity and quality standards of these Stormwater Quality Regulations; MHFD's Urban Storm Drainage Criteria Manual, Volume 3 as amended, and/or equivalent criteria.

The County allows, but is not limited to, the following types of permanent post-construction water quality treatment Best Management Practices (BMPs) or drainage facilities:

1. Bioretention/Rain Garden
2. Sand Filter
3. Extended Detention Basin
4. Permeable Pervious Pavers
5. Other water quality drainage facilities will be considered on a case-by-case basis. Refer to Sec. 10-04-08, *Proprietary or Alternative Post-Construction Water Quality Treatment Facilities*.

# 10-04-08 Proprietary or Alternative Post-Construction Water Quality Treatment Facilities

The technology of post-construction water quality treatment facilities is constantly changing. New innovations are developed and existing technologies are refined to be more effective. The acceptable drainage facilities listed in Sec. 10-04-07, *Acceptable Post-Construction Water Quality Treatment BMPs*, are not meant to be comprehensive. Should the owner or engineer desire to use other post-construction water quality treatment BMPs, it will be necessary to provide documentation that adequately demonstrates an alternative post-construction water quality treatment BMP or drainage facility option can effectively control stormwater runoff quality. Proprietary or alternative post-construction water quality treatment BMP options will be reviewed on a case-by-case basis.

# 10-04-09 Permanent Post-Construction Water Quality Treatment BMP Constructed Outside Unincorporated Adams County

When the location of the permanent post-construction water quality treatment BMP or drainage facility of an applicable site is designed and constructed to meet the requirements of these Stormwater Quality Regulations outside of the jurisdictional control of Adams County, the Developer needs to request to the adjacent local jurisdiction a written letter stating the permanent post-construction water quality treatment BMP or drainage facility is accepted by that local jurisdiction as part of the local jurisdiction's Post-Construction Program to ensure said permanent post-construction water quality treatment BMP is designed, constructed and accepted to ensure long-term maintenance of said infrastructure.

# 10-04-10 [RESERVED]

# 10-04-11 Source Control BMPs

Applicable sites shall be required to provide on-site structural and/or non-structural source controls to reduce the potential for illicit discharges into the storm drainage system from the normal operation of the constructed site. Examples of normal site activities which have the potential for pollutants to be discharged and carried off in stormwater runoff include, but are not limited to:

1. Outside material storage
2. Vehicle washing
3. Vehicle maintenance
4. Outside manufacturing
5. Painting operations
6. Above ground storage tanks
7. Loading and unloading areas
8. Fueling
9. Power washing

## 10-04-11.A Structural Source Controls and Pre-Treatment

Applicable sites that propose outdoor uses and activities that are deemed by the County to have the potential to create illicit discharges shall be required to provide special source control Best Management Practices (BMPs) and/or pre-treatment. The source control BMPs and/or pre-treatment shall be designed to prevent the contamination of stormwater runoff prior to reaching the site's permanent post-construction water quality treatment BMP or drainage facility. Source control BMPs or pre-treatment can include, but are not limited to:

1. Permanent covering of outdoor storage areas
2. Spill containment and control (secondary containment, curbing, diking, etc.)
3. Proper storm versus sanitary sewer connections to avoid cross connections
4. Provision of designated storage and material handling areas
5. Provision of proper dumpster/waste receptacles
6. Run-on flow diversion to avoid contact with hot spots/sources of pollution
7. Signage for dedicated snowpile storage areas (single family residential lots are exempted)
8. Floating oil absorbent skirts inside storm inlets
9. Baffle walls or inserts in storm boxes to intercept large trash and sediments.
10. Sand-oil separators
11. Hydrodynamic separators

### 10-04-11.B Non-Structural Controls

Non-Structural Controls or Best Management Practices (BMPs) reduce or prevent contamination of stormwater runoff by decreasing pollutant generation through changes in behavior. Non-structural controls are extremely effective, as they typically prevent or eliminate the entry of pollutants into stormwater at their source. The County encourages all development and redevelopment to require and implement non-structural controls throughout their site and within their facility operational practices. Non-structural Controls or BMPs, which may provide a significant benefit to water quality, include:

1. General good housekeeping practices
2. Preventative maintenance
3. Recycling programs
4. Spill prevention and response
5. Employee education and training
6. Sweeping programs

## 10-04-12 Ownership

Permanent post-construction water quality treatment BMPs, as well as detention drainage facilities, located on private property shall be operated, repaired, maintained and replaced as necessary by the landowner of the property on which the drainage facility is located within unincorporated Adams County, unless there is a signed and approved Operation and Maintenance (O&M) Plan or recorded document stating that a person other than the landowner shall be responsible for the operation, repair, maintenance and replacement of such facility.

Prior to the approval of the development or redevelopment, the County may require the landowner to create an association to be responsible for the operation, repair, maintenance and replacement of the drainage facility. The bylaws, covenants and restrictions of the association shall include the legal responsibility to operate, repair, maintain and replace the drainage facility installed in the development, as well as legal authority to levy an assessment on each property owner to pay for the operation, repair, maintenance and replacement of the drainage facility, and provisions for a lien on an owner's property for failure to pay the assessment.

# 10-04-13 Inspections

The landowner or person responsible for any applicable drainage facility shall perform regular inspections in accordance with the adopted criteria manuals or as specified in the Operation and Maintenance (O&M) Plan. Inspection records shall be retained for at least five (5) years and shall be readily available to the County upon request.

# 10-04-14 Operation and Maintenance of Water Quality Treatment or Drainage Facilities

An important part of water quality management is the continued maintenance of permanent post-construction water quality treatment BMP or drainage facilities to ensure they function as designed.

Repair, maintenance and replacement of drainage facilities include routine and non-routine operations. Routine maintenance may include inspections, lawn mowing and care, debris and litter removal, minor erosion mitigation, mechanical repairs, mosquito control, and sediment removal. Non-routine procedures may include removal of large amounts of accumulated sediments, dredging the bottom of a pond, restoration of large eroded areas, fence repair or replacement, restoration of vegetation and structural repairs.

The owner of the property located within unincorporated Adams County is responsible for the maintenance in perpetuity of all drainage facilities as well as the drainage system that conveys stormwater flows (such as storm inlets, storm manholes, storm pipes, culverts, channels, swales, ditches, hydraulic structures, emergency spillways and pathways, etc.) located on private land unless modified by the Improvements Agreement, recorded Plat, approved Operation and Maintenance Manual or other acceptable recorded document. Preventative and corrective maintenance and replacement shall be performed to maintain the function and integrity of the permanent post-construction water quality treatment BMP or drainage facility and the related drainage conveyance system.

## 10-04-14.A Maintenance Requirement

The County requires maintenance of the private storm sewer systems, including permanent post-construction water quality treatment BMPs or drainage facility. The obligation to maintain drainage facilities and the County's legal right to enforce that obligation is a requirement of this Section. This obligation may also be memorialized on the Subdivision Plat, Annexation Map, Improvements Agreement, Operation and Maintenance Manual or other instrument in a form acceptable to the County.

When recording a Plat, the maintenance requirement for the private storm sewer system shall be clearly stated within the plat notes. Refer to Addendum B for Drainage Maintenance and Access Easement requirements, or equivalent statement, that must be included in applicable Plats or as standalone Easement Deeds. The documents shall be filed in the office of Adams County Clerk and Recorder, and the terms thereof shall run with the land and be binding on all subsequent owners of the property, the person responsible for operation, repair, maintenance and replacement of the drainage facility or his or her successors and assigns, to ensure structural permanent post-construction water quality treatment BMPs or drainage facilities function as designed are preserved and not altered.

## 10-04-14.B Maintenance Access and Drainage Easement

Adams County requires maintenance access be provided to private storm drainage facilities to assure continuous operational capability of the system.

The property owner shall designate a maintenance access around the perimeter of storm drainage facilities, such as providing a stabilized maintenance access to the bottom of the water quality and/or detention drainage facility, or providing inspection ports and access manholes for underground drainage systems; and ensure all necessary storm manholes and inlets are located properly and accessible to allow maintenance of the storm drainage conveyance system.

The property owner shall designate a Maintenance Access and Drainage Easement sufficient to ensure access to all drainage facilities on a permanent basis for the purpose of inspection, operation, repair, maintenance and replacement. Such easement shall be recorded in the office of the Adams County Clerk and Recorder and the easements shall run with the land. Should the property owner fail to adequately maintain said facilities, the County shall have the right to enter said land for the purposes of performing the repair or maintenance at the owner's cost and expense.

## 10-04-14.C Operation and Maintenance Plan

In addition to the Easement, the property owner is responsible for recording an Operation and Maintenance (O&M) Plan once the drainage facility is constructed. The O&M Plan shall include:

1. Indicate person responsible for inspecting and performing long-term operation, repair, maintenance and replacement, emergency repairs, of all permanent post-construction water quality treatment BMPs or drainage facility;
2. Description and identification of all stormwater drainage facilities, structural and non-structural;
3. Description of specific preventative maintenance tasks and maintenance frequency for all drainage facilities;
4. Description of inspection procedures and frequency for all drainage facilities;
5. Designation of Maintenance Access and Drainage Easements on the property sufficient to ensure access to all drainage facilities;
6. Operational standards from the manufacturer of any manufactured proprietary BMPs structure or drainage device;
7. Other information or provisions as required by the County.

Refer to Addendum A for the O&M Plan template.

# 10-04-15 Right of Entry

Refer to Chapter 15 of this DSR for the authority to enter onto private property within unincorporated Adams County for inspection purposes. The inspection may include, but is not limited to, the following: sampling of any discharge and/or process waters; taking of photographs; interviewing staff on alleged violations; and access to any and all facilities or areas within the premises that may have any effect on the discharge.

# 10-04-16 Post-Construction Violations

The following is a non-exhaustive list of violations of the Stormwater Quality Regulations post-construction:

1. Failure to maintain drainage facilities.

2. Failure to perform regular post-construction inspections.
3. Failure to submit requested documentation to the County upon request.
4. Failure to adequately respond to the County's written directives.
5. An illicit discharge into the County's MS4.

If operation standards for drainage facilities are not being met; or repairs, maintenance or replacement of the permanent post-construction water quality treatment BMP or drainage facility is required, the County may, in writing, direct the landowner and/or the person responsible therefore, or their agents or representatives, to correct operational failures, repair, maintain, replace and/or install any post-construction water quality treatment BMP or drainage facility in order to keep the post-construction water quality treatment BMP or drainage facility in acceptable working condition.

# Div. 10-05 Illicit Discharges

No person shall cause, allow, or contribute to the discharge of pollutants into the private or public storm drainage system within unincorporated Adams County.

## 10-05-01 Prohibition of Illicit Discharges

1. No person shall discharge or cause to be discharged into the private or public storm drainage system or watercourses any pollutants or waters containing any pollutants that cause or contribute to a violation of applicable State of Colorado water quality standards, or any State of Colorado TMDL, other than stormwater.
2. It shall be a violation of these Stormwater Quality Regulations to cause pollutants to be deposited in such a manner or location as to constitute a threatened illicit discharge into the storm drainage system or Waters of the State.

## 10-05-02 Prohibition of Illicit Connections

1. The construction, use, maintenance or continued existence of illicit connections to the storm drainage system is prohibited.
2. The prohibition expressly includes illicit connections made prior the effective date of this Section, regardless of whether the connection was permissible under law or practices applicable or prevailing at the time of connection.

## 10-05-03 Exemptions

The commencement, conduct or continuance of any illicit discharge to the storm drainage system is prohibited except as described as follows:

1. The following non-stormwater discharges are exempt from the discharge prohibitions established by this Section when managed according to County regulations:
    a. Discharges from potable water sources, including waterline flushing, in accordance with CDPHE Water Quality Control Division's Low Risk Policy Discharge Guidance for Potable Water as amended. Potable water shall not be used in any other additional process such as, but not limited to, any type of washing, heat exchange, manufacturing, or hydrostatic testing of pipelines not associated with treated water distribution systems;
    b. Uncontaminated pumped groundwater, (not including construction dewatering systems);

c. Landscape irrigation and lawn watering;
d. Irrigation return flow;
e. Springs;
f. Rising groundwater;
g. Air conditioning condensation;
h. Uncontaminated water from crawl space pumps;
i. Individual residential car washing;
j. Foundation drains;
k. Roof drains;
l. Footing drains;
m. Dechlorinated swimming pool discharges in accordance with CDPHE Water Quality Control Division's Low Risk Discharge Guidance: Swimming Pools;
n. Diverted stream flows;
o. Dye testing, in accordance with the manufacturer's recommendations and that notification is provided to the County prior to the test;
p. Flow from natural riparian habitats and wetlands;
q. Uncontaminated groundwater infiltration (not including construction dewatering systems);
r. Water incidental to street sweeping (including associated sidewalks and medians) not associated with construction;
s. Discharges resulting from emergency firefighting activities;
t. Stormwater runoff with incidental pollutants; and
u. Discharges that are in accordance with the CDPHE Water Quality Control Division's Low Risk Policy guidance documents or other policies and guidance documents where the Division has stated that it will not pursue permit coverage or enforcement for specified point source discharges.

2. Agricultural stormwater runoff.
3. Permitted discharges with a NPDES or CDPS permit, waiver or waste discharge order issued to the discharger and administered under the authority of the Environmental Protection Agency or Colorado Department of Public Health and Environment as being necessary to protect public health and safety, provided the discharger is in full compliance with all requirements of the permit, waiver or order and other applicable laws and regulations, and provided written approval has been granted for any discharge to the storm drainage system.

## 10-05-04 Water Course Protection

Dumping or disposal of debris such as yard waste, shopping carts, brush, fill, etc. on natural channels, streams or watercourses is prohibited to avoid flood hazards. Debris can clog culverts, divert flows, and reduce the conveyance capacity of channels, streams and watercourses.

Adams County may remove during an emergency, or require the landowner to remove, any obstruction to any natural channel, stream or watercourse which causes a flood hazard, and for such purpose shall have the right of access to any such natural stream corridor, which access shall be accomplished through existing gates and roads, whenever possible.

Any person owning, leasing or otherwise occupying property through which a natural channel, stream or watercourse passes shall keep and maintain that part of the watercourse within the property free of trash, debris, excessive vegetation, animal waste and other obstacles that would pollute, contaminate, or significantly retard the flow of water through the watercourse. In addition, the landowner, lessee or tenant shall maintain existing privately owned approved structures within or adjacent to a watercourse, so that such structures will not become a hazard to the use, function, or physical integrity of the watercourse.

# CHAPTER 11 AREAS AND ACTIVITIES OF STATE INTEREST

**Contents:**

Div. 11-01 Definitions
Div. 11-02 Areas and Activities of State Interest

## Div. 11-01 Definitions

The definitions listed in this Section shall apply only to Chapter 11, regulations governing Areas and Activities of State Interest. The words and terms used in this Chapter governing Areas and Activities of State Interest shall have the meanings set forth below. If a definition is not included in those listed below, then the definition listed in Chapter 16 shall govern. If there is a conflict between the definitions in Chapter 16 and the definitions in this Chapter, then the definitions in this Chapter shall prevail. If the term is not found in this Chapter or in Chapter 16, the term shall have its common meaning.

### 11-01-01 AASI PERMIT/PERMIT

A permit issued pursuant to this Section by the Board of County Commissioners that covers an area or activity of state interest.

### 11-01-02 AFFECTED PARTY

Any person with an interest in the outcome of the permit decision for the Proposed Project.

### 11-01-03 AIRPORT

Any proposed or existing municipal or county airport or airport under the jurisdiction of an airport authority formed under the "Public Airports Authority Act" of 1965, as amended.

### 11-01-04 APPLICANT

A Person submitting an application for a Permit to engage in a development in a designated Area of State Interest or to conduct a designated Activity of State Interest, who is either the owner of the property to be developed, has written permission from the property owner for submittal of the project proposal, or has authority to condemn the property.

### 11-01-05 AQUIFER RECHARGE AREA

Any area where surface water may infiltrate to a water-bearing stratum of permeable rock, sand or gravel. This definition shall also include areas around wells used for disposal of wastewater or toxic pollutants.

### 11-01-06 AREA AROUND A RAPID OR MASS TRANSIT FACILITY

An area immediately surrounding and directly affected by a Rapid or Mass Transit Facility as defined herein.

### 11-01-07 ARTERIAL HIGHWAY

Any limited access highway that is part of the federal-aid interstate system, any limited access highway constructed under the supervision of the Colorado Department of Transportation or any private toll road constructed or operated under the authority of a private toll road company. "Arterial highway" does not

include a city street or local service road or a county road designed for local service and constructed under the supervision of local government.

**11-01-08 BUILDING**

Any structure having a roof supported by columns or walls and intended for supporting or sheltering any use or occupancy.

**11-01-09 BUILDING PERMIT**

A permit that is issued by the Adams County Community and Economic Development Department Section prior to the erection, construction, alteration, moving, relocation or change of use of any building or structure.

**11-01-10 COLLECTOR HIGHWAY**

A major thoroughfare serving as a corridor or link between municipalities, unincorporated population centers or recreation centers, or industrial centers and constructed under guidelines and standards established by, or under the supervision of, the Department of Public Works. "Collector Highway" does not include a city street or local service road or a county road designed for local service and constructed under the supervision of local government.

**11-01-11 COST**

The total monetary amount to be paid for a development project, generally including all amounts to be paid for land acquisition, capital improvements, construction, fixtures, equipment, labor, materials, operation, financing, debt service, planning, permitting and similar purposes.

**11-01-12 DEDICATION**

The conveyance or setting aside of land to the County.

**11-01-13 DESIGNATION**

That legal procedure specified by C.R.S § 24-65.1-401 *et seq*. for designating Matters of State Interest. It also includes the revocation and amendment of such designations.

**11-01-14 DETERMINATION**

Determination of Level of Permit Review or amendment by the Director of Community and Economic Development.

**11-01-15 DEVELOPMENT**

Any construction, activity and/or ongoing operation that changes the basic character or the use of the environment in which the construction, activity or operation occurs.

**11-01-16 DEVELOPMENT AREA**

Those geographic areas within the County, which shall be developed or altered directly by construction or operation of the Project.

**11-01-17 DEVELOPMENT PERMIT**

Any Adams County land use permits or approvals of any kind, including, but not limited to, building permits, special uses, temporary uses, conditional uses, site plan approvals, plat approvals, stormwater quality permits, grading permits and other land use permits.

**11-01-18 DISTRIBUTION SYSTEM**

A network of pipes and conduits through which water is piped for human consumption or a network of pipes and conduits through which water is piped in exchange or trade for water for human consumption. Also a network of distribution power lines, natural gas distribution lines, substations, and other associated equipment to convey electricity to the end-use consumer.

**11-01-19 DOMESTIC WATER AND WASTEWATER TREATMENT SYSTEM**

A Wastewater Treatment Plant, Water Treatment Plant, or Water Supply System.

**11-01-20 EFFICIENT USE OF WATER**

The employment of methods, procedures, techniques, and controls to encourage use of water for purposes, and in amounts, which shall yield the greatest possible benefit to the greatest number of people, while promoting, where feasible and appropriate, the conservation of water in particular uses. Such benefits shall include economic, social, aesthetic, ecological, agricultural and recreational benefits.

**11-01-21 ENVIRONMENT**

All natural physical and biological attributes and systems including the atmosphere, climate, geology, soils, groundwater, surface water, wetlands, vegetation, animal life, physical features, natural hazards, topography and aesthetics.

**11-01-22 FIXED GUIDEWAY**

A transportation facility consisting of a dedicated separate right-of-way or rail line for the exclusive use of rapid or mass transit vehicles.

**11-01-23 GEOLOGIC HAZARD**

A geologic phenomenon, which is so adverse to past, current, or foreseeable construction or land use as to constitute a significant hazard to public health and safety or to property. The term includes but is not limited to:

1. Avalanches, landslides, rock falls, mudflows, and unstable or potentially unstable slopes;
2. Seismic effects;
3. Radioactivity; and
4. Ground subsidence.

**11-01-24 GEOLOGIC HAZARD AREA**

An area that contains or is directly affected by a Geologic Hazard.

**11-01-25 HIGHWAY**

State and federal highways and major county arterials.

**11-01-26 IMPACT AREA**

Those geographic areas, including the Development Area, in which any impacts are likely to be caused by the Project within 500 feet or as increased by the Director of Community and Economic Development or their designee, measured from the property line(s) of the Proposed Project.

**11-01-27 INDUSTRIAL**

Any development of natural resources, business or trade, commercial activity, processing, fabrication, alteration or manufacture of raw or semi-processed materials, manufactured goods or any components thereof.

**11-01-28 INTERCHANGE**

The intersection of two or more Highways, roads, or streets, at least one of which is an Arterial Highway where there is direct access to and from the Arterial Highway.

**11-01-29 IRRIGATION FACILITIES**

Infrastructure or improvements intended to supply of convey water to dry land for agricultural purposes. Irrigation facilities do not include infrastructure or improvements designed to provide or transport water for application in municipal purposes, including domestic consumption.

**11-01-30 MAJOR EXTENSION OF DOMESTIC SEWAGE TREATMENT SYSTEM**

Any modification of an existing Wastewater Treatment Plant designed and intended to serve a Proposed Project and/or Service Area, regardless of whether such use is residential, commercial or industrial.

**11-01-31 MAJOR EXTENSION OF DOMESTIC WATER TREATMENT SYSTEM**

The expansion of existing Water Treatment Plants, or any extension of existing Water Supply Systems to serve a Proposed Project and/or Service Area, regardless of whether such use is residential, commercial or industrial.

**11-01-32 MAJOR FACILITIES OF A PUBLIC UTILITY**

1. Transmission lines, power plants, and substations of electrical utilities; and
2. Pipelines and storage areas of utilities providing natural gas or other petroleum derivatives.
3. Wind farms and associated equipment.

**11-01-33 MAJOR NEW DOMESTIC SEWAGE TREATMENT SYSTEM**

Any new Wastewater Treatment Plant designed and intended to serve a Proposed Project and/or Service Area, regardless of whether such use is residential, commercial or industrial.

**11-01-34 MAJOR NEW DOMESTIC WATER TREATMENT SYSTEMS**

Any new Water Treatment Plant or Water Supply System designed and intended to serve a Proposed Project and/or Service Area, regardless of whether such use is residential, commercial or industrial.

**11-01-35 MAJOR WATER AND SEWER PROJECT**

Major New Domestic Water and Sewage Treatment Systems; Major Extensions of Existing Water and Sewage Treatment Systems; and Municipal and Industrial Water Projects.

**11-01-36 MASS TRANSIT**

A coordinated system of one or more transit modes providing regular transportation to the general public including, but not limited to, bus or rapid transit but not including charter bus, school bus, or sightseeing transportation.

**11-01-37 MATTER OF STATE INTEREST**

An Area of State Interest or an Activity of State Interest, or both, as listed in C.R.S. §§ 24-65.1-201(1) - 203(1).

**11-01-38 MITIGATION**

An action that will have one or more of the following effects:

1. Avoiding an impact by not taking a certain action or parts of an action;
2. Minimizing impacts by limiting the degree or magnitude of the action or its implementation;
3. Rectifying the impact by repairing, rehabilitating, or restoring the impact area, facility or service;
4. Reducing or eliminating the impact over time by preservation and maintenance operations;
5. Compensating for the impact by replacing or providing suitable biological and physical conditions; and by replacing or providing suitable services and facilities.

**11-01-39 MUNICIPAL OR INDUSTRIAL WATER PROJECT**

Systems and all related components thereof that provide or may provide in the future, water supply, either directly or by trade, substitution, augmentation or exchange, for municipal or industrial uses.

**11-01-40 NATURAL HAZARD**

A natural phenomenon that so conflicts with construction or land use as to constitute a significant hazard to public health and safety or to property including, without limitation, geologic hazards, flood hazards, and wildfire hazards.

**11-01-41 NET EFFECT**

The impact of an action after Mitigation.

**11-01-42 ON-SITE WASTEWATER TREATMENT SYSTEM**

Treatment of wastewater using septic tank and leach fields.

**11-01-43 PERMIT**

See AASI Permit/Permit.

**11-01-44 PERMIT AUTHORITY**

The Board of County Commissioners of their designee.

**11-01-45 PERMIT HOLDER**

Person to whom a Permit has been granted.

**11-01-46 PERSON**

Any individual, limited liability company, partnership, corporation, association, company, or other public or corporate body, including the federal government, and includes any political subdivision, agency, instrumentality, or corporation of the State of Colorado or the United States.

**11-01-47 PROJECT OR PROPOSED PROJECT**

The site selection, construction, development, or operation of an activity or other development proposed under these Regulations throughout its life cycle including all ancillary structures, facilities, improvements, and activities, and all integrated components thereof, and any proposed land use directly related to such project if such project is to be located wholly or partially within the County. A project cannot be segmented to avoid the requirements of these Regulations. If a project is to be phased over time or is composed of distinguishable elements, the impacts of all phases or elements of the development must be considered together when reviewing the project hereunder and determining if it satisfies these Regulations.

**11-01-48 PUBLIC SERVICES AND FACILITIES**

Those services and facilities provided by a political subdivision of the State or by a federal agency.

**11-01-49 PUBLIC UTILITY**

Includes any utility or company that is generating or selling electricity or producing or selling natural gas to the general public or other companies.

**11-01-50 RAPID OR MASS TRANSIT FACILITY**

A Station or Terminal constructed to provide and facilitate passenger access and egress to a Rapid or Mass Transit System, Fixed Guideways, dedicated highway lanes restricted to use by only mass transit vehicles, restricted dedicated flyovers and restricted dedicated access to Stations or Terminals, or highway access and egress facilities restricted to use only by mass transit vehicles.

**11-01-51 RAPID TRANSIT**

The element of a Mass Transit system involving a mechanical conveyance on an (a) exclusive lane or guideway, (b) rail trackage, or (c)monorail facility, which lane/guideway, trackage or facility is constructed solely for that purpose.

**11-01-52 RECYCLING**

The treatment and use of wastewater or water in a manner that shall make it available for use again. Also included is the reuse of solid waste material.

**11-01-53 SERVICE AREA**

The primary geographic area to be served by the Proposed Project.

**11-01-54 SERVICE ROAD**

A street or road meeting County specifications used to provide ingress and egress to a development located adjacent to a highway.

**11-01-55 SHELTER**

A building or structure designed primarily to provide a waiting area for transit passengers.

**11-01-56 SITE SELECTION, RAPID OR MASS TRANSIT FACILITY**

The process for determining the location of Rapid or Mass Transit Facilities or the substantial expansion or relocation of an existing facility, by a recognized and bona fide mass transit agency or authority, the County, the State, or the federal government or any subdivision of each and or any private entity or person.

**11-01-57 STATION OR TERMINAL**

A facility constructed to provide and facilitate passenger access to and from a Rapid or Mass Transit System including areas necessary for vehicle operations, and parking areas for commuters and roadways connecting to the general road and street system of Adams County. Stations shall include any proposed regularly scheduled stop or planned optional or seasonal boarding point on a Rapid or Mass Transit System. Dedicated Park and Ride facilities with fifty or more parking spaces shall be deemed Stations for the purposes of these regulations, with or without a shelter facility. Shelters alone, or as part of traditional bus stops and pull-outs lacking fifty dedicated spaces are not considered Stations or Terminals for the purposes of this Chapter.

**11-01-58 STREAM SEGMENT**

An identifiable lake or reservoir or a stretch of a stream or tributary defined on the basis of common classified uses and similar physical, chemical and biological characteristics, up to the point at which the use or characteristic changes to another.

**11-01-59 TERMINAL**

See Station or Terminal.

**11-01-60 TRANSPORTATION CORRIDOR**

Any County or municipal street or road, any State or federal highway, and any railroad operating as a common carrier.

**11-01-61 USE**

The purpose or activity for which a parcel of land, a building or structure is designed, arranged, or intended, or for which it is occupied or maintained based on land use regulations.

**11-01-62 WASTEWATER TREATMENT PLANT**

A facility or group of units, including any system of pipes, structures, and facilities through which wastewater is collected for treatment, that is used for treatment of industrial or domestic wastewater from sewer systems and for the reduction and handling of solids and gases removed from such wastes, whether or not such facility or group of units discharges into State waters.

**11-01-63 WATER DIVERSION**

Removing water from its natural course or location, or controlling water in its natural course or location, by means of a ditch, canal, flume, reservoir, bypass, pipeline, conduit, well, pump, or other structure or device.

**11-01-64 WATER SUPPLY SYSTEM**

A system of wells, diversions, pipes, structures, and facilities, including water reservoir(s), or water storage, impoundments and their associated structures, through which a water supply is obtained, stored, and sold or distributed for domestic uses; or the system of wells, diversions, pipes, structures, and

facilities, including impoundments, through which a water supply is obtained which will be used directly or by trade, substitution, augmentation or exchange, for water which will be used for human consumption or household use. In determining whether a project is a domestic water supply system the Board shall consider water rights decrees, pending water rights applications, intergovernmental agreements, water supply contracts, and any other evidence of the ultimate use of the water.

**11-01-65 WATER TREATMENT PLANT**

The facilities within the water supply system that regulate the physical, chemical, or bacteriological quality of the water.

**11-01-66 WILDLIFE**

Native or introduced wild vertebrates or invertebrates.

**11-01-67 WILDLIFE HABITAT**

That natural or man-made environment which contains the elements of food, shelter, water and space in a combination and quantity necessary for the survival of one or more wildlife species.

# Div. 11-02 Areas and Activities of State Interest

A. **Authority**. This Chapter is authorized by C.R.S. § 24-65.1-101 *et seq*.

B. **Applicability**. This Chapter shall apply to all Matters of State Interest in the unincorporated areas of the County that have been or may hereafter be designated by the Board of County Commissioners, whether located on private or public lands.

C. **Exemptions**.

1. *Statutory and Specific Exemptions*. This DSR shall not apply to any development in an Area of State Interest or any Activity of State Interest if any one of the following conditions existed as of May 17, 1974:

   a. The specific development or activity was covered by a current Building Permit issued by the County;

   b. The specific development or activity was directly approved by the electorate of the State or the County (provided that approval of any bond issue by itself shall not be construed as approval of the specific development or activity);

   c. The specific development or activity is to be on land finally approved by the County for Planned Unit Development or substantially similar development;

   d. The specific development or activity is to be on land zoned or rezoned for the use contemplated by such development or activity; or

   e. The specific development or activity is on land with respect to which a development plan has been conditionally or finally approved by the County.

2. *Activity-Specific Exemptions*. This Chapter shall not apply to any of the following:

   a. Water Infrastructure Replacement. Replacement of an existing water diversion structure without change in the point of diversion, point of use, or yield from the diversion.

   b. Irrigation Facilities. All irrigation facilities.

   c. Required Facility Upgrades. Upgrades to existing facilities that are required maintenance or otherwise required by Federal, State, or County regulations, including repairing or replacing old or outdated equipment, or installing new equipment or ancillary facilities, provided:

(1) The improvements do not expand levels of service beyond the original design capacity;

(2) The improvements do not expand levels of service beyond acceptable levels of expansion as determined by the Director of Community and Economic Development; and

(3) The upgrade does not alter the location of the existing facility.

d. County Government Projects. Unincorporated Adams County Government projects.

e. Water System Construction. The construction or extension of water distribution systems, domestic water systems, municipal or industrial water projects, water supply systems, water treatment plants, or major new domestic water treatment systems with pipelines that do not exceed 36 inches in diameter, subject to the following requirements:

(1) Projects with pipelines 36 inches in diameter or smaller shall request a pre-application meeting for the Director of Community and Economic Development to conduct a review to determine applicability pursuant to subsection F;

(2) All districts within three miles of the proposed project shall be invited to the Conceptual Review meeting and notified of the applicability decision; and

(3) If the Director of Community and Economic Development determines that an AASI permit is required due to project impacts, the applicant shall submit an AASI application in accordance with the procedures outlined in Section F.

D. **Relationship to Other Regulations.**

1. *Regulatory Conflicts*. If any provision of this Chapter is deemed inconsistent or in conflict with any other County regulations or requirements, the more stringent regulation or requirement shall apply as determined by the County.

2. *Compliance Requirements*. Compliance with this DSR does not waive the requirement to comply with any other applicable State, local, or federal law or regulation.

3. *Coordinated Review.*

a. Generally. Any Applicant for a Permit under this Chapter that is also subject to regulations of other State or federal agencies may request that the County application and review process be coordinated with that of the other agency.

b. Major Electrical and Natural Gas Facilities – Coordination with State-Mandated Review Periods.

(1) **Applicability.** This subsection D(3)(b) applies to any application for a permit under this Chapter that also constitutes an application by a public utility or power authority providing electric or natural gas service relating to the location, construction, or improvement of a "major electrical or natural gas facility" as defined by C.R.S. § 29-20-108.

(2) **State-Mandated Procedures and Deadlines.** Notwithstanding any other provision of this DSR, an application subject to this subsection D(3)(b) shall be processed in accordance with all applicable requirements of C.R.S. § 29-20-108 and C.R.S. § 24-65.1-501. In the event of any conflict between this subsection D(3)(b) and applicable state law, state law shall control to the extent of the conflict.

(3) **Completeness Review.** Within 28 days after submission of an application subject to this subsection D(3)(b), the County shall notify the applicant in writing of any additional information required to complete the application, identifying the particular provisions of this DSR that require the information. The County shall not request additional information from the applicant after expiration of the 28-day period in a manner that extends a statutory deadline established by C.R.S. § 29-20-108.

(4) **Final Action.** For an application subject to C.R.S. § 29-20-108(2), the County shall take final action within the period prescribed by that statute: (1) within 120 days after submission of a preliminary application if a preliminary application is required by this DSR; or (2) within 90 days after submission of the final application if a preliminary application is not required. The applicable period shall commence and be administered in accordance with C.R.S. § 29-20-108(2).

(5) **1041/Transmission-Facility Deadline.** Where C.R.S. § 24-65.1-501(2)(d) applies because the development or activity involves construction or expansion of transmission facilities for which the applicant has sought a certificate of public convenience and necessity from the Public Utilities Commission pursuant to C.R.S. § 40-2-126, the County shall also comply with the 180-day period and deemed approval provision established by C.R.S. § 24-65.1-501(2)(d).

(6) **Concurrent Deadlines.** The review periods established by subsections D(3)(b)(4) and (5) shall be administered concurrently. Compliance with one statutory deadline shall not be construed to extend, toll, or supersede another applicable statutory deadline unless expressly authorized by state law or by a written agreement between the County and the applicant that is permitted under applicable law.

(7) **Agreed Review Schedule.** Nothing in this subsection D(3)(b) shall prohibit the County and an applicant from entering into a written agreement establishing a different review schedule to the extent such agreement is expressly permitted by C.R.S. § 29-20-108 or other applicable law. Any such agreement shall identify the statutory deadline or deadlines affected and the agreed date for final action.

(8) **Final Action and Deemed Approval.** If the County fails to take final action within an applicable statutory period, the consequences established by the applicable statute, including any statutory deemed approval provision, shall apply.

(9) **Construction of this Chapter.** Nothing in this Chapter shall be construed to waive, enlarge, diminish, or modify any substantive standard, procedural requirement, appeal right, or deadline established by C.R.S. § 29-20-108, C.R.S. §§ 24-65.1-101 through 24-65.1-502, or other applicable state law or regulation.

4. *Multiple Matters of State Interest*. When an Applicant engages in Development or activity that implicates AASI Permit requirements for more than one Matter of State Interest, the Applicant shall complete and submit a single AASI Permit application that includes all affected areas and activities.

E. **Designated Areas and Activities of State Interest**.

1. *Activities Requiring Permits*. A Permit is required to conduct any of the following Activities of State Interest (unless otherwise exempted by this DSR):

a. Site selection and construction of major new domestic water and sewage treatment systems and major extension of existing domestic water and sewage treatment systems;

b. Site selection and development of solid waste disposal sites except those sites specified in C.R.S. § 25-11-203(1), sites designated pursuant to C.R.S. §§ 25-11-301 – 25-11-305, and hazardous waste disposal sites, as defined in C.R.S. § 25-15-200.3;

c. Site selection of airports;

d. Site selection of rapid or mass transit terminals, stations, and fixed guideways;

e. Site selection of arterial highways and interchanges and collector highways;

f. Site selection and construction of major facilities of a public utility;

g. Site selection and development of new communities;

h. Efficient utilization of municipal and industrial water projects;

i. Conduct of nuclear detonations; and

j. The use of geothermal resources for the commercial production of electricity.

2. *Additional Designations*. The Board may designate additional Matters of State Interest subsequent to the adoption of this DSR. Any proposed project in any subsequently designated Area of State Activity and the conduct of any subsequently designated Activity of State Interest shall also be subject to this DSR and shall require a Permit unless specifically exempted.

3. *Waiver.* In lieu of a permit application and review as provided by this Chapter, the County, at its sole discretion, may elect to negotiate an intergovernmental agreement with the State of Colorado or a political subdivision of the State, as defined by C.R.S. § 29-1-202(2), for activities of state interest. Intergovernmental Agreements are described in subsection O.

F. **Permit Application Process**.

1. *Presubmittal Meeting*. Before submitting an application for a Permit under this Chapter, any Person seeking to engage in an activity or Development subject to this DSR shall meet with Community and Economic Development Department staff. At this meeting, Community and Economic Development Department staff shall explain the regulatory process and requirements and submittal requirements.

2. *Submittal*. The Applicant shall submit the following prior to the presubmittal meeting:

a. A copy of the latest approved zoning and subdivision plans, a vicinity/Zoning Map, and Assessor Parcel Number(s) of the parcel(s) that are proposed to be developed.

b. A written summary of the Project that describes the impacts of the proposed project as it relates to applicable approval criteria that are sufficient for determining the applicability of AASI Permit Requirements that shall be required for the application.

c. A map and/or sketch prepared at an easily readable scale showing:

(1) Boundary of the proposed activity;

(2) Relationship of the proposed activity to surrounding topographic and cultural features such as roads, streams, and existing structures; and

(3) Proposed building, improvements, and infrastructure.

d. A presubmittal application form.

3. *Director of Community and Economic Development Determination*.

a. The Director of Community and Economic Development shall determine, in writing, the applicability of this article and Chapter to the conduct of particular proposed activities or Development. The Director of Community and Economic Development shall make this Determination within 10 business days after the Presubmittal Meeting in which the Applicant provides adequate information for the Director of Community and Economic Development to make such Determination.

b. If any Person is aggrieved by the Director of Community and Economic Development's Determination to include or exempt an activity from the AASI Permit regulations and procedures, that Person may file an appeal to the Board of County Commissioners no later than 10 business days after the date of the Director of Community and Economic Development's written Determination. See subsection I.

c. No Development Without Permit. If it is determined that the proposed project requires a Permit, no Person may engage in an Activity of State Interest or engage in Development in a designated Area of State Interest without first obtaining a Permit. No Permit shall be issued for any activity that does not comply with this DSR.

d. Process Land Use Applications Concurrently. Applicants are encouraged to submit an AASI Permit Application concurrent with or approximately at the same time as all other necessary land use applications. If an Applicant chooses not to submit all land use applications concurrently, the County encourages the Applicant to submit an AASI Permit Application around the same time as the Final Development Plan, or Final Plat or other similar land use process that is involved with site planning.

4. *Application Submittal Requirements*. The Director of Community and Economic Development may waive one or more of the submittal requirements when the submittal information would not be relevant to an analysis as to whether the Project complies with the approval criteria. Unless waived, the following submittal components are required:

a. *Application Fee.*

(1) The application package shall be accompanied by payment of the application fee for the AASI Permit review. The County shall establish and administer a schedule for such application.

(2) The Board of County Commissioners shall take no action on the application package until all fees and expenses related to the application review process have been paid.

(3) The Applicant shall also be responsible to pay for any consultant that the County may need to retain to analyze, evaluate, or provide information to the County regarding all or a portion of an application where County Staff does not have expertise. The selection of any consultants shall be subject to the approval of the Director of Community and Economic Development.

b. *Information Describing the Applicant.*

(1) The names, addresses, email address, fax number, organization form, and business of the Applicant, and if different, the owner of the Project.

(2) The names, addresses, and qualifications, including areas of expertise and experience with projects directly related or similar to that proposed in the application package, of individuals who are or shall be responsible for constructing and operating the Project.

(3) Authorization of the application by the Project owner, if different than the Applicant.

(4) Documentation of the Applicant's financial and technical capability to develop and operate the Project, including a description of the applicant's experience developing and operating similar projects.

c. *Information Describing the Project*.

(1) Detailed plans and specifications of the Project.

(2) Descriptions of at least three or more alternatives to the Project that were considered by the Applicant.

(3) Schedules for designing, permitting, constructing, and operating the Project including the estimated life of the Project.

(4) The need for the Project, including existing/proposed facilities that perform the same or related function; and population projections or growth trends that form the basis of demand projections justifying the Project.

(5) Description of all conservation techniques to be used in the construction and operation of the Project.

d. *Property Rights, Permits and Other Approvals.*

(1) A list and copies of all other federal, State, and local permits and approvals that have been or shall be required for the Project, together with any proposal for coordinating these approvals with the County permitting process.

(2) Copies of all official federal and State consultation correspondence prepared for the Project; a description of all Mitigation required by federal, State, and local authorities; and copies of any draft or final environmental assessments or impact statement required for the Project.

(3) Description of the water to be used by the Project and alternatives, including the source, amount, quality of such water, the Applicant's right to use the water, including adjudicated decrees, applications for decrees, proposed points of diversion, and existing uses of water. If an augmentation plan has been filed in court, the applicant shall submit a copy of that plan.

(4) Regional Water Quality Management Plan: Provisions of the regional Clean Water Plan, promulgated by the Denver Regional Council of Governments, that apply to the Project and assessment of whether the Project would comply with those provisions.

e. *Financial Feasibility of the Project.*

(1) The estimated construction costs and period of construction for each Development component.

(2) Revenues and operating expenses for the Project.

(3) The amount of any proposed debt and the method and estimated cost of debt service.

(4) Details of any contract or agreement for revenues or services in connection with the Project.

(5) Description of the persons or entity(ies) who shall pay for or use the Project and/or services produced by the Development and those who shall benefit from any and all revenues generated by it.

(6) Cost of all mitigation measures proposed for the Project.

(7) Detailed description as to how the Project shall be financed to show that the Applicant has the ability to finance the Project.

f. *Land Use*.

(1) Description of existing land uses within and adjacent to the Impact Area.

(2) Description of provisions from local land use plans that are applicable to the Project and an assessment of whether the Project shall comply with those provisions.

(3) Description of impacts and Net Effect that the project shall have on land use patterns.

(4) Description of the surrounding and/or impacted community(ies).

(5) Description of the surrounding and/or impacted Cultural Resources.

(6) Description of existing and unique agricultural land in the area.

g. *Local Government Services*.

(1) Description of existing capacity of and demand for local government services including roads, schools, water and wastewater treatment, water supply, emergency services, transportation, infrastructure, housing, law enforcement, and other services necessary to accommodate Development.

(2) Description of the impacts and Net Effect of the Project on the demand for local government services and the capability of local governments to provide services.

(3) Description of the potential effect on the existing transportation network including, but not limited to: road hierarchy, circulation system, road connections, right-of-way dedications, conformance with Adams County engineering standards, road access, alignment of roads, intersections, sidewalks and trails, pedestrian access, parks and open space.

h. *Financial Burden On County Residents*.

(1) Description of the existing tax burden and fee structure for government services including but not limited to assessed valuation, mill levy, rates for water and wastewater treatment, and costs of water supply.

(2) Description of impacts and Net Effect of the Project on existing tax burden and fee structure for government services applicable to County residents and property owners.

i. *Local Economy*.

(1) Description of the local economy including but not limited to revenues generated by the different economic sectors, and the value or productivity of different lands.

(2) Description of impacts and Net Effect of the Project on the local economy and opportunities for economic diversification, including the number and types of jobs created.

(3) Description of jobs created as a result of the Project.

(4) Description of income potential from jobs created by or as a result of the proposed project.

j. *Recreational Opportunities*.

(1) Description of present and potential recreational uses, including the number of recreational visitor days for different recreational uses and the revenue generated by types of recreational uses.

(2) Map depicting the location of recreational uses such as fishery stream segments, access points to recreational resources, and hiking and biking trails.

(3) Description of the impacts and Net Effect of the Project on present and potential recreational opportunities and revenues to the local economy derived from those uses.

k. *Environmental Impact Analysis.* The following is a non-exclusive list of items the Applicant shall submit for review by the Community and Economic Development Department and other referral agencies:

(1) Description of the existing natural environment and an analysis of the impacts of the project to the natural environment.

(2) Descriptions in this section shall be limited to the Impact Area, and shall include an analysis of existing conditions, supported with data, and a projection of the impacts of the project in comparison to existing conditions.

(3) The analysis shall include a description of how the Applicant shall comply with the Applicable Approval Criteria in subsection P.

a. Air quality.

(A) Description of the air sheds to be affected by the Project, including the seasonal pattern of air circulation and microclimates.

(B) Map and description of the ambient air quality and State air quality standards of the air sheds to be affected by the Project, including particulate matter and aerosols, oxides, hydrocarbons, oxidants and other chemicals, temperature effects and atmospheric interactions.

(C) Descriptions of the impacts and net effect that the Project shall have on air quality during both construction and operation under both average and worst-case conditions.

b. Visual Quality.

(A) Map and description of ground cover and vegetation, tree canopies, waterfalls and streams or other natural features.

(B) Description of view sheds, scenic vistas, unique landscapes or land formations.

(C) Map and description of buildings, structure design and materials to be used for the Project. Include elevations of proposed buildings and other structures.

(D) Descriptions of the impacts and Net Effect that the Project shall have on visual quality.

c. Surface Water Quality.

(A) Map and description of all surface waters, including applicable State water quality standards, to be affected by the project.

(B) Descriptions of the immediate and long-term impact and Net Effects that the Project shall have on the quantity and quality of surface water under both average and worst case conditions.

(C) Descriptions of the immediate and long-term impacts and Net Effects that the project shall have on the meandering characteristics and limits of the streambed under both average and worst-case conditions.

d. Groundwater Quality and Quantity.

(A) Map and description of all groundwater, including any and all aquifers that are affected by the proposed project. At a minimum, the description should include:

(I) Seasonal water levels in each subdivision of the aquifer affected by the Project.

(II) Artesian pressure in aquifers.

(III) Groundwater flow directions and levels.

(IV) Existing aquifer recharge rates and areas and the methodology used to calculate recharge to the aquifer from any recharge sources.

(V) For aquifers to be used as part of a water storage system, methodology and results of tests used to determine the ability of aquifer to impound groundwater and aquifer storage capacity.

(VI) Seepage losses expected at any subsurface dam and at stream/aquifer interfaces and methodology used to calculate seepage losses in the affected streams, including description and location of measuring devices.

(VII) Existing groundwater quality and classification.

(VIII) Location of all water wells and their uses. ii. Description of the impacts and Net Effect of the Project on groundwater.

e. Wetlands and Riparian Areas.

(A) Map and description of all floodplains, wetlands, and riparian areas to be affected by the project, including a description of each type of wetlands, species composition, and biomass, confirmed by a submitted wetland delineation that has been completed within a year of submission in the appropriate time of year.

(B) Description of the source of water interacting with the surface systems to create each wetland (i.e., side-slope runoff, over-bank flooding, groundwater seepage, etc.).

(C) Description of the impacts and Net Effect that the Project shall have on the floodplains, delineated flood hazard zone(s), wetlands and riparian areas.

f. Terrestrial and Aquatic Animals and Habitat.

(A) Map and description of terrestrial and aquatic animals including the status and relative importance of game and non-game wildlife, livestock and other animals.

(B) A description of stream flows and lake levels needed to protect the aquatic environment.

(C) Description of threatened or endangered animal species, as well as any species listed in the Colorado State Wildlife Action Plan (SWAP), and their habitat.

(D) Map and description of critical wildlife habitat and livestock range to be affected by the project including migration routes, calving areas, summer and winter range, and spawning areas, production areas, leks, wintering roost sites, and nests.

(E) Description of the impacts and Net Effect that the Project shall have on terrestrial and aquatic animals, habitat and food chain.

g. Terrestrial and Aquatic Plant Life.

(A) Map and description of terrestrial and aquatic plant life including the type and density, and threatened or endangered plant species and habitat.

(B) Descriptions of the impacts and Net Effect that the Project shall have on terrestrial and aquatic plant life.

h. Soils, Geologic Conditions and Natural Hazards.

(A) Map and description of soil, geologic conditions, and Natural Hazards including but not limited to soil types, drainage areas, slopes, avalanche areas, debris fans, mud flows, rock slide areas, faults and fissures, seismic history, and wildfire hazard areas.

(B) Descriptions of the risks to the Project from Natural Hazards.

(C) Descriptions of the impact and net effect of the project on soil and geologic conditions in the area, and their effects on streambed meander limits and aquifer recharge areas.

i. Nuisances. Descriptions and maps showing the range of noise, glare, dust, fumes, vibration, and odor levels caused by the Project, along with an indication of their significance.

j. Areas of Paleontological, Historic or Archaeological Importance.

k. Map and description of all sites of paleontological, historic or archaeological interest. ii. Description of the impacts and Net Effect of the Project on sites of paleontological, historic or archaeological interest.

l. Hazardous Materials Description.

(A) Description of all hazardous, toxic, and explosive substances to be used, stored, transported, disturbed or produced in connection with the Project, including the type and amount of such substances, their location, and the practices and procedures to be implemented to avoid accidental release and exposure, and any foreseeable impacts to the environment of such substances.

(B) Location of storage areas designated for equipment, fuel, lubricants, chemical and waste storage with an explanation of spill containment measures.

(C) Reportable quantities, emergency response plan, spill prevention, and counter measures plan due to the proposed project.

m. Balance Between Benefits and Losses.

(A) Description of foreseeable benefits of natural, agricultural, recreational, range or industrial resources within the County and opportunities to develop those resources in the future.

(B) Description of foreseeable losses of natural, agricultural, recreational, range or industrial resources within the County and loss of opportunities to develop those resources in the future.

n. Monitoring and Mitigation Plan.

(A) Description of all Mitigation for the Project.

(I) Describe how and when Mitigation shall be implemented and financed.

(II) Describe Impacts that are unavoidable that cannot be Mitigated.

(B) Description of methodology used to measure impacts of the project and effectiveness of proposed Mitigation measures.

(C) Description, location and intervals of proposed monitoring to ensure that Mitigation shall be effective.

l. *Referrals To Outside Agencies, Response To Referral Comments And Neighborhood / Scoping Meeting*.

(1) The Community and Economic Development Department shall determine which outside referral agencies may be affected by the proposed development and should receive referral packets. Potential referral agencies may include, but not be limited to homeowner's associations, local, regional, state and federal governmental entities, and service providers.

(2) The applicant shall provide written notice to property owners within five hundred feet of the property lines of the parcel(s) of land which the development is proposed. The Director of Community and Economic Development may extend the 500-foot property owner notice area as necessary. The written notice shall state the date, time, place, and purpose of the neighborhood/scoping meeting. All available information concerning the proposed project shall be presented by the Applicant or designee during the neighborhood/scoping meeting. A written summary of the meeting including comment sheets, and names, addresses, and phone numbers of attendees shall be submitted to the Community and Economic Development in order for an application to be considered complete.

(3) The Community and Economic Development Department shall review the referral packets in order to determine that there is sufficient information in the referral packet, including, but not limited to, AASI Permit information that pertains to the referral agency.

(4) The Applicant shall be responsible for putting the referral packets together and addressing the envelopes, but the Community and Economic Development Department shall be responsible for mailing the packets.

(5) The referral entities shall have 30 days to respond.

(6) The Applicant shall respond to all referral comments and that response shall be included as part of the application. This referral process is required, along with all other application submittal requirements, in order for an application to be considered complete.

G. **Additional Submittal Requirements**.

1. *Major Water and Sewer Projects*. In addition to the Submittal Requirements in subsection F above, the following requirements shall apply to Major Water and Sewer Projects:
   a. Description of existing Domestic Water and Wastewater Treatment Systems in the vicinity of the Project, including their capacity and existing service levels, location of intake and discharge points, discharge permit requirements, service fees and rates, debt structure and service plan boundaries and reasons for and against connecting to those facilities.
   b. Description of other water and wastewater management agencies in the project area and reasons for and against consolidation with those agencies.
   c. Description of how the Project may affect adjacent communities and users of wells.
   d. Description of demands that this project expects to meet and basis for projections of that demand.
   e. Description of efficient water use, recycling and reuse technology the Project intends to use.
   f. Description of how the Project shall affect urban/rural development, urban/rural densities, and site layout and design of storm water and sanitation systems.
   g. Map and description of other municipal and industrial water projects in the vicinity and a discussion of how the project shall compete with or duplicate those services in the County.
2. *Major Facilities of A Public Utility*. In addition to the Submittal Requirements in subsection F, above, the following requirements shall apply to Major Facilities of a Public Utility:
   a. Map and description of areas around the proposed Major Facilities of a Public Utility.
   b. Potential likelihood of nearby activities that may disrupt utility services.
   c. Description of how facilities shall affect existing community patterns.
   d. Description of applicable adopted Comprehensive Plans and whether facilities comply with those provisions.
   e. Projections/forecasts of need for electricity or natural gas and the basis for the projections and forecasts.
   f. Expected effect and impact on nearby property owners and on current land uses, compared with alternate locations.
3. *Airports*. In addition to the Submittal Requirements in subsection F, above, the following requirements shall apply to Airports:
   a. Map and description of nearby land uses. Expected impact of the new Airport on those land uses and nearby property owners from noise and traffic.
   b. Map and description of flight patterns as related to other land uses. Description of potential public safety and property issues related to the airport and plane crashes.
   c. Description of how the Airport shall affect existing communities, the environment and existing community services.
   d. Description of how the airport shall affect economic and transportation needs of the state and the area.

e. Description of applicable adopted Master Plans and whether the Airport complies with these plans.

f. Description of applicable FAA permits and regulations. Provide applicable FAA permits.

g. Description of how the proposed Airport relates to existing Airports.

4. *Arterial Highways, Interchanges and Collector Highways.* In addition to the Submittal Requirements in subsection F, above, the following requirements shall apply to Arterial Highways, Interchanges and Collector Highways:

   a. Description of how the Project shall affect traffic patterns as well as non-motorized traffic.

   b. Description of how the new roads shall likely affect surrounding land uses and existing community patterns.

   c. Description of how new roads shall affect community, regional, and statewide traffic demands.

   d. Description of how new roads shall comply with other local, State and federal regulations and master plans.

5. *Rapid or Mass Transit Facilities.* In addition to the submittal requirements in subsection F, above, the following requirements shall apply to Rapid or Mass Transit Facilities:

   a. Development in Areas Around Rapid or Mass Transit Facilities shall require the following submittals:

      (1) One or more maps at sufficient scale showing the location of the proposed Development and its relationship to the Rapid or Mass Transit Station or Terminal and the Interchanges, streets, highways, parking lots, and public facilities which are adjacent to or form an integral part of the operation of the rapid or mass transit facility.

      (2) A narrative description of the motor vehicle, bicycle, and pedestrian traffic likely to be generated by the proposed project, including but not limited to traffic generation at various times of the day, potential congestion, and potential demand for parking generated by the Development.

      (3) A narrative description of the impacts of the proposed project to the Rapid or Mass Transit Facility.

      (4) Maps or diagrams illustrating the pedestrian and bicycle routes that can be utilized to gain access between the proposed development and the adjacent Rapid or Mass Transit Facility.

   b. Rapid or Mass Transit Facilities shall require the following additional submittals:

      (1) A general narrative description stating whether the proposed project is a Station, Terminal, Fixed Guideway or other Rapid or Mass Transit Facility. The narrative description shall give a description of the location of the proposed project, including Intersections, towns, existing and planned facilities and landmark features. The narrative description shall also describe the impacts of the facility, and associated activities, on the character of the area and its peculiar suitability for particular uses with a view to conserving the value of buildings and encouraging the most appropriate use of land throughout the unincorporated area of Adams County.

(2) One or more maps at sufficient scale, showing the location of the proposed facility together with proposed or existing transportation corridors, zoning classification and land use within 2000 feet or more.

(A) Fixed Guideways. If the proposed facility is a Fixed Guideway, the application shall also include:

(I) Description of the type of motor power that shall be used to propel transit vehicles along the guideway and maximum anticipated speed of the transit vehicles along different segments of the system.

(II) Maps showing the proposed right-of-way.

(III) The minimum and maximum passenger capacity of the transit vehicles that shall travel on the guideway and the anticipated frequency or scheduling of guideway use.

(IV) The maximum proposed grade of the guideway and the maximum curvature. Proposed curves in excess of ten degrees shall be indicated on the map.

(V) Identification of all buildings or other structures that shall be removed in order for the proposed guideway to be built.

(VI) A plan for preventing collisions at points where the proposed guideway crosses other transportation corridors.

(VII) A study that describes and analyzes the effects of noise and vibration on neighboring property owners, with particular emphasis on residential land uses.

(B) Stations and Terminals. If the proposed facility is a Station or Terminal associated with a Rapid or Mass Transit Facility, the application shall also include:

(I) A passenger impact analysis including:

1. The number of vehicle trips associated with the Station or Terminal at or just before any scheduled departure;
2. The number of passengers that shall likely ride only one way on any given day; and
3. The number of passengers that can be expected to bring baggage, recreational equipment, tools, or other material.

(II) The anticipated schedule of departures and arrivals at the Station or Terminal and the expected capacity of each transit unit.

(III) The maximum length of any train that shall serve the Station or Terminal, excluding propulsion units.

(IV) Basic floor plans and architectural sketches of each proposed building or structure, together with a site map showing the relative location of each building or structure.

(V) A map of all roadways, parking areas with parking requirements, and other facilities showing details such as width, layout, traffic flow, pavement markings and traffic control devices.

(VI) Identification of all buildings or other structures that shall be removed in order for the proposed Station or Terminal to be built.

H. **Completeness Determination**. An application shall not be accepted and deemed received for purposes of C.R.S. § 24-65.1-501(2)(a), unless and until it is complete in accordance with the requirements of this DSR. The Director of Community and Economic Development shall determine whether the application is complete in accordance with the requirements contained in this DSR. If the Director of Community and Economic Development determines that the application is incomplete, then the Director of Community and Economic Development shall specify in writing the additional information that is required. Only when the application is determined to be complete shall the process set forth below regarding Permit Review and Hearing Procedures commence.

I. **Appeal of Director of Community and Economic Development Determination**.

1. *Purpose*. The purpose of this section is to detail the steps and requirements for appeals from a Determination by the Director of Community and Economic Development to ensure the DSR is administered properly and consistently with the policies adopted by the County.
2. *Applicability*. All appeals from a Determination by the Director of Community and Economic Development shall be processed in accordance with this section. The Board of County Commissioners shall have the authority to hear and decide appeals by any aggrieved person, where it is alleged there is an error in the Director of Community and Economic Development's Determination of whether an AASI Permit is required, the Director of Community and Economic Development's Determination of whether the Technical Review Amendment (TRA) requirements have been met, or the Director of Community and Economic Development's Determination denying a TRA.
3. *Time Limitations*. All appeals shall be submitted in writing within 10 calendar days of the date the Determination was made or rendered by the Director of Community and Economic Development. The Director of Community and Economic Development may waive or extend this deadline only upon finding the person filing the appeal received no actual or constructive form of notice of the Determination being appealed. Failure to file the appeal in a timely manner shall constitute a waiver of any rights to appeal under this DSR.
4. *Appeal Review Procedures*. An appeal is initiated by submitting a completed appeal application form with the Director of Community and Economic Development. An appeal shall be processed through a public hearing before the Board of County Commissioners. The Board of County Commissioners shall grant the appeal, modify the Director of Community and Economic Development's Determination, or deny the appeal based on consideration of the staff report, the evidence from the public hearing, and compliance with the criteria for approval.
5. *Appeal Review Steps*. The processing of an appeal shall be according to the procedures outlined in Div. 13-01, *Common Review Procedures*.
6. *Criteria For Approval.* The Board of County Commissioners, in granting an appeal or modifying the Director of Community and Economic Development's Determination, shall have all the powers of the Director of Community and Economic Development. In making its decision to grant an appeal or modify a Determination, the Board must find error in the application of this DSR on the part of the Director of Community and Economic

Development. The decision concerning the appeal shall set forth the basis of the Board of County Commissioners' decision.

7. *Action By the Director of Community and Economic Development*. Upon the granting of an appeal or modification of the Director of Community and Economic Development's Determination by the Board of County Commissioners, the Director of Community and Economic Development shall send a letter of decision to the applicant. The letter of decision shall describe in detail the grant of appeal approved by the Board of County Commissioners.
8. *Effect of Approval.* The Applicant shall be subject to all permits required by this DSR. All orders, decisions, determinations, and interpretations made under those permit procedures shall be consistent with the reversal or modification granted to the appellant.

J. **Approving and Issuing A Permit**.

1. *Permit Review and Hearing Procedures.*
   a. Permit Review Procedures.
      (1) Staff Review and Staff Report. The Community and Economic Development Department shall review the application and prepare a report recommending approval, conditional approval, denial, or continuance of the permit.
      (2) Hearing Date. The Community and Economic Development Department shall set a public hearing before the Planning Commission and the Board of County Commissioners. The hearing date for the Planning Commission public hearing shall be scheduled after receipt of a completed application. The Board of County Commissioners public hearing shall be scheduled, and notice of the hearing published, within 30 days of receipt of a completed application. The Hearing shall take place not less than 30 days nor more than 60 days after receipt of a complete application.
2. *Planning Commission Hearing and Decision.*
   a. Planning Commission Hearing. The Planning Commission shall conduct the hearing to determine whether the proposed project complies with the Approval Criteria in subsection P.
   b. Planning Commission Hearing Notice. The County shall publish notice of the hearing in accordance with this section and with C.R.S § 24-65.1-501. Notice shall be published once in a newspaper of general circulation in the County, not less than 30 days nor more than 60 days before the date set for the Board public hearing.
   c. Notice to Property Owners. The Community and Economic Development Department is responsible for written notice of the public hearing which shall be delivered or mailed, first-class postage prepaid, to adjoining landowners within a minimum of 500 feet of the entire boundary of the proposed activity, not less than 30 days nor more than 60 days before the date set for the Board public hearing, except that the Director of Community and Economic Development may extend the radius used for noticing based on the nature of the proposed project, its potential impacts and the general character of the area. The Community and Economic Development Department shall be responsible for public notice sign(s) per DSR specifications, not less than 30 days nor more than 60 days before the date set for the Board public hearing.
   d. Planning Commission Decision. If the Planning Commission determines that the proposed project complies with all applicable provisions of this DSR, then it shall

recommend that the Board approve the application. If the Planning Commission determines that the proposed activity does not comply with all applicable provisions of this DSR, then it shall recommend that the Board deny the application or approve the application with conditions to ensure compliance with the DSR. The Planning Commission may continue action on the application at its discretion.

3. *Board of County Commissioners Hearing and Decision.*
   a. Board Hearing. The Board shall conduct the hearing to determine whether the proposed project complies with the Approval Criteria in subsection P.
   b. Board of County Commissioner Hearing Notice. The County shall publish notice of the hearing in accordance with this subsection and with C.R.S. § 24-65.1-501. Notice shall be published once in a newspaper of general circulation in the County, not less than 30 days nor more than 60 days before the date set for the Board public hearing.
   c. Notice to Property Owners. The Community and Economic Development Department is responsible for providing written notice of the public hearing which shall be delivered or mailed, first-class postage prepaid, to adjoining landowners within a minimum of 500 feet of the entire boundary of the proposed activity, not less than 30 days nor more than 60 days before the date set for the Board public hearing, except that the Director of Community and Economic Development may extend the radius used for noticing based on the nature of the proposed project, its potential impacts and the general character of the area. The Community and Economic Development Department shall be responsible for public notice sign(s) per DSR specifications, not less than 30 days nor more than 60 days before the date set for the Board public hearing.
   d. Board Decision.
      (1) If at the end of the hearing, after considering all information on the record, the Board finds that additional information is necessary for it to determine whether the proposed project shall satisfy all of the Approval Criteria in subsection P the Board may deny the Permit, or continue the hearing to accept additional information. I
      (2) The Board may approve the application if it determines that the proposed project complies with all applicable provisions of this DSR. If the Board determines that the application fails, or may fail, to comply with any one of the Approval Criteria, the Board, at its sole discretion, may either approve the permit application with reasonable conditions necessary to ensure compliance with the DSR or deny the application.
4. *Conduct of Hearings, Hearing Record, and Decision*. Hearings shall be conducted in a manner to afford procedural due process to the Applicant and any Affected Party.
   a. The burden of proof is on the Applicant to demonstrate with evidence on the record that the proposed project complies with all of these regulations.
   b. The Board's decision shall be made by resolution. A copy of the resolution shall be recorded in the Office of the County Clerk and Recorder and shall be mailed to the Applicant.

K. **Term of Permit**. Approval of a Permit shall lapse after 12 months, unless:
   1. Development permits for the proposed project for construction are obtained for commencement of construction, if such permits are required; and remain in effect, or

2. Activities described in the Permit have substantially commenced; or
3. The Board specifies in its resolution granting the Permit a different time period in which Building Permits or construction shall be obtained or activities shall commence.

L. **Renewal**. Permits issued under this Chapter may be renewed following the same procedure for approval of new Permits. The Board may impose additional conditions at the time of renewal if necessary to ensure that the Project shall comply with this DSR.

M. **Permit Does Not Exempt**. Permits issued under this Chapter shall not exempt the proposed project from also complying with zoning and other requirements of this DSR. Notwithstanding the issuance of a Permit under this Chapter, no Building Permit shall be issued and no construction shall begin until all requirements of the DSR have been satisfied.

N. **Permit Amendment/Technical Review Amendment (TRA)**. Any change in the application, design, construction or operation of the Project from that approved by the Board shall require either a Full Amendment or a Technical Review Amendment. The criteria for this determination shall be based on the additional size of the area affected and/or the intensity of impact of the Project.

1. *Full Amendment*. If the proposed amendment meets the criteria necessary for an AASI Permit, then the Full Amendment shall need to meet the requirements and process for an AASI Permit as outlined in this Chapter for the particular Area and Activity of State Interest.
2. *Technical Review Amendment.* The process and requirements for a Technical Review Amendment would occur when changes in the original AASI Permit are of such a limited nature or scope that a formal AASI Permit Full Amendment would be unnecessary. Such Technical Review Amendments may include, but are not limited to, minor changes to building facades, location and type of landscape material, relocation of light poles or fixtures that do not affect light levels at the property line, and the relocation of interior pedestrian walks and trails.
   a. Prerequisites For A Technical Review Amendment (TRA). The following factors shall be used by the Director of Community and Economic Development to determine if an application is eligible for a TRA. These factors shall include, but are not necessarily limited to the following:
      (1) Proposed amendments do not fall within the criteria listed for an AASI Permit Full Amendment as specified in this Chapter.
      (2) Proposed amendments do not violate existing zoning or subdivision regulations.
      (3) Proposed amendments do not relate to any site, building, or sign detail that was a condition of approval through the public hearing process.
      (4) Proposed amendments do not substantially change any of the original plans or items that may have been conditioned through the public hearing process.
   b. Submittal Requirements For Technical Review Amendment (TRA). Submittal requirements for a TRA include:
      (1) Completed application (available at the Community and Economic Development Department).
      (2) Application fee.
      (3) Proof of ownership or notarized letter of authorization from the landowner permitting a representative to process the application with a disclaimer that no other party's consent is required.

(4) A letter of intent indicating the purpose and need for the TRA.

(5) The first and any other subsequently approved AASI Permit, development plan exhibits and associated material. (Typically copied from the approved AASI Permit and associated material).

(6) A revised blueline plan exhibit (24" x 36") with the proposed amendment highlighted. Font size shall be readable when reduced to an 11 x 17 inch size. No plans shall include copyright restrictions.

c. Approval Criteria For A Technical Review Amendment (TRA). Prior to approval of a Technical Review Amendment, the Director of Community and Economic Development shall consider the following criteria:

(1) Shall the TRA ensure the efficient development and preservation of the original AASI Permit, and the underlying development plan or subdivision plat?

(2) Shall the TRA adversely affect reasonable development expectations and the use and enjoyment of adjacent land or the public interest?

(3) Shall the TRA preserve the spirit and intent of the original AASI Permit and development plan and not weaken the purposes of these regulations?

(4) Shall approval of the amendment adversely affect the public health, safety, and welfare?

d. Technical Review Amendment Process. The following is the review process for a Technical Review Amendment (TRA):

(1) Upon receipt of all required information, the Director of Community and Economic Development shall review the submittal and prepare comment.

(2) The Applicant shall be notified of any outstanding issues upon completion of a 14-day staff review and referral process. The applicant shall resolve all outstanding issues raised through the referral process.

(3) The Applicant shall submit a final mylar which shall be an original drawing in black ink on 24" x 36" single/double matte mylar or photographic blackline positive mylar of the same, or equivalent.

(4) Upon acceptance of the final mylar by the Community and Economic Development Department, the Director of Community and Economic Development shall approve the Technical Review Amendment.

(5) After the Director of Community and Economic Development approves and signs the Technical Review Amendment, Building Permits may be applied for and/or obtained.

(6) If any Person or entity is aggrieved by Director of Community and Economic Development's Determination to exempt a TRA application because it does not meet TRA requirements or if a TRA is denied by the Director of Community and Economic Development, that person or entity may file an appeal to the Board of County Commissioners, no later than 10 business days after the date of the Director of Community and Economic Development's written Determination. See subsection I.

O. **Intergovernmental Agreements**. In lieu of a permit application and review as provided by this DSR, the County, at its sole discretion, may elect to negotiate an intergovernmental agreement with the State of Colorado or a political subdivision of the State as defined by C.R.S. § 29-1-

202(1), for activities of state interest. The County encourages intergovernmental agreements to promote mutually beneficial relationships and effectively address areas and activities of state interest. In the event such an intergovernmental agreement is approved by the Board of County Commissioners, the intergovernmental agreement shall be deemed to satisfy all requirements of this DSR and an AASI Permit shall be issued provided that all of the following conditions are met:

1. Nothing in this section shall be construed to waive the applicability of this DSR or to create in the State or any political subdivision a right or interest to an intergovernmental agreement with the County.
2. Exercise of the provisions of this section by the State or political subdivision shall not prevent the entity from electing at any time to proceed under the permit provisions of this DSR.
3. Both the Board and the governing body of the State or political subdivision shall approve the intergovernmental agreement in the manner required by the Colorado Constitution, state statutes, and any applicable charter, ordinance or resolution.
4. A public hearing shall be conducted by the Board to publicly review and approve the proposed intergovernmental agreement. Notice of the public hearing shall be published once at least 30 and not more than 60 days prior to the hearing in a newspaper of general circulation in the County. Property owners within a minimum of 500 feet from the property lines of the location of the proposed project shall be notified by the Community and Economic Development Department of the date and time of the public hearing not less than 14 days prior to the Board of County Commissioners hearing date.
5. A neighborhood/scoping meeting shall be held by the Applicant, and a summary addressing the concerns of the neighborhood shall be submitted by the Applicant to the Community and Economic Development Department which shall include, but is not limited to, the names, addresses, telephone numbers, and concerns. The neighborhood/scoping meeting summary shall be submitted to the Community and Economic Development Department along with a presubmittal meeting application prior to the scheduling of a public hearing. The boundaries of the residents notified for the neighborhood/scoping meeting shall be determined by the Director of Community and Economic Development and shall not be less than 500 feet from the property lines of the location of the proposed project.
6. The purpose, intent, and applicable criteria of C.R.S. § 24-65.1-101 *et seq*. and of this DSR shall be satisfied by the terms of the intergovernmental agreement.
7. The state or political subdivision and the County shall both be authorized to enter into the intergovernmental agreement.

P. **Approval Criteria**. A Permit may be approved if the proposed activity complies with the following general criteria and any additional applicable criteria in this section. In determining whether the proposed activity complies with the criteria, the Board shall take into consideration the construction, operation and cumulative impacts of the proposed activity.

1. *General Approval Criteria.*
   a. Documentation that prior to site disturbance associated with the proposed project, the Applicant can and shall obtain all necessary property rights, permits and approvals. The Board may, at its discretion, defer making a final decision on the application until outstanding property rights, permits and approvals are obtained or the Board may grant a Permit with conditions and/or conditions precedent which shall adequately address outstanding concerns.

b. The proposed project considers the relevant provisions of the regional water quality plans.

c. The Applicant has the necessary expertise and financial capability to develop and operate the proposed project consistent with all requirements and conditions.

d. The proposed project is technically and financially feasible.

e. The proposed project is not subject to significant risk from Natural Hazards.

f. The proposed project is in general conformity with the applicable comprehensive plans.

g. The proposed project does not have a significant adverse effect on the capability of local government to provide services or exceed the capacity of service delivery systems.

h. The proposed project does not create an undue financial burden on existing or future residents of the County.

i. The proposed project does not significantly degrade any substantial sector of the local economy.

j. The proposed project does not unduly degrade the quality or quantity of recreational opportunities and experience.

k. The planning, design and operation of the proposed project reflects principals of resource conservation, energy efficiency and recycling or reuse.

l. The proposed project does not significantly degrade the environment. For purposes of this section, the term environment shall include:

    (1) Air quality.

    (2) Visual quality.

    (3) Surface water quality.

    (4) Groundwater quality.

    (5) Wetlands, flood plains, streambed meander limits, recharge areas, and riparian areas.

    (6) Terrestrial and aquatic animal life.

    (7) Terrestrial and aquatic plant life.

    (8) Soils and geologic conditions.

m. The proposed project does not cause a nuisance and if a nuisance has been determined to be created by the proposed project the nuisance has been mitigated to the satisfaction of the County.

n. The proposed project does not significantly degrade areas of paleontological, historic, or archaeological importance.

o. The proposed project does not result in unreasonable risk of releases of hazardous materials. In making this determination as to such risk, the Board's consideration shall include:

    (1) Plans for compliance with federal and State handling, storage, disposal and transportation requirements.

    (2) Use of waste minimization techniques.

(3) Adequacy of spill prevention and counter measures, and emergency response plans.

p. The benefits accruing to the County and its citizens from the proposed activity outweigh the losses of any resources within the County, or the losses of opportunities to develop such resources.

q. The proposed project is the best alternative available based on consideration of need, existing technology, cost, impact and this DSR.

r. The proposed project shall not unduly degrade the quality or quantity of agricultural activities.

s. The proposed Project does not negatively affect transportation in the area.

t. All reasonable alternatives to the proposed project, including use of existing rights-of-way and joint use of rights-of-way wherever uses are compatible, have been adequately assessed and the proposed project is compatible with and represents the best interests of the people of the County and represents a fair and reasonable utilization of resources in the Impact Area.

u. The nature and location of the proposed project or expansion shall not unduly interfere with existing easements, rights-of-way, other utilities, canals, mineral claims or roads.

v. Adequate electric, gas, telephone, water, sewage and other utilities exist or shall be developed to service the site.

w. The proposed project shall not have a significantly adverse Net Effect on the capacities or functioning of streams, lakes and reservoirs in the impact area, nor on the permeability, volume, recharge capability and depth of aquifers in the impact area.

x. If the purpose and need for the proposed project are to meet the needs of an increasing population within the County, the area and community development plans and population trends demonstrate clearly a need for such development.

y. The project does not create adverse impacts on adjacent properties or the surrounding area with respect to: traffic generation and circulation; noise, vibration, dust, light, glare, or odors; hours of operation; building scale, massing, and site design in relation to established development patterns; public service and infrastructure demand; and public health, safety, or environmental risks.

2. *Additional Approval Criteria.*

a. The Following Additional Criteria Apply to Major Water and Sewer Projects:

(1) To the extent practicable, Domestic Water and Wastewater Treatment Systems shall be consolidated with existing facilities within the area. The determination of whether consolidation is practicable shall include but not be limited to the following considerations:

(A) Distance to and capacity of nearest Domestic Water or Wastewater Treatment System.

(B) Technical, legal, managerial and financial feasibility of connecting to existing Domestic Water or Wastewater Treatment System.

(C) Scope of the Service Area for existing Domestic Water or Wastewater Treatment System.

(D) Projected growth and development in the Service Area of existing Domestic Water or Wastewater Treatment System.

(2) The proposed project shall not result in duplicative services within the County.

(3) The proposed project shall be constructed in areas that shall result in the proper utilization of existing treatment plants and the orderly development of domestic water and sewage treatment systems of adjacent communities.

(4) If the proposed project is designed to serve areas within the County, it shall meet community development and population demands in those areas.

(5) The proposed project emphasizes the most efficient use of water, including the recycling, reuse and conservation of water.

(6) The Applicant demonstrates sufficient managerial expertise and capacity to operate the facility.

b. The Following Additional Criteria Apply to Major Facilities of A Public Utility.

(1) Areas around Major Facilities of a Public Utility are administered so as to minimize disruption of the service provided by the public utility.

(2) Areas around Major Facilities of a Public Utility are administered so as to preserve desirable existing community and rural patterns.

(3) Where feasible, Major Facilities of a Public Utility are located so as to avoid direct conflict with adopted local comprehensive, State and regional master plans.

(4) Where feasible, Major Facilities of a Public Utility are located so as to minimize dedication of new right-of-way and construction of additional infrastructure (e.g., gas pipelines, roads, and distribution lines.)

(5) The applicant has provided an approved Water Supply Plan using an aquifer life assumption of a 300-year supply, assuming a 50 percent recovery factor to operations.

c. The Following Additional Criteria Apply to Airports.

(1) Areas around Airports are administered to encourage land use patterns that separate uncontrollable noise sources from residential and other noise-sensitive areas.

(2) Areas around Airports are administered to avoid danger to public safety and health or to property due to aircraft crashes.

(3) Airports are located or expanded in a manner that minimizes disruption to the environment, minimizes the impact on existing community service, and complements the economic and transportation needs of the State and the area.

d. The Following Additional Criteria Apply to Arterial Highways, Interchanges and Collector Highways.

(1) Areas around interchanges involving Arterial Highways are administered to:

(A) Encourage the smooth flow of traffic;

(B) Foster the development of such areas in a manner calculated to preserve the smooth flow of such traffic;

(C) Preserve desirable existing community travel pattern;

(D) Located so that community traffic needs are met; and

(E) Located so that desirable community patterns are not disrupted.

e. The Following Additional Criteria Apply to Rapid or Mass Transit Facilities.

(1) Areas around Rapid or Mass Transit Facilities are administered to:

(A) Promote the efficient utilization of the Rapid or Mass Transit Facility.

(B) Facilitate traffic circulation patterns of roadways serving the mass transit facility.

(C) Promote development that shall include bike and pedestrian paths providing access to the Rapid or Mass Transit Facility.

(2) Rapid or Mass Transit Facilities are located so as to preserve the value of buildings at the site and avoid demolition of businesses or residences to the extent possible. Proposed locations of Rapid or Mass Transit Terminals, Stations, and Fixed Guideways which shall not require the demolition of residences or businesses are given preferred consideration over competing alternatives.

(3) Rapid or Mass Transit Facilities are located and such activities conducted with reasonable consideration, among other things, as to the character of the area and its peculiar suitability for particular uses and with a view to conserving the value of buildings and encouraging the most appropriate use of land throughout the unincorporated area of Adams County.

(4) Stations, shelters and terminals are appropriately located to attract maximum ridership to the extent feasible and to meet transit needs.

(5) Rapid or Mass Transit Facilities have adequate and safe ingress and egress for all transit modes.

(6) The location of Fixed Guideways maximizes joint use of rights-of-way for trails and bikeways and other transportation alternatives.

(7) Rapid or Mass Transit Facilities are designed and located in a manner that shall reduce traffic congestion.

(8) Guideway design and location does not permit snow plumes from snow removal equipment on the guideway to reach the travel surface of a plowed public road except at intersections, nor shall guideways be placed or designed so that snow plumes from snow removal equipment on public roads shall reach the guideway.

(9) The parking areas associated with a Station or Terminal are capable of holding a number of automobiles that equals the Station or Terminal number of passengers expected to park at the during peak periods.

(10) Access roads to a Station or Terminal are designed and located to accommodate, during a 15-minute period, the maximum number of automobiles anticipated to arrive before the scheduled departure of the mass transit conveyance without causing cars to back up onto the public road serving the facility.

(11) The Manual on Traffic Control Devices applies to safety devices at intersections of a Fixed Guideway and other transportation corridors.

(12) A proposed location of a Rapid or Mass Transit Facility that imposes a burden or deprivation on a local government cannot be justified on the basis of local benefit alone, nor shall a permit for such a location be denied solely because the location places a burden or deprivation on one local government.

(13) Rapid or Mass Transit Facilities minimize the effects of noise and vibration on neighboring property owners, with particular emphasis on residential land uses.

# CHAPTER 12 DEVELOPMENT REVIEW BODIES AND OFFICIALS

**Contents:**

Div. 12-01 Administrative Officials
Div. 12-02 Elected and Appointed Officials

## Div. 12-01 Administrative Officials

### 12-01-01 Director of Community and Economic Development

A. **Generally.** The Director of Community and Economic Development, as designated by the Board of County Commissioners, is responsible for administering, interpreting, and enforcing the provisions of these Development Standards and Regulations (DSR). The Director of Community and Economic Development may delegate responsibilities to other staff members of the Community and Economic Development Department.

B. **Powers and Duties.**

1. *Development Review.* The Director of Community and Economic Development shall have the authority to make recommendations or final decisions on the development review applications denoted in 13-01-12, *Development Review Summary*.

2. *Other Powers and Duties.* In addition to those set forth above, the Director of Community and Economic Development's powers and duties shall include, but not be limited to, the following:

   a. *Render Interpretations*. Render interpretations of all provisions of these standards and regulations and as set forth in Chapter 1.

   b. *Application Requirements.* Establish and update application forms, submittal requirements, and review schedules for all applications and appeals pursuant to these standards and regulations.

   c. *Administration of Agreements.* Administer Development and Improvement Agreements to ensure compliance with these standards and regulations and all conditions of approval that relate to roads, drainage, grading, erosion control and floodplains.

   d. *Enforcement Actions*. If the Director of Community and Economic Development determines that a property, structure, or use is in violation of this DSR or any permit issued hereunder, the Director may initiate enforcement proceedings before the Permit Issuing Authority, which may include suspension or revocation of the permit, or any other remedies provided in Chapter 15, *Enforcement, Violations, and Remedies*.

### 12-01-02 Director of Public Works

A. **Generally.** The Director of Public Works, as designated by the Board of County Commissioners, is responsible for interpreting and applying, in consultation with the Director of Community and

Economic Development, the roadway design, access design and traffic requirements, and the stormwater management provisions of this DSR.

B. **Powers and Duties.**

1. *Development Review.* The Director of Public Works shall have the authority to make recommendations or final decisions on the development review applications denoted in Sec. 13-01-12, *Development Review Summary Table.*
2. *Other Powers and Duties.* In addition to those set forth above, the Director of Public Work's powers and duties shall include the creation and administration of application forms and other standardized documentation necessary to support the effective administration of the relevant provisions of this DSR.

# Div. 12-02 Elected and Appointed Officials

## 12-02-01 Board of County Commissioners

A. **Generally.** The Board acts as the governing body of the County with the powers enumerated in State law and this Chapter.

B. **Powers and Duties**.

1. *Development Review*. The Board of County Commissioners shall have the authority to make recommendations or final decisions on the development review applications denoted in 13-01-12, *Development Review Summary*.
2. *Other Powers and Duties*. In addition to those set forth above, the Board of County Commissioners' powers and duties shall include the delegation of powers, duties, and responsibilities to the Planning Commission, Board of Adjustment, other boards and commissions, and administrative staff members to the extent permitted by law any power granted to the Board of County Commissioners provided that such delegation is made subject to specific instruction, criteria, and standards to guide the exercise of any delegated discretion.

## 12-02-02 Planning Commission

A. **Generally.** The Planning Commission advises the Board of County Commissioners on land use, zoning, subdivision, and comprehensive planning.

B. **Powers and Duties.**

1. *Development Review.* The Commission shall have the authority to make recommendations or final decisions on the development review applications denoted in Sec. 13-01-12, *Development Review Summary Table.*
2. *Develop and Adopt a Comprehensive Plan*. Develop and adopt a Comprehensive Plan for the physical development of the unincorporated area of the County, subject to the approval of the Board of County Commissioners.

## 12-02-03 Board of Adjustment

A. **Generally.** The Board of Adjustment is appointed by the Board of County Commissioners to hear and decide Variances, Appeals of Administrative Decisions, and certain Special Use Permits in

accordance with these standards and applicable state law. The Board's authority, membership, responsibilities, and operating procedures are established pursuant to C.R.S. § 30-28-117, § 30-28-118, and this DSR.

B. **Powers and Duties.**

1. *Development Review.* The Board of Adjustment shall have the authority to make recommendations or final decisions on the development review applications denoted in 13-01-12*, Development Review Summary.*

# 12-02-04 Procedural Rules and Conduct of Board and Commission Members

A. **Governance Rules.** The Planning Commission, the Board of Adjustment, and the Board of County Commissioners may adopt rules deemed necessary to guide how they operate. In addition, members of each body shall follow the rules of conduct set forth below.

B. **Conflict Of Interest.** Members have the right and the obligation to vote on all questions before them and to participate in the business of the Commission or Board, except when a conflict of interest exists.

1. *Notification Of Conflict of Interest.* Whenever the Planning Commission, the Board of Adjustment, or the Board of County Commissioners is considering a matter which raises a question of conflict of interest for a particular member, the member is responsible for alerting the Chairperson and County Attorney prior to the start of the meeting.
2. *Conduct At Meetings Where a Member Has a Conflict of Interest.* If any member has a conflict of interest with any particular item, the member shall notify the Commission or Board and the public in attendance of the conflict of interest. The member shall not participate in either the Commission's or Board's discussion or voting on the item. Any Commission or Board member who believes, but is not sure, that they have either a potential conflict of interest/the appearance of impropriety in any agenda item before the Commission or bias as relates to any agenda item before the Commission shall disclose the nature and possible extent of such interest/bias on or before the start of the agenda item. The balance of the Commission or Board shall vote to determine if the member has a conflict/bias and is thereby disqualified for that agenda item.
3. *Minimizing Conflicts.* It is intended that situations resulting in conflict of interest for members shall be minimized.

C. ***Ex Parte* Contacts.** *Ex parte* contacts are contacts between individuals seeking to influence a decision of members of the Planning Commission, Board of Adjustment, or Board of County Commissioners outside the meeting forum on a quasi-judicial matter. Members shall avoid *ex parte* communications concerning quasi-judicial matters. Should *ex parte* contacts occur where relevant and material information is obtained and considered by a member, then such information shall be disclosed prior to or at the time of the public hearing on the matter so that interested parties may have an opportunity to respond.

D. **Open Meetings.** Meetings of the Planning Commission, Board of Adjustment, and Board of County Commissioners, including site visits, shall be open to the public, except as provided by law.

E. **Open Records.** Information presented to the Planning Commission, Board of Adjustment, or Board of County Commissioners in carrying out their responsibilities, records of meetings, and

any other material resulting from the conduct of their activities shall be kept on file in the Office of the Adams County Clerk and Recorder or the Director of Community and Economic Development, and shall be available for inspection by the public upon reasonable request, except as otherwise required or may be provided by law. The Colorado Opens Records Act shall be relied upon to determine what documents shall be retained and made available for public inspection.

F. **Amendments to the Rules of Procedure.** Any member of the Planning Commission, Board of Adjustment, or Board of County Commissioners, or the Director of Community and Economic Development may propose amendments to the rules of procedure.

# CHAPTER 13 DEVELOPMENT REVIEW PROCEDURES

**Contents:**

Div. 13-01 Common Review Procedures
Div. 13-02 Administrative Procedures
Div. 13-03 Land Use Procedures
Div. 13-04 Plan, Text, and Zoning Map Amendment Procedures
Div. 13-05 Site Development Procedures
Div. 13-06 Platting Procedures
Div. 13-07 Relief and Appeal Procedures

## Div. 13-01 Common Review Procedures

### 13-01-01 General Provisions

A. **Purpose**. The purpose of this Division is to establish application procedures, public notice and hearing requirements, common review criteria, and other elements that apply to all or most development review applications in this DSR. Doing so consolidates information and avoids the need for repetition of identical material throughout the remainder of the Chapter.

B. **Sequencing of Applications**. The Sections of this Division are arranged in a chronological sequence beginning with Sec. 13-01-02, *Step 1: Conceptual Review and Pre-Application Conferences*, and ending with Sec. 13-01-10, *Step 10: Appeals*.

C. **Development Review Summary Table**. For each development review application, Sec. 13-01-12, *Development Review Summary Table*, establishes which review bodies make recommendations and final actions, provides periods of validity, shows whether a public hearing is needed and the type of public notice required, and provides cross-references to relevant standards that are required to be followed in order to receive potential approval.

D. **Enhanced Notice**. The Director of Community and Economic Development is authorized to increase the minimum notice requirements established by this Chapter, including expanded mailed notice areas, additional posting requirements, or extended notification timelines, provided such increase is applied consistently and is reasonably related to the nature or potential impacts of the proposed land use action.

### 13-01-02 Step 1: Conceptual Review and Pre-Application Conferences

A. **Purpose**. Conceptual review is an opportunity for an applicant to discuss requirements, standards, and procedures that apply to a development proposal. Major problems can be identified and solved during conceptual review before a formal application is submitted.

Representatives of the Community and Economic Development Department and other County Departments regularly attend conceptual review meetings.

B. **Applicability**. A conceptual review meeting is voluntary for all development applications. Conceptual review may be requested by an applicant as a means of identifying potential problems prior to making formal application. A request for conceptual review shall be made at least 30 days in advance of the requested conceptual review meeting.

C. **Concept Plan Submittal**.

1. *Materials*. The applicant requesting a conceptual review meeting shall submit a sketch of the proposed development, conceptual review meeting checklist, and any conceptual review fees at least 30 days in advance of the requested conceptual review meeting. The sketch should indicate the location of the proposed project, major streets, and other significant features in the vicinity. The applicant should also submit any conceptual designs to be discussed.
2. *Level of Detail*. The degree of assistance provided by staff at the conceptual review meeting will depend upon the level of detail the applicant provides in the conceptual review meeting submittal. The applicant is encouraged to provide as much detail as possible when preparing the conceptual review meeting submittal.

D. **Staff Review and Recommendation**. Following the conceptual plan meeting with the applicant, the Director of Community and Economic Development shall furnish the applicant with written comments regarding the plan, including appropriate recommendations to inform and assist the applicant. The written comments shall be delivered to the applicant within seven days of the conceptual review meeting.

E. **Continuing Review Process**. Potential applications may subsequently undergo the neighborhood meeting process established in Sec. 13-01-03, *Step 2: Neighborhood Meeting*.

# 13-01-03 Step 2: Neighborhood Meetings

A. **Purpose**.

1. *Citizen Engagement*. The purpose of neighborhood meetings is to present the development concept to citizens and for the citizens to identify, list, and discuss issues related to the development proposal. Neighborhood meetings are held early in the process so affected property owners have an opportunity to provide input before excessive time and effort have been expended by the applicant.
2. *Director of Community and Economic Development Determination*. The Director of Community and Economic Development may require a neighborhood meeting for those applications indicated in Table 13-01-12, *Development Review Summary Table*.
3. *Delayed Review*. If a neighborhood meeting is required, the applicant shall submit the required neighborhood meeting summary and affidavits prior to advancing to application review.

B. **Applicability**.

1. *Table Reference*. Neighborhood meetings are required in accordance with Table 13-01-12, *Development Review Summary Table*.
2. *Scheduling, Noticing, and Cost*. If a neighborhood meeting is required, the applicant shall be responsible for scheduling, noticing, coordinating the meeting, and all costs associated with holding the meeting.

C. **Neighborhood Meeting Requirements**

1. *Location*.

a. *Subject Property*. To provide surrounding property owners the best opportunity to attend, the neighborhood meeting should be held on the subject property whenever possible. If this is not possible, the meeting shall be held on the closest practical location to the subject site as agreed upon between the Director and the applicant.

(1) *Urban Adams County.*

(A) If it is not possible to hold the neighborhood meeting on the subject property, the applicant may hold the neighborhood meeting may be held at an alternate location that is a maximum of three miles from the subject property.

(B) The Director may grant a written exception to this policy to increase the distance of the alternate location to approximately five miles if that applicant submits a request in writing with the proposed location and demonstrates that no practical locations within three miles or less exist.

(2) *Semi-Urban Adams County.*

(A) If it is not possible to hold the neighborhood meeting on the subject property, the applicant may hold the neighborhood meeting may be held at an alternate location that is a maximum of five miles from the subject property.

(B) The Director may grant a written exception to this policy to increase the distance of the alternate location to approximately fifteen miles if the applicant submits a request in writing with the proposed location and demonstrates that no practical locations within five miles or less exist.

(3) *Rural Adams County.*

(A) If it is not possible to hold the neighborhood meeting on the subject property, the applicant may hold the neighborhood meeting may be held at an alternate location that is a maximum of fifteen miles from the subject property.

(B) The Director may grant a written exception to this policy to increase the distance of the alternate location if the applicant submit a request in writing with the proposed location and demonstrates that no practical locations within fifteen miles or less exist.

2. *Time Of Neighborhood Meeting*. The applicant shall hold the neighborhood meeting on a weekday evening between the hours of 5:00 p.m. and 8:00 p.m. or on weekends between the hours of 9:00 a.m. and 5:00 p.m. The meeting shall not be scheduled on a legal holiday.

E. **Notice of Neighborhood Meeting**.

1. *Recipients*. The applicant shall give written notice of the neighborhood meeting to the owners of record of all real property within 500 feet (exclusive of public rights-of-way, public facilities, parks, or public open space) of the property lines of the parcel of land for which the development is planned. Designated representatives of neighborhood groups and homeowner's associations within the area of notification shall also receive written notice from the applicant.

2. *Timing of Notice*. The applicant shall mail the written notices at least 10 days prior to the meeting date. The notice shall state the date, time, place, and purpose of the neighborhood meeting and shall include a map of the property.

F. **Attendance at Neighborhood Meeting**. The applicant or applicant's representative shall attend the neighborhood meeting. The Director may also attend or send a representative.

G. **Format of Neighborhood Meeting**. The applicant shall hold the neighborhood meeting in an open house format. Maps of the development site, site plans and architectural elevation drawings shall be available for review by the public. The applicant or applicant's representative shall be available to answer questions. The applicant shall provide comment sheets for participants to provide feedback concerning the proposed development. The applicant shall offer participants the opportunity to provide their name and mailing addresses for the purpose of receiving notice of public hearings concerning any application that is subsequently submitted.

H. **Summary of Neighborhood Meeting**. The applicant shall prepare a written summary of the neighborhood meeting. The applicant shall include the written summary with the development application submittal and shall explain how any issues identified at the neighborhood meeting have been addressed. In addition, any names and addresses for participants who would like to receive notice of public hearings concerning any application that is subsequently submitted shall be submitted with the meeting summary.

I. **Continuing Review Process**. Application submittals shall subsequently undergo the process established in 13-01-04, *Step 3: Development Application, Submittal, and Completeness*.

# 13-01-04 Step 3: Development Application, Submittal, and Completeness

A. **Submittal Requirements.**

1. *Form*. All development applications shall be submitted in a form established by the Director.
2. *Contents*. Each development application shall include the identified items required for the type of submittal. The Director may waive items not applicable due to the particular conditions and circumstances of a given development proposal.

B. **Consolidated Development Applications and Review.** When multiple development application types must be submitted for the same overall development proposal, the applicant may consolidate applications into a single filing for submittal and review, at the discretion of the Director. A consolidated application must still be reviewed by all applicable reviewing authorities.

C. **Development Application Contents.** The Director shall establish development application submittal requirements.

D. **Burden of Proof**. The applicant shall have the burden of proof to demonstrate the signatory fully complies with this DSR and all application requirements.

E. **Rights to Submittals**. Development review submittals submitted to the County are considered public records, subject to public inspection under the Colorado Open Records Act (CORA). Any such documents that do not bear appropriate copyright notice may also be copied under CORA, and it is the obligation of applicants to clearly mark any copyrighted documents submitted to the County.

F. **Development Review Fees and Public Notice Cost Reimbursement.** Development review fees shall be established as part of the County's fee schedule adopted by the Board of County Commissioners. The development review fees shall be paid at the time of submittal of any development application. Public notice fees shall be established as part of the County's fee schedule adopted by the Board of County Commissioners. Prior to the first public hearing on the application by any development review body, the applicant is responsible for paying the public notice costs for any notices required as part of this Step 3. The fee schedule is available in the Department of Community and Economic Development.

G. **Determination of Completeness.**

1. After receipt of the development application, the Director shall determine whether the application is complete and ready for review. The development application shall not be reviewed until the application submittal is determined complete by the Director. A notification to the applicant through the ePermit Center or some other method that application intake is complete does not constitute a determination of completeness by the Director.
2. No application shall be processed if taxes due on the requested property(ies) are not paid, if inspection fees are not paid, or if fines assessed against the applicant have not been paid.
3. In determining whether an application is complete, the Director shall ascertain whether it contains all required forms, checklists, plans, studies, fees, signatures, and supporting materials necessary for the reviewing authority to begin substantive review and determine compliance with applicable regulations. A determination of completeness by the Director does not imply that the information is accurate, that additional information will not be requested, or that the application satisfies approval criteria.
4. The Director may delegate the authority to determine completeness to the case manager assigned to a specific development application.

H. **Notification.** For only those development applications that require a staff report, within seven days of the date the application is determined to be complete, the Director shall send mailed notice to the following individuals and entities describing the nature of the application and the deadline for pre-hearing comments.

1. *Property Owners*. Owners of record of all real property located within a minimum of 500 feet (exclusive of public rights-of-way, public facilities, parks, or public open space) of the property lines of the parcel of land for which the development is planned, which notification radius may be enlarged by the Director. The owners of record of property shall be considered to be the parties listed by the Assessor for Adams County as those against whom taxes are assessed.
2. *Neighborhood Groups*. Designated representatives of neighborhood groups and homeowner's associations within the area;
3. *Meeting Attendees*. All individuals who attended the neighborhood meeting and requested to be notified of the progress of the application for development.

I. **Application for Building Permits for Signs.** The following standards apply to Building Permits for signs:

1. *Completeness Determination.* The Director of the Community and Economic Development Department shall inform the applicant of the completeness of their application within 10 business days after the date an application is received.

2. *Timing of County Review.* Once the application is complete, the County will review for compliance with the DSR and the building code. The County will inform the applicant within 10 business days after the completeness determination of a recommended approval, denial, or requirement of resubmittal of the application, unless the applicant agrees to an extension. The applicant will have 30 days to respond to the County's request for resubmittals. Once resubmitted the County will have an additional 10 business days to review the application for compliance with the DSR and the building code.

J. **Financial Capacity and Technical Qualifications**. Prior to approval, the Director of Community and Economic Development shall have the authority to require an applicant to demonstrate to the satisfaction of the reviewing authority that the applicant possesses, or has secured, the technical expertise and financial resources necessary to complete the proposed development and to complete all required improvements in accordance with the approved plans, applicable regulations, and any conditions of approval. Such evidence may include, but is not limited to, resumes of project professionals, updated operational plans, safety and compliance records, development pro formas, letters of financial commitment, and other documentation deemed appropriate by the reviewing authority.

K. **Continuing Review Process**. Application submittals shall subsequently undergo the process established in 13-01-05, *Step 4: Staff Report*.

# 13-01-05 Step 4: Staff Report

A. **Referral Agency Review**. Within seven days after determining the development application is complete, the Director shall refer the development application to the appropriate referral agencies. Referral agencies shall have 21 days from the date of mailing to submit their comments to the Director. If a referral agency identifies concerns that require an investigation, the applicant, the County Commissioners, and the agency may agree to a 30-day extension of this time limit. Failure of the reviewing agencies to respond within the specified time limit or within the time period of an extension shall be considered a favorable response for the purpose of the review.

B. **Potential Referral Agencies**. Following is a list of the potential referral agencies:

1. The appropriate school district;
2. Each county and/or municipality within three miles of the boundary of the proposed development;
3. All utility districts, associations, or companies providing service in the immediate vicinity of the proposed development;
4. All local improvement and service districts in the immediate vicinity of the proposed development;
5. All appropriate ditch companies;
6. The Colorado State Forest Service;
7. The Colorado Department of Transportation;
8. The Natural Resources Conservation Service (Soil Conservation District Board) for explicit review and recommendations regarding soil suitability, floodwater problems and watershed protection;
9. The U. S. Army Corps of Engineers;
10. The Colorado Parks and Wildlife (CPW);

11. The Adams County Department of Parks and Community Resources;
12. The Adams County and State Departments of Health for a review of those aspects of a proposed development that have the potential for immediate or long-term environmental health impacts, including, but not limited to, the on-lot sewage disposal reports, for the review of the adequacy of existing or proposed sewage treatment works to handle estimated effluent, for a report on the water quality of the proposed water supply to serve the proposed development, noise, odors, and pollution prevention;
13. The State Board of Land Commissioners if the proposed development is adjacent to state school land;
14. The State Engineer for an opinion regarding material injury likely to occur to decreed water rights by virtue of the diversion water necessary to serve the proposed development and adequacy of the proposed water supply to meet the needs of the proposed development;
15. The Colorado Geologic Survey for an evaluation of those geologic factors, that would have a significant impact on the proposed development;
16. The Director of Public Works;
17. The Sheriff's Office; or
18. Any public or private agency, company, or corporation, that has existing or proposed infrastructure in the immediate vicinity of the proposed development, which, in the opinion of the Director, may be affected by the proposed development.

C. **Comments**. Each referral agency shall be asked to send a copy of its comments to the applicant, but the applicant should contact the Director to ensure all comments are received.

D. **Staff Report**.

1. *Preparation*. Following receipt of the referral agency comments or at the end of the review period, the Director shall review the development application and prepare a staff report.
2. *Availability to the Public and Recommendations*. The staff report shall be made available for inspection and copying by the applicant and the public at least 4 days prior to the scheduled public hearing on the development application. The staff report shall indicate whether, in the opinion of the staff, the development application complies with all applicable standards of this DSR. The staff report shall contain a recommendation for approval, approval with conditions, or denial and may recommend such conditions for approval to eliminate any areas of non-compliance or to mitigate any adverse effects of the development proposal.

E. **Continuing Review Process**.

1. *Approved Applications*. Applications receiving approval may subsequently undergo the processes established in 13-01-09, *Step 8: Actions Following Development Decision*.
2. *Applications Requiring Public Meeting or Hearing*. Applications requiring a public meeting or hearing, as denoted in Table 13-01-12-1, *Development Review Summary Table*, shall subsequently undergo the processes established in Sec. 13-01-06, *Step 5: Public Notice*, and Sec. 13-01-07, *Step 6: Public Meetings and Hearings*.
3. *Covered Colorado Surface-Development Applications*. Pursuant to the Colorado Notification of Surface Development Act, C.R.S. §§ 24-65.5-101 through 24-65.5-105, for a covered Colorado surface-development application, the applicant must send statutory notice to qualifying mineral estate owners by certified mail with return receipt requested or by nationally recognized overnight courier at least 30 days before the initial public

hearing, and the County must obtain the applicant's certification before convening that hearing.

## 13-01-06 Step 5: Public Notice

A. **Generally**. Notice of the public hearing shall be provided by the Director in accordance with the following procedures.

B. **Applicability**. Table 13-01-12-1, *Development Review Summary Table*, denotes the development review procedures that require public notice.

C. **Constructive Notice**. Minor defects in any notice shall not impair the notice or invalidate proceedings pursuant to the notice if the County has made a *bona fide* attempt to comply with applicable notice requirements. Minor defects in notice include errors in a legal description or detailed property location that are not substantial with respect to the general location of the property, typographical or grammatical errors, or errors of actual acreage that do not impede communication of the notice to affected parties.

D. **Written Notice**.

1. *Recipients*. The Director shall give written notice to the residents and owners of record of all real property located within a minimum of 500 feet (exclusive of public rights-of-way, public facilities, parks, or public open space) of the property lines of the parcel of land for which the development is planned. The owners of record of property shall be considered to be the parties listed by the Assessor for Adams County as those against whom taxes are assessed. The Director may further expand the notification area as set forth in Sec. 13-01-01. Designated representatives of neighborhood groups and homeowner's associations within the area of notification shall also receive written notice from the Director.

2. *Timing*. The written notices shall be mailed or emailed at least 15 days prior to the first public hearing date concerning the application. The written notice shall state the date, time, place, and purpose of the public hearing(s). Failure to mail or email such notice shall not affect the validity of any hearing or determination by the Planning Commission, Board of Adjustment, or Board of County Commissioners. Failure of any record owner or occupant to receive a notice of public hearing shall not necessitate another hearing or invalidate any action by the development review body.

E. **Posted Notice**.

1. *Location and Timing*. The real property proposed to be developed shall be posted with a sign, giving notice to the public of the proposed development. The Director shall post signs on the subject property in a manner and at a location to afford the best notice to the public. The property shall be posted at least 10 days prior to the first public hearing date.

2. *Size and Contents*. The sign shall be a minimum of two square feet and shall state the date, time, place, and purpose of the public hearing(s) and phone number and address of the case manager. Failure of the sign to remain posted prior to the hearing date shall not affect the validity of any hearing or determination by the Planning Commission, Board of Adjustment, or Board of County Commissioners.

F. **Published Notice**. The Director shall publish notice of the public hearing. Notice of the time, date, and place of the public hearing(s) on the development application shall be published in the official County newspaper at least 14 days prior to any hearing before the Board of County Commissioners. Failure of the Director to publish the required notice shall necessitate the delay of the hearing.

G. **Continuing Review Process**. Applications with required notice provided shall subsequently undergo the processes established in Sec. 13-01-07, *Step 6: Public Meetings and Hearings*.

H. **Public Notice Cost Reimbursement**. Public notice fees shall be established as part of the County's fee schedule adopted by the Board of County Commissioners. Prior to the first public hearing on the application by any development review body, the applicant is responsible for paying the public notice costs for any notices required as part of this Step 5. The County's fee schedule shall include a schedule of public notice costs based upon typical costs for newspaper advertising, mailed notices, and posted notices. The fee schedule shall be updated periodically to reflect current costs incurred by the County for such public notice.

## 13-01-07 Step 6: Public Meetings and Hearings

A. **Procedures Requiring Public Meetings and Hearings**. Table 13-01-12-1, *Development Review Summary Table*, denotes the development review procedures that require public meetings and hearings.

B. **Neighborhood Meetings**. Refer to Sec. 13-01-03, *Step 2: Neighborhood Meetings*.

C. **Conduct of Public Hearing**.

1. *Rights of All Persons*. Any person may appear at a public hearing and submit evidence, either individually or as a representative of a person or an organization. Each person who appears at a public hearing shall state their name, address and, if appearing on behalf of a person or organization, the name and mailing address of the person or organization being represented.

2. *Testimony and Evidence.* All testimony and evidence shall be part of the record. The decision-making body may determine its relevance and weight in applying the approval criteria.

3. *Continuance of Public Hearing*.

   a. *Discretion to Grant*. The Planning Commission, Board of Adjustment, or Board of County Commissioners may in its sole discretion, continue any public hearing to a fixed date, time, and place.

   b. *Time Period Waiver*. The applicant's agreement to a continuance shall nullify any requisite time period to act on the application. If the applicant requests a continuance, the applicant may be required to pay a continuance fee.

D. **Decision and Findings**.

1. *Decision*. After consideration of the development application, the staff report, and the evidence from the public hearing, the Chair shall close the public hearing, if applicable, and, unless the application is continued, the decision making body shall approve, approve with conditions, or deny the development application based on its conformance with the applicable approval criteria in this DSR. Except as otherwise provided herein, in the case of the Planning Commission, the approval, approval with condition(s), or denial shall be considered only as a recommendation to the Board of County Commissioners.

2. *Findings*. All decisions requiring a public meeting or hearing shall include at least the following elements which may be incorporated into a resolution:

   a. A statement of specific findings or other factors considered, whichever is appropriate, and a statement of the basis upon which the facts were determined, with specific reference to the relevant standards set forth in these standards and regulations; and

b. A statement of approval, approval with conditions, or denial, whichever is appropriate.

3. *Written Findings to Applicant*. If the final decision making body denies a Subdivision Plat or Improvements Agreement, the Community and Economic Development Director shall provide the applicant with written findings of the final decision making body specifying the provisions of this DSR or other applicable County regulations that the submittal did not meet, in accordance with C.R.S. § 30-28-133.5(1).

4. *Notification to Applicant*. The Director shall mail or email notification of the Planning Commission's, Board of Adjustment's, or Board of County Commissioners' decision to the applicant within seven days after the decision. The Director shall make available to the public a copy of the decision within seven days after the decision.

# 13-01-08 Step 7: Standards and Conditions of Approval

A. **Standards.** Before approving a development application, the Planning Commission, Board of Adjustment, or Board of County Commissioners must find that the development application has met the requirements of these standards and regulations and complies with the required criteria for approval.

B. **Standard Condition of Approval**. Every land use approval is subject to the condition that the property shall be developed and used only in accordance with the approved application, plans, and conditions of approval. All material representations made by or on behalf of the applicant in the application, submitted materials, or proceedings before the development review body shall be deemed incorporated into the approval and shall constitute binding conditions of approval, unless expressly excluded or modified by the final decision.

C. **Other Conditions of Approval**. The Planning Commission, Board of Adjustment, or Board of County Commissioners may impose such reasonably related conditions of approval on the development application to adequately mitigate the impacts of the proposed developments. Such conditions must have a reasonable nexus to potential impacts of the proposed development and should be roughly proportional, both in nature and extent, to the impacts of the proposed development or shall be mutually agreed upon by Adams County and the applicant. (See 1-02-08, *General Conditions of Land Use Approvals*, for further limitations on conditions.)

D. **Continuing Review Process**. Applications receiving approval with conditions at a public meeting or hearing may subsequently undergo the processes established in 13-01-09, *Step 8: Actions Following Development Decision*.

# 13-01-09 Step 8: Actions Following Development Decision

A. **Recording of Decisions and Plats**.

1. *Decisions Requiring a Public Meeting or Hearing.* Once approved, the decision of the Planning Commission, or Board of County Commissioners shall be filed with the Office of the Adams County Clerk and Recorder.

2. *Final Plats*. In the case of a Final Plat, once the final Construction Plans and Final Plat are approved, the Improvements Agreement is executed, and any other conditions of approval have been met, the Final Plat shall be recorded in the Office of the Adams County Clerk and Recorder.

3. *Biosolids Application Permit*. The applicant shall record an approved Biosolids Application Permit with the Office of the Adams County Clerk and Recorder. Upon recording the application, the permit will be deemed valid and the applicant may begin to apply the biosolids as provided for by the permit.

B. **Expired Approvals and Extensions**.

1. *Generally*. Table 13-01-12-1, *Development Review Summary Table*, denotes the expiration period for all development review approvals.
2. *Term of Approval*. The time period for approvals shall commence upon the date of approval and expire at the end of the stated time period, except where conditions precedent are required to be completed prior to the commencement of the approval, in which case the time period shall not begin until those conditions have been satisfied to the County's satisfaction unless:
   a. The applicant submits a complete application for the next required approval in a sequence of approvals; or
   b. An extension is granted in accordance with subsection 3, below, *Renewal of Approvals*.
3. *Renewal of Approvals*.
   a. *Generally*. Except as otherwise provided herein, the Director may extend the expiration date of any approval for a duration not to exceed 90 days by written request from the property owner according to the requirements of this Section.
   b. *Timing of Application for Extension*. Written requests for extensions shall be received no later than 30 days prior to the expiration of the approval.
4. *Extensions for Extraordinary Circumstances*. Untimely requests for extensions shall not be granted unless the applicant demonstrates that extraordinary circumstances justify the request. The Director may extend the expiration date of any approved development review applications in response to extraordinary circumstances, such as flood, fire, snowstorm, or other natural or human-made disaster that makes it temporarily infeasible to commence or continue with construction. The Director shall determine the period of such extensions.
5. *Public Hearing Extensions*.
   a. *Applicability*. A public hearing is required for:
      (1) Extensions of an expiration date that are longer than those that can be granted by the Director in accordance with this Section;
      (2) Second (and subsequent) extensions after the Director's initial extension;
      (3) Extension of a Preliminary Development Plan; and
      (4) Extension of a Preliminary Plat.
   b. *Decision-Making Body*. Extensions by public hearing shall be acted upon by the decision-making body that granted the original approval.
   c. *General Criteria*. Extensions may be granted after a public hearing if the applicant demonstrates that:
      (1) There is good cause for the request; and
      (2) They will perform (or cause to be performed) the work authorized by the permit or approval within the extended term.

d. *Additional Criteria for a Preliminary Development Plan Extension*. Extensions of a Preliminary Development Plan may be granted after a public hearing if the applicant also demonstrates that:
   (1) The applicant has made substantial progress toward obtaining Final Development Plan (FDP) approval;
   (2) The extension will not adversely affect the public health, safety, or welfare;
   (3) Applicable conditions in the surrounding area have not substantially changed; and
   (4) The extension remains consistent with the Comprehensive Plan and purposes of this DSR.

e. *Additional Criteria for a Preliminary Plat Extension*. Extensions of a Preliminary Plat may be granted after a public hearing if the applicant also demonstrates that:
   (1) The applicant has made substantial progress toward obtaining Final Plat approval;
   (2) The extension will not adversely affect the public health, safety, or welfare;
   (3) Applicable conditions in the surrounding area have not substantially changed; and
   (4) The extension remains consistent with the Comprehensive Plan and purposes of this DSR.

C. **Continuing Review Process**. An applicant may amend an approved application in accordance with Sec. 13-01-10, *Step 9: Amendments to Approved Applications*.

# 13-01-10 Step 9: Amendments to Approved Applications

A. **Minor Amendments**.

1. *Final Decision of Director*. The Director may approve, approve with conditions, or deny a minor amendment to any approved development application without additional public hearings. The Director may authorize such minor amendments if the development application, as amended, continues to comply with this DSR, at least to the extent of its original compliance.

2. *Criteria for Minor Amendments*.

   a. Minor amendments shall consist only of any or all of the following:
      (1) The amendment results in an increase or decrease by 5% or less in the approved number of dwelling units;
      (2) The amendment results in an increase or decrease in the amount of square footage of a nonresidential land use or structure that does not change the character of the project;
      (3) The amendment results in a change in the housing mix or use mix ratio that complies with the requirements of the zone district and does not change the character of the project; or
      (4) The amendment does not result in a change in the character of the development.

   b. For purposes of this subsection (2), the following shall constitute a change in the character of the development:
      (1) A material change in the planned land use pattern, including:

(A) Introducing a new land use not previously approved;

(B) Eliminating a land use category that was a defining feature of the approved plan; or

(C) Reconfiguring the spatial relationship of uses in a manner that alters circulation, buffering, or compatibility with adjacent properties.

(2) An increase in building height, number of stories, or building massing.

(3) A change in the street network, block layout, or access pattern beyond minor realignment.

(4) A significant change in the arrangement of amenity space, including:

(A) Removal or relocation of designated amenity spaces;

(B) Reduction in the size of required amenity spaces; or

(C) Elimination or substantial redesign of a central organizing open space element of the development.

(5) A change that alters the expected intensity or operating characteristics of the development, such as hours of operation, expected traffic generation, noise, or other external impacts beyond what was originally reviewed.

(6) A change that increases impacts on public facilities or infrastructure beyond levels accommodated in the approved plan, including water, wastewater, stormwater, and roadway capacity.

(7) Any other modification that alters the fundamental development concept as described in the approved plan or narrative, including changes that undermine key features relied upon during the original review and approval.

3. *Referral to Planning Commission*. The Director may refer a minor amendment to the Planning Commission.

4. *Final Decision of Commission*. If so referred, the decision of the Planning Commission shall constitute a final decision, subject to appeal to the Board of County Commissioners.

5. *Preliminary Plats and Development Plans*. A minor amendment to any Preliminary Plat or Preliminary Development Plan may be processed through the application for Final Plat or Final Development Plan Process as determined by the Director.

B. **Major Amendments**.

1. *Criteria for Major Amendments*. Amendments to any approved application not determined by the Director to be a minor amendment under the criteria set forth in subsection A(2), *Criteria for Minor Amendments*, above, shall be deemed a major amendment.

2. *Review and Decision*. Major amendments shall be reviewed and processed in the same manner as the original application for which the amendment is sought. Any approved major amendments shall be recorded in accordance with the procedures for recording the original approval, as specified in Sec. 13-01-09, *Step 8: Actions Following Development Decision*.

3. *Abandonment*. Any partial or total abandonment of an approved application shall be considered a major amendment.

## 13-01-11 Step 10: Appeals

A. **Generally.** Unless otherwise specified in this DSR, the applicant, the property owner of the subject property, or a person otherwise permitted to appeal by state law (collectively referred to as parties of interest), may appeal a decision on a development application addressed in this Article in accordance with the procedures in this Section. The appropriate appeal body may reverse the decision being appealed only if the appeal body determines that the decision or interpretation being appealed was incorrect based on the standards and criteria in this DSR, provided that its action does not have the effect of approving a Variance that would not be permitted under Sec. 13-07-03, *Variance* (and only the Board of Adjustment may grant Variances). As an alternative to reversal of the decision, the appeal body may modify the decision or interpretation, or may modify conditions attached to an approval being appealed, to bring it into conformance with the standards and criteria of this DSR.

B. **Procedures.**

1. *Effect of Appeal.* Filing an appeal does not automatically stay the effect of a land use decision or related approvals, consistent with C.R.S. § 13-51.5-104. The decision-making body or the official whose decision is under appeal may issue a stay where necessary to prevent immediate peril to life or property.
2. *Appeal Forums.*
   a. *Board of Adjustment.* Except as specified in subsection b, *Board of Commissioners*, below, all appeals from decisions of the Director of Community and Economic Development (other than platting decisions) or Director of Public Works shall be heard by the Board of Adjustment.
   b. *Board of Commissioners.* Appeals from a decision of the Planning Commission pursuant to Sec. 13-01-10(A)(4) or Sec. 13-04-05(A) or an appeal of a platting decision of the Director of Community and Economic Development shall be heard by the Board of County Commissioners.
   c. *District Court.* Appeals from final decisions of the Board of Adjustment or the Board of County Commissioners shall be in accordance with Rule 106 of the Colorado Rules of Civil Procedure.
3. *Timing for Filing Appeal.* Except for appeals subject to Rule 106 of the Colorado Rules of Civil Procedure, appeals shall be filed with the Director no later than ten (10) days after the date of the initial decision. Upon receipt of an appeal, the Director shall forward the documents constituting the record of the action to the appropriate development review body.
4. *Time of Decision.* Appeals will be considered within 90 days of the date the appeal is filed unless the parties agree in writing to a different time frame.
5. *Notice of Decision*. Written notice of the decision normally shall be sent to the appellant and all other parties who have made a written request for notification within ten (10) days of the decision. The decision of the appellate body shall be deemed the final decision of the County on the application.

# 13-01-12 Development Review Summary Table

A. **Generally.** Table 13-01-12-1, *Development Review Summary Table*, compiles the review procedures for applications in this DSR involved in the development review process. Detailed information about general procedures and applications are further discussed in this Article. Refer to Sec. 13-01-06, *Step 5: Public Notice*, for details on public notice.

| Table 13-01-12-1, Development Review Summary Table<br>• = Meeting Required '--' = Not Applicable<br>P = Published Notice Required M = Mailed Notice Required<br>S = Signs Notice Required<br>DCED = Director of Community and Economic Development PC = Planning Commission<br>BCC = Board of County Commissioners BOA = Board of Adjustment<br>[ ] = Public Hearing Required | | | | |

| Waiver from Public Works Standards (13-07-06) | Public Works Director[11] | Public Works Director[11] | -- | 12 months |

**TABLE NOTES**:
*Any final action item that does not require a public hearing may be considered as part of the Board of County Commissioners' consent agenda.

1. The time period in the "Expiration" column is measured from the date of the approval. Expiration occurs if the applicant does not commence the work prior to the expiration or does not diligently pursue completion of the project or the subsequent required approval. *See* Sec. 13-03-02.C, *Extensions of Approval*.
2. Refer to the Notice requirements in Sec. 13-02-05, *Oil and Gas Facility Permit*.
3. The Biosolids Application Permit shall be valid unless the State permit lapses.
4. Notification signs are a discretionary, supplemental form of notice of a proposed rezoning and will be posted if the Director of Community and Economic Development determines that supplemental signs will materially improve the ability of affected owners and members of the public to learn about the proposed rezoning and participate in the public process, given the scale and nature of the proposal and the other notice methods being used.
5. Planning Commission recommendation is only required for a subdivision exemption application with a concurrent rezoning request.
6. Planning Commission recommendation is only required for a minor subdivision final plat application with a concurrent rezoning request.
7. At any time prior to Final Plat approval, the Director of Community and Economic Development may refer a Final Plat or Replat to the Board of County Commissioners for public hearing and decision when the Director determines that one or more of the following situations is present: (a) The subdivision presents significant public policy considerations; (b) The subdivision involves substantial public infrastructure or complex financing arrangements; (c) Material issues remain unresolved at the Preliminary Plat stage; and/or (d) The Final Plat includes a material change from the approved Preliminary Plat.

   At the time of Preliminary Plat approval, or at any time prior to Final Plat approval, the Board of County Commissioners may elect to retain jurisdiction over a Final Plat application. The Board may retain jurisdiction when it determines that one or more of the following situations is present:
   (a) The subdivision presents significant public policy considerations;
   (b) The subdivision involves substantial public infrastructure or complex financing arrangements;
   (c) Material issues remain unresolved at the Preliminary Plat stage;
   (d) The Board desires continued oversight of compliance with conditions of approval; and/or
   (e) Retention of jurisdiction is otherwise in the public interest.

   An aggrieved party may appeal action by the Director of Community and Economic Development on a Final Plat or Replat to the Board of County Commissioners at a regular business meeting when a request for appeal is submitted, in writing, to the Director of Community and Economic Development within 30 days of the action.

8. Any plat that involves dedication of an interest in real property to the County and/or vacation of an interest in real property held by the County must be acted upon by the Board of County Commissioners. The Director of Community and Economic Development may recommend scheduling such plat for consideration as part of the Board of County Commissioners' consent agenda, subject to the Board of County Commissioners' authority to act on the item as part of its public hearing agenda.
9. For the vacation of a County roadway, notice per C.R.S. § 43-2-303(2)(b) is required.
10. A Planning Commission recommendation on a subdivision design standards waiver request is only required for a major subdivision application with a concurrent subdivision design standards waiver request.
11. In consultation with the Director of Community and Economic Development.

B. **Review Steps**. Table 13-01-12-2, *Review Steps*, establishes which steps in the review process are relevant to each type of application. If there is any conflict between the Table and the textual description of applicable review procedures, the textual description of the review procedures shall prevail.

**TABLE NOTES:**

1. A Pre-Application Conference and Neighborhood Meeting are required for Certificate of Designation for Hazardous Waste and Solid Waste for other applications, the Director of Community and Economic Development may request a Pre-Application Conference and/or Neighborhood Meeting based on if the Director of Community and Economic Development determines the development proposal would or would not have significant neighborhood impacts.

# Div. 13-02 Administrative Procedures

## 13-02-01 Administrative Review Permit

A. **Purpose**. The purpose of this Section is to provide processing requirements for Administrative Review Permits

B. **Applicability**. All uses that require an Administrative Review Permit in accordance with Div. 2-06, *Principal Use Table*, must be processed in accordance with this Section. The designation of a use requiring an Administrative Review Permit does not constitute an authorization or assurance that such use will be approved.

C. **Initiation.** Any owner of, or person having interest in the property on which the use requiring administrative review is proposed to be located may request an Administrative Review Permit.

D. **Specific Review Procedures**. The following review procedures shall apply:

1. *Common Review Procedures*. The procedures outlined in Div. 13-01, *Common Review Procedures*;
2. *Administrative Review Permit Demonstration Requirements for Wireless Communication Facility (WCF) Sites.* In addition to compliance with all applicable standards of this Chapter, an applicant for an Administrative Review Permit shall demonstrate, through written documentation and supporting technical materials, that:
   a. The proposed site is necessary to provide appropriate signal coverage quality;
   b. The site is required pursuant to the applicant's FCC license;
   c. The site is necessary to accommodate increased system capacity due to caller volume;
   d. Existing topography and/or structures in the surrounding area preclude other feasible locations in the same service area;

e. Technical and engineering factors require the site to be located in the proposed location, including but not limited to system design constraints, frequency requirements, availability of electric power, interconnection to telephone land lines, and site access;

f. The screening and design of the facility will make the site compatible with surrounding land uses; and

g. The proposed facility will not block a significant view, including but not limited to views of the Front Range of the Rocky Mountains, the South Platte River, the Rocky Mountain Arsenal Wildlife Refuge, Barr Lake, or other significant water bodies.

3. *Non-Small Cell Facilities in the Right-of-Way.* Non-small cell facilities are discouraged within the public right-of-way. An applicant requesting approval of a new non-small cell facility within the right-of-way shall obtain an Administrative Review Permit and demonstrate that:

a. Exceptional circumstances exist that prohibit installation of a small cell facility; and

b. There are no feasible alternatives to locate the wireless facility outside of the public right-of-way.

E. **Criteria for Approval**. In determining whether to approve the application, the development review body denoted in Table 13-01-12-1, *Development Review Summary Table*, as taking final action shall consider the following criteria and find that each has been met (or determined to be inapplicable, in which case the criterion shall not be required to be satisfied, provided that the basis for such determination is supported by the record):

1. *Purposes*. The use is consistent with the purposes of this DSR as listed in Sec. 1-01-03, *Findings and Purposes*.

2. *Performance and Specific Use Standards*. The use complies with the requirements of these standards and regulations including, but not limited to, all applicable performance and specific use standards.

3. *Adverse Impacts*. Any adverse impacts of the use on the surrounding area with respect to the environment; building scale, massing, and site design in relation to established development patterns; access, traffic generation and circulation; parking; emergency services; utilities and infrastructure demand; waste disposal areas; noise, lighting, vibration, air emissions, dust and odor; hours of operation; and other material adverse impacts have been addressed and/or mitigated to the maximum extent practicable. the maximum extent practicable.

4. *Suitability*. The site is suitable for the use, including adequate usable space, adequate access, and absence of environmental constraints.

5. *Site Plan*. The Site Plan for the proposed use will provide adequate fencing, screening, and landscaping.

## 13-02-02 Building Permit

A. **Purpose**. The purpose of this Section is to provide procedures for reviewing, approving, approving with modifications, or denying requests to erect, move, place, or alter a structure, sign, or temporary structure.

B. **Applicability**. All Building Permits shall be processed in accordance with this Section. A Building Permit is required for any structure, sign, fill, excavation, temporary building, or utility

installation. All structures shall comply with these standards, even if the Chief Building Official waives the permit requirement.

C. **Initiation**. The property owner or authorized representative may submit a Building Permit application . Upon permit issuance, the applicant shall provide contractor information.

D. **Specific Review Procedures**. The following review procedures shall apply:

1. *Common Review Procedures*. The procedures outlined in Div. 13-01, *Common Review Procedures*; and
2. [Reserved].

E. **Moving Buildings or Structures**.

1. *Permit Required*. No building or structure shall be moved into, within, or set down in the unincorporated area of Adams County or transported upon any public right-of-way within said area until an Oversize Load Permit and a Building Permit have been obtained.
2. *Inspection and Conformance Required*. Buildings or structures proposed to be moved shall meet all the regulations of Adams County and shall be compatible in size, structure, age, value, and general architectural design to the neighborhood in which they are proposed to be moved. A building proposed to be moved, is required to be inspected prior to being moved.

F. **Criteria for Approval**. In determining whether to approve the application, the development review body denoted in Table 13-01-12-1, *Development Review Summary Table*, as taking final action shall consider the following criteria and find that each has been met (or determined to be inapplicable, in which case the criterion shall not be required to be satisfied, provided that the basis for such determination is supported by the record):

1. The request complies with all standards, development plans, and permits.
2. Legal access to the property exists.
3. The request meets all building code requirements in effect at the time of application.

G. **Improvement Location Certificate**. The Building Official may require the permit holder, as a condition of continuing construction beyond the foundation stage and/or prior to rough framing, to submit an Improvement Location Certificate ("ILC") prepared and certified by a Colorado-licensed professional land surveyor. An ILC may be required when, in the judgment of the Building Official, verification of the location of the foundation or structure is necessary to establish compliance with this DSR, Building Codes, approved plans, or recorded property interests, including when:

1. the foundation or structure is located within, or in close proximity to, a required setback;
2. the foundation or structure is located within a specified distance of an established property line or other established boundary;
3. the structure is located near or within an easement, utility easement, drainage easement, access easement, right-of-way, or other recorded area in which construction may be restricted;
4. the lot is irregular, constrained, or otherwise presents unusual boundary or setback conditions;
5. the proposed construction involves a variance, lot line adjustment, nonconforming condition, or other approved deviation from applicable dimensional requirements;
6. existing structures, walls, fences, improvements, or other physical conditions make the location of property lines or required setbacks uncertain or difficult to verify; or

7. the Building Official determines that other site-specific circumstances warrant verification of the location of the foundation or structure.

When required, the ILC shall show the location of the foundation or structure in relation to established applicable property lines, required setback lines, and recorded easements or rights-of-way, together with such elevations or other information as the Building Official reasonably determines is necessary to verify compliance. The ILC shall be submitted to and approved by the Building Official before the Building Official authorizes the next applicable inspection or permits construction to proceed beyond the foundation stage and/or prior to rough framing.

H. **Improvement Location Survey**. The Building Official may require additional survey documentation, including an Improvement Survey Plat, when the circumstances of the property or construction make an ILC insufficient to establish compliance. Where necessary to establish or verify property boundaries, the Building Official may require a land survey or survey plat prepared by a Colorado-licensed land surveyor.

# 13-02-03 Clearing and Grading Permit

A. **Purpose**. The purpose of this Section is to provide processing requirements for Clearing and Grading Permits to review, consider, approve, approve with modifications, or deny a request for permission to clear bush and/or vegetation, excavate or import soils, disturb land and/or, change the topography of land within unincorporated Adams County.

B. **Applicability**.

1. All Clearing and Grading Permits must be processed in accordance with this Section. A Clearing and Grading Permit is required if:
   a. The total area of land disturbance is to be 3,000 square feet or greater, or
   b. The cumulative fill and/or excavation exceeds 50 cubic yards.
2. A Clearing and Grading Permit is the mechanism to provide authorization under which land may be cleared of vegetation, excavated, receive imported soils, disturbed and/or, the topography of the land altered. In accordance with Sec. 5-02-02, *Approved Plans Required*, properties that are the subject of an active Subdivision case cannot be issued a Clearing and Grading Permit prior to the approval of the subdivision plat. Agricultural and farming activities are exempt from this requirement.

C. **Initiation**. The owner(s) of the property to which the clearing and grading work is to be performed, the owner of the utility, or any person(s) performing work within the County with legal right to perform such work may request a Clearing and Grading Permit without limitation.

D. **Specific Review Procedures**. The following review procedures shall apply:

1. *Common Review Procedures*. The procedures outlined in Div. 13-01, *Common Review Procedures*.
2. *MS4 Properties*. Compliance with the County's Stormwater Quality Regulations is required for properties located within the MS4, including, without limitation, the potential need for a separate Stormwater Quality Permit. Refer to Chapter 10 for guidance.
2. *Construction Plans*. A Clearing and Grading Permit will not be approved until Construction Plans are approved. If there is no construction activity for a period longer than six months, then any Clearing and Grading Permit issued will be automatically terminated.
3. *Final Construction Site Stabilization*. The Clearing and Grading Permit shall remain active until Final Construction Site Stabilization has occurred. Final Construction Site Stabilization

occurs when all ground disturbing activities are complete, and all disturbed areas have either been built on, paved over or a uniform vegetative cover has been established per conditionally accepted ESCP. Prior to Clearing and Grading Permit closeout, all items listed below must be completed in order for the construction site to be considered to have Final Construction Site Stabilization:

a. The site has a uniform vegetative cover with a density of at least seventy percent (70%) compared to the original undisturbed site. Vegetative cover shall be established with the approved seed mix, sod or a combination thereof.

b. If applicable, proper installation and maintenance of all approved permanent post-construction stormwater quality treatment BMPs.

c. Removal of all stockpiles of soil, construction material/debris, construction equipment, etc. from the construction site.

d. Streets, parking lots and other surrounding paved surfaces are clean and free of any sediment or debris.

e. Removal of sediment and debris within the private or adjacent public storm drainage system.

f. Restoration and stabilization of any damaged public infrastructure caused by the Permittee's construction activities.

g. Any acceptance of installed vegetative cover shall not be construed to relieve the property owner of the duty to warrant and maintain the installed vegetative measures as aforementioned.

4. *Permit Closeout Notification*. The Permittee must contact the County to set up a Closeout Inspection. The purpose of the Closeout Inspection is to verify the site is adequately stabilized and/or covered with pavement or structures, per the County accepted plans. If the County needs to conduct more than one Closeout Inspection, an inspection fee may be assessed for each additional closeout inspection, as approved by Adams County Annual Fee Schedule adopted by the Board of County Commissioners.

E. **Criteria for Approval**. In determining whether to approve the application, the development review body denoted in Table 13-01-12-1, *Development Review Summary Table*, as taking final action shall consider the following criteria and find that each has been met (or determined to be inapplicable, in which case the criterion shall not be required to be satisfied, provided that the basis for such determination is supported by the record):

1. *Compliance with this DSR*. The Clearing and Grading Permit is consistent and complies with the requirements of this DSR .

2. *Quality Work*. The work to be performed will be of such a standard and condition as to mitigate adverse impacts on neighboring properties to the maximum extent practicable.

3. *Proof of Clean Fill.* Documentation verifying that any imported soils meet the County's clean fill requirements, including source location and test results demonstrating the material is free of contaminants.

4. *Safety*. Adequate controls have been established to ensure compliance and safety during the course of work.

5. *Financial Guarantees*. Adequate financial guarantees have been provided to ensure that any problems arising from the work to be performed can be reasonably remedied by the County, if necessary.

# 13-02-04 Contractor Registration

A. **Registration Required**. Any contractor operating a business involving the construction, alteration, remodeling, repairing, or equipping of buildings or other structures, shall be registered as a contractor with Adams County. Those contractors performing work involving installation of underground utilities or construction of roads and streets and storm drainage facilities in Adams County are exempt from this registration requirement. However, other applicable standards and permits required by the County shall apply.

B. **Registration Procedure**.

1. *Application and Certificate of Insurance to be Submitted*. Applications for Contractor Registration shall be submitted on forms provided by the Chief Building Official. Each application shall be accompanied by a certificate of insurance indicating the applicant has liability insurance coverage in an amount agreeable to the Director of Community Development covering the type of registration requested.
2. *Examination Waived*. The Chief Building Official may license or register, without examination, applicants who are duly licensed under the laws of the State of Colorado, the City and County of Denver, and other counties, or municipalities within the State of Colorado for the licensing and the regulating of the plumbing trade, mechanical trade, building trade, etc., deemed by the Chief Building Official to be equivalent to the requirements of the County building code.
3. *Registration of Electrical Contractors*. Electrical contractors shall be licensed by the State of Colorado and registered with the Chief Building Official before performing any electrical work within Adams County. Registrations shall be valid for three years from the date of issuance.
4. *Registration of Plumbing Contractors*. Plumbing contractors shall be licensed by the State of Colorado and registered with the Chief Building Official before performing any plumbing work within Adams County. Registration shall be valid for three years from the date of issuance.
5. *Registration of all Other Construction Contractors*. All contractors performing work involving the construction, alteration, remodeling, repairing, or equipping of buildings or other structures in Adams County shall be licensed by the City and County of Denver; other counties, or municipalities within the State of Colorado; or the International Code Council. Registration shall be valid for one year from the date of issuance.

C. **Classification of Registrations**.

1. *Class A Registration*. This Registration entitles the holder to engage in the construction, alteration, tenant finish, or repair of any type of structure as permitted by the Building Code.
2. *Class B Registration*. This Registration entitles the holder to engage in the construction, alteration, or repair of commercial buildings and single- or multi-family buildings not exceeding three stories in height as permitted by the Building Code.
3. *Class C Registration*. This Registration entitles the holder to engage in the construction, alteration, or repair of one- and two-family dwellings and accessory buildings as permitted by the Building Code.
4. *Class D Registration*. Any specialty contractor including, but not limited to, plumbing, electrical, siding, fences, glass and glazing, insulation, roofing, or mobile home installer.

D. **Expiration of Registration**. All license registrations shall expire one year from the date of issuance, unless a certificate of insurance or reciprocal license precedes the one-year expiration, in which case the registration expires at the same time the insurance lapses or reciprocal license expires.

E. **Responsibilities of Registrants**. All registered contractors shall be responsible for work requiring a permit under the provisions of the County Building Code, including, without limitation, the items herein listed:

1. To provide minimum safety measures and equipment to protect workers and the public as proscribed by the County building code.
2. To present a registration card when requested by the Chief Building Official or authorized representative.
3. To obtain a permit when required.
4. To construct faithfully without substantial departure from or disregard of drawings and specifications when such drawings and specifications have been filed and approved by the Department of Community and Economic Development.
5. To complete all work authorized on the permit issued under the authority of the County building code, unless good cause is shown.
6. To obtain inspection services when the same are required by the County building code.
7. To pay any fee assessed under the authority of the County building code.
8. To obey any order issued under the authority of the County building code.
9. To provide honest, factual and complete information on all applications for permits.

F. **Validity of Registration**.

1. A change in name, business designation, or ownership of a registered contractor shall have the legal effect of operating without a valid registration. All such changes shall be reported by the registrant to the Department of Community and Economic Development within ten (10) days after such change occurs.
2. In the case where it is desired to change the name of a presently registered firm, partnership, or corporation where there is no change in ownership, a new license shall be issued under the new name, without charge, upon the surrender of the registration originally issued.

G. **Renewal of Registration.**

1. *Procedure and Criteria for Renewal*. Application for renewal of registration shall follow the procedures for a new registration. In determining whether a registrant is eligible for renewal, the County shall consider the contractor's documented compliance with the County's Building Code during the preceding registration period, including:
    a. whether the contractor commenced work requiring a building permit without first obtaining the required permit;
    b. whether the contractor performed work that materially failed to conform to approved construction documents or applicable requirements of the County's adopted Building Code;
    c. whether the contractor continued work after service of a stop work order, except as authorized by the Chief Building Official;
    d. whether the contractor concealed work before completion of a required inspection;

e. whether the contractor failed to correct a violation identified by the Chief Building Official within the time prescribed by the Building Code, an approved correction notice, or other lawful order;
f. whether the contractor failed to comply with applicable requirements for required inspections, tests, or special inspections;
g. whether the contractor committed repeated violations of the County's adopted Building Code that resulted in notices of violation, failed inspections, stop work orders, or other documented enforcement actions; or
h. whether the contractor otherwise failed to comply with any of the Responsibilities of Registrants as set forth herein.

2. *Denial of Renewal*. When the Chief Building Official determines that a contractor is not eligible for renewal based on one or more of the criteria for renewal, the procedure shall be the same as for a suspension or revocation of registration. If the registration is non-renewed, the contractor shall not be granted another registration for at least 12 months after the date of the expiration of the most recent registration.

H. **Suspension or Revocation of Registration**.

1. *Authority*.

The Chief Building Official may suspend or revoke a registration when the registrant commits one or more of the following acts or omissions:

a. Failure to comply with any of the Responsibilities of Registrants as set forth herein.
b. Knowingly combining or conspiring with a person, firm or corporation by permitting one's registration to be used by such other person, firm or corporation.
c. By acting as agent, partner, associate or in any other capacity with person, firms or corporations to evade the provisions of the County building code.
d. Willfully refusing to correct the registrant's violation of any provision of the County building code, these standards and regulations, or other County requirements including provisions of Development Agreements or Improvements Agreements.

2. *Procedure*.

When any act or omission as herein enumerated is committed by a contractor, and the Chief Building Official deems such registration shall be suspended or revoked, the procedure shall be as follows:

a. The registrant shall be notified, in writing, by same-day or next-day mail or courier at the Contractor's address of record on file with the County, or by personal service, at least seven days prior to the effective date of the suspension or revocation.
b. Upon the receipt of the notice, the registrant may request a hearing. Such request shall be in writing to the Chief Building Official within seven days of the receipt of the notice. Failure to request a hearing renders the Chief Building Official's decision final.
c. If a hearing is requested by the registrant, the Chief Building Official shall set a time, date, and place for the hearing and shall so notify the registrant.
d. When a hearing is conducted, the registrant and other interested parties may be in attendance. The hearing shall be conducted in accordance with the procedures and requirements outlined in the bylaws of the Building Code Board of Appeals. The hearing shall be conducted by the Building Code Board of Appeals:

e. At the hearing, the Building Code Board of Appeals shall consider all the evidence presented and shall determine whether the suspension or revocation of the registrant was justified.

f. The burden of proof at said hearing shall be upon the Chief Building Official by a preponderance of the evidence.

g. The Building Code Board of Appeals shall issue a written order within ten (10) business days from the hearing date. The order or a copy thereof shall be available to the registrant at the Department of Community and Economic Development. The date of such availability shall be deemed the date of the order. Failure to issue an order within ten (10) business days from the date of the hearing shall be deemed to be a final order reversing the decision of the Chief Building Official.

h. If the registration is revoked, the contractor shall not be granted another registration for at least 12 months after the date of revocation.

3. *Temporary Suspension or Revocation*.

A registrant shall not be permitted to perform any construction activities in Adams County after the effective date of the suspension or revocation by the Chief Building Official until the occurrence of one of the following circumstances:

a. The Building Code Board of Appeals rules the suspension or revocation was not justified;

b. The registrant posts a performance bond for the construction being performed; or

c. The period of suspension expires.

I. **Violations**. Any person, firm or corporation violates these regulations:

1. By performing in a business involving the construction, alteration, remodeling, repairing, or equipping of buildings or other structures or performing any other activity requiring the registration of contractors hereunder; and

2. Failing to register with the Chief Building Official of Adams County; or

3. Performing any of the activities requiring a registration while said registrant is suspended or revoked or without having first posted an adequate performance bond.

# 13-02-05 Oil and Gas Facility Permit

A. **Purpose**.

1. The purpose of an Oil and Gas Facility Permit is to regulate the surface land use of oil and gas development in a manner that protects the public safety, health, welfare, the environment and wildlife of Adams County and its residents by ensuring that facilities are constructed and operated in accordance with best practices, to provide for sound environmental practices to protect the County's natural resources, to provide for the orderly siting and development of oil and gas operations, as well as to prevent damage to County roads and bridges.

2. The Colorado Energy and Carbon Management Commission (ECMC), the Colorado Department of Public Health and the Environment (CDPHE) and the federal government have authority to regulate certain aspects of oil and gas mineral extraction. Requirements contained in this Section shall not exempt the owner or operator of an Oil and Gas Facility from compliance with the requirements of the ECMC, CDPHE, or any other regulatory authority.

3. The provisions of these standards and regulations shall apply to the construction, installation, alteration, repair, erection, location, maintenance, operation, and abandonment of all new or substantially modified oil and gas facilities within the unincorporated areas of the County. Substantially modified for the purposes of this Section means anything requiring a Major Amendment.

B. **Applicability**. All uses that require an Oil and Gas Facility Permit must be processed in accordance with this Section. The Director of Community and Economic Development is the permit issuing authority for Oil and Gas Facility Permits that do not require any waiver from approval criteria or performance standards. Oil and Gas Facility Permits requiring waivers from approval criteria or performance standards must be approved by the Board of County Commissioners through the designated Waiver process.

C. **Initiation**. Any owner of, or person demonstrating a legal interest in property on which the Oil and Gas Facility use is proposed to be located may request an Oil and Gas Facility Permit without limitation.

D. **Specific Review Procedures**. The following review procedures shall apply:

1. *Common Review Procedures*. The procedures outlined in Div. 13-01, *Common Review Procedures*.

2. *Final Action*. An Oil and Gas Facility permit may be approved by the Director of Community and Economic Development if the application does not require waiver or modification from any approval criteria or performance standards. An Oil and Gas Facility permit requiring a waiver or modification from any of the approval criteria or performance standards, or as otherwise stated in these regulations, must be approved by the Board of County Commissioners, and requires a public hearing. The Director of Community and Economic Development or the Board of County Commissioners shall approve, approve with conditions, or deny the Oil and Gas Facility permit based on consideration of the staff report, the evidence from the public hearing (if applicable), and compliance with the criteria for approval.

3. *Oil and Gas Facility Permit Review Steps*. The processing of a proposed Oil and Gas Facility permit shall be as follows:

a. *Conceptual Review and Pre-Application Conference*. Applicable. Operator shall identify three proposed locations for the Oil and Gas Facility for the Alternative Site Analysis process outlined below. For each location, Operator shall identify, and visually depict the same on a map, the following items that are located within a half-mile radius of the parcel boundary of the proposed facility: existing or platted residences, occupied buildings, parks, open space, schools, future school facilities, state licensed daycares, known areas of environmental contamination such as superfund sites, hospitals, water bodies, floodplains, floodways, water supply facilities including wells, existing active and decommissioned wells, and roadways. Proposed access routes to the site should also be provided. This information must be submitted to Community and Economic Development for review. Following that, a conceptual review meeting shall be held with the Operator. Operators are encouraged to schedule a conceptual review prior to entering into any surface use agreements.

(1) *Alternative Site Analysis*. Prior to submittal of Form 2, 2A, or Oil and Gas Development Plan to the ECMC and during the conceptual review, the applicant must consult with the County on an Alternative Site Analysis as outlined below:

(A) *In General*. The County seeks to site Oil and Gas Facilities in areas that have the least off-site impact possible in order to protect the health, safety, and welfare of its residents and to protect the environment and wildlife. In order to determine whether proposed siting is appropriate, the Community and Economic Development Department must evaluate alternative sites.

(B) *Description of Potential Sites*.

(I) Applicant must submit descriptions of at least three potential sites for the Oil and Gas Facility that were considered by applicant. All potential site descriptions shall include Geographic Information System (GIS) data. The GIS data shall include, at a minimum, the outline edge of maximum disturbance and the access road for each proposed site. The description shall include an explanation of site locations considered, whether mineral extraction is possible and reasonable from those sites, the off-site impacts associated with those sites, and why a particular site is proposed, if any.

(II) Potential sites shall be:

1. A minimum of 500 feet away from each other but can be located on the same parcel; and
2. Uniquely distinct from one another as determined by the Director of Community and Economic Development.

(C) *Evaluation Materials*. The Director of Community and Economic Development shall evaluate the potential sites to determine which site is likely to have the least off-site impacts. The Director of Community and Economic Development will determine whether applicant is required to provide traffic impact studies, engineering studies, Environmental Impact Analysis as defined in these standards and regulations, or other evaluation tools in order to adequately evaluate site options. If not required by the Director of Community and Economic Development as part of the alternative site analysis, these site-specific evaluation tools can be submitted by the applicant after site selection has occurred.

(D) *Evaluation Criteria*. In determining which sites are likely to have the least off-site impact, the Community and Economic Development Department may consider the following, at a minimum:

(I) Distance from existing or platted residences, schools, state licensed daycares, high occupancy buildings, active open spaces, environmentally sensitive areas, public drinking water supply areas, or other areas likely to be adversely impacted;

(II) Traffic impacts and impact to roads, bridges, bicycle and pedestrian facilities, and other infrastructure;

(III) Access to water and other operational necessities;

(IV) Whether the site allows for utilization of impact mitigation, such as use of proximate pipelines;

(V) Noise impacts;

(VI) The impact on the surrounding land;

(VII) The impact on wildlife; and

(VIII) Impact on nearby environmental resources such as water bodies.

(E) *Site Selection*. The County shall review all proposed locations in order to determine which location(s) best protects public health, safety, welfare, the environment, and wildlife resources and will choose the location that best satisfies this goal. The Director of Community and Economic Development will determine if any proposed sites meet this goal. If no location satisfies this goal, Operator shall submit three new proposed locations. The County may recommend denial of the Oil and Gas Facility Permit if it does not believe that any of the proposed sites meet the siting goal. Site Selection as part of the Alternative Site Analysis, as outlined above, does not constitute the approval of an Oil and Gas Facility application.

(F) The County will make every effort to consult with the ECMC as part of the Alternative Site Analysis, as provided for in ECMC Rules.

b. *Neighborhood Meeting*.

(1) In addition to the requirements of Sec. 13-01-03, *Step 2: Neighborhood Meetings*, at the neighborhood meeting, the applicant shall provide an overview of its proposed oil and gas operation and allow those in attendance to provide input as to the proposed operation, including, but not limited to, issues that arise from application of these regulations to the proposed operation, and suggested mitigation to adequately ensure compliance with these regulations. Where Disproportionately Impacted Communities, as defined in ECMC rules, are located within one mile of the proposed Oil and Gas Facility, the Operator may be required to hold separate or additional neighborhood meetings to ensure adequate engagement and documentation of concerns, as determined by the Director of Community and Economic Development, based on primary and secondary languages, culturally sensitive methods of communication and, other socio-economic factors that impact public availability and participation in neighborhood meetings.

(2) The Operator shall send notice for neighborhood meetings to all property owners, current residents, and school facility or childcare center administrators within one mile at a minimum, or greater, as determined by the Director of Community and Economic Development, of the facility. Notice of neighborhood meetings shall occur at least 14 days prior to the meeting. The format, location, and timing of the neighborhood meeting will be approved by the County.

c. *Development Application, Submittal, and Completeness*. In addition to the submittal checklist and development application guide requirements for required submittals for Oil and Gas Facility Permits, Oil and Gas Facility Permit applications shall address the following.

(1) Transportation, roads, access standards, and fees:

(A) The applicant's transportation plan must be designed and implemented to ensure public safety and maintain quality of life for other users of the county transportation system, adjacent residents, and affected property owners.

(B) Where available, existing private roads shall be used to minimize land disturbance unless traffic safety, visual or noise concerns, or other adverse surface impacts clearly dictate otherwise.

(C) Access roads on the site and access points to public roads as identified in the application materials shall be reviewed by the Community and Economic Development Department and shall be built and maintained in accordance with the engineering specifications and access road standards defined in this DSR (Chapter 7).

(D) Oil and gas operations must minimize impacts to the physical infrastructure of the County transportation system. Any costs to improve county transportation system infrastructure necessitated by the proposed oil and gas operation shall be the responsibility of the Applicant in accordance with Div. 4-07, *Road Impact Fees*. All transportation system infrastructure improvements and associated costs shall be determined by the Director of Community and Economic Development. The County shall perform the work or arrange for it to be performed. If the Applicant disagrees with the infrastructure improvements or associated costs as assessed by the Community and Economic Development Department, it may request that the Community and Economic Development Department approve a different route for its proposed oil and gas operation that avoids the need for such improvements. Alternatively, the Applicant may engage a licensed civil engineering firm to perform a traffic impact study in accordance with Chapter 7 of this DSR to independently evaluate County transportation system infrastructure improvements necessitated by the proposed oil and gas operation.

d. *Concurrent Referral and Review*. County staff may refer the complete application review by the various County Departments and the County Attorney's Office, as deemed appropriate. An application may require review by outside experts or agencies such as the U.S. Army Corps of Engineers, if the project impacts a floodplain, life-safety providers, adjacent jurisdictions, local public health departments, and others as may be deemed appropriate. Operator shall reimburse the County for reasonable costs incurred in connection with the use of third-party expert reviewers.

e. *Public Notice.* Applicable, except notice shall be sent by the applicant to all property owners and current residents within one mile of the proposed parcel where an application for an Oil and Gas Facility has been filed with the County, at a minimum, or greater, as determined by the Director of Community and Economic Development. The Notice shall meet the format prescribed by the County. The notice shall contain a statement informing the recipients of the notice that they may request written notification by the Applicant of the commencement of construction and commencement of drilling operations. The applicant shall provide written notification by U.S. Mail, which shall include an offer to consult, to any municipality, special district, or County whose boundaries are within one mile of the proposed parcel where an application for an Oil and Gas Facility has been filed with the County. Posted notice shall be required for all Oil and Gas Facility Permits. The signs shall be posted by the County on the subject property in a manner and at a location to afford the best notice to the public. Posting for an Oil and Gas Facility Permit shall take place no later than ten (10) days after the Operator selects a site for the facility.

f. *Public Hearing*. Applicable if the Oil and Gas Facility Permit requires non-administrative waiver from any approval criteria or performance standards. In cases requiring a waiver, a public hearing shall be held in front of the Board of County Commissioners.

g. *Standards and Conditions of Approval*. The Director of Community and Economic Development in approving a permit for an Oil and Gas Facility may attach any conditions necessary to implement the Adams County Comprehensive Plan, ensure the compatibility with adjacent uses, and are protective of public health, safety, welfare, the environment, and wildlife resources. Conditions may include a requirement of an Access Permit or Oversize Load Permit prior to development of the Oil and Gas Facility, a Floodplain Use Permit prior to any work within the floodplain, or a Building Permit prior to construction of certain structures within the Oil and Gas Facility.

h. *Amendments*.

(1) All amendments shall be processed in accordance with Sec. 13-01-10, *Step 9: Amendments to Approved Applications*. Major Amendments for Oil and Gas Facilities include, at a minimum, any amendments to a Form 2A with the Energy and Carbon Management Commission. For purposed of an Oil and Gas Facilities Permit, anything not identified as a major amendment shall be processed as a Minor Amendment.

(2) A Minor Amendment will be required if an OGF is to be operated by any person or entity during the term of the permit that is different than the person or entity that initially obtained the OGF. The new operator shall submit to the County, at a minimum, evidence of required environmental liability insurance, evidence of financial assurance held by the Energy and Carbon Management Commission, a signed Oil and Gas Worker Safety Attestation statement, and a history of regulatory compliance with Energy and Carbon Management Commission or other agency rules. The new operator shall agree in writing to comply with all the terms and conditions of the initial OGF permit.

E. **Criteria For Approval**. In determining whether to approve the application, the development review body denoted in Table 13-01-12-1, *Development Review Summary Table*, as taking final action shall consider the following criteria and find that each has been met (or determined to be inapplicable, in which case the criterion shall not be required to be satisfied, provided that the basis for such determination is supported by the record):

1. *DSR Purposes*. The Oil and Gas Facility is consistent with the purposes of this DSR.

2. *Compliance with this DSR*. The Oil and Gas Facility will comply with the requirements of this DSR including, but not limited to, all applicable performance standards, unless specifically waived or modified by the Board of County Commissioners after public hearing.

3. *Adverse Impacts*.

a. The siting of the Oil and Gas Facility, after evaluation of alternative sites, does not create adverse impacts on adjacent properties or the surrounding area with respect to: traffic generation and circulation; noise, vibration, dust, light, glare, or odors; hours of operation; building scale, massing, and site design in relation to established development patterns; public service and infrastructure demand; and public health, safety, or environmental or wildlife risks.

b. The siting of the Oil and Gas Facility does not create any site-specific conditions that present significant or material impacts to nearby land uses.

c. The Oil and Gas Facility has addressed off-site impacts and complies with all applicable performance standards, unless specifically waived or modified by the Board of County Commissioners after public hearing.

4. *Suitability*. The site is suitable for the use, including adequate usable space, adequate access, and adherence of environmental or wildlife stipulations.

5. *Development Standards*. The Site Plan for the proposed use will provide adequate parking, traffic circulation, fencing, screening, and landscaping.

6. *Infrastructure and Services*. Sewer, water, storm water drainage, fire protection, police protection, and roads are available and adequate to serve the needs of the Oil and Gas Facility as designed and proposed.

7. *Historic Sites*. The Oil and Gas Facility does not cause significant degradation of cultural, historic, or archaeological sites eligible for County landmarking, or the National Historic Register.

8. *Water*. The Oil and Gas Facility does not cause adverse impacts to surface or ground waters within Adams County. The Operator shall comply with all applicable water quality standards.

9. *Hazards*. The Oil and Gas Facility does not cause unreasonable risks of emergency situations such as explosions, fires, gas, oil or water pipeline leaks, ruptures, hydrogen sulfide or other toxic gas or fluid emissions, and hazardous material vehicle accidents or spills.

10. *Air Quality*. The Oil and Gas Facility meets all required air quality standards.

F. **Oil and Gas Facility Permit Waiver**.

1. *Purpose*. The purpose of this Section is to establish criteria and detail the steps whereby the Board of County Commissioners, at public meeting, may grant waivers or modifications from approval criteria or performance standards normally required for Oil and Gas Facility Permits, allow the Oil and Gas Facility use in an area not zoned for Oil and Gas Facilities, or allow an applicant to develop an Oil and Gas Facility site not selected by the Community and Economic Development Department.

2. *Applicability*. If the Oil and Gas Facility permit application is denied based on noncompliance with the approval criteria or performance standards, if the applicant seeks to develop in an area not zoned for Oil and Gas Facility development, or if an applicant seeks to develop on a site not approved by the Community and Economic Development Department, an applicant may apply for an Oil and Gas Facility Permit Waiver.

3. *Initiation*. A waiver may be proposed by any applicant that may apply for an Oil and Gas Facility. The applicant has the burden of proof to demonstrate that the waiver or proposed site selection meets the criteria for approval.

4. *Waiver Review Procedures*.

a. Any waiver shall be processed through a public hearing before the Board of County Commissioners. Waiver applications will be heard by the Board of County Commissioners at a public hearing. At such public hearing, the Board of County Commissioners may waive or modify specific regulations or standards requested by the applicant and approve the application, may approve with conditions, or may deny the application.

b. Applicants may only seek a waiver after submitting a complete application for an Oil and Gas Facility Permit and participating in a conceptual review meeting with Community and Economic Development staff. If applicant is unable to meet all approval criteria and comply with all performance standards required for an Oil and Gas Facility Permit, applicant may choose to seek a waiver from the Board of County Commissioners. The processing of a waiver shall be according to, in compliance with, and subject to the provisions contained in the relevant common review procedures as follows:

(1) *Conceptual Review and Pre-Application Conference.* Must be completed prior to application for waiver as part of Oil and Gas Facility Permit process.

(2) *Neighborhood Meeting*. Director of Community and Economic Development will determine whether neighborhood meetings are required after evaluating steps taken as part of Oil and Gas Facility process.

(3) *Development Application, Submittal, and Completeness*. In addition to all requirements for an Oil and Gas Facility Permit, applicant must provide a request for waiver that articulates the specific waivers sought and explains why waivers are necessary.

5. *Criteria For Approval*. In determining whether to approve the waiver application, the development review body denoted in Table 13-01-12-1, *Development Review Summary Table*, as taking final action shall consider the following criteria and find that each has been met (or determined to be inapplicable, in which case the criterion shall not be required to be satisfied, provided that the basis for such determination is supported by the record):

a. *Applicable to All Waivers*.

(1) Extraordinary hardships or practical difficulties result from strict compliance with these standards and regulations.

(2) The purpose of these standards and regulations are served to a greater extent by the alternative proposal.

(3) The waiver does not have the effect of nullifying the purpose of these standards and regulations.

b. *Additional Criteria for a Zone District Waiver*.

(1) The proposed Oil and Gas Facility is consistent with the Adams County Comprehensive Plan.

(2) The proposed Oil and Gas Facility does not create adverse impacts on adjacent properties or the surrounding area with respect to: traffic generation and circulation; noise, vibration, dust, light, glare, or odors; hours of operation; building scale, massing, and site design in relation to established development patterns; public service and infrastructure demand; and public health, safety, or environmental or wildlife risks.

c. *Additional Criteria for a Setback Waiver*.

(1) The Oil and Gas Facility provides substantially equivalent protections to public health, safety, welfare, the environment, and wildlife resources that are equal to or more effective to satisfy the criteria of approval. The criteria for determining substantially equivalent protections may include, but are not limited to:

(A) The location of receptors and proximity of those receptors;

(B) The location, nature, and size of the facility;

(C) The duration and intensity of all phases of operation at the Oil and Gas Facility;

(D) The extent to which the Oil and Gas Facility design, any planned best management practices, best available control measures and technologies, and conditions of approval avoid, minimize, and mitigate adverse impacts;

(E) The extent to which the Oil and Gas Facility is compatible with the surrounding area, not detrimental to the immediate area, not detrimental to the future development of the area, and not detrimental to the health, safety, or welfare of the inhabitants of the area and the County;

(F) The level of consent or waivers obtained from primary resident(s), landowners; and

(G) The extent to which the Oil and Gas Facility will minimize, avoid, mitigate, and offset cumulative impacts.

G. **Moving and Oversize Weight Permit for Oil and Gas Wells**.

1. *Permit Required*. A Moving and Oversize Weight Permit, also known as an Oversize Load Permit, is required when a vehicle with load exceeds 70 ft. in length, 13 ft. in height, 8.5 ft. in width or exceeds 20,000 pounds per axel, such as a drilling rig. The applicant is solely responsible for knowing the height and weight of their vehicles including the weight distribution of their load (per axle) in relation to overpass heights and weight restrictions of bridges or culverts along the route. A permit must be obtained each time a County road is used for the transportation of a drilling rig. The names of both the Operator and Mover shall appear on the application for the permit. The Director of Public Works must be notified of the day and time of the move prior to commencing the move. The Director of Public Works may temporarily postpone moves due to inclement seasonal weather conditions where road or bridge damage might occur. If a move is temporarily postponed due to inclement seasonal weather conditions, the life of the permit shall be extended for the number of days during which the move was temporarily postponed.

2. *Permit Withheld*.

a. A Moving and Oversized Weight Permit shall be withheld unless a copy of the drilling permit issued by the Energy and Carbon Management Commission and evidence of insurance is submitted by both the Operator and Mover meeting the following requirements and are submitted to the Director of Public Works. This requirement shall not apply to workover rigs.

b. A policy of liability insurance obtained by each of the parties named on the application wherein the County shall be named as an insured party. The endorsement of Adams County as an insured party shall be obtained by each applicant. The policy shall specify damage to County roads, bridges, and other property of the County is an insured item, with a minimum liability coverage of $100,000 to guarantee payment for damage to any County roads, bridges, and/or property of Adams County during any moving operations and under all Oversize Load Permits issued hereunder.

c. In lieu thereof, the applicant may request the County to substitute a letter of indemnity or self-insurability in place of a liability policy. If in the determination of the Board of County Commissioners, a letter of indemnity or self-insurability provides sufficient coverage for damages, which might occur, the substitution shall be allowed.

d. No policy or liability insurance shall be permitted to lapse, be canceled, or be withdrawn unless ten (10) days written notice from the insurance company is given to Adams County prior to any lapse, cancellation, or withdrawal. In the event of any such lapse, cancellation, or withdrawal, the Moving and Culvert Installation Permit shall be deemed canceled and no further moves shall be allowed until reinstatement of this policy of liability or letter of indemnity. The policy or letter of indemnity shall be kept valid and in force as long as the drilling rig remains in the County and until such rig leaves the County.

# 13-02-06 Biosolids (Domestic Sludge) Application Procedure

A. **Purpose**. The purpose of this Section is to provide processing requirements for Biosolids Application Permits to review, consider, approve, approve with modifications, or deny a request for permission to discharge or dispose of biosolids through land application.

B. **Applicability**. All Biosolids Application Permits must be processed in accordance with this Section. A Biosolids Application Permit is the only authorization under which biosolids may be discharged or applied to land for disposal. Land applications of sewage, sewage sludge, or septage are prohibited.

C. **Initiation**. The owner of the property where the biosolids are proposed to be discharged or disposed may request a Biosolids Application Permit without limitation.

D. **Specific Review Procedures**. The following review procedures shall apply:

1. *Common Review Procedures*. The procedures outlined in Div. 13-01, *Common Review Procedures*.
2. *Development Application Submittal*: The application will be reviewed by the Soil Conservation District according to their rules and regulations regarding standards required for acceptable farming practices and in accordance with the time schedule for review.
3. *Soil Conservation District Recommendation*. Upon receipt of a recommendation from the Soil Conservation District, the Director of Community and Economic Development shall either approve, deny, or conditionally approve the request based upon the Soil Conservation District's recommendation and compliance with County regulations.
4. *Survey*. The applicant shall contact all property owners within one mile from the boundaries of the site where biosolids are to be placed as part of the information submitted to the Director of Community and Economic Development. The applicant shall conduct and document in writing a survey of residents regarding their understanding of Biosolids land application practices to gauge their acceptance of biosolids being placed at the site. The applicant shall include as information in its submittal the survey questionnaire, number of surveys distributed and means of distribution, and all survey responses received by the applicant.
5. *Nuisance Control Plan:* The applicant shall provide sufficient detail on the methods and best management practices employed to control odor and dust during the application of Biosolids.
6. *Water and Soil Protection:* The applicant shall provide PFAS monitoring results from the source of biosolids as reported to the Colorado Department of Public Health and Environment.

7. *Notice of Authorization:* Notice of Authorization for the Use and Distribution of Biosolids issued from the Colorado Department of Public Health and Environment shall be included in the application submittal.
8. *Director Duties*. Upon receipt of a complete application, the Director of Community and Economic Development shall either issue or deny the issuance of a Biosolids Application Permit within 45 days of receipt of the complete application or required resubmittal application. The Director shall notify the applicant by mail or email of the Director's decision within 45 days of the decision. The Biosolids Application Permit shall describe in detail the proposed Biosolids application allowed by the permit, including all specific conditions applied by the Director. Applicants and residents may appeal the decision of the Director of Community and Economic Development concerning the granting of a permit to apply biosolids to the Board of Adjustment as outlined in Sec. 13-07-04, *Appeal of Administrative Decisions*.

E. **Criteria for Approval**. In determining whether to approve the application, the Director in taking final action shall consider the following criteria and find that each has been met (or determined to be inapplicable, in which case the criterion shall not be required to be satisfied, provided that the basis for such determination is supported by the record):

1. *DSR Requirements*. The applicant has complied with the requirements of this DSR.
2. *Ground Water Protection*. The proposed Biosolids Application Permit ensures the protection of ground and surface water quality and minimizes any adverse impacts on surrounding property.
3. *Compatibility*. Any adverse impacts of the use on the surrounding area with respect to the environment; building scale, massing, and site design in relation to established development patterns; access, traffic generation and circulation; parking; emergency services; utilities and infrastructure demand; waste disposal areas; noise, lighting, vibration, air emissions, dust and odor; hours of operation; and other material adverse impacts have been addressed and/or mitigated to the maximum extent practicable.
4. *Nuisances*. The application shall not result in excessive traffic, noise, vibration, dust, air pollutant emissions, odors, or hours of operation after 10:00 pm and before 6:00 am on any day.
5. *Notice of Authorization*. The applicant has obtained a Notice of Authorization for the Use and Distribution of Biosolids from the Colorado Department of Public Health and Environment.

# Div. 13-03 Land Use Procedures

## 13-03-01 Certificate of Designation for Hazardous Waste and Solid Waste

A. **Purpose.** The purpose of this Section is to detail the steps for obtaining a Certificate of Designation for Solid Waste and Hazardous Waste disposal sites and facilities that are presumptively incompatible with other land uses and may have long-term ramifications on surrounding lands. Certificates may require specific conditions to ensure appropriate location, design, configuration, and operation, including but not limited to requirements for site

buffering, nuisance impact controls, environmental protection, monitoring, access management, or operational controls.

B. **Applicability.** A Certificate of Designation shall be required for all solid waste and hazardous waste disposal sites and facilities that may include, but not be limited to:

1. *Solid Waste Sites.* Sites and facilities where the collection, storage, treatment, utilization, and final disposal of solid waste occurs except as specifically exempted;
2. *Infectious Waste Treatment Facilities*;
3. *Hazardous Waste Disposal Sites;*
4. *Waste Impoundment Operations;*
5. *Commercial Composting Operations.* Class III Composting Facilities as defined in Colorado Department of Public Health and Environment Regulations 6 CCR 1007, Part 2, Section 14, *Commercial Composting Standards*;
6. *Inert Fill Landfills.* Landfills when meeting the criteria for a Certificate of Designation;
7. *Demolition and Construction Debris Landfills*;
8. *Scrap Tire Monofill and Recycling Facilities.* Facilities with an inventory of more than 10,000 processed and unprocessed scrap tires; and
9. *Other Sites or Facilities.* Sites or facilities not specifically mentioned herein as may be required by C.R.S. § 30-20-101 *et seq*., C.R.S. § 25-15-101 *et seq*., and C.R.S. § 25-15-201 *et seq*.

C. **Authorization Requirements.** Only the Board of County Commissioners may, after recommendation of the Planning Commission, adopt a resolution approving a Certificate of Designation to locate in accordance with this DSR.

1. *Zone District Compliance.* Only those uses that are authorized as permitted principal uses or conditional uses in a zone district may be approved; and
2. *No Guarantee Provision.* The designation of a use as a permitted principal use or conditional use does not constitute authorization or assurance that such use shall be approved.

D. **Initiation.**

1. *Generally*. Any owner or person having an interest in the property on which the facility requiring the Certificate of Designation is proposed to be located may request a Certificate of Designation without limitation.
2. *Development Application Submittal.* A Certificate of Designation requires two submittals.
   a. *First Submittal.* The first submittal shall be for the Planning Commission and Board of County Commissioners to determine preliminary findings of fact regarding use compatibility and siting impact issues. Within 10-days of receipt, an application for a hazardous waste disposal facility shall be referred to the Colorado Geological Survey for a recommendation as to the site's geological suitability for land disposal of hazardous waste.
   b. *Second Submittal.* Following the determination of findings of fact regarding land use compatibility and siting impact issues, a second set of submittals shall be made to allow the review of the engineering design and operations plan and technical reports, and final approval, approval with conditions, or disapproval of the Certificate of Designation.

3. *Determination of Complete Application* Applications shall be reviewed for completeness in accordance with Div. 13-01, *Common Review Procedures,* and shall include the following additional requirements for the second submittal. .
   a. *State Approval Requirements.* Upon receipt of a written recommendation for approval from the Colorado Department of Public Health and Environment (CDPHE), public hearings on the engineering design and operations plan and technical reports shall be set before the Planning Commission and Board of County Commissioners.
   b. *State Disapproval Provision.* No hearings shall be set if the CDPHE recommends disapproval pursuant to C.R.S. § 30-20-104(3).

E. **Specific Review Procedures.** The following review procedures shall apply:
1. *Common Review Procedures*. The procedures outlined in Div. 13-01, *Common Review Procedures.*
2. *Second Neighborhood Meeting.* In addition to the neighborhood meeting required in Table 13-01-12-2, *Review Steps*, prior to initial submittal, the Director of Community and Economic Development may require a neighborhood meeting upon submittal of the operations plan and technical report following review and approval, denial, or approval with conditions of the initial application.
3. *Planning Commission Public Hearings*. Two public hearings before the Planning Commission shall be required.
4. *Notice.* Public notice shall be provided in accordance with Div. 13-01. Notice shall be sent to all property owners within 1,500 feet in urban areas and one mile in semi-urban and agricultural areas at minimum, or greater distance as determined by the Director of Community and Economic Development.
5. *Public Hearing.* Public hearings shall be conducted in accordance with the Common Development Review Procedures.
   a. *Hearing Requirements.* Two sets of public hearings shall be held before both the Planning Commission and Board of County Commissioners.
   b. *First Hearing Purpose.* A hearing shall be held to review the Certificate of Designation's compatibility with surrounding land uses and to make preliminary findings.
   c. *Second Hearing Purpose.* A hearing shall also be held to review the engineering design and operations plan and technical reports.
   d. *Waiver Authority.* The Director of Community and Economic Development may waive the public hearings to determine preliminary findings of fact regarding land use compatibility and siting impact issues of a proposal upon request of the applicant or with the applicant's concurrence, if one of the following determinations is made:
      (1) *Operational Separation Issue*. That due to the nature of the proposed operation, issues related to land use compatibility and siting impact cannot be separated from the information required in the engineering design and operations plan and technical reports; or
      (2) *Minor Nature Determination*. That due to the nature of the proposed operation, the engineering design and operations plan and technical reports is minor in nature and no public purpose would be served by separating the two components of the request.

6. *Decision Standards.* Decision standards shall be applied in accordance with the Common Development Review Procedures.
   a. *First Hearing Standards.* At the first hearing concerning a Certificate of Designation, the Planning Commission shall conduct preliminary fact finding and consider all relevant evidence regarding land use compatibility and site impacts concerning the application.
   b. *First Hearing Considerations.* This hearing shall include, but not be limited to, information on surrounding land uses, access and traffic impact, conformance with requirements of these standards and regulations, and conformance with policies of the Adams County Comprehensive Plan.
   c. *Planning Commission Recommendation.* The Planning Commission shall forward a recommendation in the form of recommended findings of fact to the Board of County Commissioners as to whether the proposed land use is in accordance with the applicable review criteria.
   d. *Board Initial Review.* The Board of County Commissioners shall then conduct a preliminary fact-finding public hearing and consider all relevant evidence regarding land use compatibility and site impacts concerning the application.
   e. *Negative Finding Authority.* If the Board of County Commissioners finds that the proposed land use is not in accordance with the criteria, it shall make a finding of fact, and such findings may be the basis of denial at future hearings should the applicant wish to proceed with the remainder of the permitting process.
   f. *Second Hearing Process.* After receiving the engineering design and operations plan and technical reports submittal, recommendation of approval from CDPHE, and completing Steps a. through f., the Planning Commission shall forward a recommendation of disapproval, approval, or approval subject to conditions to the Board of County Commissioners for the Certificate of Designation.
   g. *Final Board Action.* The Board of County Commissioners shall then conduct a public hearing and may approve the request, in whole or in part, with or without modifications and requirements, or deny the request.
   h. *State Compatibility Requirement.* Approval, if given, shall not be in conflict with CDPHE's recommendation, but the Board of County Commissioners may impose any additional requirements or conditions it deems necessary to meet the purpose and intent of this DSR.
7. *Amendments***.**
   a. *Minor or Major Amendment.* For solid waste disposal sites, the following shall be considered in determining if the change is a minor or major amendment:
      (1) State Review of Change Type.
         (A) Change determination requirements. A determination as to the type of change under State regulations shall be made by referring the proposed change to the CDPHE for a finding of fact whether the proposed change constitutes a significant change under State regulations.
         (B) State review timeline. The State shall be afforded a twenty working day period to respond and upon receipt of a determination from the State as to the type of change, the applicant shall be advised of the determination

and whether additional information is needed to complete the technical review of the change.

(C) No State response provision. If the State does not respond with a determination as to whether the change is significant within twenty working days, the County may proceed based upon its own determination.

(2) County Review of Change Type. A determination shall be made by the Director of Community and Economic Development as to the nature of the change concerning County requirements as listed in the Certificate of Designation and with regard to potential impact on neighboring properties, the general public, or those intended to occupy or use the solid waste disposal sites. The change shall fall into one of the following categories:

(A) Minor Changes. A minor change from the permit, including approved plans, is one which shall have no discernible impact or shall have limited impact on neighboring properties, the general public, or those intended to occupy or use the site and facility.

(I) State Significant Change Exclusion. No change which has been determined by the State to be a "significant change" under State regulations shall fall into this category.

(II) Routine Nature Examples. Minor changes are routine in nature and may include, but are not limited to:

1. Corrections of typographical errors in the approved permit;
2. Equipment replacement or upgrading with functionally equivalent components;
3. Increased frequency in monitoring or maintenance activities;
4. Closure of the facility at an earlier than permitted date;
5. Changes in information listed in facility contacts or coordinators listed in the plan;
6. Replacement of a monitoring facility which has been damaged or rendered inoperable without change in location, design, or depth; and
7. Changes in the Site Plan which provide for more efficient operations on site but have no impact on operation methods or the surrounding area.

(III) Waste Stream Additions. A change to allow additional elements in the waste stream may be determined to be minor, provided the waste is not specifically prohibited by the permit, is a common variation in the type and quantity of the waste managed under the facility permit, and does not require a change in methods of operation, additional monitoring to ensure public health requirements are met, or result in a change in reclamation of the site.

(IV) Regulatory Compliance Changes. Changes necessary to comply with new regulations may be considered minor where these

changes can be implemented without substantially changing design specifications or management practices in the permit.

(B) Major Changes. A major change from the permit, including approved plans, is one which has been determined to potentially have a significant impact on neighboring properties, the general public, or those intended to occupy or use the waste disposal site and facility.

(I) State Significant Change Inclusion. Changes which have been determined to be a "significant change" under State regulations shall fall into this category.

(II) Major Change Examples. Major changes include, but are not limited to:

1. Change in ownership of the facility;
2. Extension of the certificate's duration;
3. Changes in the Site Plan which reduce or change the character of approved buffering;
4. Reduction in quantity or quality of monitoring unless such change is mandated by regulatory requirements; and
5. Change in a specific condition, standard, or requirement of the Board of County Commissioners' approval which would change the character of the facility or substantially increase the intensity of use.

(III) Prohibited Waste Stream Changes. A change which allows additional elements in the waste stream that are prohibited by the permit, requires a change in the operations plan or the approved reclamation plan, or allows waste that is not a common variation in the type and quantity of the waste managed under the facility permit is a major change.

(3) State Review of Request Substance. Based on the State's recommendation, the following procedures shall apply:

(A) Approval of Significant Change. If the CPDHE recommends approval of a significant change, proceed to County Review below.

(B) Disapproval of Significant Change. If the CPDHE recommends disapproval of the requested significant change, no public hearings shall be set and the request shall be denied.

(C) Approval of Non-Significant Change. If the CPDHE recommends approval of a non-significant change, proceed to County Review below.

(D) Disapproval of Non-Significant Change. If the CPDHE recommends disapproval of the requested non-significant change, the request shall be denied.

(E) No State Comment Within Review Period on a Non-Significant Change. If the State does not respond with a recommendation on the requested change within 60 calendar days, the County may proceed based upon its own determination, and the applicant shall be advised that it is the operator's responsibility to ensure that the minimum standards of the Solid

Waste Disposal Sites and Facilities Act, C.R.S. § 30-20-101 *et seq*., have been met.

(4) County Review of the Substance of the Request.

(A) Minor Change Approval Process. If the CPDHE recommends approval of a non-significant change, and the change is a minor change as determined by the Director of Community and Economic Development, then the Director may approve the request with conditions determined necessary to ensure that the intent of these Regulations is met.

(B) Director Denial Appeal Rights. If the Director of Community and Economic Development denies the request, the applicant may apply for a change in accordance with the procedure for a major change.

(C) Major Change Review Process. If the Colorado Department of Health recommends approval of a significant or non-significant change, and the change is a major change as determined by the Director of Community and Economic Development, the review procedure as established in Review Step 7 to Review the Operations Plan and Technical Report shall be followed, and the request shall be evaluated in accordance with the applicable Criteria for Approval in subsection F or G below.

b. *Information Requirements for Solid Waste Facility Amendments (Major Change).*

(1) Application and Fee. Application form and a review fee in accordance with a schedule established by the Board of County Commissioners as provided for in C.R.S. § 30-20-103;

(2) Plans and Narrative. Design and operations plan, technical reports, and written narrative which clearly describe the changes requested and their effect on the operation of the facility and the surrounding area; and

(3) Additional Information. Provision of any other relevant information required by the Director of Community and Economic Development to ensure that there is adequate information to review the amendment.

c. *Hazardous Waste Disposal Site Amendments.*

(1) Amendment Requirements. For hazardous waste disposal sites, an amendment to the Certificate of Designation is required as specified in the terms and conditions of the permit, or for all changes except for changes in:

(A) On-site operational best practices;

(B) On-site environmental and personnel monitoring requirements; and

(C) Changes described above in (A) and (B) are subject to regulation by the CDPHE pursuant to C.R.S. § 25-15-301 *et seq*., and are not subject to County review unless it is a substantial change that requires County approval pursuant to C.R.S. § 25-15-206 or as specifically required per the terms and conditions of the Certificate of Designation.

(2) Review Procedures of for Hazardous Waste Amendments.

(A) State Review Requirements. The proposed change shall be referred to CDPHE for a finding of fact whether the proposed amendment constitutes a substantial change, as defined in 6 CCR 1007-2, Part 2.

(B) State Review Timeline. The State shall be afforded a twenty working day period to respond, and upon receipt of a determination from the State as to the type of change, the applicant shall be advised of the determination and whether additional information is needed to complete the technical review of the change.

(C) No State Response Authority. If the State does not respond with a determination as to whether the change is substantial within twenty working days, the County may proceed upon its own determination based on such specified terms and conditions of the existing Certificate of Designation or upon public hearing.

(D) Substantial Change Determination. If the proposed amendment constitutes a substantial change as determined in accordance with the specified terms and conditions of the CD or by finding of the Board of County Commissioners, public hearings shall be set in accordance with the procedures defined in subsection E(5), *Public Hearing*, above, and the findings required by the Criteria of Approval.

(E) Public Hearing Process. After receipt of CDPHE's finding of fact or upon determination of staff that the required State review period has expired, a public hearing shall be set, and staff shall appear before the Board of County Commissioners during a public hearing and present relevant testimony concerning whether any proposed changes constitute a substantial change.

(F) Board Finding of Fact. The Board of County Commissioners shall make a finding of fact based upon staff's testimony and recommendations of CDPHE.

(G) Non-Substantial Change Determination. If the proposed amendment does not constitute a substantial change as determined in accordance with the specified terms and conditions of the CD or by finding of the Board of County Commissioners, no public hearings shall be set. A decision on changes determined to be non-substantial is made by CDPHE in accordance with State regulatory requirements and applicable State statutes.

(H) State Denial Response. If the recommendation of CDPHE is denial, no public hearing shall be set, and the request shall no longer be considered.

d. *Information Requirements for Hazardous Waste Disposal Site Amendments.*

(1) Application and Fee. Application form and a fee set forth by and available from the Department of Community and Economic Development;

(2) Plans and Narrative. Engineering design and operations plan modifications, technical and analytical reports, and written narrative which clearly describe the changes requested and their effect on the operation of the facility and the surrounding area; and

(3) Additional Information. Provision of any other relevant information required by the Director of Community and Economic Development to ensure that there is adequate information to review the amendment.

F. **Solid Waste Facility Criteria for Approval**. The Planning Commission, in making their recommendation, and the Board of County Commissioners, in approving a Certificate of Designation for a solid waste disposal facility, shall consider the following criteria and find that each has been met (or determined to be inapplicable, in which case the criterion shall not be required to be satisfied, provided that the basis for such determination is supported by the record):

1. *Zoning Compliance.* The proposed use is an acceptable use in the applicable zone district.
2. *Plan Consistency.* The Certificate of Designation is consistent with the purposes of these standards and regulations and meets the intent of the Adams County Comprehensive Plan.
3. *Standards Compliance.* The Certificate of Designation shall comply with the requirements of these standards and regulations, including but not limited to all applicable performance standards.
4. *Compatibility Requirements.* The Certificate of Designation does not create adverse impacts on the surrounding area with respect to the environment; building scale, massing, and site design in relation to established development patterns; access, traffic generation and circulation; parking; emergency services; utilities and infrastructure demand; waste disposal areas; noise, lighting, vibration, air emissions, dust and odor; hours of operation; and other material adverse impacts.
5. *Off-Site Impact Management.* All off-site impacts are adequately addressed by the incorporated plans, procedures, and specified terms and conditions of the Certificate of Designation.
6. *Site Suitability.* The site is suitable for the Certificate of Designation, including adequate usable space, adequate access, and absence of environmental constraints.
7. *Demonstrated Need.* There is a need for the facility in the County.
8. *Compliance Capability.* The applicant has documented the ability to comply with the regulations, requirements, and recommended conditions of the CDPHE, the Colorado Geological Survey, the Adams County Health Department, and other relevant referral agencies.
9. *Accessibility Requirements.* The site is accessible to Adams County residents and other potential users.
10. *Environmental Compliance.* The proposed facility shall comply with all applicable laws and regulations relating to air, water, soil and other environmental media, and noise pollution. When standards do not exist for regulating emissions from a particular type of facility, the County shall consider whether the facility may impact health and welfare of the community based upon specific facility design and operating procedures.
11. *Siting Standards Compliance.* The site conforms to siting standards for the type of facility being proposed.

G. **Hazardous Waste Disposal Site Criteria for Approval**. The Planning Commission, in making their recommendation, and the Board of County Commissioners, in approving a Certificate of Designation for a hazardous waste disposal site, shall consider the following criteria and find that each has been met (or determined to be inapplicable, in which case the criterion shall not be required to be satisfied, provided that the basis for such determination is supported by the record):

1. *Zoning Compliance.* The proposed use is an acceptable use in the applicable zone district.

2. *Plan Consistency.* The Certificate of Designation is consistent with the purposes of these standards and regulations and meets the intent of the Adams County Comprehensive Plan.
3. *Standards Compliance.* The Certificate of Designation shall comply with the requirements of these standards and regulations, including but not limited to all applicable performance standards.
4. *Compatibility Requirements.* The Certificate of Designation does not create adverse impacts on the surrounding area with respect to the environment; building scale, massing, and site design in relation to established development patterns; access, traffic generation and circulation; parking; emergency services; utilities and infrastructure demand; waste disposal areas; noise, lighting, vibration, air emissions, dust and odor; hours of operation; and other material adverse impacts.
5. *Off-Site Impact Management.* All off-site impacts are adequately addressed by the incorporated engineering design plans, operating procedures, and specified terms and conditions of the Certificate of Designation.
6. *Site Suitability.* The site is suitable for the Certificate of Designation as determined by the Colorado Geological Survey and, including adequate usable space, adequate access, and absence of environmental constraints.
7. *Demonstrated Need.* There is a need for the facility in the County.
8. *Compliance Capability.* The applicant has documented the ability to comply with the health standards and operating procedures as provided by the CDPHE, the ACHD, and other relevant agencies.
9. *Accessibility Requirements.* The site is accessible to Adams County residents and other potential users.
10. *Environmental Compliance.* The proposed facility shall comply with all applicable laws and regulations relating to air, water, soil and other environmental media, and noise pollution. When standards do not exist for regulating emissions from a particular type of facility, the County shall consider whether the facility may impact health and welfare of the community based upon specific facility design and operating procedures.
11. *Siting Standards Compliance.* The site conforms to siting standards for the type of facility being proposed.
12. *State Statutes*. The Certificate of Designation complies with the requirements of C.R.S. § 25-15-203.

H. **Issuance of Certificate**. Upon final approval and fulfillment of all requirements of the Board of County Commissioners, the Board of County Commissioners shall issue a Certificate of Designation in conformance with the decision of the Board of County Commissioners and shall notify the CDPHE of the approval within five days. The Certificate of Designation shall describe in detail the use allowed by the certificate, include all specific conditions applied by the Board of County Commissioners, and be accompanied by an official Site Plan and building elevations modified by the applicant to reflect the conditions of the certificate.

I. **Effect of Approval**.

1. *Authorization of Use*. Issuance of a Certificate of Designation shall be deemed to authorize only the particular use and development plan for which it is issued. The applicant shall be subject to all other permits required by this DSR to develop the land.
2. *Conditions*. All conditions contained in the Certificate of Designation shall be binding upon the applicant, and any successors and assigns. The Certificate of Designation and its

conditions shall limit and control the issuance and validity of Certificates of Occupancy, and shall restrict and limit the construction, location, use, and maintenance of all land and structures within the development. The Board of County Commissioners shall be required to sign the Certificate of Designation and have it recorded in the Office of the Adams County Clerk and Recorder.

# 13-03-02 Conditional Use Permit

## 13-03-02.A Conditional Use Permit Procedures, General

1. **Purpose**. The purpose of this Section is to detail the steps for obtaining a Conditional Use Permit, as required in Div. 2-06, *Principal Use Table,* Div. 3-13*, Accessory Uses and Structures,* and Div. 3-14, *Temporary Uses and Structures*. In addition to meeting applicable performance standards, conditional uses may require the imposition of conditions in order to ensure the number and type of conditional uses and their location, design, and configuration are appropriate at a particular location.
2. **Applicability**. All uses that require a Conditional Use Permit must be processed in accordance with this Section. Only the Board of County Commissioners may, after recommendation of the Planning Commission, adopt a resolution approving a conditional use to locate in accordance with these standards and regulations.
3. **Initiation**. Any owner or person having an interest in the property on which the conditional use is proposed to be located may request a Conditional Use Permit without limitation.
4. **Specific Review Procedures**. The following review procedures shall apply:
   a. *Common Review Procedures*. The procedures outlined in Div. 13-01, *Common Review Procedures*.
   b. *Conditions of Approval*. Attach any conditions necessary to implement the Adams County Comprehensive Plan, Transportation Master Plan, and the Comprehensive Safety Action Plan, and ensure compatibility with adjacent uses. The Board of County Commissioners in approving a Conditional Use Permit may condition the approval on one or more of the following:
      (1) A requirement to ensure development proceeds in accordance with a specific Site Plan and/or development schedule.
      (2) A requirement of public dedication of rights-of-way for roads, alleys, public ways, drainage and public facilities, and the installation of off-site improvements as are reasonably required by or related to the effect of the Conditional Use Permit.
      (3) A requirement to ensure design and mitigation measures be put in place including, but not limited to, limits on the hours of operation and traffic generating uses; improvements to on-site and off-site pedestrian, bicycle, and vehicular circulation and safety; alternative access or open space provisions to address site capacity and resource protection issues; controls on noise, light, odors and other potential nuisances; measures to protect and improve the aesthetic value of high traffic areas; requirements to protect air and water quality; construction of fencing and planting of landscaping; restrictions on signage and outdoor lighting; changes in off-street parking layout and design; restrictions concerning the building bulk, height, setback, location, and external appearance; stipulations concerning adequate storm drainage or utilities; and limits on the duration of the Conditional Use Permit.

c. *Pipelines and Gathering Lines.*

(1) Gathering Lines shall be sited to avoid areas containing existing ort proposed residential, commercial, and industrial buildings; places of public assembly; surface water bodies; and designated open spaces.

(2) Without compromising pipeline integrity and safety, Operator shall share existing pipeline rights-of-way and consolidate new corridors for pipeline rights-of-way to minimize impact.

(3) Setbacks from residential, commercial, or industrial buildings, places of public assembly, the high-water mark of any surface water body and sensitive environmental features will be determined on a case-by-case basis in consideration of the size and type of pipeline proposed and features of the proposed site.

(4) Operator must make available to County upon request all records submitted to the Pipeline and Hazardous Materials Safety Administration (PHMSA) or the Public Utilities Commission (PUC) including those related to the location, line status, and operator, inspections, pressure testing, pipeline accidents, and other safety incidents.

(5) Operator shall submit "as-built" construction drawings to the Adams County Community and Economic Development Department within 120 days of construction completion, or as soon thereafter as is reasonably practicable thereafter if the Developer encounters delays. The Developer shall, with the submission of construction drawings, also submit "as built" GIS pipeline data in electronic form and in a format reasonably acceptable to the Adams County Community and Economic Development Department and Public Works Department, to be used solely for internal Adams County mapping systems.

(6) At the time of submission, the operator shall clearly identity any GIS files or data layers claimed to be exempt from public disclosure under applicable law and shall provide a written statement identifying the statutory basis for the claimed exemption

(7) The County shall maintain such GIS data as confidential security-sensitive critical infrastructure information to the fullest extent permitted by applicable law. The County shall not voluntarily disclose such information except as required by law, court order, or as necessary for government operations, emergency response, utility coordination, or other official government purposes.

(8) If the County receives a request for disclosure of the submitted GIS data under the Colorado Open Records Act or other applicable law, the County may provide notice to the submitting operator, when reasonably practicable and not prohibited by law, to allow the operator the opportunity to assert any applicable exemption or seek judicial relief at its own expense. The County retains the sole authority to determine its obligations under the law.

(9) Nothing in this section shall be construed to limit the County's use of the submitted GIS data for its governmental purposes, create public records exemption, waive any privilege or exemption available under state or federal law, or obligate the County to withhold records when disclosure is required by law. GIS data shall not be used in lieu of Colorado 811 locates.

5. **Criteria for Approval**.

a. *Generally*. In determining whether to approve the application, the development review body denoted in Table 13-01-12-1, *Development Review Summary Table*, as taking final

action shall consider the following criteria and find that each has been met (or determined to be inapplicable, in which case the criterion shall not be required to be satisfied, provided that the basis for such determination is supported by the record):

(1) The conditional use is allowed in the applicable zone district.

(2) The conditional use is consistent with the purposes of these standards and regulations.

(3) The conditional use will comply with the requirements of these standards and regulations, including, but not limited to, the following:

(A) The proposed use complies with all applicable dimensional, buffering, screening, landscaping, and design standards.

(B) The proposed use complies with any use-specific performance and operational standards.
